CONGRESSIONAL RECORD,
SIXTY-THIRD CONGRESS, FIRST SESSION.

SENATE.

WEDNESDAY, September 3, 1913.

The Senate met at 11 o'clock a. m.
Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.
The Journal of yesterday's proceedings was read and approved.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the bill (S. 2319) authorizing the appointment of an ambassador to Spain.

The message also announced that the House had passed a bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes, in which it requested the concurrence of the Senate.

PETITIONS AND MEMORIALS.

Mr. JONES. I have resolutions adopted by the Commercial Club of Seattle in reference to the wreck of the steamship *State of California* in Alaskan waters on August 17, and urging the necessity of increased aids to navigation in those waters. I ask that it may be printed in the Record and referred to the Committee on Commerce.

There being no objection, the resolutions were referred to the Committee on Commerce and ordered to be printed in the Record, as follows:

The English-speaking world has again been called upon to shudder at the recital of a disastrous wreck in Alaska waters. For years petition after petition has been presented to the proper authorities, requesting aids to navigation, better facilities, and more thorough survey of the inland waters of this the most valuable outside Territory of the United States, but with little effect. Each passing year witnesses some disastrous wreck on this coast which in almost every case is due to the absence of aids to navigation or the fact that the waters have been improperly charted.

Whereas on the morning of August 17 the steamship *State of California* struck a reef in Gambier Bay, southwestern Alaska, and in three minutes went to the bottom, and with the awful death toll of 32 souls as a relic of the direful event; and

Whereas this steamship was traveling over a route not usually covered by steamships, owing to the fact that it was engaged in aiding the industrial development of a frontier section of Alaska, specifically for the development of fishing and other industries on the Prince of Wales and other important islands of the western coast, whose waters are almost wholly uncharted and practically no aids to navigation exist; and

Whereas for years past wrecks of all kinds, amounting to millions of dollars, have occurred in the Alaskan Archipelago, resulting in tremendous financial loss as well as a large number of human lives: Therefore be it

Resolved, That the attention of the Congress of the United States be drawn to this condition, and that Senators, Members of Congress representing the State of Washington, and the Delegate in Congress from the Territory of Alaska be requested to bring this matter directly before the House of Representatives, and that they be urged to introduce a bill in those bodies calling for a full investigation; and be it further

Resolved, That the Senators and Representatives and Delegate mentioned above be requested to produce, or have produced, for such investigation full facts regarding the uncharted waters of Alaska from the United States Coast and Geodetic Survey and the Hydrographic Office of the United States Navy, as well as a report covering the need of further aids to navigation from the Bureau of Navigation and the United States Lighthouse Board; and be it further

Resolved, That the Commercial Club of the city of Seattle respectfully request immediate action on the part of the Representatives of the State of Washington in the matter of the above, owing to the urgency of the case and growing importance of Alaska and the steady increase in its shipping and commerce relations.

Mr. NELSON presented a memorial of the congregation of the United Norwegian Lutheran Church in convention at St. Paul, Minn., remonstrating against the reestablishment of the Army canteen, which was referred to the Committee on Military Affairs.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JONES:

A bill (S. 3072) granting an increase of pension to Hulda L. Winter; to the Committee on Pensions.

By Mr. OLIVER:

A bill (S. 3073) granting an increase of pension to Ira Felt (with accompanying papers); to the Committee on Pensions.

By Mr. MCLEAN:

A bill (S. 3074) granting an increase of pension to Julia McCarthy (with accompanying papers); to the Committee on Pensions.

By Mr. SHIVELY:

A bill (S. 3075) granting an increase of pension to James B. Kendall; and

A bill (S. 3076) granting an increase of pension to Henry Willis; to the Committee on Pensions.

THE LEVANTINE GRAPE (S. DOC. NO. 178).

Mr. FLETCHER. Mr. President, at the request of the Senator from Arizona [Mr. SMITH], who could not be present at the opening of the session to-day, I present a brief on the Levantine grape, generally designated commercially as currants, which I desire to have printed. As I stated, it bears on the subject of currants, and the matter is, I believe, involved to some extent in the pending tariff bill. I have had an estimate made of the cost to print it, which will be about \$140, if it is printed as a public document. It is a matter of great interest to the people of California, Arizona, and that section of the country, and I believe it is in every way worthy of publication.

Mr. SMOOT. Have the illustrations been taken out?

Mr. FLETCHER. The illustrations will be omitted, except the plates furnished by the Department of Agriculture.

Mr. SMITH of Arizona entered the Chamber.

Mr. SMOOT. I wish to ask the Senator a question. Has the substance of this paper been already published by the Agricultural Department?

Mr. SMITH of Arizona. No; it has not.

Mr. FLETCHER. To only portions of it reference has been made in some of the reports, I think.

Mr. SMOOT. By whom was the paper prepared?

Mr. SMITH of Arizona. By Mr. Tarpey, of California. The question is one affecting the rates of duty in the tariff bill. I hope the Senator from Utah will not raise a question as to the printing of the paper.

Mr. SMOOT. I am raising no objection at all. I am asking a question for information.

Mr. SMITH of Arizona. When the Senator has asked for the printing of a public document I have never gone to the extent of asking him about it or examining him as to what it contains. I will state that it is a matter which affects the people of Arizona, California, and southern Nevada. It is a question as to what is a true currant or a true grape.

Mr. SMOOT. Perhaps the Senator does not understand my position. It is that if the information has already been published by the Agricultural Department, or if it is a part of an Agricultural Department bulletin, there would be objection to having the matter printed as a public document. But the Senator assures me that it is not, and that it was prepared by a gentleman outside. I have not any objection to its being printed as a public document.

The VICE PRESIDENT. Without objection, the paper will be printed as a public document.

The morning business is closed.

THE TARIFF.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BRISTOW. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	Norris	Smith, Ga.
Bacon	Gallinger	O'Gorman	Smoot
Bankhead	Hollis	Oliver	Stephenson
Borah	Hughes	Overman	Sterling
Bradley	James	Page	Stone
Brady	Johnson	Penrose	Sutherland
Brandeggee	Jones	Perkins	Swanson
Bristow	Kenyon	Pomerene	Thomas
Bryan	Kern	Reed	Thompson
Cañon	La Follette	Robinson	Thornton
Chamberlain	Lane	Root	Tillman
Chilton	La	Saulsbury	Vardaman
Clapp	Lippitt	Shafroth	Walsh
Clark, Wyo.	Lodge	Sheppard	Warren
Clarke, Ark.	McCumber	Sherman	Weeks
Colt	McLean	Shields	Williams
Cummins	Martin, Va.	Shively	
Dillingham	Martine, N. J.	Simmons	
Fall	Myers	Smith, Ariz.	

Mr. STERLING. I will state that my colleague [Mr. CRAWFORD] is necessarily absent on business of the Senate.

Mr. McCUMBER. My colleague [Mr. GRONNA] is unavoidably absent. He has a general pair with the senior Senator from Illinois [Mr. LEWIS].

Mr. JONES. I desire to announce that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily absent from the city. He is paired with the Senator from Florida [Mr.

BRYAN]. I make this announcement that it may stand for the day.

The VICE PRESIDENT. Seventy-three Senators have answered to the roll call. There is a quorum present.

Mr. SIMMONS. I understand that the Senator from Kentucky [Mr. BRADLEY] desires to go back to the beginning of Schedule J and offer an amendment at that point.

Mr. BRADLEY. I submit an amendment and ask that it be read.

The VICE PRESIDENT. The Secretary will read the amendment.

The SECRETARY. On page 83 insert a new paragraph, to be numbered 275, in place of paragraph 275, stricken out by the committee, as follows:

275. Hemp, hackled, known as line of hemp, 2½ cents per pound; hemp, not hackled or dressed, 1½ cents per pound; tow hemp, 1½ cents per pound; jute and jute butts, 1½ cents per pound.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Kentucky.

Mr. BRADLEY. Mr. President, I dislike at this late day in the consideration of the tariff bill to detain the Senate, but I will ask a few minutes' time in explanation of the amendment.

Hemp, according to the statement of the Agricultural Department, can be grown profitably (if properly protected by a duty) in three-fourths of the States of the Union. It is especially valuable for cordage, webbing, warp, canvas, and any other article that must have unusual strength and durability. It has been demonstrated that the finest linen in the world can be made of hemp, and not only a fine article of linen, but an article that has a gloss on it of a very silky appearance.

The possibilities of hemp are very great. It was once a thriving industry. There were \$3,500,000 invested in it, 6,000 employees, and an annual wage of \$1,250,000. There were then 417 mills in the United States. There are now less than 20.

The decrease in the production has become absolutely alarming. From 1899 to 1909 there was a decrease of 36.6 per cent in its production, there being in 1899 11,750,000 tons and in 1909 only 7,483,000 tons. Since that time the decrease has continued. There were at one time more than 100,000 acres grown in hemp. Now there are about 12,000.

It was formerly a very prosperous industry in Virginia, Kentucky, and Missouri, but it has now, as I said a moment ago, alarmingly decreased. I desire to submit, without taking the time of the Senate to read, a table showing the imports, value, revenue, and rates of tariff duty under the Dingley law and the Payne law on the different qualities of hemp.

Dingley bill, 1905.			
HEMP, NOT HACKLED.			
Imported.....	long tons.....	3,823	
Value.....		\$606,190	
Revenue collected.....		\$76,462	
Duty, \$20 per ton; ad valorem, 12.61. *			
Payne bill, 1912.			
HEMP, NOT HACKLED.			
Imported.....	long tons.....	3,916	
Value.....		\$843,471	
Revenue collected.....		\$88,117	
Duty, \$22.50 per ton; ad valorem, 10.45.			
Dingley bill, 1905.			
HEMP, HACKLED.			
Imported.....	long tons.....	64	
Value.....		\$15,737	
Revenue collected.....		\$2,598	
Duty, \$40 per ton; ad valorem, 16.49.			
Payne bill, 1912.			
HEMP, HACKLED.			
Imported.....	long tons.....	162	
Value.....		\$50,945	
Revenue collected.....		\$7,330	
Duty, \$45 per ton; ad valorem, 14.39.			
Dingley bill, 1905.			
HEMP, TOW OF.			
Imported.....	long tons.....	21	
Value.....		\$2,907	
Revenue collected.....		\$420	
Duty, \$20 per ton; ad valorem, 14.95.			
Payne bill, 1912.			
HEMP, TOW OF.			
Imported.....	long tons.....	918	
Value.....		\$202,642	
Revenue collected.....		\$20,660	
Duty, \$22.50; ad valorem, 10.20.			

Now, notwithstanding the Payne law increased the rates in the Dingley law, importations increased. It will be asked why this is true, and if the increase of the tariff increases the importations why should we have a tariff? My information is that the reason why it is true is that in Russia and Italy, after the passage of the Payne bill, the wages of the laborers were materially cut down. The question here is, If it has been hard for

us to live under the present tariff, how much harder will it be for us to live without any tariff?

Under the Payne law hemp not hackled imports increased from 3,823 to 3,916 tons; hemp hackled increased from 64 to 162 tons; hemp tow from 21 to 918 tons.

I also submit a table of the rates which were fixed by the present House bill in the way of duties on hemp, and estimates of importations and values, which have been stricken out in the Senate in order to make hemp free:

Hemp, not hackled.			
Importations anticipated.....	tons.....	5,000	
Value.....		\$875,000	
Revenue to be collected.....		\$56,000	
Duty, 6.40 ad valorem, or.....	per ton.....	\$11.20	
Hemp, hackled.			
Importations anticipated.....	tons.....	500	
Value.....		\$150,000	
Revenue to be collected.....		\$11,200	
Duty, 7.47 ad valorem, or.....	per ton.....	\$20.00	
Hemp, tow of.			
Importations anticipated.....	tons.....	1,000	
Value.....		\$195,000	
Revenue to be collected.....		\$11,200	
Duty, 5.47 ad valorem, or.....	per ton.....	\$11.20	

The Senate, however, is determined that even this slight assistance to the farmers shall be denied.

The present duty on hemp is full small, and I hope this rate may be inserted in the present bill.

The importation of foreign hemp from Russia and Italy has very much injured the hemp interest in this country, but that has contributed slightly, comparatively speaking. The chief cause of this injury is the free importation of jute and jute butts. Wages are paid our hemp laborers of 20 cents an hour, while in India, where jute and jute butts are produced, they are paid only 5 cents a day. Jute is a native growth of India and requires no cultivation. The only labor there is in cutting and breaking. Those laborers are composed of men, women, and children, who are ninety-nine one-hundredths naked. They do not even wear slit skirts or radio gowns. [Laughter.] That is the class of people who are destroying a great interest in this country.

The rate of increase in importation of jute and jute butts is absolutely alarming, increasing millions of pounds every year. I have placed in this amendment a duty of 1½ cents per pound on jute and jute butts. I understand our friends on the other side desire some source of revenue. If that be true, this is the place to obtain it. My amendment will yield more than \$3,000,000 per annum, and would in addition save the hemp industry of this country.

But while jute and jute butts are free under this bill, the manufacturers of jute are protected, notwithstanding it is largely manufactured in nearly every penitentiary in the United States; it is in fact one of the chief industries of many of the penitentiaries.

I want to say another thing, and hope I will not offend when I say it, that I have never seen the greediness of public men so manifest as it is upon this proposition, and this applies to many on both sides of this Chamber. Men who favor protection on every other article are in favor of free jute; and why? Because it gives cheap cotton bagging in the South and cheap grain bags in the country generally.

Mr. Dewey, of the Agricultural Department, is my authority for what I say, and he has made a careful and intelligent investigation of this question. He states that with proper protection hemp and flax would in a short while produce all the bagging and grain sacks needed and by reason of competition would eventually be produced as cheaply as they are bought to-day.

The articles which are manufactured from jute are very inferior. It is true you get them cheap; but while a carpet with a hemp warp would last in the olden time for 20 or 30 years, if you have one made out of jute and dance the tango on it once it is gone. [Laughter.] So it is with all articles made from jute. Even grain sacks, I understand, can not be used more than once. Grain sacks can be made from another source. We have in the South what is known as "low-grade cotton," which would make most excellent grain sacks, and a great industry could be developed in that way, and it could also be developed in hemp and flax.

The only market that hemp has is a special and very contracted one. It is confined to certain avenues of trade where it is absolutely necessary—for instance, cordage for use in the Navy. The consequence is that, having but a limited market, there is but a very limited supply of hemp raised in this country.

I want to call attention to one other fact and I am through. Mr. Dewey says that in case of war if this country were cut off from the foreign supply, the supply on hand from foreign countries would not last more than two or three days and we would be left absolutely without remedy.

I do not see why there should be a desire to destroy this industry in this country. It is now only barely living, and this bill will kill it. The House of Representatives in its bill did retain a certain small ad valorem duty, but the Senate committee has stricken that out. Now, I appeal to the Senate to restore a duty on hemp and to place a duty on jute and jute butts. I will ask for a division of the question, first on hemp and then on jute and jute butts. I will also ask for the yeas and nays.

The yeas and nays were ordered.

Mr. BRISTOW. My attention was diverted, and I ask what duty does the Senator want on hemp? Is it on that that the Senator wants a vote?

Mr. BRADLEY. Two and a quarter cents on hackled hemp; on not hackled and tow hemp, 1½ cents; and on jute and jute butts 1½ cents per pound.

Mr. BRISTOW. What paragraph is that?

Mr. BRADLEY. Paragraph 492.

Mr. SMOOT. The present rate is \$20 a ton.

Mr. BRISTOW. The House fixed the rate at half a cent a pound. What is the amendment proposed by the Senator from Kentucky? Please let it be reported.

The VICE PRESIDENT. At the request of the Senator from Kansas the particular amendment which the Senator from Kentucky desires voted on at the present time by yeas and nays will be stated.

The SECRETARY. On page 83, after line 11, it is proposed to insert the following:

275. Hemp, hackled, known as line of hemp, 2½ cents per pound; hemp, not hackled or dressed, 1½ cents per pound; tow hemp, 1½ cents per pound; jute and jute butts, 1½ cents per pound.

Mr. BRISTOW. That seems to be a substitute for a number of paragraphs in the bill that were stricken out.

Mr. BRADLEY. It is a special paragraph.

Mr. BRISTOW. I should like to have it divided so as to vote for a part of it, but I do not want to vote for all of it.

Mr. BRADLEY. I have asked for a division of the question, so that we shall first vote on hemp, and then vote on jute.

Mr. BRISTOW. I should like to vote to retain the House provision.

Mr. BRADLEY. If I fail in this, I am going to offer the House provision.

Mr. SIMMONS. I entirely agree with the Senator from Kansas [Mr. BRISTOW]. I doubt very much whether it is quite regular, if it is competent, to offer an amendment which embraces in its terms four different paragraphs. I think it should be divided, so that each amendment will apply to a particular paragraph.

The VICE PRESIDENT. The Senator from Kentucky is in order. The Senate committee amendment to the House bill has already been agreed to, and all of those paragraphs have for the present passed out of the bill, so the Senator from Kentucky is offering an entirely new paragraph.

Mr. BRADLEY. I asked that the question might be divided, so that we should first vote on hemp and then on jute.

Mr. LODGE. Vote first on the amendment on hemp.

Mr. BRADLEY. It amounts to two separate paragraphs. I have no objection, however, to the vote being first taken on jute.

Mr. SIMMONS. If the Senator desires to strike out four paragraphs and to make one paragraph of it, I shall make no objection to that course.

The VICE PRESIDENT. Those paragraphs have already been stricken out by the action of the Senate.

Mr. SIMMONS. I understand that is the situation.

The VICE PRESIDENT. Those paragraphs are not in the bill at all at the present time.

Mr. SIMMONS. Very well, Mr. President.

The VICE PRESIDENT. And the amendment is to insert a new paragraph.

Mr. SIMMONS. I think, under those conditions, it is all right. The matter was in four paragraphs in the bill, and, as the Chair properly states—I had overlooked that fact—we have stricken out all four paragraphs, and the Senator's amendment makes one paragraph of it, as I understand.

Mr. BRADLEY. That is it.

Mr. SIMMONS. I shall make no objection to that.

The VICE PRESIDENT. The Senator from Kentucky asks for a division of the question on his amendment, on which the yeas and nays have been ordered. In the absence of objection, the amendment will be divided as requested.

Mr. WILLIAMS. Mr. President, just a word, for the Record more than for any other purpose. Jute is already upon the free list and has been upon the free list for quite a while. It was put upon the free list because every effort to raise it here has

resulted in failure, not because we can not raise jute—4 tons of it can be raised to the acre in the Mississippi Valley—but we can not decorticate it; we have not the labor to go into that sort of industry. So much for jute.

Hemp is a singular illustration of an attempt to create an industry by legislation and of its utter failure. There has been a duty on hemp ever since Henry Clay's day; but, notwithstanding all that, the amount of land in hemp has decreased rather than increased, and I understand that in the last 10 or 20 years the decrease has been from about 100,000 acres down to about 12,000. That has occurred under an extravagantly high rate of duty of \$22.50 per ton upon hemp not hackled or dressed, \$45 per ton upon line hemp or hackled hemp, and \$22.50 per ton even upon the tow hemp. These extravagant rates of duty have failed to create this industry, so that, even from a protective standpoint, the thing is a confessed failure.

We found jute and cotton upon the free list. We have placed flax and hemp and wool there, all of them being the raw materials of textile industries, so that we might have a better opportunity to reduce the rates of duty upon the finished product without damaging the manufacturers, as might have been done by a large reduction in the rates on the finished articles without giving free raw materials.

I hope the amendment will be voted down.

Mr. BRISTOW. I ask to have stated the amendment upon which we are to vote, so that I may understand what it is.

The VICE PRESIDENT. The amendment has been divided. The Secretary will state the part of the amendment on which the vote is now to be taken.

The SECRETARY. The first part of the amendment is on page 83, after line 11, where it is proposed to insert the following:

275. Hemp, hackled, known as line of hemp, 2½ cents per pound; hemp, not hackled or dressed, 1½ cents per pound; tow hemp, 1½ cents per pound.

Mr. BRISTOW. Let me inquire. Is that the same duty as that provided in the present law?

Mr. BRADLEY. Yes, sir.

Mr. BRISTOW. The equivalent ad valorem is 14.39 per cent?

Mr. BRADLEY. That is what it is on one of the articles. It is not the same on all of them.

Mr. BRISTOW. The handbook here gives the ad valorem equivalent on importations in 1912 under the present law at 10.45 per cent for hemp not hackled; hemp, hackled, at 14.39 per cent; and hemp tow at 10.20 per cent. Those rates were materially reduced by the House. It seems to me that that is nothing more than a revenue duty, if you are going to impose any duty at all. The highest rate, according to the 1912 importations as estimated by this book, would be less than 14½ per cent ad valorem.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Kentucky [Mr. BRADLEY], which has been read, upon which the yeas and nays have been ordered. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. BANKHEAD (when his name was called). I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the senior Senator from Maryland [Mr. SMITH] and vote "nay." I make this announcement of transfer for the remainder of the day.

Mr. McCUMBER (when Mr. GRONNA's name was called). My colleague [Mr. GRONNA] is unavoidably absent. He is paired with the junior Senator from Illinois [Mr. LEWIS]. I will allow this announcement to stand upon all votes taken to-day.

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Nevada [Mr. NEWLANDS]. I transfer that pair to the junior Senator from Maine [Mr. BURLINGHAM] and vote "yea."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON]. I transfer that pair to the Senator from Oklahoma [Mr. GORE] and vote "nay."

The roll call was concluded.

Mr. BRYAN. I have a pair with the Senator from Michigan [Mr. TOWNSEND] which I transfer to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. OWEN] and vote "nay."

Mr. CHILTON. I have a general pair with the junior Senator from Maryland [Mr. JACKSON], which I transfer to the junior Senator from Nevada [Mr. PITTMAN] and will vote. I vote "nay."

Mr. GALLINGER. I announce the pair between the Senator from Delaware [Mr. DU PONT] and the Senator from Texas [Mr. CULBERSON].

Mr. CLARKE of Arkansas (after having voted in the negative). I understand the junior Senator from Utah [Mr. SUTHERLAND] has not voted, which makes it necessary for me to withdraw my vote, as I have a pair with that Senator.

The result was announced—yeas 36, nays 38, as follows:

YEAS—36.			
Borah	Crawford	Lodge	Poindexter
Bradley	Cummins	McCumber	Root
Brady	Dillingham	McLean	Sherman
Brandeggee	Fall	Nelson	Smoot
Bristow	Gallinger	Norris	Stephenson
Cañon	Jones	Oliver	Sterling
Clapp	Kenyon	Page	Thornton
Clark, Wyo.	La Follette	Penrose	Warren
Colt	Lippitt	Perkins	Weeks
NAYS—38.			
Ashurst	Johnson	Reed	Stone
Bacon	Kern	Robinson	Swanson
Bankhead	Lane	Saulsbury	Thomas
Bryan	Lea	Shafroth	Thompson
Chamberlain	Martin, Va.	Sheppard	Tillman
Chilton	Martine, N. J.	Shields	Vardaman
Fletcher	Myers	Shively	Walsh
Hollis	O'Gorman	Simmons	Williams
Hughes	Overman	Smith, Ariz.	
James	Pomerene	Smith, Ga.	
NOT VOTING—21.			
Burleigh	Gore	Owen	Sutherland
Burton	Gronna	Pittman	Townsend
Clarke, Ark.	Hitchcock	Ransdell	Works
Culbertson	Jackson	Smith, Md.	
du Pont	Lewis	Smith, Mich.	
Goff	Newlands	Smith, S. C.	

So Mr. BRADLEY's amendment was rejected.

The VICE PRESIDENT. The question is on the second subdivision of the amendment, which will be stated.

The SECRETARY. "Jute and jute butts, 1½ cents per pound."

Mr. BRADLEY. On that I ask for the yeas and nays.

The VICE PRESIDENT. The request does not seem to be seconded by one-fifth of the Senators present. The question is on agreeing to the second subdivision of the amendment.

The amendment was rejected.

Mr. McCUMBER. Mr. President, I offer an amendment to take the place of paragraph 272, just stricken out by the committee.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 83, in place of the committee amendment, on line 12, it is proposed to insert, as paragraph 272, the following:

Flax straw advanced in condition or value by manufacture, but not hackled or dressed, one-half of 1 cent per pound.

Mr. WILLIAMS. I suppose a point of order would lie to this amendment. We have been over this flax matter and have voted on it, and the Senate has already adopted the amendment as to this paragraph. We went back to hemp this morning, because we passed it over to accommodate the Senator from Kentucky [Mr. BRADLEY]. I do not care to make any technical point; but I do submit to my friend from North Dakota—

The VICE PRESIDENT. The Chair is going to rule that this is identical with the original paragraph as passed by the House.

Mr. WILLIAMS. I said I would not make the point of order, but I thought there ought to be an end to litigation somewhere. The Senate has dealt with the matter once.

Mr. McCUMBER. I wish to say to the Senator, if the Chair please, that the Senator is wrong, and that the amendment is not at all identical with the language which was stricken out, as I can easily demonstrate.

Mr. WILLIAMS. That was not my point.

Mr. McCUMBER. The facts are these: One paragraph has been stricken out by the committee. I do not seek to amend that paragraph. I propose to put in an entirely new paragraph of an entirely different character.

Mr. WILLIAMS. But the point I was making was not that this has been stricken out by the committee, but that it has been voted on by the Senate. We dealt with this paragraph, dealt with it fully, and, in fact, devoted a day to it.

Mr. McCUMBER. That paragraph is entirely out. I am not seeking to amend it. Paragraph 272 has gone out. I am now inserting another paragraph, to be numbered 272, of an entirely different character. I should like to have the attention of the chairman of the committee, but, as he is not present, I can not delay my statement upon this matter.

I wish the Senator from Mississippi would look at this subject from the producer's standpoint. I shall not attempt to go over any of the argument I made the other day. I do wish to say, however, that I believe that with any kind of proper protection of the flax industry the production of spinning flax can

be made profitable in the United States. There seems to be almost a total lack of information as to what is meant by the terms "hackled tow" and "unhackled tow" as used in the bill, what is tow and what is not tow, when it ceases to be straw, and when it becomes the tow that is spoken of in the bill.

I am perfectly free to admit that the portion of the bill covering this subject was not intended to and did not, except incidentally, cover the product upon which I seek to have protection.

I have here the ordinary flax, so that you may understand the processes. It is a flax that is cut with the seed on it. It goes through the separator and these seeds are taken out. As it goes through the separator it is, of course, unfitted for any kind of spinning purposes except for the coarsest kind of fabrics. They do make out of that, I believe, the basis or the foundation for linoleum.

The next process, if we were going to make spinning flax out of this, would be to lay it out where the sun and the rain would fall upon it. That is called the retting, or rotting, process. That would separate the wood from the fiber.

In the ordinary manufacturing process, after that is done, it is taken to the mill and then the scutching process follows. In other words, we have a fiber with some of the woody pulp still on it. That is scutched off with a large knife, the same as the hair and other stuff is taken off of leather, through a scutching process. That is the third process.

Between those processes comes the hackling process, which is a combing out of the several strands. They first go through a coarse comb and then through a finer comb, until the material is fitted for weaving.

To show that this flax can be properly made from an American product by a new process that has no rotting or retting whatever in it, but is done entirely through the mill, I exhibit here a little bunch of flax straw just as it is cut very low. There is no retting process whatever. That, however, has gone through a new process that takes the woody pulp from it, and then it has gone through the process of hackling this portion, or combing it out. Then it is bleached, either in the sun or mechanically. The bleaching will cost in the neighborhood of about 1 cent a pound—a little under rather than above it.

I am not seeking, by the amendment I propose, to touch this product at all. If you think it needs too great a duty to justify the attempt to produce flax fiber in this country, well and good. But remember, we have a valuable product. That product is worth \$450 a ton.

Here is another product. I will take next the Belgian product. It is much shorter, but it is worth \$350 a ton. This is pulled by hand from the ground; it is hackled and scutched, and is ready for spinning linen. It can be bleached by the sun or artificially, at 1 cent a pound.

Here we have a very much longer fiber, that is pulled in Germany. It is hackled and scutched flax, pulled by hand from the ground, ready for spinning. That, also, can be bleached for about a cent a pound.

I have here another American product which you will see is fully as fine as that produced in Germany, and of a much longer fiber than that which is produced in Belgium. That is worth, also, \$450 per ton.

I have here another product of the United States which is made from a western flax. It is not very well taken care of, but it is worth over \$300 a ton.

The amendment does not touch this product. Here is the matter to which I wish to call the attention of the Senator from Mississippi. I know he is too far away to see what it is, but this comes from the ordinary straw that we raise out in North Dakota. In other words, it goes through the separator, through the thrashing machine. It is badly broken up. The straw is then hauled to a little mill with corrugated rollers. Those corrugated rollers break the straw into very small particles, and to a great extent separate the wood. This is unfit for spinning. You could not use it for the purpose of manufacturing any kind of a fabric. It is worth, as I state, in the neighborhood of twenty to twenty-three dollars a ton in that condition. We have a market for it, with a \$10 per ton protection, that justifies our people in hauling it to the mills, and justifies the mills in running it through the corrugated rollers and advancing it to this stage. Without that protection we could not pay the freight on it and haul it to the place where it is used in the manufacture of different kinds of cooling apparatus, in refrigerator cars, and so forth. It is pounded down very hard and compact. It keeps wonderfully dry. It will last forever. It does not rot, and will give the cooling and at the same time will not add very much to the weight. It has taken the place of charcoal and other substances in the manufacture of refrigerator cars.

We can use this article for that purpose. That is the one thing that I want protected to a sufficient extent. I am not going to call for a roll call on the amendment; but it does seem to me that when the committee reconsider this matter, if they see just what I am trying to protect and that it is not in what may be called the linen industry in any way, they will give it the consideration it deserves.

I simply ask for a vote upon the amendment I have offered.

The VICE PRESIDENT. The Chair wishes to ask the Senator from North Dakota whether the House provision was not applicable to the very article to which he has been addressing himself?

Mr. McCUMBER. No. I am not speaking here of flax, as it is called. The word "flax" relates to the fiber. The language of my amendment is "flax straw advanced in condition or value by manufacture, but not hackled or dressed."

The VICE PRESIDENT. The Chair did not catch the word "straw."

The question is on the amendment proposed by the Senator from North Dakota.

The amendment was rejected.

Mr. BRADLEY. Mr. President, I was just going to propose another amendment in regard to hemp when the Senator from North Dakota secured recognition.

I now offer an amendment restoring the duty provided by the House bill. I shall not ask for the yeas and nays on it.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 83, it is proposed to insert a new paragraph, as follows:

275½. Hemp, and tow of hemp, one-half cent per pound; hemp, hackled, known as "line of hemp," 1 cent per pound.

The VICE PRESIDENT. The Chair rules that that has already been passed on once in the Committee of the Whole, and the amendment is not in order.

Mr. BRADLEY. I was not here at the time that was done. I was ill, and it was especially agreed that it should be passed over in order that I might take it up on my return.

Mr. WILLIAMS. Will the Senator yield to me? The Senator from Kentucky is right about this hemp paragraph. It was passed over because he at that time was sick. We agreed that we would consider it then, but that whenever he came in he might move any amendment to it he chose. That was done by unanimous consent.

The VICE PRESIDENT. The question, then, is on agreeing to a motion to reconsider the vote whereby the Senate committee amendment was adopted striking out paragraph 275.

The motion to reconsider was agreed to.

The VICE PRESIDENT. The question now is on striking out the paragraph, which is the same language exactly as the amendment of the Senator from Kentucky. [Putting the question.] The ayes seem to have it.

Mr. BRADLEY. I ask for a division.

Mr. WILLIAMS. If we are going to have a division, I would rather have the yeas and nays.

The yeas and nays were ordered.

Mr. POINDEXTER. I should like to have the question stated by the Secretary.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 83 the Committee on Finance reported to strike out lines 16 and 17, in the following words:

275. Hemp, and tow of hemp, one-half cent per pound; hemp, hackled, known as "line of hemp," 1 cent per pound.

The VICE PRESIDENT. The Secretary will call the roll on agreeing to the amendment of the committee.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I make the same announcement of my pair and its transfer as on the previous vote. I vote "yea."

Mr. CLARKE of Arkansas (when his name was called). I have a pair with the junior Senator from Utah [Mr. SUTHERLAND]. I see that he is not present, and I withhold my vote.

Mr. SHEPPARD (when Mr. CULBERSON's name was called). My colleague [Mr. CULBERSON] is unavoidably absent. He is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

Mr. LEWIS (when his name was called). I make a transfer of my pair to the Senator from North Carolina [Mr. SIMMONS] and vote "yea."

Mr. McCUMBER (when his name was called). I transfer my pair as before and vote "nay."

Mr. REED (when his name was called). I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. OWEN] and vote "yea."

Mr. THOMAS (when his name was called). I make the same transfer as before and vote "yea."

The roll call was concluded.

Mr. CHILTON. I transfer my pair with the junior Senator from Maryland [Mr. JACKSON] to the junior Senator from South Carolina [Mr. SMITH] and vote. I vote "yea."

Mr. BACON (after having voted in the affirmative). I note that the senior Senator from Minnesota [Mr. NELSON] has not voted. I therefore, having a general pair with him, withdraw my vote.

The result was announced—yeas 38, nays 36, as follows:

YEAS—38.

Ashurst	Kern	Pomerene	Stone
Bankhead	Lane	Reed	Swanson
Bryan	Lea	Robinson	Thomas
Chamberlain	Lewis	Saulsbury	Thompson
Chilton	Martin, Va.	Shafroth	Tillman
Fletcher	Martine, N. J.	Sheppard	Vardaman
Hollis	Myers	Shields	Walsh
Hughes	O'Gorman	Shively	Williams
James	Overman	Smith, Ariz.	
Johnson	Pittman	Smith, Ga.	

NAYS—36.

Borah	Crawford	Lodge	Root
Bradley	Cummins	McCumber	Sherman
Brady	Dillingham	McLean	Smoot
Brandegee	Fall	Norris	Stephenson
Bristow	Gallinger	Oliver	Sterling
Catron	Jones	Page	Thornton
Clapp	Kenyon	Perkins	Warren
Clark, Wyo.	La Follette	Poin Dexter	Weeks
Colt	Lippitt	Ransdell	Works

NOT VOTING—21.

Bacon	Goff	Newlands	Smith, S. C.
Burleigh	Gore	Owen	Sutherland
Burton	Gronna	Penrose	Townsend
Clarke, Ark.	Hitchcock	Simmons	
Culberson	Jackson	Smith, Md.	
du Pont	Nelson	Smith, Mich.	

So the amendment of the committee was agreed to.

The SECRETARY. The next committee amendment passed over is, on page 87, in Schedule K, wool and manufactures of—

Mr. OLIVER. I understood that we were to take up paragraph 145 to-day.

Mr. THOMAS. Is the Senator from Iowa [Mr. KENYON] present?

Mr. BRISTOW. He will be here in a short time.

The VICE PRESIDENT. Paragraph 145, aluminum, is before the Senate.

Mr. OLIVER. Mr. President, on the 9th of last month the junior Senator from Iowa [Mr. KENYON] delivered an address on the pending bill. The Senator's speech takes up 13 pages of the CONGRESSIONAL RECORD, out of which 8 pages are devoted to a discussion of the aluminum industry, or rather to a wholesale arraignment of the Aluminum Co. of America. The Senator during his career has had large experience in prosecuting malefactors, or supposed malefactors, and with varied success has taken an active part in the enforcement of the Sherman antitrust law. But I venture to say that never during his entire professional career has the Senator, when representing the prosecution, delivered an address to judge or jury in which all of the facts or alleged facts that would be damaging to the accused were brought into prominence and everything that could be said in reply to them was minimized or suppressed to the extent that it has been done in this instance. I would be failing in my duty to my fellow townsmen, pioneers in a great industry, if I allowed to pass unchallenged many of the statements which the Senator so recklessly made and did not endeavor to correct, as far as possible, the false impressions he left on the minds of those who heard him.

I listened with great attention to what the Senator from Iowa said from the beginning to the end of his speech. I do not know whether he intended it or not, but I am certain that when he concluded every Senator who listened to him and who had not studied the question was under the impression that the Aluminum Co. of America was substantially without a competitor in this country, not only in the manufacture but in the sale of its product, for the Senator entirely ignored the fact that during practically all the years it has been in business it has been subject to the open and vigorous competition of the product of European plants. The manufacture of aluminum in Europe has more than kept pace with the progress of the industry in the United States, so that to-day the European plants produce approximately 100,000,000 pounds annually, while the normal demand of Europe amounts only to about one-half that figure. The European producers are protected in all parts of the world except in the United States by their cartels and syndicate agreements, which are favored by their Governments and form the universal method of doing business in con-

tinental Europe in all the great industries. As a result of this the United States is a favorite field which the British and continental manufacturers use as a dumping ground for their surplus product.

Statistics show that the total imports of aluminum and its products during the fiscal year ending June 30, 1912, amounted to 15,646,405 pounds, upon which duties were collected amounting to \$1,122,252.87, and to show the astounding increase of these importations, notwithstanding the imposition of what the Senator from Iowa would term a prohibitive duty, I submit a statement taken from the Government records of the aluminum imported into the United States for the fiscal year ending on the 30th of June last. The published statements, I will say, only come up to the 30th of June, 1912. It shows that there were imported during that period 28,158,525 pounds; that the value thereof was \$4,961,297; that the unit value of these imports showed an average price of 17.6 cents per pound, and that the duties collected amounted to \$2,196,555.03. The average price charged during the whole of 1912 by the Aluminum Co. of America to its customers was 18.11 cents per pound, showing a difference between the price that company charged and the average import price of less than 1 cent a pound, and still the Senator from Iowa would have us believe that the company has uniformly held the price at just a little above or a little below the amount of duty over and above the foreign price.

The amount of duties collected on this commodity during the fiscal year was \$2,196,555.03. What will this amount to and how greatly will the development of the industry in this country be retarded if this duty is reduced to 2 cents a pound, or as proposed by the Senator from Iowa, swept away altogether? As a revenue proposition it seems like insanity to surrender this revenue unless it is proposed that the Government in the future is to depend entirely upon the income tax for its revenue. I have here a statement in detail, which I ask leave to insert in the RECORD.

Importations of aluminum into the United States, fiscal year ending June 30, 1913.

	Quantity in pounds.	Value.	Duties.
First quarter:			
Crude.....	3,020,700.2	\$368,778.00	\$211,449.01
Plates, sheets, bars, etc.....	118,962.5	22,610.00	13,085.90
Manufactures of.....		75,333.00	33,908.40
Second quarter:			
Crude.....	9,374,776	1,520,468.00	656,234.32
Plates, sheets, bars, etc.....	343,023.5	71,829.00	37,732.59
Manufactures of.....		93,932.00	42,278.40
Third quarter:			
Crude.....	7,300,702	1,190,310.00	511,049.14
Plates, sheets, bars, etc.....	474,580	107,615.00	52,247.81
Manufactures of.....		105,971.50	47,687.18
Fourth quarter:			
Crude.....	6,945,934	1,168,024.00	486,215.38
Plates, sheets, bars, etc.....	579,447	145,436.00	63,739.17
Manufactures of.....		90,950.50	40,927.73
Grand total.....	28,158,525.2	4,961,297.00	2,196,555.03

It will be seen from this that during this one year the imports amounted to just a little more than 70 per cent of the total production of the Aluminum Co. of America, and in the face of this the Senator from Iowa contends that this company has an absolute monopoly of the sale of this article in the United States of America.

Aluminum was discovered in 1854, but, owing to the difficulty of its extraction, from that date to the formation of the Pittsburgh Reduction Co. in 1888, the total production for the entire 34 years did not exceed 200,000 pounds, which sold for \$8 a pound and even higher. In 1888 a group of Pittsburgh business men put up a fund amounting to \$20,000 for exploiting the patent and process of Charles M. Hall for the manufacture of aluminum, holding an option on the patent in the name of a small company formed for that purpose, and styled the Pittsburgh Reduction Co. In 1889 the Hall patent was acquired, and under the terms of the option the Pittsburgh Reduction Co. was made a company with \$1,000,000 capital stock, of which about one-half was paid in cash, and the remainder issued for the patent. There has been some controversy as to the exact amount of stock that was issued for this patent, but it makes little difference, for even if the patent right was bought in for the entire amount of the capital stock, in this case it certainly will be acknowledged that it was worth all and more than could possibly be charged for it. In 1890, \$600,000 of new stock was issued for cash at par, and in 1905, \$2,200,000 more of the new stock was issued, of which \$1,200,000

was paid for in cash and the remainder issued as a stock dividend. The company has since declared other stock dividends, so that the total outstanding stock is now \$18,750,000, and it has a surplus to-day which makes its net assets worth about \$30,000,000. In 1909 the name of the company was changed from the Pittsburgh Reduction Co. to the Aluminum Co. of America, but no other change was made in its organization. It was a change of name and no more. When this company started in business in 1890 aluminum was selling at \$2.50 per pound. It was regarded more as a toy than anything else and there was but little demand for it as an article of general usefulness; but the successive reductions in price which were made by the Aluminum Co. of America brought about a steadily increasing demand, and in 1893 the output of the company amounted to 215,000 pounds. This was sold at about 75 cents per pound. It was not until 1896 that the output exceeded 1,000,000 pounds. From 1896 to 1912 the output gradually increased from 1,100,000 pounds in 1896 to about 40,000,000 pounds in 1912. This increased output was accompanied by continuous and successive reductions in price. As I have stated, the average price in 1890 was about \$2.50 per pound, and in 1912 the average price of all aluminum sold by the Aluminum Co. of America was 18.11 cents per pound.

The Hall patent expired in 1906, but the company still had a virtual monopoly on the manufacture by reason of its license under the Bradley patent, which expired in 1909. Since the expiration of that patent, while they have had an actual monopoly of manufacture, there has been no legal monopoly, and the field has been free to anybody who might wish to enter it. There are two reasons why no competitor has heretofore appeared in the field. One is the enormous amount of capital required, and the other the great difficulty in securing water-power privileges, which are an absolute necessity to the successful and economic conduct of the industry; but there is now in course of construction in the State of North Carolina a plant which, when completed, will be an active and strong competitor of the Aluminum Co. of America. I will refer to it fully later on.

The speech of the Senator from Iowa was nothing more or less than an indictment of the officers and owners of the Aluminum Co. of America. Almost every crime known to the business world was laid at their doors. The Senator was almost dramatic in his effort, and his speech undoubtedly produced a profound effect on those who listened to him. I can not hope to compete with him in his manner of presentation of these charges, but I do expect by laying before the Senate the cold facts to overcome the impression he produced.

Of all things charged against this company, there are three, and three only, of which the company has been guilty; not one of the others is borne out by the facts. It is true, first, that this company has to-day a monopoly of the production—not the sale—of aluminum in the United States; second, that the stockholders have made a very large amount of money out of the business; if business success is a crime and enterprise and energy are worthy of bonds, then these men are criminals—and not otherwise; and, third, that the Government brought suit in the District Court of the United States for the Western District of Pennsylvania, charging it with being a monopoly in violation of the Sherman Antitrust Act, and that the company consented to a decree enjoining it from doing certain specified acts; but it never acknowledged that it violated the Sherman law, and the decree does not so find.

In his speech the Senator from Iowa states as facts all of the allegations contained in the bill in equity filed by the Government, but makes no allusion whatever to the defendant's answer, which specifically denies every one of the alleged acts so far as they constitute a violation of the Sherman Act, either in letter or in spirit.

I will now proceed to examine these different allegations in some detail:

First. The Senator says it is quite apparent that the Aluminum Co. has a monopoly as to bauxite. Now, I say, Mr. President, that there is nothing whatever upon the record which shows that this company has a monopoly or anything approaching a monopoly as to bauxite. In the development of its business the men who guided the affairs of the company wisely decided that as far as possible they ought to obtain sufficient reserves of raw material to supply their wants for some years ahead at least. In their efforts to do this they have to-day control of enough bauxite to last them for not more than 10 years ahead at their present rate of production. There is plenty of bauxite in the country to supply all comers, but it must be developed before it can be used. In fact, the Government's bill of complaint, while it charges this company with endeavoring to obtain control of this raw material, practically

nullifies this charge by the following statement—I read from the bill as filed by the Department of Justice:

Furthermore, petitioner does not now insist that it was unlawful within itself for defendant by the various purchases above described to acquire and hold so large a per cent of the bauxite known to exist in the United States suitable for the manufacture of aluminum. What other deposits of bauxite there may be in the United States, and the character and extent thereof, it is impossible now to state; but petitioner is advised that there are practically inexhaustible quantities abroad, which may be mined and shipped into the United States at such prices as would enable independent companies to successfully compete with defendant were all other restraints removed from the aluminum industry. Hence, petitioner does not attack defendant's ownership of the various deposits of bauxite to which it now has title.

Now, while the Senator from Iowa alleges this charge against the Aluminum Co., he makes no mention of its virtual withdrawal by the Department of Justice.

While we are on the subject of bauxite, I may as well add another chapter. In February last, after the termination of the suit, the Aluminum Co. desired to add still further to its reserves of bauxite by the purchase of certain property in Arkansas containing bauxite ore. They were about to establish another plant in Tennessee, which is now in course of construction, and the bauxite properties which the company then owned and controlled were not sufficient in their opinion to insure a satisfactory supply for the new plant, in addition to the old ones. As a matter of precaution, therefore, they wrote to the Attorney General stating their intention and submitting estimates and tables, together with the report of eminent geologists and engineers, to the effect that the bauxite which they controlled would be exhausted at the present rate of consumption within 10 years, and requesting the Attorney General to advise them, as far as he could, whether or not they would be safe in purchasing this additional supply of bauxite. In due course they received a reply from the department, which I will ask the Secretary to read.

The PRESIDING OFFICER (Mr. WALSH in the chair). There being no objection, the Secretary will read as requested.

The Secretary read as follows:

DEPARTMENT OF JUSTICE,
Washington, D. C., July 23, 1913.

Mr. ARTHUR V. DAVIS,
President Aluminum Co. of America, Pittsburgh, Pa.

DEAR SIR: A variety of circumstances have prevented me from sending a reply to your letter of February 20 last, asking whether the purchase by your company of 550 acres of bauxite land lying in the State of Arkansas and belonging to the Sawyer-Austin Lumber Co. will violate the decree in the case of the United States v. Aluminum Co. of America and others, in the United States District Court for the Western District of Pennsylvania. You state, in some detail, the facts and circumstances as you understand them.

The policy of this department inhibits us from giving opinions which could be regarded as binding upon the Government, except to the President and heads of departments. You will readily appreciate how impossible it would be for us to advise the various corporations with which the Government has had or may have litigation concerning the details of their business.

However, it seems permissible to say that, nothing else appearing except what you have written, no reason now occurs to me for thinking that what you propose to do would be in violation of the decree.

Very respectfully, for the Attorney General,

J. A. FOWLER,
Assistant to the Attorney General.

Mr. OLIVER It will be seen from this, Mr. President, how exceedingly flimsy is this charge that the Aluminum Co. ever sought to control or does control bauxite properties to any further extent than is absolutely necessary for the legitimate supply of its wants. There is no doubt in my mind that there is plenty of bauxite in this country to supply all possible wants for generations to come. The necessity for it will induce exploration, and exploration will produce the mineral; otherwise, all users, the Aluminum Co. included, will be driven to France for their supply. I understand that in that country the supply is practically unlimited; that it is easily mined and is obtained at an exceedingly low cost as compared with the cost of mining it in Arkansas, where the deposits occur in pockets and not in large bodies.

The Senator from Iowa says, quoting from the Government's bill:

The history of the aluminum cooking utensil business in the United States is a history of shipwrecks caused chiefly by the arbitrary, criminal, and unfair dealing of the Aluminum Co. of America.

Even in his quotations the Senator is unfair. I will read the exact language of the bill:

The history of the aluminum cooking utensil business in the United States is a history of shipwrecks—possibly in part caused by inefficiency, necessity of experiment, and lack of capital, but caused chiefly or contributed to by the arbitrary, discriminatory, and unfair dealings of the defendant.

It will be noted that the Government in its bill modifies greatly its statement with regard to the unfair dealings of this company with reference to the cooking utensil industry. The Senator, however, having first emasculated the sentence, allows

it to go into the RECORD practically without comment. In its answer the defendant company absolutely and specifically denies any charge of discrimination or of unfair treatment. It says—

the defendant does not now and has not in the past unlawfully, substantially, or in any degree restrained or monopolized the interstate trade and commerce in cooking utensils. Many of the manufacturers of aluminum cooking utensils in the United States, in which the defendant company has no financial interest, have been prosperous; in fact they have all been prosperous where they were efficiently managed, had an adequate capital, and manufactured utensils of good quality. It is true that in the early history of the cooking utensil business in the United States many of the persons who undertook to manufacture the same produced aluminum cooking utensils of such poor quality that aluminum cooking utensils were being discredited and the market therefor largely destroyed, and it became necessary for the defendant company to embark in the manufacture of cooking utensils in order to produce manufactured articles which would be satisfactory to the consumers and thus develop a market for aluminum, and the development of the cooking utensil business in the United States has been largely, if not solely, the result of the defendant's efforts.

The Aluminum Cooking Utensil Co. was started by the Aluminum Co. of America in 1902. There was submitted to the United States Government a list of 11 companies manufacturing aluminum cooking utensils exclusively, 10 of which started in business since the Aluminum Cooking Utensil Co. was formed, and all of which have always obtained, and still do obtain, their aluminum from the Aluminum Co. of America, and whose business has constantly increased. Since this list was submitted to the Government there have been several other cooking utensil companies started, all of which are customers of the Aluminum Co. of America, and none of them have complained of bad treatment by that company.

Now, with regard to aluminum castings; it is true that the Aluminum Co. of America owns about 1,600 out of the 4,000 shares of the capital stock of the Aluminum Castings Co. They do not control that company, and they are under an express contract with the majority stockholders that they will never buy from anybody sufficient shares to give them control. The business is conducted by the majority stockholders, who look out for their own interests, and the Aluminum Co. in its answer to the bill expressly denies that under any circumstances they give this company any preference of any kind over their other customers. That the Aluminum Castings Co. does not by any means control or even dominate the business of the country in such castings is shown by the fact that at the time the suit was brought by the Government there were in the United States 322 foundries manufacturing aluminum castings, and to-day there are more than that number. Each of these foundries is continually increasing the amount of its product, and they are all prosperous. The company absolutely denies—and I believe every word they say—that either the Aluminum Castings Co. or the Aluminum Utensils Co. has been favored as to deliveries over other customers. As a matter of fact, during the shortage in aluminum in the latter part of 1912, to which I will refer hereafter, the company cut down its shipments to these two companies 50 per cent in order to supply aluminum to others, and the books of the company show that the companies in which the Aluminum Co. is not interested fared better during that shortage than the companies in which it is interested. The same thing exactly will apply to aluminum goods and novelties. The Aluminum Co. of America owns only about 31 per cent of the capital stock of the Aluminum Goods Manufacturing Co. That company is managed and conducted, as are the other companies, in an independent manner by the majority of the stockholders. The Aluminum Co. of America denies that it furnishes crude aluminum to that company at any unduly preferential rates, or at rates that would enable that company to underbid its competitors.

Mr. President, in my time it has been my lot to read many legal documents, but I feel justified in saying that in all my experience never have I come across a paper bearing upon an important question which is so weak in all its essential elements as the bill in equity filed by the United States Government against this company. It alleges everything; it specifies nothing. With the exception of five contracts which it recites, and which it alleges to be in restraint of trade, it deals in generalities only.

Sometime during the summer or fall of 1912 the newspapers reported that the Government was preparing to bring suit against the Aluminum Co. for violation of the Sherman Act. Upon receiving this information Mr. Davis, president of the company, informed the Department of Justice that the company was not knowingly violating the law in any way whatever; that if it was the officers would like to be informed of it and would rectify whatever in the opinion of the Attorney General was wrong; and they voluntarily opened up to the department

all of their papers, books, contracts, and everything that had been done from the very commencement of the company's existence. It was a wholesale show-down. And I may here add that it was by this means that the department obtained the information which enabled it to include in its bill the only specific acts with which the company was charged, namely, the Norton agreement, the General Chemical Co. agreement, the contract of the Pennsylvania Salt Manufacturing Co., and the Kruttschnitt-Coleman, and the A. J. A. G. agreements. An examination of the bill in equity will show that outside of these agreements everything in the bill consists of general statements, of which there is no proof whatever, not made under the sanction of an oath, and not one of which recites any specific act; and this fact assumes all the more prominence when we consider that the Government goes into extreme detail with regard to the five agreements to which I have alluded. Does it not follow from this that if they had the facts as to the other things charged they would be equally specific with regard to them? In reality they had no facts and they had no case, but the Department of Justice having embarked upon the enterprise, and having announced its intention to bring suit, was unwilling to abandon it and insisted upon filing its bill.

The company made answer denying all the allegations in the bill so far as they charged violations of the Sherman Act, and where the facts were admitted, as in the case of the agreements I have mentioned, they denied that they constituted violations of that act. Finally the Government submitted a decree, to which the defendant's officers willingly consented, for it enjoined them from doing nothing that they had been doing. It directed the cancellation of the A. J. A. G. agreement, which had been terminated by the company's own action more than a year before the suit was brought or contemplated. It also directed the cancellation of the three contracts relating to a limitation of the use of bauxite on the part of the Norton Co., Pennsylvania Salt Manufacturing Co., and the General Chemical Co., but these contracts had also been terminated before the suit was brought, after a conference with the officers of the Department of Justice. The company had also purchased some stock in one of its subsidiary companies from Messrs. Kruttschnitt and Coleman, and in connection with the purchase had obtained from these two men a contract by which they had agreed not to engage in the manufacture of aluminum east of Denver, Colo., for a term of 20 years. The decree directed a cancellation of this contract, and the company complied therewith. I am not enough of a lawyer to say whether a contract like this is a violation of the Sherman Act or not. I do know that it is not so many years since I entered into a contract of that kind myself, by which I agreed for 10 years not to engage in a certain line of business within certain specified limits. This contract was drawn up by the present senior Senator from Iowa, and I know that at that time I never thought I was engaging in an illegal transaction, and I do not believe that the Senator from Iowa considered that he was participating in one. Beyond the cancellation of agreements, all of which had already been canceled, the decree, as I have stated, simply enjoined the Aluminum Co. and its officers from doing a great number of things which they never had done, and were perfectly willing to be enjoined from doing, because they did not intend to do them at any time thereafter. It might be asked why they did not fight if they had such confidence in their position. The answer to that is plain. There was no denying the fact that the company had, and still has, a monopoly of the manufacture of aluminum, and being a monopoly they realized that it was but reasonable that their operations should be subject to closer scrutiny than that of other industries in which competition exists. But as it stands, the injunction is a mere *brutum fulmen*. It aimed at nothing and it hit nobody.

One of the most remarkable things about this remarkable decree is its conclusion. Both the lawyers and the court must have been in grave doubt as to the right to issue any injunction whatever, because after formulating the order by which they directed the defendant to refrain from doing a lot of things which it had not been doing, they limited the provisions of the decree by a set of provisos which effectually removed any sting that might have been concealed in it. They are so unique that I will read them:

Provided, however, That nothing contained in this decree shall be construed to prevent or restrain the lawful promotion of the aluminum industry in the United States.

Provided further, That nothing herein contained shall obligate defendants to furnish crude aluminum to those who are not its regular customers to the disadvantage of those who are whenever the supply of crude aluminum is insufficient to enable defendant to furnish crude aluminum to all persons who desire to purchase from defendant, but this proviso shall not relieve defendant from its obligation to perform all its contract obligations, and neither shall this proviso, under the conditions of insufficient supply of crude aluminum referred to, be or con-

stitute a permission to defendant to supply such crude aluminum to its regular customers mentioned with the purpose and effect of enabling defendant or its regular customers, under such existing conditions, to take away the trade and contracts of competitors.

Provided further, That nothing in this decree shall prevent defendant from making special prices and terms for the purpose of inducing the larger use of aluminum, either in a new use or as a substitute for other metals or materials.

Provided further, That nothing in this decree shall prevent the acquisition by defendant of any monopoly lawfully included in any grant of patent right.

Provided further, That the raising by defendant of prices on crude or semifinished aluminum to any company which it owns or controls or in which it has a financial interest, regardless of market conditions, and for the mere purpose of doing likewise to competitors while avoiding the appearance of discrimination, shall be a violation of the letter and spirit of this decree.

Then, at the end follows its remarkable conclusion. I quote:

This decree having been agreed to and entered upon the assumption that the defendant, Aluminum Co. of America, has a substantial monopoly of the production and sale of aluminum in the United States, it is further provided that whenever it shall appear to the court that substantial competition has arisen, either in the production or sale of aluminum in the United States, and that this decree in any part thereof works substantial injustice to defendant, this decree may be modified upon petition to the court after notice and hearing on the merits, provided that such applications shall not be made oftener than once every three years.

It is further ordered that the defendants pay the cost of suit to be taxed.

Now, if this means anything, it must mean that if the Aluminum Co. had not had a monopoly of its manufacture, the Government would have had no case at all, and no injunction would then have been granted; and it specifically provides that if substantial competition arises the court will modify the decree.

That there is now "substantial competition" in the sale of aluminum I have already shown. I will now say something about the coming competition in its manufacture. On page 449 of the briefs and statements filed with the Senate Committee on Finance is a brief of the Southern Aluminum Co., of Whitney, N. C.

I am sorry the Senators from North Carolina are not in the Chamber, because much of what I am going to say is based upon information received from one of them. In it the Southern Aluminum Co. states that it is starting the construction of a plant for the manufacture of aluminum at Whitney, N. C., utilizing the water power of the Yadkin River. The building of the plant and the development of the water power will cost approximately \$10,000,000. The plant when completed will offer employment to approximately 1,500 workmen, which will in turn necessitate the building of an industrial town. It then goes on to give some statistics with regard to the manufacture of aluminum, most of which have already been presented to you, and to pray for a specific duty on the product.

Within the last few days I have been informed by the junior Senator from North Carolina that the outlay of this company will be from \$12,000,000 to \$15,000,000 instead of \$10,000,000; that they are prosecuting their work with great diligence, and that they think they have discovered extensive deposits of bauxite in their near vicinity.

In this connection I send to the Secretary's desk and ask to have read an article concerning this enterprise from the *Manufacturers' Record*, a southern industrial paper published at Baltimore, under date of the 21st ultimo.

The PRESIDING OFFICER. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

THE ALUMINUM INDUSTRY IN THE SOUTH AND THE TARIFF ISSUE.

The announcement has been made by the Southern Aluminum Co., which is now building a plant at Whitney, N. C., to cost between \$10,000,000 and \$12,000,000, that if aluminum is put on the free list, as has been proposed in the tariff discussion, the company will abandon its undertaking, and thus North Carolina would lose the establishment of the largest industry ever started in that State.

This North Carolina enterprise, while it has some American capital, is largely financed by French people, some of whom are interested in the great aluminum plants in Europe. The extent of the aluminum industry in this country and abroad is not generally understood. The United States is already producing 40,000,000 pounds a year, while there are a large number of aluminum plants in various parts of Europe, including France, Germany, Sweden, and other countries, where water power at a low cost is available and where vast supplies of bauxite can be had at a low figure. Many of these foreign plants, if not all of the leading ones, are, it is said, syndicated and their financial operations controlled by banking houses. Some of them are able to secure water power as low as \$6 per horsepower per year, and the supply of bauxite is reported as almost unlimited—indeed, there is a great mountain of it, from which the material is mined at a low cost. The rate of wages in foreign plants is said to be about 80 cents a day for a 12-hour working day, while in this country the rate for similar grade labor in aluminum work is about \$2 a day for an eight-hour day.

Surely Congressmen from the South should be sufficiently interested in the industrial development of their section, for industrial progress is essential to agricultural prosperity, to see that the industries of the South receive a measure of protection fully equal to that given those of other sections. Of what avail are our limitless stores of coal and iron

and clays and other resources out of which to create vast industrial wealth if through false political economy these resources are to remain dormant, valueless to their owners, to the South, and to the world?

Mr. KENYON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Iowa?

Mr. OLIVER. I yield.

Mr. KENYON. I understand a part of that article was omitted. I have here the article in full. It is from the Manufacturers' Record of August 21, 1913. I do not know whether the part referred to was intentionally omitted or not.

Mr. OLIVER. I omitted the part which referred in detail to the development of the company, thinking it was not directly pertinent.

Mr. KENYON. The omission was intentional, then?

Mr. OLIVER. Oh, yes. I did not intend to insert all of it, because I did not want to extend it at such length.

Mr. KENYON. I had intended to insert it all.

Mr. BACON. Mr. President, as the Senator from Pennsylvania has noted the absence of the Senator from North Carolina, I wish to say that I have had inquiry made, and I find that he has been called away upon official business.

Mr. OLIVER. I am sure the Senator from North Carolina is not absent without cause, Mr. President.

I may add here that the Southern Aluminum Co. is largely owned by the principal owners of the French Aluminum Co., together with some of the large metal dealers in New York; that it has no connection whatever with the Aluminum Co. of America, but proposes to be a distinct and direct competitor with that company for American business. I am also informed that they expect to develop bauxite fields on this side of the ocean sufficient to supply their wants, but in case they are unable to do this they can obtain an abundant supply from France, where the deposits are near the sea, and can be transported direct from there to North Carolina seaports. It can easily be seen how unjust it would be to a new industry like this, bringing to the country millions of dollars of capital and involving the development of the great natural resources of the South, to absolutely open up our markets to free foreign competition.

Mr. KENYON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Iowa?

Mr. OLIVER. Certainly.

Mr. KENYON. I am not going to interrupt the Senator again, because I know it is unpleasant, and it is better to wait until I can speak in my own time. But, referring to the point the Senator is now on, I should like to inquire if it is a fact that the Aluminum Co. of America has no connection whatever with the Southern Aluminum Co. or any of its officers?

Mr. OLIVER. I am assured that there is no connection whatever. This is reinforced in my mind by the fact that when I asked them about it they knew nothing whatever about the state of development of the enterprise, or anything of the kind.

Mr. KENYON. I have been informed that there was some connection, but I do not know.

Mr. OLIVER. I think I can assure the Senator that that is based on mere suspicion, because I know, or think I know, that it is not the case.

Mr. KENYON. Has the Senator information as to that from the officers of the Aluminum Co. of America?

Mr. OLIVER. It is from the officers that I obtained my information.

Mr. KENYON. From the officers of the company?

Mr. OLIVER. Yes; from the officers of the company, that there is no connection whatever between them.

Mr. KENYON. Would the Senator mind stating who are the officers to whom he refers?

Mr. OLIVER. I received this information directly from Mr. Finney, who is the southern sales agent of the company, with headquarters here in Washington.

Mr. KENYON. Of the Aluminum Co. of America?

Mr. OLIVER. Of the Aluminum Co. of America. I also have received some information from Mr. Davis, although I did not inquire directly from him, because it did not occur to me when I was talking with him; but I did, later on, ask Mr. Finney, and he assured me that there is no connection whatever.

Mr. KENYON. I do not know of my own knowledge as to the matter.

Mr. OVERMAN. Mr. President, I think I can say to the Senator that there is no connection whatever. I wish to say, unless the Senator has already stated it, that these French people were forced here. The French people bought some bonds of what was known as the Whitney Power Co. This company

came down into North Carolina and built a dam about 30 miles from where I live for the purpose of developing power and furnishing power to railroads and cotton mills. The panic came on, and the company failed. In the meantime the Southern Power Co. were established near Charlotte and erected a great power plant on the Catawba River or its tributaries, and they succeeded in getting contracts for power with all our cotton mills. Nearly every cotton mill in the State is being run by power furnished by the Southern Power Co.

Mr. Whitney, who lived in Pittsburgh, Pa., and who financed this Whitney Co., failed, and the company failed; the matter was in litigation for a long time, and finally the property of the company was ordered to be sold.

The Frenchmen, who I think owned about \$400,000 worth of these bonds, purchased the property. They then had the dam, partially completed, and about 10,000 acres of land. They found that the Southern Power Co. had come into this territory and had contracts to furnish the power for all these factories, and there was no field for activity or operation for another power plant in that section.

The French people therefore concluded that to utilize the property they were forced to purchase they would build an aluminum plant. I have seen their prospectus, and I know their officers can not speak English, because they had to speak to me through an interpreter. They are selling bonds in France now to complete the concern. They have a force there now of about 3,000 people, I am told, and have contracted for 250 houses, and all the officers are Frenchmen. I do not think they have any connection whatever with the American concern. I am sure of it, in fact, from what I have been told; and from all the circumstances—and I have examined into it—I think it is an entirely independent concern.

Mr. OLIVER. I think there is no doubt of that, Mr. President.

The Senator from Iowa, to show the arbitrary method adopted by the Aluminum Co. of America in dealing with its customers, inserts a copy of one of their contracts of sale, which he says is "a fair sample of the harassing methods employed by this arrogant monopoly toward those who were compelled to deal with them."

A critical examination of this contract will show that, while it is rather stringent in its provisions, it is not in anyway one-sided, and that it does not bind the customer to do anything except to specify in reasonable time for the aluminum which he has agreed to buy; but in reality it is not the usual form of contract which the company uses in dealing with its ordinary customers—it is a special form used in sales to importers and others, who only buy from the Aluminum Co. when they are unable to fill their wants from abroad. I have here a copy of the company's usual contract, simple and direct in its provisions, which I will ask the Secretary to read.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary proceeded to read the form of contract.

Mr. OLIVER. If the Senate will allow me I really do not think it is necessary to take time in reading it. I ask that it be inserted in the Record.

The PRESIDING OFFICER. That order will be made without objection.

The matter referred to is as follows:

ALUMINUM CO. OF AMERICA,
Pittsburgh, Pa.,

This contract between Aluminum Co. of America, Pittsburgh, Pa., hereinafter called the company, and _____, hereinafter called the purchaser, witnesseth:

(1) Within eleven (11) months from this _____ date, the company will furnish and the purchaser will buy in approximately equal monthly installments not less than 400 nor more than 600 net tons (2,000 lbs. each) of aluminum ingot at the following prices:

No. 1 grade _____ \$ per lb.
No. 12 alloy _____ \$ per lb.

Other standard grades at the current extras or discounts from the No. 1 grade price in effect on the date orders are placed.

These are f. o. b. New Kensington, Pa.; Niagara Falls, N. Y.; or Massena, N. Y., at the company's option.

(2) The company's invoices will be payable without discount in New York or Pittsburgh exchange 30 days from date of bill of lading.

(3) Strikes, fires, differences with workmen, accidents to machinery, or other unavoidable causes will excuse either of the contracting parties from sending or executing orders.

(4) This contract is void unless accepted on or before _____ and in any event unless approved by the company's general sales agent.

Accepted _____, 1912; Submitted _____
By _____

Approved _____, 1912.

ALUMINUM CO. OF AMERICA,
By Manager.

ALUMINUM CO. OF AMERICA,
By General Sales Agent.

Mr. OLIVER. Now, who are the men who are asking for a reduction or the removal of the duty on aluminum? An examination of the proceedings before the Ways and Means Committee of the House and of the briefs filed with the Finance Committee of the Senate will show that the most urgent ones are New York importers, who hope to increase their sales by reason of this legislation, and even they, as a rule, are only urging that the duty be reduced and not that the commodity be placed on the free list. The protests from the manufacturers are exceedingly few, and there would be practically none if it were not for an aggressive campaign conducted by the agent of the British Aluminum Co., Mr. Arthur Seligmann, of New York City. This gentleman in January last sent out broadcast a circular letter to all the manufacturers of aluminum products throughout the country which contained two glaring misstatements. The letter is published in the hearings before the Ways and Means Committee, on page 1483.

I have lately learned that immediately on the publication of the rates of duty recommended by the Finance Committee (2 cents per pound on ingots and 3½ cents per pound on sheets) this same British company, represented in America by this same Arthur Seligmann, placed contracts for 24 stands of sheet rolls and 7 foil rolls, a plant large enough to supply the entire sheet consumption of the United States. So soon are we to reap the fruits of these reductions.

Out of the hundreds of manufacturers of aluminum products in the United States to whom these letters were sent, so far as I can discover, only four responded by filing briefs with the Ways and Means Committee. The briefs of E. K. Morris & Co., the Milburn Wagon Co., and the Diller Manufacturing Co., all of which were inserted in the RECORD by the Senator from Iowa, were evidently inspired by this letter of Mr. Seligmann. This is shown by the fact that they are all dated within a few days after the date of his letter, and also by the fact that they repeat his misstatements almost in the same words. I will quote from Mr. Seligmann's circular and afterwards from the responses of the different companies:

Mr. SELIGMANN. It is also a well-known fact that aluminum can be produced as cheaply over here as it can on the other side, and only a few years ago very considerable quantities of aluminum were exported to Europe and sold by the American producer at prices ruling on the other side, which of course were much lower than the ones paid over here.

THE DILLER MANUFACTURING CO. It is also a well-known fact that aluminum can be produced as cheaply over here as it can abroad, and only a few years ago very considerable quantities of aluminum were exported to Europe and sold by the American producer at prices ruling on the other side, which, of course, were much lower than the prices paid over here.

E. K. MORRIS & CO. It is our opinion, based on the best information we can secure, that aluminum can be manufactured in this country nearly as cheap as abroad.

THE MILBURN WAGON CO. We further believe that this country can produce aluminum as cheap as other countries, because it was not very long ago that the United States exported a great deal of aluminum, and this aluminum was sold at lower prices than it was sold in this country.

It will be noted that the letter of the Diller Manufacturing Co. quotes the very words of Mr. Seligmann's letter. Now this letter was written at a time when there was an aluminum famine in this country. For some reason the demand for aluminum during the last half of 1912 was so great that the Aluminum Co. was unable to supply it. That company met the demands of its customers as far as it could, and, as I have before stated, reduced the quantity of ingots supplied to the companies in which it had an interest to one-half their requirements in order to supply the wants of its other customers so far as possible. Its managers even purchased some aluminum from abroad and handed it over to their customers at cost prices and in some cases at a loss. They did this because of their desire to hold their customers' business as far as possible and to prevent that dissatisfaction which must ensue when a manufacturer is unable to obtain a steady and reliable supply of raw material. Notwithstanding this, the demand exceeded the supply and the users of aluminum were consequently in a dissatisfied frame of mind. Mr. Seligmann's circular, therefore, fell on fertile soil, and it is a matter of surprise that the responses to it were so very few in number. In addition to these briefs there were two or three others filed with the Finance Committee later on, but I have no reason to suppose that there was any connection between Mr. Seligmann and these parties.

I may here add that the shortage of aluminum is now over and there is an ample supply for all who desire it.

The two misstatements in Mr. Seligmann's circular and in the briefs mentioned, to which I referred, are that aluminum can be produced as cheaply in this country as it can on the other side, and that the American producer (evidently referring to the Aluminum Co.) had been exporting the product of that company to Europe and selling at lower prices than those which prevailed over here. These statements are,

both of them, absolutely false, as I will demonstrate before I conclude.

There is still another letter which the Senator from Iowa inserted in the RECORD to which I refer with some regret, for its very insertion without qualifying comment seems to me to approach very near to an act of bad faith to the Senate and to the public. It is a letter from the Racine Manufacturing Co. of Racine, Wis. It contains this statement:

We know for a positive fact that the Aluminum Co. of America has exported material both in sheet and shapes to European countries by fast steamers, such as the *Lusitania*, *Mauretania*, and other fast boats, and the first thing that confronts them when they reach the European shores is the fact that they must meet the European competition and sell their stock anywhere from 20 to 25 cents per pound, which is the same stock that they are selling in this country at 30 and 40 cents per pound.

Now, at the time that the Senator from Iowa inserted this letter in the RECORD he must have read the testimony of Mr. Davis before the Ways and Means Committee of the House, for he quoted copiously from that testimony in his speech. And Mr. Davis at that time asserted most positively that never in its history had the Aluminum Co. of America exported any of its own products; that any exports it had made were the products of imported material upon which it obtained a refund of 99 per cent of the duty. Further than this, in the course of Mr. Davis's testimony, Mr. FORNEY, of Michigan, a member of the Ways and Means Committee, alluding to this same Racine Manufacturing Co., uses the following language:

Mr. Chairman, if Mr. Davis will permit me to interrupt him just for a statement. I think it is due to Mr. Davis and to the members of the committee to say that I received a letter from a firm to whom the Aluminum Co. of America sells aluminum, dated the 2d of December, in which they complain that the Aluminum Co. of America were selling aluminum cheaper abroad than they were selling it in this country. I wrote him and asked for a full explanation, and he finally, on December 26—and it is the manufacturing company of Racine, Wis.—and he apologizes and states that he was wholly misinformed, and that the information given to the chairman of this committee at that time was incorrect, and that there were no exports, as stated in his letter to Mr. Underwood on December 2.

I have here a copy of a letter written to another Member of Congress by the Racine Manufacturing Co., in which they make the same recantation of their charge. It is not long, and I will ask the Secretary to read it.

THE PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

RACINE, WIS., December 21, 1912.

THE HON. ANDREW J. PETERS,
House of Representatives, Washington, D. C.

MY DEAR SIR: Since writing our letter of November 25 to the chairman of the Ways and Means Committee and our letter to you of November 30, 1912, we have received several replies to same from various Representatives in which they have asked us to verify the veracity of our report in regard to several items. The majority of exceptions have been to the fact that we claimed that the Aluminum Co. were exporting at the present time and not able to supply the local demand, but giving the European market the preference.

At the time we wrote this letter we believed that this was true, but in receiving so many responses, and all along the same line, we felt that we owed it to you and to every member of your committee to personally investigate the matter by a trip east.

The writer has just returned, and we find that our statements have been misleading. The records show that during 1908, 1909, and 1910 the Aluminum Co. exported considerable stock, due to the fact that there was an overproduction in this country. We, as well as other manufacturers, were not using anywhere near the quantity that we are using at the present time.

We also found that a good deal of the exported stock was made in Quebec and brought into this country in an ingot form under bond and rolled into sheets under bond in Buffalo, as we understand it. It was then exported and all the duty practically refunded.

Therefore, our statements to you have been misleading, because this proves conclusively that this stock was not made in the United States, but made in a foreign country, and the rolling into sheets was the only labor performed in this country, and as the stock in question has been bonded through from Canada, the Aluminum Co. would not have to contend with the American-made products.

We have also ascertained that there is now in process of organization an aluminum company to compete with the United States Aluminum Co. in this country.

We want to be fair with you in this matter, which explains our reason for our trip east, and we do not propose to make any statements that we can not substantiate.

Thanking you for the consideration shown and appreciating the efforts that you are putting forth, we are,

Yours, very truly,

RACINE MANUFACTURING CO.

By _____, Secretary.

Mr. OLIVER. Now, when the Senator introduced this letter had he forgotten that the Racine Co. had made the amend, or was he simply desirous of placing before the public everything that was prejudicial to this company and of concealing the real facts? I leave it to him to decide.

Mr. KENYON. Mr. President—

THE PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Iowa?

Mr. OLIVER. I do.

Mr. KENYON. The Senator is propounding that to me as a question. I did understand from the testimony that Mr. Selig-

mann, a man whom I do not know and never had any correspondence with, had withdrawn a certain letter he had written to the committee. I gathered together a large bunch of letters and had them introduced, perhaps without paying any particular attention to this particular letter. I did not understand, and I do not now understand, that the Racine Manufacturing Co. had withdrawn what they said, but I do understand from the Senator that they withdraw what they say about the information from Mr. Seligmann.

Mr. OLIVER. I beg pardon, Mr. President; the Racine Manufacturing Co.'s letter was written before Mr. Seligmann's letter was written, as the Senator will see from its date in the testimony, and it had no bearing upon it at all, and was not called forth by it. In fact, the Racine Co.'s brief or proposition to the Ways and Means Committee, as far as I have seen, is the only one that was voluntarily submitted by a manufacturer to the Ways and Means Committee. All the rest were submitted by importers, and, as Mr. Fordney stated, they in distinct terms withdrew their statement to the prejudice of this company about exportations.

But that is not all. I have stated that the Senator quotes very freely from the testimony of Mr. Davis, with a view of showing that that gentleman admitted acts of apparent wrongdoing on the part of his company, but he invariably selects out the point which suits him and omits to insert Mr. Davis's explanations which always follow. For instance, on page 3712, the Senator inserts a colloquy between Mr. Palmer and Mr. Davis referring to the trade agreement between the Canadian company and the European companies, but omits Mr. Davis's statement which immediately follows and which is in the following language:

But, as I say, that contract has no relation whatever to the United States, and so far as the United States business is concerned it is a decided detriment from our standpoint.

Mr. PALMER. Why?

Mr. DAVIS. Because these people have got a certain amount of surplus to dump and this is the only place to dump it, the United States, and that is where they send it.

Again referring to the same Canadian-European agreement, the Senator from Iowa inserts a long dialogue, from the reading of which an opinion prejudicial to the Aluminum Co. must be formed, but omits that which immediately follows. I read:

Mr. PALMER. Against the Sherman law for a company in America to make an agreement with a European company?

Mr. KENYON. What page of the record or of the hearings, if the Senator please, is he reading from?

Mr. OLIVER. I will state that I can not inform the Senator, but it follows shortly afterwards.

Mr. KENYON. The Senator does not happen to have the page of the hearings?

Mr. OLIVER. I have not the page of the hearings. I am sorry that I have not.

Mr. KENYON. All right; I will try to find it.

Mr. OLIVER. I have them all marked in my book of the hearings, but unfortunately have not the book at hand at this moment.

Mr. PALMER. Against the Sherman law for a company in America to make an agreement with a European company?

Mr. DAVIS. Well, I am not enough of a lawyer to tell whether it might be so construed, but we wanted to be absolutely on the safe side and be absolutely a law-abiding company. So we not only made no attempt to make an agreement—

Mr. PALMER (interposing). You made up your mind that you would do nothing that could possibly be construed as a violation of the laws of the United States?

Mr. DAVIS. Yes, sir.

Mr. PALMER. But you have a pretty accurate understanding with those companies over there about the price at all times, have you not?

Mr. DAVIS. Absolutely none, sir. If we had we would consider that we would be violating the law. I do not think there is a great deal of difference between a secret contract and a written one.

Mr. PALMER. They have made a contract for all the European markets and the Canadian markets between all the manufacturers of aluminum except yourselves, and you now say you are practically competing against a combination which is world-wide?

Mr. DAVIS. No, sir; you mean competing in the United States?

Mr. PALMER. Yes.

Mr. DAVIS. No, sir; because none of these companies have any connection with each other so far as the United States is concerned. Each of them operates quite independently and without the knowledge of the others at all.

Mr. PALMER. And with no understanding about price?

Mr. DAVIS. Absolutely none.

Mr. PALMER. Is there, in fact, any competition as to price for the American market as between those European companies?

Mr. DAVIS. Absolutely the most open and free, and from every standpoint the most virulent.

Another instance—on page 3712, the Senator from Iowa inserts the following:

Mr. RAINEY. Of course, you do not expect your Canadian company to furnish much competition, do you?

Mr. DAVIS. In this country?

Mr. RAINEY. Yes.

Mr. DAVIS. No, sir; naturally not.

But the Senator omits the following:

Mr. RAINEY. And on account of the agreement of your Canadian company with all of these other foreign companies you would not expect the foreign companies to furnish much competition for you, would you?

Mr. DAVIS. We not only expect it, but we have it. As I tried to explain, this agreement distinctly excludes the United States, and every company under the agreement is at perfect liberty to sell as much as it pleases in the United States and at whatever price it pleases.

Mr. RAINEY. Including the Canadian company?

Mr. DAVIS. Oh, yes; of course, including the Canadian company.

Mr. RAINEY. You do not expect them to do it, do you?

Mr. DAVIS. No; we naturally do not expect them to do a great deal; but there are, I think, 11 other companies which are free to import into the United States, and the figures show that they do import into the United States.

Then I skip a few paragraphs.

Mr. RAINEY. Is it not true that your Canadian company and these foreign companies are on such amicable and friendly relations that it leads to a gentlemen's agreement by which the foreign companies will not interfere with you very much in the United States?

Mr. DAVIS. Absolutely not, sir. I have already answered that question to Mr. Palmer and would like to reiterate it again to you that there is absolutely nothing of the sort and, in fact, just the reverse.

Mr. RAINEY. Does the fact that your Canadian company has a perfect agreement with all of the foreign companies produce a feeling of unfriendliness toward you?

Mr. DAVIS. It produces the keenest competition in this country, because this is the only country in which they can sell. The old saying is that "the proof of the pudding is in the eating of it." Now, the matter of fact is that they imported into this country last year 30 per cent of what we make, which does not look as though there was very much of a gentlemen's agreement.

I will pause here to say that I think even the Senator from Iowa will admit that Mr. Davis in his testimony acted toward the committee with the utmost frankness. He not only showed no effort to conceal anything, but he voluntarily gave the committee the fullest possible information with regard to his business, concealing nothing.

Mr. President, I have cited these instances and inserted these extracts to show—and I think I have shown—that the Senator from Iowa throughout the whole of his speech was actuated more by the zeal of a prosecutor than by a desire of fair and impartial discussion of the merits of the question before the Senate.

I will now turn to the point on which the Senator plays his high card, and upon which he evidently relied more than on anything else to produce in the minds of his hearers a feeling of resentment against this company. I refer to the famous Swiss agreement, denominated—I know not why—the A. J. A. G. agreement. In presenting this agreement he charges that its provisions are "so infamous as to constitute business treason." He says that "in this agreement the foreign company absolutely refuses to sell aluminum, directly or indirectly, to the United States Government." Now, I say, Mr. President and Senators, that nowhere within the lines of this agreement is there any mention whatever made of the United States Government, and that never, at its inception or during its existence, were sales to the United States Government contemplated or considered by either of the parties thereto or by anybody who had any connection therewith.

Mr. KENYON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Iowa?

Mr. OLIVER. I do.

Mr. KENYON. I do not want to interrupt the Senator, but—

Mr. OLIVER. I like to be interrupted.

Mr. KENYON. All right. On page 16 of the contract of the Aluminum Co. of America with the Swiss company this is set out—

Accordingly the A. J. A. G. will not knowingly sell aluminum directly or indirectly to the United States of America and the Northern Aluminum Co. will not knowingly sell directly or indirectly to the Swiss, German, and Austria-Hungarian Governments.

Is not "the United States of America," in connection with the entire language of that clause, clear?

Mr. OLIVER. The United States Government was never thought of when the agreement was made.

Mr. KENYON. How does the Senator know the United States Government was never thought of?

Mr. OLIVER. Because the agreement shows it, and the result shows it.

Mr. KENYON. The language shows what it is, and not what the Senator may know.

Mr. OLIVER. I am going to undertake a hard task. I am going to undertake to persuade the Senator from Iowa that it never was thought of.

Mr. KENYON. I am willing to be persuaded, if the Senator has that intimate knowledge which differs from the plain language of the contract.

Mr. SHIVELY. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Indiana?

Mr. OLIVER. I yield to the Senator.

Mr. SHIVELY. The language of the contract does not mention the United States Government.

Mr. OLIVER. I understand that.

Mr. SHIVELY. It does mention the United States of America. Now, that is different; and is it not even broader, agreeing that they would not only not sell to the United States Government, but they would not sell to the people of the United States?

Mr. OLIVER. Mr. President, I agree with everything the Senator says, and I am going to allude to it. There is in the agreement a clause by which the Swiss company agrees not to sell to the United States of America, and that means the whole United States, and that includes the United States Government. But I think now, if the Senator will listen to me, he will be convinced—and I think even the Senator from Iowa will be convinced—that under these regulations of the Swiss, Austrian, and German Governments there was an element, as far as it related to the Swiss company, that showed that the sales to the Government of the United States were not considered at all when it came to the Aluminum Co. of America.

I will ask the Senator from Indiana to listen to what I have to say within the next five minutes, and I will be very glad then to have him ask me any question he pleases.

I must say that if this contract had been entered into between any two companies which monopolized or controlled, or sought to monopolize or control, the aluminum business, it would be in the highest degree reprehensible, and under our laws would be criminal; but when you come to consider that the agreement is between only 2 out of 14 companies, or, eliminating the Aluminum Co. of America, 2 out of 13 companies, all engaged in the same lines of business and all competing with each other, it must immediately appear that there was some reason for its existence other than that of controlling sales, prices, or territory. The whole thing is easily explained.

The Northern Aluminum Co., manufacturing aluminum in Canada, was entering the foreign field and had established selling agencies in Great Britain and South America. The Swiss company, which was the largest European producer of aluminum, but whose output amounted to only about 20 per cent of the total European product, had its agencies established in Continental Europe. These two companies, therefore, as a measure of business economy, to save selling expenses, agreed between themselves that their selling agencies would mutually represent each other in their respective territories and that the products so sold would be divided according to the percentages stipulated in the agreement. The Swiss company, however, insisted that as it would naturally have the preference in selling to the Swiss, German, and Austro-Hungarian Governments, there should be no allotment to the Northern Co. so far as sales to those Governments were concerned; that is, that the sales which the Swiss company made to those Governments should not be included in the percentages of the sales named in the contract. Then follows the stipulation that sales in the United States were reserved to the Aluminum Co. of America, which was the parent company of the Northern company making the contract. This refers to all sales in the United States, and sales to the Government were not mentioned, and as I think I can conclusively prove were not considered, in making the agreement. I do not by any means defend this stipulation with regard to sales in the United States, and I believe that if the Aluminum Co.—I am referring to all the sales in the United States—has done anything that is a violation of the Sherman Act it is in this instance; but in making the agreement it was not guilty of the "business treason" with which the Senator charged it, for there were 11 other companies then and now in existence who were not only potential but actual competitors for the Government business, and for all business in the United States of America then and since, as I shall now show.

Mr. SHIVELY. Mr. President, right there, do I understand that the Senator contends that at the time this agreement was made and for some time subsequent thereto there were 11 other companies in competition with the Northern Aluminum Co.?

Mr. OLIVER. There were 11 other companies in competition, through their agencies in the United States, with the Aluminum Co. of America. They not only competed, but they did business in the United States; they competed for Government business. They not only competed for it, but they got it. They not only got it, but they got all of it during the whole three years that this agreement was in force. The Aluminum Co. of America during the whole three years never sold a pound to the United States Government, but what the Government bought was imported aluminum. I have the record here for that.

Mr. SHIVELY. If the Senator please, all of these companies, however, at that time were in these written agreements with the Northern Aluminum Co.

Mr. OLIVER. Not at all. This agreement of the Northern Aluminum Co. was only with the Swiss company.

Mr. SHIVELY. Let me call the Senator's attention to what Mr. Davis said. I think the Senator must have overlooked that. His testimony is found on page 1502 of the hearings.

Mr. OLIVER. I know, and I have explained that. That is an agreement of the Northern Aluminum Co. with the other companies, and I think the Senator will find that it is dated long after this agreement; it is an entirely distinct and different thing; it is an agreement between the Northern Aluminum Co., the Canadian Company—it is a syndicate agreement, a cartel—and the various European companies, and includes all of them, by which they divided up, in accordance with the European custom, all of the aluminum business of the world outside of the United States of America; but the business in the United States of America is open to competition with every one of them, and not only open to competition, but last year they sold 70 per cent as much in this country as did the Aluminum Co. of America.

Mr. SHIVELY. The Aluminum Co. is itself a frequent importer.

Mr. OLIVER. The Aluminum Co. is an importer of raw ingot aluminum, of which it takes, I suppose, the surplus product of its Canadian plants, and pays the duty on it. If it has occasion to export any manufactured material, it receives a drawback, but so far as American business is concerned, there are 14 companies in the world competing for it to-day. There is only one manufacturer of this article up to date in the United States of America, but there soon will be two. So far, however, as sales and business are concerned, the business is as free and open as the air we breathe. I have anticipated a little what I intended to say, but I will now go on. I should like the Senator from Indiana to listen, and also for the Senator from Iowa to listen.

This Swiss agreement took effect on October 1, 1908. It was terminated by notice—I want the Senator from Iowa to hear what I have to say.

Mr. KENYON. I am listening.

Mr. OLIVER. I beg pardon; I did not see the Senator.

Mr. KENYON. I would not miss a word for anything.

Mr. OLIVER. It was the Senator from Indiana [Mr. SHIVELY] to whom I was more particularly referring. I want the Senator from Indiana to listen to this, because I think he is a fair man, and I think I can convince him. I repeat that this Swiss agreement took effect on October 1, 1908. It was terminated by notice in August, 1911, which, by the way, was considerably more than a year before the Government suit was brought.

The Senator from Iowa, in order to show how necessary aluminum is to the Navy, submitted a list of purchases of the Navy Department during the years 1910, 1911, and 1912. I am now able to add the year 1909 to his list, and to give a list of all the purchases by that department during the three years or less in which this Swiss agreement was in force.

I will not go over all the figures, but I ask that the table be published in the RECORD.

The PRESIDING OFFICER. There being no objection, that order will be made.

The table referred to is as follows:

Schedule.	Date.	Quantity.	Unit price.	Contractor.
963.....	Mar. 9, 1909	200 pounds....	\$0.55	Baer Bros.
1361.....	June 29, 1909	2,000 pounds..	.21	The Nassau Smelting & Refining Works.
1380.....	July 6, 1909	1,000 pounds..	.185	Do.
1405.....	July 13, 1909	1,000 pounds..	.217	Do.
1493.....	Aug. 10, 1909	4,000 pounds..	.224	Illinois Smelting & Refining Works.
1635.....	Sept. 14, 1909	3,000 pounds..	.2249	Columbia Smelting & Refining Works.
1663.....	Sept. 21, 1909	1,000 pounds..	.2125	Nassau Smelting & Refining Works.
1736.....	Oct. 12, 1909	64 sheets.....	10.00	J. H. Jolly.
1741.....do.....	1,000 pounds..	.22125	The Nassau Smelting & Refining Works.
2036.....	Jan. 4, 1910	800 pounds....	.215	Great Western Smelting & Refining Co.
2133.....	Jan. 25, 1910	1,500 pounds..	.2175	Nassau Smelting & Refining Works.
2718.....	Aug. 2, 1910	2,000 pounds..	.2299	Berry & Aikens.
2759.....	Aug. 9, 1910	3,000 pounds..	.219	Nassau Smelting & Refining Works.
3021.....	Nov. 8, 1910	3,000 pounds..	.2175	General Metals Selling Co.
3583.....	May 31, 1911	5,000 pounds..	.2015	Pope Metals Co.

Mr. OLIVER. This table shows that beginning with March 9, 1909, and ending May 31, 1911—and this includes everything that was purchased by the Navy Department from the 1st of October, 1908, until the date in August, 1911, when the Swiss agreement was terminated by notice—there were 15 purchases of aluminum made by the Navy Department. The total amount of all these was 28,500 pounds. The total value was less than \$7,000.

Mr. SHIVELY. Can the Senator state the average price per pound the Government paid?

Mr. OLIVER. I will state that the unit price is given opposite every one, and it runs from 18½ cents a pound up to about 23 cents a pound—there is one small shipment of 200 pounds made at 55 cents a pound, probably some highly finished article made of aluminum.

Mr. SHIVELY. If I may interrupt, does the Senator know whether that 18½ cents a pound was the price of the ingot aluminum?

Mr. OLIVER. It must have been, because plates and the more highly finished articles would undoubtedly sell higher than that.

Is it likely that two companies of the magnitude of these two companies, whose gross contracts would amount probably to \$20,000,000 a year, would go to the trouble of crossing the ocean to enter into an agreement to cheat the United States Government, whose purchases in three years only amounted to \$7,000? As a simple proposition what is the likelihood of this occurring? But I will go further than that. I will read the names of those who furnished this material. The firm of Baer Bros., filled one out of the 15 contracts.

Mr. GALLINGER. Where are they located?

Mr. OLIVER. They are New York importers. The Nassau Smelting & Refining Works filled seven of them; the Illinois Smelting & Refining Works filled one; the Columbia Smelting & Refining Works filled one; J. H. Jolly filled one; the Great Western Smelting & Refining Co., one; Berry & Aikens, one; the General Metals Selling Co., one; and the Pope Metals Co., one.

There is not one of these concerns in which the Aluminum Co. has any interest whatever; there is not one of them that is a customer of the Aluminum Co., except occasionally, when they can not get aluminum elsewhere. They are all importers. I have information—I want the Senator from Iowa to hear this—that the Nassau Smelting & Refining Works, which filled seven of these orders, obtained the material supplied to the United States Government directly from a bonded warehouse. I acquit the Senator from Iowa of intentional deceit in this matter, but surely a critical examination ought to show him or any reasonable man that the controlling intention of a contract between only 2 out of 13 competitors could not possibly be the control or monopoly of the business, and his charge of any intention to control Government orders or to shut out competition for such orders must be dismissed as childish when we consider that during the whole life of the agreement the supposed beneficiary neither directly nor indirectly sold one pound to the Government of the United States—to the Navy Department, at all events. I have not been able to obtain the records from the War Department, but the sales to that department are negligible; they use very little. This effectually disposes of the charge of "business treason."

Now let us see, Mr. President, who will be the principal beneficiaries from the removal of this duty; or, rather, who are those who ask for it, for I hold that it will benefit nobody but the foreign manufacturer and the importing middleman. In the first place the use of aluminum is largely confined to those who are able to pay for it. It is from its nature an industrial luxury. Except where it is used as an alloy in the manufacture of steel, it goes chiefly into fine houses, intricate and high-priced machinery, and fine automobiles. As a general proposition I would say that a reduction of 1 or 2 or 3 cents a pound in the price of the aluminum ingot would bring about no change whatever in the prices charged for a vast majority of articles into which it enters.

Among the answers to interrogatories propounded to manufacturers by the Committee on Finance, I find on page 52 a communication from the Ford Motor Co., of Detroit, Mich. Interrogatory number 2 reads as follows:

What are the raw materials used in the production of the commodity you produce? State exact nature of material used.

The Ford Motor Co. answers as follows:

In such manufacture, among other raw materials, we use large quantities of aluminum, purchasing same in ingots.

Further on they say:

We use approximately 11 pounds of aluminum per automobile.

You will note that this company ignores entirely all such trivial matters as engines, steel, electrical apparatus, tires,

glass, leather, springs, commutators, magnetos, and what not—in fact, all of the almost innumerable items of raw material entering into the manufacture of automobiles—and mentions only the 11 pounds of aluminum used in each car. The same company also filed with the Finance Committee a brief upon the subject of aluminum. It is found upon page 453 of the briefs and statements filed with the Finance Committee. In this brief the Ford Co. states that—

It was obliged since October 1 to import upward of 2,000,000 pounds of aluminum owing to the inability of the Aluminum Co. of America to supply its wants, and that it paid therefor \$0.2685 per pound f. o. b. Detroit.

I will here call attention to the fact that while the Aluminum Co. was unable to supply the wants of all of its customers during the latter part of 1912, it never advanced the price beyond 22 cents per pound during that period, which would be substantially 5 cents per pound less than the Ford Co. says it paid for imported aluminum. This, it seems to me, is a complete answer to the charge made by the Senator from Iowa that the Aluminum Co. held its price at a figure substantially 7 cents per pound, or the full amount of the duty, above the price of imported metal.

Let me say a few words about this Ford Motor Co. One of the chief counts in the indictment of the Senator from Iowa against the Aluminum Co. is that "this monopoly has made enormous profits." I quote his very words. Now, whatever profits were made by the Aluminum Co., the greater part of its accumulations arose during a period when it was absolutely protected by the patent laws of the United States. This can not be said of the manufacturers of automobiles, with whom patents, as a rule, have been mere incidents.

I have made some inquiry about the Ford Motor Co. and have received some little information concerning it. I find that the company was organized on June 17, 1903, just about 10 years ago, with an authorized capital stock of \$150,000, of which, however, only \$100,000 was paid in. I have since been informed that of this \$100,000 there was only \$60,000 paid in in cash, but that the other \$40,000 was issued for patents. I am not quite certain about this, however, and will give them the benefit of the doubt, and say they started out with a cash capital of \$100,000. This was all the cash that was ever paid in on their capital stock. All subsequent additions and all the dividends were from profits. Five years afterwards, on October 22, 1908, the capital stock was increased to \$2,000,000, and in November, 1908, the treasurer of the Ford Co. made the statement that the increase from \$150,000 to \$2,000,000 was all paid in by stock dividend from accumulated surplus—\$1,850,000 accumulation in five years, and that is only the beginning.

Their statements for the last four years show the following net surplus over and above all liabilities:

Aug. 1, 1909	\$3, 208, 000. 00
Sept. 30, 1910	5, 581, 772. 02
Sept. 30, 1911	10, 375, 145. 28
Sept. 30, 1912	16, 745, 095. 57

Mr. LODGE. Is that the annual profit?

Mr. OLIVER. Oh, no; the accumulation.

Mr. SMOOT. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Utah?

Mr. OLIVER. I do.

Mr. SMOOT. Does the Senator know whether the report is true that the company, while making these profits, also pay Mr. Ford \$100,000 per month as salary?

Mr. OLIVER. I will state that I have heard that, but I do not know whether it is true. I am coming to that.

The earnings deducible from the above figures are as follows:

For the year ending—	
Sept. 30, 1910	\$2, 375, 772. 02
Sept. 30, 1911	4, 793, 373. 26
Sept. 30, 1912	6, 369, 950. 29

In addition to this, during all this period the company was declaring large dividends. I have no direct information about the amount of these dividends, except as to the last one, to which I will allude, but they undoubtedly amounted to many millions of dollars, so that the earnings I have above stated are in addition to whatever amount the company has seen fit to divide among its stockholders in the meantime. It will be seen from this that the earnings for the year ending September 30, 1912, were over 6,000 per cent on the capital invested nine years preceding, while the undivided surplus amounted to nearly 17,000 per cent on the original capital, and the total investments in the business amounted to 20,000 per cent of the original capital.

About one month ago the company paid a cash dividend of 500 per cent on its capital of \$2,000,000. The dividend amounted to \$10,000,000 in cash paid out in one lump. Computed on the

actual cash capital of \$100,000, which was originally paid in, this one dividend would amount to 10,000 per cent.

I am told that this company pays Mr. Henry Ford, its president, a salary of \$100,000 a month—not \$100,000 a year, \$100,000 a month; but I learn this only from hearsay, and will not vouch for the truth of the statement.

According to my information, the Ford Co. last year produced 75,000 automobiles. I understand that this year they expect to turn out something like 250,000; and this is borne out by their statement to the Finance Committee, in which they say that they use annually about 2,500,000 pounds of aluminum, which, allowing 11 pounds for each car, would furnish 227,272 cars. If 75,000 cars enable them to scatter dividends of \$10,000,000 every once in a while, what will 227,000 cars do for them? Figure it out by the rule of three. It actually makes one dizzy to deal with such figures. Alongside of them the accumulations of the Aluminum Co. look like the traditional "30 cents."

Now, I am not begrudging these earnings to the Ford Co. I understand that Mr. Ford, the head of the company, was practically the first man to conceive the idea that the automobile was destined to become an article of general use and not simply a pleasure vehicle for the rich; that he is a great engineer; and that he bent his mind toward the devising of a car which could be built at as low a cost as possible, consistent with good workmanship. As I understand, he has come nearer to solving this problem than any man living, and he has met with the success he so richly deserves. He is getting only what is coming to him. But I do say that he and his company are by no means objects of sympathy, and that it little becomes them, and others like them, to complain of this duty, the removal of which would only tend to swell their already overgrown budget of enormous profits.

Mr. LODGE. During the period when this victim of the Aluminum Co. of America was making these enormous profits it itself was receiving a protection, I believe, of 45 per cent.

Mr. OLIVER. Forty-five per cent; yes. That does not count, though, in these days.

Mr. BRISTOW. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Kansas?

Mr. OLIVER. Certainly.

Mr. BRISTOW. Did not a representative of the company say, however, that it did not need any protective tariff at all for its business; that it could sell abroad in competition with any other manufacturers?

Mr. OLIVER. I have heard that statement, but I do not think it appears in either of the briefs which were filed.

Mr. BRISTOW. It may not appear in the briefs, but that statement has been printed time and again.

Mr. OLIVER. I should not think it needed any.

Mr. LODGE. They have not suggested the removal of any duties except other people's duties.

Mr. BRISTOW. Oh, no; I think the Senator is mistaken about that.

Mr. LODGE. Not in anything that appears here.

Mr. BRISTOW. The Ford Co. has maintained that it does not need any protective duty. As a matter of fact, there are more Ford automobiles in Europe than any European build to-day.

Mr. OLIVER. It needs the removal of duties only on what it buys, I suppose.

The Ford Co. in its communication to the Finance Committee states that it uses approximately 11 pounds of aluminum on each automobile. Taking this at an average rate of 18 cents per pound it would mean that they spend for aluminum a little less than \$2 on each automobile. Assuming for the moment that they are compelled by reason of the tariff to pay an additional price equal to the whole duty—7 cents per pound—the cost to this company under the present law would be 77 cents for each automobile, and under the proposed duty of 2 cents per pound it would amount to only 22 cents per automobile, and still they come in here and complain. I really think, Mr. President, that, so far as this one company is concerned, in justice to this downtrodden industry, grunting and sweating as it does under the burden of this aluminum monopoly, perhaps this duty ought to be removed. Let them have their 22 cents—they need the money.

I have already said enough, perhaps too much, about the Aluminum Co. of America. I will now, in as few words as possible, discuss the abstract merits of the paragraph before us and the amendment proposed by the Senator from Iowa.

The duty on aluminum—that is, aluminum ingots—under the present law is 7 cents per pound. It is proposed by the Finance Committee to reduce this to 2 cents per pound, and this proposition has received the sanction of the Senate. The amendment of the Senator from Iowa proposes to abolish the duty alto-

gether, not only upon the aluminum ingot but upon all articles made therefrom. Now, I would like Senators for the time being to dismiss from their minds all thought of the Aluminum Co. of America and to assume that this is a competitive business, as it really is so far as the sale of the product is concerned, and undoubtedly will be in a year from now with regard to its manufacture, for by that time the Southern Aluminum Co. will be about ready to operate its plant.

First let us take the question of revenue:

The Government during the fiscal year ending June 30, 1912, derived a revenue from imports of this product amounting to \$1,122,252.87, and during the fiscal year of 1913 the amount was \$2,190,555.03. At the proposed duty of 2 cents per pound on ingots and 3½ cents per pound on plates—even assuming that the imports would not increase under the reduced duties—the revenue to be surrendered by placing it upon the free list would be \$638,393.24. It would be no less than a crime to surrender this revenue unless there was a crying reason therefor.

Now, let us look at the question from the standpoint of even competitive protection. Aluminum is really a unique product in that it is commonly accepted to be a raw material in the same sense as zinc or copper, but in reality it is a highly finished product and should be classed with an automobile or a piece of furniture so far as its cost and real value are concerned as compared with the cost and value of the raw materials from which it is evolved. The cost of producing aluminum is practically altogether labor. Different from most other highly finished products, aluminum is produced from cheap and common raw materials—bauxite, coal, salt, and petroleum coke. It requires about six tons of bauxite, six tons of coal, one-quarter ton of salt, and one ton of petroleum coke to make one ton of aluminum. These quantities of bauxite, coal, and salt in the ground and the petroleum coke at the refinery are not worth at the outside \$15, and yet they produce a ton of aluminum which is worth (at 18 cents a pound) \$360, and all of this value, with the exception of a comparatively small amount of supplies, is added to these raw materials in the form of labor.

Bauxite, the native ore, is first made into alumina. The labor in producing aluminum naturally divides itself into that required in making alumina, that required in making carbon electrodes, and the direct labor required in the process of smelting aluminum from alumina. The bauxite, the coal, and the salt—the salt being first made into soda ash—are put together in a complicated chemical process to produce alumina.

The Aluminum Co. of America manufactures a part of its own alumina, but it also purchases a very large quantity from outside manufacturers at a cost of 3 cents per pound. It takes 2 pounds of alumina to make 1 pound of aluminum, so that with alumina at 3 cents per pound the cost per pound of aluminum for alumina only is 6 cents.

With the exception of minor supplies, the entire cost of alumina is in labor, either in making the salt into soda ash or getting the coal out of the ground and under the boiler or in the direct labor required in the process. At the East St. Louis plant of the Aluminum Co. of America they employ 1,000 men and pay from \$1.75 to \$2.25 per day, with the skilled artisans at much higher wages. The relative wages paid for such kinds of labor in France are too well known to require comment—in addition to which the greater number of the men employed at the East St. Louis plant work only 8 hours a day, while in France all of this work is done on 12-hour shifts.

It takes about three-fourths of a pound of carbon electrodes to make 1 pound of aluminum. Carbon electrodes are made from petroleum coke by grinding and baking, and are worth on the market about 3 cents per pound—2½ cents would be a very close market price. Petroleum coke at the ovens is worth about one-fourth of 1 cent per pound, and the difference between this price and a finished price of 2½ cents per pound is nearly all direct or indirect labor. At 2½ cents per pound the carbon electrode cost per pound of aluminum would be 1½ cents.

The other principal item besides direct labor in the manufacture of aluminum is electric power. Here the French manufacturer has a decided advantage because of the high falls which are available on the west slope of the Alps and the north slope of the Pyrennees—and the bauxite lies between these two ranges on the Mediterranean shore, as do also coal deposits. The French water powers not infrequently have a drop of 2,000 feet, while the water powers of the United States run from 30 to 150 feet on the average. The cost of a water power is almost altogether labor. The digging of canals and flumes and building of dams, and so forth, all involve a very large amount of labor, which is reflected in the cost of a horsepower.

The French thus have the advantage of not having so much dirt to move or so wide dams to build on account of handling so much less water, as they get the power from a high drop, which

otherwise must be made up in volume of water; and, secondly, they get the advantage of cheap labor in digging their canals, building their dams, and so forth, as compared with our labor. The ordinary hydroelectric development in the United States is considered cheap at \$100 per horsepower. An average cost would be nearer \$120 per horsepower. Foreign aluminum manufacturers would not even consider a power which would cost more than \$70 per horsepower, and the cost of \$50 per horsepower is not at all uncommon.

One horsepower will produce about 450 pounds of aluminum a year. A fair price for electric power in this country is \$18 per horsepower per annum, and a close price is \$15. At \$15 per horsepower per annum the cost of electric power per pound of aluminum is $3\frac{1}{4}$ cents.

When it comes to direct labor in the smelting process, the French manufacturer has a very decided advantage because in this process dexterity does not cut much figure. No amount of dexterity or skill can increase the quantity of metal electrolytically deposited. It is hot, hard work, and the American plants run three shifts and pay an average of \$2 per caput, or \$6 per day, while the French pay 80 cents per caput for two shifts, or \$1.60 per day. I have no hesitancy in saying that on direct labor in the smelting process alone the French have an easy advantage of at least 1 cent per pound.

The French also have a natural advantage of contiguity of bauxite and water power, so that the transportation item is practically altogether eliminated in their costs. To make 1 ton of aluminum the Aluminum Co. of America is compelled to transport 6 tons of bauxite from Arkansas to East St. Louis, a distance of over 500 miles, at the rate of \$2 per ton, and then to transport 2 tons of alumina from East St. Louis either to Niagara Falls or Massena—an average distance of about 1,000 miles. The rate to Niagara Falls is $12\frac{1}{2}$ cents, and the rate to Massena is $17\frac{1}{2}$ cents per hundred, so that the average is 15 cents per hundred, or \$3 per ton, making a total freight charge of \$18 per ton of aluminum, or nine-tenths of a cent per pound, to get the bauxite to the water power. It will thus be seen that out of a protection of 2 cents per pound one-half of it is exhausted at once in overcoming this natural French advantage in the matter of transportation alone, and the entire duty of 2 cents per pound is absorbed in the two items of transportation and labor in smelting before the aluminum reaches the refinery.

I have compared the United States with France, because the principal exports of aluminum to the United States come from France. About one-half of the aluminum made in Europe is made in that country, and the home consumption of France is only about one-third of the capacity of its aluminum plants. But other countries besides France are practically as well located. Large and cheap water powers are available on the coast of Norway, and good water powers are to be had in Italy and Switzerland; and inasmuch as the French bauxite is on the seacoast, transportation of bauxite to Norway and Italy is a trivial proposition.

In addition to this, French bauxite is obtained from an enormous mountain of that material carrying a percentage from 63 to 65 per cent of bauxite, while the American deposits are contained in pockets, rendering the mining very much more expensive, and when obtained the percentage of bauxite runs only about 53 or 54 per cent. This difference in the quality of the ore, or rather in the quantity of bauxite per ton of ore, assumes great significance when you consider that it requires just as much heat and just as much labor to smelt a ton of the inferior material as is necessary in the reduction of the richer ores of France.

Taking into consideration all the advantages enjoyed by the French manufacturer—smaller investment, superiority of bauxite, saving in transportation charges, cheaper and better water power, and cheaper labor—I am convinced that he can produce aluminum ingots at a cost at least 4 cents a pound less than the most favored American plant. To lay any lower duty on the article will be an injustice not only to the American manufacturer but to the 7,000 workmen who depend on this industry for their bread, and it will be an absolute embargo against any future competition on this side of the ocean. To place it on the free list would be a crime against the revenues of the United States.

Mr. KENYON. Mr. President, I do not wish to take much of the time of the Senate, but I do wish to reply to one or two of the things said by the distinguished Senator from Pennsylvania [Mr. OLIVER], who certainly has illuminated this subject very much.

The Senator complains that I presented the case against the Aluminum Co. of America as a prosecutor, or with the zeal of a prosecutor. Possibly that is one of my faults, Mr. President—that I am overzealous in a cause in which I believe.

But if I presented it with the zeal of a prosecutor, he certainly has presented the other side of it with the zeal of a counsel for the defense.

I did not intend to say any unfair things about the Aluminum Co. of America. I had to go to the record for my facts. There may be some mistakes in some of those purported facts. I had nowhere else to go. I did not enjoy a confidential relationship with the officers of the Aluminum Co. of America. I was not on any boards of directors with them. I could get my information nowhere else. Even after all his speech, and the array of figures he has so splendidly arranged, I still reiterate what I said before, that the facts and quotations in my speech are substantially correct.

Mr. President, it is unfortunate for the Aluminum Co. of America that they could not be represented in court by the distinguished Senator from Pennsylvania as they have been represented here and before a committee of the Senate and a committee of the House; because although they agreed there, and it was found in the decree that they were a substantial monopoly, the distinguished Senator from Pennsylvania has showed that that is not true, evidencing a far better knowledge of the affairs of the Aluminum Co. of America than the aluminum company itself and its attorneys.

Mr. OLIVER. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Pennsylvania?

Mr. KENYON. I do.

Mr. OLIVER. I rather think the Senator will concede that I have proved that they are not a monopoly, as far as the sale of this product is concerned.

Mr. KENYON. No; I will not concede it at all. But I do say that if the Senator had appeared in court, representing these people, as he appears here and makes this argument, he might have secured a different kind of decree. It is amazing to me that high-priced lawyers, able in their particular line, should ever consent to this decree if they had all the knowledge the Senator from Pennsylvania seems to have about it.

He says this is a weak bill in equity; that the Government did not have the facts; that the Government had no case; that the contracts terminated before the suit was brought. Mr. President, it is amazing that if the Government had no case, and if the allegations of their petition were not true, the counsel for this company conceded, according to the recital of the court in the decree, that they were a monopoly. I could not go any further than that. I thought that was sufficient. Yet the distinguished Senator criticizes me for saying that the Aluminum Co. of America had this monopoly.

Mr. OLIVER. Mr. President, if the Senator will allow me, I do not think that anywhere in my speech I criticized the Senator for saying that. I can not recollect it; and if I did, I withdraw it, because I acknowledge myself that it is a monopoly.

Mr. KENYON. The Senator criticized me for so many things that possibly I was wrong about that. Inasmuch as the Senator acknowledges that the Aluminum Co. of America is a monopoly, there is no use in referring to the decree.

Mr. President, I introduced this amendment in the best of faith, because I believed in the principle it represents. I did not know anything in particular about the affairs of the Aluminum Co. of America. It was not to strike at them at all, but it was as an illustration of the principle for which I have contended—that where goods are the subject of a monopoly or trust control the tariff ought to be taken off.

The Democratic Party has favored that doctrine. The distinguished Senator from Indiana [Mr. KERN], who honors his State and the Senate by his presence, was a candidate for Vice President upon a platform declaring for exactly that proposition. Fifteen or sixteen years ago in my State that was placed in our Republican platform.

That is what I had in mind. I did not mean to strike at the friends or the pets of the Senator from Pennsylvania at all. It was simply a fair illustration of the proposition—

Mr. OLIVER. Mr. President, I think I ought to protest against such language.

Mr. KENYON. I will withdraw anything that the Senator protests against.

Mr. OLIVER. I think it would be well for the Senator to do so.

Mr. KENYON. I sat here and listened to the Senator's criticisms and arraignments of me for putting in letters and deceiving the Senate, and I did not raise any particular objection; but I withdraw the statement if he desires.

Mr. OLIVER. I accused the Senator of nothing that he did not do; and I do not think it is in order for a Senator to come in here, when another Senator stands on the floor defending his constituents, to talk about their being his "pets," and using language of that sort.

Mr. KENYON. I think probably that language should not be used, and I will withdraw it. But the Senator went before a committee of Congress and presented the cause of these people when they were seeking to get power sites on the St. Lawrence River.

Mr. OLIVER. Mr. President, I went before the Commerce Committee of the United States Senate, of which I was a member, to introduce the representatives of this company. I have no recollection of ever having gone before a committee of the House, although just now I will not say that I did not do so; but I rather think I never went before any committee except the Committee on Commerce. However, I had a perfect right to do both, and I will do it again if occasion arises.

Mr. KENYON. I do not doubt the Senator will.

Mr. President, there was not any particular reason that I could see for the Senator from Pennsylvania to become so excited over this proposition. Something was said here the other day by the distinguished Senator from Kansas [Mr. Bristow] that had better be borne in mind by the Senate. He said that out upon the stump we talk about doing something against the trusts and combinations, and then when we come here we seem to forget it. We do talk in that way as candidates for Congress and for the Senate; and then when we get here, somehow or other it seems impossible to get anything done with relation to the trusts.

I know that possibly I am subject to criticism for being overzealous on this question; but we raise constitutional objections, we think of something else that is better to be done, and so on. The distinguished Senator from Nebraska [Mr. Hitchcock] a few days ago had a proposition that commanded large support on this side, but received no support on the other side except his own vote. I have reached a point in my mental calculations—and I may be all wrong—where it is a conviction with me that the trust problem is more important than anything else; and if it can be hit in any reasonable way I am willing to try it and to follow it out.

Mr. GALLINGER. Mr. President—

The PRESIDING OFFICER (Mr. PITTMAN in the chair). Does the Senator from Iowa yield to the Senator from New Hampshire?

Mr. KENYON. With pleasure.

Mr. GALLINGER. There is one phase of the trust problem that has troubled me all along. I have no sympathy with trusts and combinations; but is it not rather remarkable that we should be legislating in an extreme way against an American trust while we are permitting the importation of goods into our country from foreign trusts?

Mr. KENYON. Of course we can not stop a foreign trust. A number of foreign countries view the trust question very differently from the way in which we view it. They encourage trusts and believe in trusts.

Mr. GALLINGER. To make it more specific, suppose there is an aluminum trust in England—I do not know whether there is one or not. We legislate against a similar combination in this country, but the product of the British trust is poured into our market without any import duty being placed upon it. Is that quite fair?

Mr. KENYON. If that argument is good, I suppose we can not do anything with trusts in this country.

Mr. GALLINGER. I am not so sure about that.

Mr. BRANDEGEE. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Connecticut?

Mr. KENYON. I do; but I do not want to start this whole trust question. We have argued it here for a number of days. I simply want to close with one observation. I yield to the Senator from Connecticut, however.

Mr. BRANDEGEE. I do not want to start the trust question either, but the Senator is discussing it, and this occurred to me: The Senator is proposing a remedy, as I understand, to be applied where a product in this country is controlled by a trust. If it is controlled by a trust, and if that trust is competing with a foreign trust, what good does it do to take off the duty on the product?

Mr. KENYON. That question was asked here the other day. It is a very pertinent question.

Mr. BRANDEGEE. I did not hear the answer. What benefit is it to the consumer, or how does it operate to help anybody, to take the duty off a product in which the foreign trust is competing with the domestic trust?

Mr. KENYON. Here is a situation, in this very instance, where fabricators of aluminum wares are compelled to go to the Aluminum Co. of America to get their aluminum. That company controls it. If the fabricators can not get it from the Aluminum Co. of America—and they have subsidiary companies, and may not be willing to sell to them—they have to go

abroad and buy it. Then they have to pay the manufacturer's price abroad and whatever additional the tariff may be. In that particular instance it would be a help. In many instances it would be no help at all.

Mr. BRANDEGEE. Shall we leave our people absolutely in the hands of the foreign trust and then let them raise the price to wherever they please?

Mr. KENYON. Oh, we do not do that.

Mr. BRANDEGEE. I am not saying that we do. I say that where a product—

Mr. KENYON. The Senator is putting a good many "ifs" in it.

Mr. BRANDEGEE. I am putting only one "if" in it. I am saying that if a product is controlled by a trust in this country which is competing with a trust which controls the product in a foreign country, what remedy would it be to us to put the article upon the free list so that we can freely import it from the foreign trust?

Mr. KENYON. I have said before, in answer to that question—which, of course, the Senator assumes is a very conclusive question—that there is a moral side to this question. I have said that where men have built up monopolies behind tariff duties in this country—and I do not suppose the Senator will agree with me that tariff duties are conducive in any way to monopoly—they ought not to be permitted to enjoy that protection, whatever it may be, where they have entered into these illegal organizations.

Mr. BRANDEGEE. Whatever the moral question may be, if the foreign trusts are encouraged by their Governments and our trusts are discouraged by this Government and put out of business and the business turned over to the foreign trusts, it seems to me the moral question will rapidly become a practical question in this country as to whether we are going to produce anything in this country, or go humbly to the foreigner and pay whatever price his foreign trust, backed by the Government, wants to exact.

Mr. NORRIS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. KENYON. Yes.

Mr. NORRIS. On that question I think the Senator from Connecticut assumes what may or may not be true; that is, that if we put the product on the free list the American trust will necessarily have to go out of business. If that were true, we would perhaps be subject to the foreign trust. If that were not true, they might still remain in business. The usual reason why a trust controlling an article in Europe and a trust controlling the same article here can both make so much money is because of an agreement between them to divide up the world's territory.

Mr. BRANDEGEE. What I am assuming is nothing except that the foreign trust, the foreign company, the foreign producer is able to produce its product cheaper than the domestic producer, because if it is not it will not get into this market.

Mr. KENYON. Why does the home trust want any protective tariff on the product, then?

Mr. BRANDEGEE. I am not saying whether that is so or not. I am simply saying that if a corporation in this country is competing with a corporation in another country, and each one practically controls the product in its respective country, I wonder how effective a remedy it will be to put the one in this country out of business, if it can be put out of business by its foreign competitor, which can produce cheaper.

The Senator says there are several "ifs" there, which both he and I have introduced into this discussion. I agree with him that there are two "ifs" now. I introduced one and he introduced another. But I have simply assumed—and I have not heard it denied by anybody—that the cost of production is lower abroad in the case of most of these competitive products. If it is not, I do not see how the public is to be benefited in the line of a cheaper cost of living by putting these products on the free list.

Mr. KENYON. I am not going into any discussion on that point. I went into it the other day, and I have taken enough time on it. I only want to say that in the Democratic platform in 1912 our Democratic friends said:

Articles entering into competition with trust-controlled products and articles of American manufacture which are sold abroad more cheaply than at home should be put upon the free list.

We denounce the action of President Taft in vetoing the bills to reduce the tariff in the cotton, woolen, metal, and chemical schedules and the farmers' free-list bill, all of which were designed to give immediate relief to the masses from the exactions of the trusts.

The Senator from Pennsylvania has conceded that this is a monopoly; the courts have held that it is a monopoly; and consequently under the Democratic platform it ought to be put on the free list.

Mr. OLIVER. I conceded it was a monopoly, Mr. President, in the sense that when one manufacturer makes everything of a certain article that is made in the country he must necessarily have a monopoly of its manufacture. But I never conceded that it was anything in the nature of what is termed a trust. Its monopoly arose not as intimidated by the Senator under the protection of the tariff. It arose under the protection of the patent laws of the United States. That is what gave it its start and what gave it a large part of its accumulated profits. Since 1909 it has had a monopoly in the manufacture solely because nobody ever started to manufacture in competition with it, but one great reason why nobody ever started to manufacture in competition with it is because it was already having a strong competition with foreign manufacturers.

Mr. KENYON. As it has developed in the article the Senator put in the Record that this aluminum producer has now become very powerful and very strong in two of the Southern States, that may account for the fact that the protective tariff is retained on it at this time.

Mr. WALSH. Mr. President, as the consideration of this matter has led us back to the amendment offered by the distinguished Senator from Iowa a short time ago, I desire to submit some observations in relation to that amendment.

I will take occasion to say that I have the deepest sympathy with the end which the esteemed Senator seeks to accomplish through this amendment. To indicate how fully I enter into the spirit of it, I have myself studiously endeavored to frame an amendment intended to effect exactly the same purpose and along the lines attempted by the Senator. I simply desire to give him the benefit of the reflections that occurred to me in connection with the matter and to refer to some of the obstacles, seemingly insurmountable, which I encountered in an attempt to make a general provision covering these cases.

In the first place, Mr. President, the amendment proposes to put upon the free list every commodity adjudged by a court to be controlled by a combination in violation of the Sherman antitrust act. Section 1 of that act provides that—

Every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several States or with foreign nations is hereby declared to be illegal. Every person who shall make any such contract or engage in any such combination or conspiracy shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by fine, etc.

As in the act hereto.

Section 2 provides that—

Every person who shall monopolize or attempt to monopolize or combine or conspire with any other person or persons to monopolize any part of the trade or commerce among the several States or with foreign nations shall be deemed guilty of a misdemeanor, etc.

As in the act hereto.

The amendment proposed by the Senator from Iowa provides that—

Whenever it shall be found by a court of competent jurisdiction, either Federal or State, and said finding is unchallenged either by appeal or writ of error, or if challenged and said decision is sustained by the court of last resort, either Federal or State, that any article or commodity upon which a duty is levied under this act is under the control of a monopoly or combination formed or operating in violation of the act of July 2, 1890, or substantially under such control, no further duty shall be levied or collected on such article or commodity, and the same shall therefore be admitted free of duty.

The difficulty about the matter is, Mr. President, that the court makes no such adjudication in any action prosecuted under the provisions of the Sherman Antitrust Act. Whether a monopoly actually exists or not, whether it controls in whole or in part the output of a certain commodity or not is a mere matter of evidence to establish whether the illegal combination condemned by section 1 exists or the monopolization referred to in section 2 has taken place.

To illustrate the point more clearly, I refer to the fact that before I came to the Senate I was engaged in the prosecution of a combination for the violation of this act, and I sought to have it adjudged to be a combination in contravention of the law, though I hoped to establish that it controlled no more than 25 per cent of the commodity in which it dealt. Under the decisions I felt perfectly confident that if the other conditions existed a decree would be awarded.

The fact is, Mr. President, that in no one of the cases in which it has been adjudged that a combination does exist contrary to the provision of the act, at least in none of those which have gone to the Supreme Court, has there been a complete control in the hands of the offending corporation. In the work entitled "Concentration and Control," by President Van Hise, of the University of Wisconsin, published a year or so ago, he speaks of the various combinations and generally of the proportion of the product in which they deal controlled by them.

He starts with the Standard Oil and states, at page 104, that—

The Standard Oil Co., with its various affiliated concerns, handled 84.2 per cent of the crude oil which goes to the refineries in the United States. One refinery, that at Bayonne, N. J., consumed more crude oil than all of the independent plants of the country.

So, even in the case of the Standard Oil Co., it will be observed that other companies, not known at least to be associated with it in any way, handled 15.8 per cent of the entire product. That is a case where the product is practically under the control of this company, and it undoubtedly regulates the price. I speak of it, however, to show that even that company would not be found to be in entire control of the commodity.

Now, take the case of the steel company, which is to-day being prosecuted by the Government as being in existence in violation of this act. At page 119 this author tells us that independent companies control the following percentages:

	Per cent.
Pig iron, spiegel, and ferro	56.6
Steel ingots and castings	45.7
Rails	41.1
Structural shapes	53
Plates and sheets of all kinds	50.3
Black plate produced in tin mills	47.1
Coated tin-mill products	38.9
Black and coated sheets produced in sheet mills	61.1
Wire rods	32.7
Wire nails	44.5
Wrought pipe and tubes	61.8
Seamless tubes	44.7

Yet under this amendment should the Government obtain a decree it will be absolutely necessary to subject every independent competitor of the United States Steel Trust to the competition which would result by putting all the products of that great combination upon the free list.

Take the American Tobacco Co. At page 140 the author tells us:

This group of companies in 1909 controlled 92.7 per cent of the cigarette business of the country, 62 per cent of the plug tobacco, 59.2 per cent of the smoking tobacco, and in 1901, the first year it entered the snuff business, 80.2 per cent of the snuff. Later the American Tobacco Co. entered the cigar business, and by 1903 it had acquired about one-sixth of the cigar output of the United States.

So that while the American Tobacco Co., as recited in the decree of the Supreme Court of the United States, controls very largely this product, still there are independent competing companies. The principle of the amendment, I dare say, should hardly be applied with respect to tobacco. I venture to say that the distinguished Senator from Iowa himself would not seriously ask that all the importations of tobacco be put upon the free list in view of the adjudication of the Supreme Court of the United States in the Tobacco Trust case. I would like much to hear from him as to whether he believes that we ought to admit free of duty all tobacco from Cuba, from the Philippines, and from all foreign countries.

It was suggested in that connection, in the course of the discussion on this subject the other day, that a consumption tax might be placed upon tobacco. But, of course, a consumption tax operates upon the domestic product as well as on the imported product, and is levied upon all. The consumption tax is paid by the importer and by the independent producer as well.

Mr. SIMMONS. Does the Senator mean a consumption tax or a tax on production?

Mr. WALSH. A production tax would operate only on domestic products, and would leave the foreign importation to come in without any tax at all.

Mr. SIMMONS. I merely wanted to know that I understood the Senator correctly.

Mr. WALSH. I understood the Senator from Kansas [Mr. Bristow] to suggest the other day that the difficulty might be met by a consumption tax, tobacco going to the free list under the amendment. Of course, if a consumption tax were put upon the article, the domestic product would be upon the same footing with the imported product, unless you put a heavier tax upon imports than upon the domestic products, and then you would, in effect, have an import duty.

So, without detaining the Senate longer, I could go through the list—

Mr. KENYON rose.

Mr. WALSH. If the Senator will pardon me just a moment—I could go through the list and show you that in all these cases in which a combination has been adjudged to be a violation of the Sherman Antitrust Act a great wrong, as it seems to me, would, by the operation of the amendment, should it be adopted, be done to the independent competitors of the great trusts.

I had something further to say about this, but I would be very glad to answer the Senator.

Mr. KENYON. The Senator asked me a question about tobacco. I am not clear but that the Senator is right about that.

I wish to ask the Senator, Does he repudiate the Democratic platform in that respect?

Mr. WALSH. I was going to reach that in just a moment. I shall be very glad to give the Senator my views about the platform.

I was going on to say that one of these prosecutions was carried on against what was popularly known as the Whisky Trust. That there is a combination of the great distilleries in this country I apprehend no one will deny, and my own individual opinion about it is that it exists in violation of the act of 1890. Let us assume that the Government prosecutes successfully a suit against what is generally known as the Whisky Trust and it is adjudicated that it exists in violation of the act. Automatically, then, all the products of that great combination go upon the free list and whiskies are introduced in this country without any tax whatever. I apprehend very likely the Senator would not like to see that result ensue.

Now, I want to answer directly the question addressed to me by the distinguished Senator from Iowa. I was to no small extent responsible for the incorporation of the plank in the Democratic platform to which he alludes, and therefore I felt it my duty to endeavor honestly and earnestly, as I think the Senator from Iowa has done, to give it expression in the legislation that is now under consideration before this body. I attempted to frame an amendment that would commend itself to my own conscience and my own judgment and along the very lines that the Senator from Iowa is traveling, and I have reached the conclusion, Mr. President, that it is impossible to arrive at a correct solution of this matter by any general declaration in relation to the subject, or any general provision, and that that plank in the platform is to be carried out and can be carried out only by having in mind its principles in framing the free list.

For instance, it was adjudicated in the case of the United States *v.* The Standard Oil Co. (121 U. S., 1) that the Standard Oil Co., largely in control of the production of petroleum in this country, is a combination in violation of the act, and we have put petroleum on the free list.

It was adjudicated in the case of the United States *v.* Swift & Co. (196 U. S., 375)—

Mr. SIMMONS. In connection with what the Senator has said about the Standard Oil Co. I will say that the Standard Oil Co. is also producing asphalt, and we have put asphalt on the free list.

Mr. WALSH. It was adjudicated in United States *v.* Swift & Co. (196 U. S., 375) that the Beef Trust was a combination in violation of this act, and all meats are by this very bill put upon the free list.

It was adjudicated in United States *v.* The Addystone Pipe Co. (175 U. S., 211) that that organization, engaged in the manufacture of cast-iron pipe, was a combination in restraint of trade, and we have put its principal product upon the free list.

In the case of Nelson *v.* The United States (201 U. S., 92) was presented for consideration the operations of the Paper Trust and whether it was a combination in violation of this act, and we have put print paper upon the free list.

So likewise lumber is upon the free list, a combination engaged in the production and sale of lumber being charged with being a combination in violation of the act.

A prosecution is now being carried on by the Government, as my understanding is, against the American Sugar Refining Co., alleging that it is a trust and that it controls in large part the sugar that is sold to the American people. Let me assume that that prosecution is successfully carried on and it is so adjudged by the court. The amendment offered by the Senator from Iowa, I recall, had the earnest support of the esteemed Senator from Kansas [Mr. BRISTOW], who I see sitting near him at the present time. I apprehend if that prosecution is carried on successfully and sugar automatically, under this amendment, goes upon the free list, it would not meet the entire approval of the esteemed Senator from Kansas, who has been earnest and persistent in his efforts to get the duty upon sugar reduced, but still to keep it at a figure which he thinks it ought to bear, about \$1 a hundredweight.

Mr. BRISTOW. Mr. President—

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Kansas?

Mr. WALSH. I yield.

Mr. BRISTOW. I wish to say that to put sugar upon the free list is in the interest of the trust concerning which the Senator is now speaking, and I am not going to cast any vote in the interest of that organization, if I know it.

Mr. WALSH. Exactly; and that is the situation which I desire to present to the distinguished Senator from Kansas. He assumes, and I agree with him to a very great extent, that to put sugar on the free list would be to the interest of the

American Sugar Refining Co. as to its refining business. In fact, I apprehend that proposition can not be disputed by anybody; and yet if the amendment offered by the Senator from Iowa means anything, it means that just as soon as a favorable decree is arrived at in that suit automatically that commodity must go to the free list.

So, Mr. President, I submit that the only possible way in which you can carry out the spirit of the amendment offered by the esteemed Senator from Iowa—the plank in the Democratic platform and the plank to which he alludes in the Republican platform of his State adopted many years ago—is to pick out these various commodities that are controlled entirely or largely by the trust, to single them out and throw them into the free list, wherever greater evils will not be the result. I am satisfied that you can not reach the end in the other way.

I have not yet listened to any debate upon this floor in which it has been asserted that any particular commodity found upon the dutiable list is entirely or very largely in the control of a trust except aluminum, the free listing of which is urged by the esteemed Senator from Iowa. That presents a peculiar condition, inasmuch as the product—at least such I understand is the contention of the Senator from Iowa—seems to be controlled abroad as well as here by one and the same trust. To put it on the free list would seem to me to be in the interest of a foreign trust. Thus, although possibly the language of the platform is violated in that instance, there is no violation whatever of the spirit of it by getting whatever revenue will be derived from a duty upon that product.

I am desirous of being helpful to the Senator from Iowa in the solution of this question, and if it is possible to frame a general amendment to this bill which will accomplish the result at which he is striving, overcoming these difficulties to which I have thus briefly alluded, I assure him that he shall have my cooperation in any effort he may make to have it adopted as a part of this act.

Mr. McCUMBER. Mr. President, I waited with considerable interest to see whether the Senator from Montana [Mr. WALSH] would suggest a single instance in which taking the tariff off of a trust-made product would not also take it off of some of the same kind of products produced by those who are independent of a trust, and until he gives us one or two instances of that kind I will assume that it is impossible to apply that particular provision of the Democratic platform. But it seems to me, Mr. President, that where he has attempted to apply it in these so-called trust-produced articles he has applied it without discrimination to those who would be least able to bear it. There may be a meat trust that would justify putting meat upon the free list. However, I think the Senator will find that in the neighborhood of 60 per cent of the meat produced is entirely outside of any trust. Therefore, if he is taking off the tariff on meat because of a meat trust he is affecting 60 per cent of the business that is not interested in any degree in it.

I also find no instance in which there has been a trust in the production of cattle in the United States, and yet I find that we have placed cattle upon the free list. I have looked in vain to find an egg trust, or a poultry trust, or a wheat-producing trust, or a potato trust, and yet these articles that are produced by so many of the people in the United States, amounting to 33,000,000, who are interested in their production, are all placed upon the free list irrespective of the matter of trust and when, as a matter of fact, they are almost the cheapest things produced in the United States.

Mr. SIMMONS. Mr. President, the Democratic Party in the United States Senate and in Congress has not been oblivious to the declaration of the Democratic Party in its national platform that trust-controlled products should be put upon the free list; but we have not thought that that meant that we should pass a general statute in the language of the platform declaring that trust-controlled products should go upon the free list. We have interpreted that declaration to mean that when we come to deal with the tariff, which places articles upon the dutiable list or upon the free list, we should carry out the Democratic declaration as far as possible in favor of putting articles that are controlled by a trust on the free list. The committee of this body having charge of that matter, and I think the committee of the House having charge of that matter, have tried, in framing this tariff bill, to carry out that declaration of the Democratic Party.

Of course, as the Senator from Montana [Mr. WALSH] has said, there are circumstances under which it is practically impossible, without doing the greatest injustice, to put a product which is in part under the control of a monopoly upon the free list. In addition to that, of course, we have to consider the revenues of the Government. But wherever in the framing of this bill we have found that an article was controlled by a trust we have put that article upon the free list unless there

were some compelling reasons growing out of the circumstances of its manufacture and the fact that the Government had to have revenue, which intervened and made that impracticable or unwise.

The Democratic Party in its platform laid out a well-defined program of legislation. It declared in favor of a revision and a reform of the tariff, it declared in favor of a revision and a reform of our currency and financial legislation, and it declared against the continuance of combinations in restraint of trade. The Democratic Party has undertaken to carry out these platform pledges.

We have begun with the tariff. This special session was called for the purpose of carrying out our pledges with reference to the tariff. The tariff bill is before the Senate; we have been engaged in its consideration now for over five weeks; it will soon, I am sure, become the law of the land. When it becomes the law of the land, I think that it will be received as a fair interpretation of the pledges and promises of the Democratic Party with respect to that subject, and will meet the conditions which confront us.

Notwithstanding it involves sacrifices on the part of the individual Members of Congress, making it necessary for us to stay here during the whole summer, and probably during the whole fall and into the winter, we are preparing to carry out our pledge with reference to financial legislation. When we have finished that, Mr. President, the Democratic Party will take up the trust question.

We will enter upon that question and the question of the regulation of transportation rates and deal with the questions in a broad, comprehensive way—and we are now dealing with the question of the tariff, and as we will deal with the question of currency, in a broad, comprehensive way.

We do not wish to inject into the tariff bill now pending before the Senate the trust question or the railroad question. They should be dealt with separately. There is no more reason why we should inject the trust question or the railroad question into this tariff bill than that we should inject the financial question into it. All four of them are great questions. They can only be dealt with effectually as separate measures.

When we reject an amendment to this bill dealing with the trust question, it does not mean we are opposed to the principle of the question. When we reject an amendment dealing with the railroad transportation question, it does not mean that we are opposed to that. When we reject an amendment to this bill dealing with the currency question, it does not mean we oppose that provision; but it means we do not propose to deal with these different questions in this particular bill, and that we desire, as far as possible, to confine this bill to matters pertaining to the tariff.

The Democratic Party will carry out the pledges of its platform, but it will do it in an orderly way. It will not attempt in one bill to cover the whole field of promised reform. It will deal with the questions separately and effectually, and when we are finished the country will be satisfied that we have done the best we can to carry out our pledges to the people with respect to all great questions embraced in our platform declaration.

Mr. President, I presume the matter before the Senate is the amendment of the Senator from Iowa [Mr. KENYON] with reference to aluminum.

Mr. KENYON. Yes; that is it.

Mr. SHIVELY. Mr. President, the subject under immediate consideration is paragraph 145. The question is, What rates, if any, shall be placed on aluminum? The present law fixes 7 cents a pound on ingot aluminum and 11 cents a pound on aluminum in sheets, plates, strips, and rods. The junior Senator from Pennsylvania [Mr. OLIVER] manifestly believes these rates should be maintained. The senior Senator from Iowa [Mr. CUMMINS] has offered a series of amendments to the metal schedule, in which he fixes 6 cents a pound on aluminum in ingots and 9 cents a pound on aluminum in sheets, plates, strips, and rods. The bill as it came from the House fixed a flat ad valorem rate of 25 per cent, which, at present prices, is equal to about 4 cents a pound on ingot and between 6 and 7 cents a pound on the further advanced forms of the metal. The Finance Committee has reported an amendment fixing the rates at 2 cents a pound on ingot and 3½ cents a pound on sheets, plates, bars, and rods. The rates prescribed by the senior Senator from Iowa are 200 per cent above and the amendment of the junior Senator from Iowa 100 per cent below the rates submitted by the committee.

Now, Mr. President, in all this contest and confusion as to what the rates should be the issue is far less one of fact than of policy. There is no wide disagreement as to the facts. Aluminum has taken its place beside iron and steel as one of the great metals of civilization. It has become an indispensable

in many industries and a highly desirable material in many others. There is no substance in what has been said about overproduction. The use of aluminum is limited only by limitations on its supply. Nothing can prevent the multiplication of its uses save difficulty and uncertainty as to supply. If American industries can be assured of reliability and steadiness of supply, there is practically no limit on the demand.

What are the conditions of supply? To this time there has been, and now is, just one producer of aluminum in the United States. Projects for production of the metal are being carried forward in North Carolina which, it is alleged, will create competition and increase production. Whether the new project means real competition remains to be seen. But down to 1909 the Aluminum Co. of America had complete control of production in this country by virtue of the Hall patent. About the time that the Hall patent was issued a Frenchman named Heroult discovered and applied the same process of separation of the aluminum from the bauxite, or clay, in which it is found, and production of the metal went forward contemporaneously and by the same process in Europe and the United States. It follows that while, by virtue of its patent, the Aluminum Co. of America had exclusive control of production within this country nothing but the tariff or other artificial influences could put that company in exclusive control of the domestic market.

That under the protective rates in the acts of 1897 and 1909 the Aluminum Co. of America attempted to build up and maintain monopolistic control of the market there can be no well-founded doubt.

Mr. OLIVER. Mr. President, if the Senator from Indiana will allow me, I should like the Senator to give some specifications on that charge.

Mr. SHIVELY. I shall furnish the Senator with specifications, though it is not my purpose to dwell at length on the voluminous and incontestable evidence before us. The Aluminum Co. of America went into court. It filed its answer. Then it permitted a decree to be taken against it.

Mr. SMITH of Arizona. The Senator from Indiana says this company went into court. Does he mean that they voluntarily went into court, or that they were carried there by the Government itself by a suit brought against the company?

Mr. SHIVELY. The Government brought its suit in the western district of Pennsylvania, making the Aluminum Co. of America party defendant. In its complaint the Government set out copies of a series of written agreements and charged a series of acts, all in violation of the antitrust act of 1890. The company filed its answer, denying the allegations of the complaint. Then it went into court, and without awaiting the presentation of evidence on the merits, consented to a decree nullifying the agreements and prohibiting the acts of which the Government complained. These agreements and these acts were all in interruption and restraint of the supply of aluminum to the industries in this country dependent in whole or in part on this metal.

The junior Senator from Pennsylvania inquires for evidence in support of the charge of effort on the part of this company at monopolistic control. Not long prior to the expiration of its patent the Aluminum Co. of America organized the Northern Aluminum Co. under Canadian law and established a plant on the Canadian side of the St. Lawrence River. The Aluminum Co. of America then owned and now owns every dollar's worth of stock of the Northern Aluminum Co. For all the purposes of market control the latter was and is a part of the former. The president of the Aluminum Co. of America then went to London and negotiated the agreements between the Northern Aluminum Co. and the European producers of aluminum. This was to resolve the producers of the whole world into a single organization.

Mr. OLIVER. Mr. President—

The VICE PRESIDENT. Does the Senator from Indiana yield to the Senator from Pennsylvania?

Mr. SHIVELY. I do.

Mr. OLIVER. The Senator knows very well that all of those agreements related to business and sales outside of the United States of America. Those agreements were not only submitted and unfolded to the Committee on Ways and Means, but they were submitted to the Department of Justice of the United States. They not only related solely to business outside of the United States, but business in the United States is expressly excepted; and, if the Senator is not aware of the fact, I can inform him that it is to-day and always has been subject to the freest and most open competition, and the record shows that fact. The Northern Aluminum Co., the Canadian company, entered into those agreements because that is the way in which business is transacted in other countries, and the only way.

Mr. SHIVELY. The Senator went over all that ground in his speech this afternoon. The idea that all these pains should be

taken by the Aluminum Co. of America, a corporation organized under the laws of Pennsylvania, to draw all outside producers of aluminum into an organization without reference to control of or influence on the price of aluminum in the United States is strangely novel. The market in the United States had a protection of 7 cents and 11 cents a pound. Arthur V. Davis, of Pittsburgh, Pa., was then and is now the president of the Aluminum Co. of America. He projected and supervised the organization of the Northern Aluminum Co. of Canada. Having completed that organization, he went to London and negotiated the agreements with the European producers of aluminum. Mr. Davis appeared before the Committee on Ways and Means of the House last January in support of the rates on aluminum in the present law.

On page 1502 of the hearings before that committee occurs the colloquy on this point between Mr. Davis and Representative PALMER, as follows:

Mr. PALMER. What companies are connected with your Canadian company in a contract? Where do they operate?

Mr. DAVIS. There is a company in Italy, a Swiss company, with plants in Switzerland, Germany, and Austria; two companies, I think, in Norway; some five or six companies in France; two companies in England; and another company in Switzerland independent of the one first spoken of. I think that is all.

Mr. PALMER. That comprises about all the aluminum manufacturers on the Continent?

Mr. DAVIS. Yes, sir; all aluminum manufacturers on the Continent.

Mr. PALMER. Then your Canadian company has a contract with all of the aluminum manufacturers?

Mr. DAVIS. Yes, sir.

Mr. PALMER. Which contract regulates the prices?

Mr. DAVIS. Yes, sir.

Mr. PALMER. What is the price in Canada to-day?

Mr. DAVIS. The price in Canada to-day?

Mr. PALMER. Yes. Is it the same as it is here?

Mr. DAVIS. Yes; the same as it is in England or Italy. Just now it is abnormally high. It has averaged about 12 or 14 cents until just within the last two or three months.

Mr. PALMER. Is there real competition abroad between these various companies which you have mentioned?

Mr. DAVIS. There has been.

Mr. PALMER. Is there now?

Mr. DAVIS. Not now; no, sir.

Mr. PALMER. Why not?

Mr. DAVIS. On account of this contract that I speak of.

Mr. PALMER. Well, I mean in the foreign market is there real competition?

Mr. DAVIS. This contract covers the foreign market.

Mr. PALMER. As well as the Canadian market?

Mr. DAVIS. Yes, sir.

Now, mark the fact that these agreements were negotiated by the Northern Aluminum Co., which is a subsidiary and factotum of the Aluminum Co. of America, and that the agreements were made and perfected by the president of the latter company. Are we asked to believe that all this was done without the intention and effect of influencing the price of aluminum to American consumers? The world price of aluminum has advanced since that time. In the agreements was an assignment of territory to the world's producers. In the agreements it is expressly provided that "the sales in the United States of America are understood to be expressly reserved to the Aluminum Co. of America," and then to assure the European parties to the contract of assignment of territory and distribution of product, of full compliance with its terms, the agreement further says that "the Northern Aluminum Co. engages that the Aluminum Co. of America will respect the agreements hereby laid upon the Northern Aluminum Co."

Of course, these agreements looked to a world control. No other inducement could exist for making them. And whatever rise ensued in the world's markets it will be found on a study of foreign and domestic prices that the Aluminum Co. of America through all the years substantially has absorbed the duty on aluminum in a correspondingly advanced price to the consumers of this country. Not only did the agreements result in increase of prices abroad, but that increase is also absorbed in the domestic price plus what protective rates our tariff assures to the domestic producing monopoly at home. The artificial contrivances with foreign producers only aggravated the exactions from domestic consumers.

The question, therefore, presents an industrial side as well as a revenue side. What claim has the protectionist for the maintenance of the present rates? That which is to-day the Aluminum Co. of America started as the Pittsburgh Reduction Co., with a capital of \$20,000. This capitalization was subsequently increased to \$1,000,000, and then to \$1,600,000, and thereafter to \$3,800,000, on which capitalization a stock dividend of \$20,000,000, or over 500 per cent, was declared. This was in December, 1909, and in 1912 its surplus again amounted to over \$12,000,000. All this was in addition to whatever of cash dividends had been distributed through the years of its operation. Allowing nothing for these cash dividends we have capital and surplus of over \$35,000,000 on an original investment which, after including several hundred thousand dollars for the patent,

amounted, on Mr. Davis's statement at the House hearings, to a sum not exceeding \$1,810,000.

Down to 1909 the Aluminum Co. of America had produced about 160,000,000 pounds of the metal. That \$20,000,000 of stock dividend represented a profit of 13½ cents per pound on its total production. Doubtless much of the product of this company is carried forward by its subsidiary companies into sheets, plates, bars, rods, castings, cooking utensils, novelty articles, and other fabrications of aluminum. But it all eventuates in the profits realized by the parent company.

The facts on which these conclusions are based are not drawn from sources unfriendly to this company. Without exception, they come from the written agreements entered into by the company through its subsidiary and the voluntary statements of the president of the company. Viewed from the industrial side, the undisputed and indisputable facts leave no excuse, even from the standpoint of the protectionist, for the rates in the existing law.

At this point is projected into this debate the proposition to place all articles on the free list which by a court of competent jurisdiction are found to be the subjects of trust control. The weakness of this proposition is that when the court so finds it becomes the duty of the court to dissolve the trust agreements and annul the devices by which competition has been strangled and thus reestablish competition in the market. If the decree of the court is effective, the import duty would continue as long as the monopoly continues and end only when competition is established.

In the execution of Democratic platform pledges the pending bill places on the free list a long series of articles which common observation shows to be the subjects of artificial manipulation, and this is done without reference to judicial action in relation to them. The special cases of judicial decree, or cases in process of litigation, were enumerated a few moments ago by the junior Senator from Montana [Mr. WALSH] in his statement with admirable clearness and conciseness. In a majority of these cases it is palpable that the duties produce no revenue and that the rates are employed only to establish and maintain artificial prices at home, while selling the like domestic product at lower and competitive prices abroad. The pending measure makes intelligent application of the free list as a corrective of restraints on trade as far as the principle is capable of effective operation.

It will serve no good purpose to unduly magnify the free list as a factor in the eradication of trusts. Legislation on the tariff can broaden the field of competition and thus nullify the domestic arrangements for market control. But each case is dependent on its own facts. If the control be international, the case is exceptional and calls for action in a situation where the tariff may be without influence. Regrading, forestalling, engrossing, and monopolizing are not new things. They were denounced at common law and punished as crimes two centuries ago. The devices of to-day to strangle competition and exploit society are only varying forms of these old offenses against the law. There is not an American lawyer but who knows, or certainly should know, that when he assists clients to perfect their schemes to strangle competition he is acting in the teeth of the letter and spirit of the common law and in the teeth of the plain spirit, if not the express letter, of the antitrust act of 1890.

If the act of 1890 confers the necessary power to make its decree efficacious to destroy the evil, and the power is employed, that is sufficient. If the power conferred and the duty enjoined by the act are so used that the trust or monopoly avoids, evades, flouts, and treats with contempt the decrees of the court, then manifestly a solemn duty is imposed on the Department of Justice and the court to take appropriate action to enforce respect for the decrees of the court and compel correction of the wrongs which the act denounces and prohibits. If the act of 1890 is inadequate to meet any case that has arisen or that may arise, then the duty is on Congress to enlarge, supplement, and reenforce the act of 1890. If the act of 1890 is sufficient, enforce it. If it is not sufficient, reenforce it by appropriate legislation.

Now, Mr. President and Senators, your committee reports in favor of an amendment fixing the rate at 2 cents and at 3½ cents a pound. These rates are reductions of 72 per cent on the rates in the present law. There have been importations of aluminum. Whatever may have been the effect of the decree of the court in the case against the Aluminum Co. of America, there was an importation for the fiscal year ended June 30, 1913, of approximately 28,000,000 pounds.

The demand for the metal is so great that the conspiracies among producers can not prevent its use. The Aluminum Co. of America is itself an importer. On the basis of last year's

importations the rates prescribed by the committee will yield a revenue to the Government of at least from \$500,000 to \$600,000. This is a consideration we are not authorized to overlook. At the same time we release the American consumers from the remorseless exactions and heartless vexations practiced on them under the present law.

The Senator from Pennsylvania refers to the Ford Automobile Co. and the cost of aluminum per machine. He points to the large capital and large profits of that company. The consumers of aluminum are not all Ford companies. These consumers include hundreds of modest manufacturers, to whom this metal is necessary and to whom the high prices and uncertain supply are positive hardships. The \$20,000,000 of stock dividends were in large part contributions by these consumers under the compelling force of the present tariff law. These consumers ask no special privilege. They only ask that the taxing power of the Government shall not be used to bind them hand and foot in the market, while a favorite of the taxing power despoils them of their substance and puts to hazard their business. The rates prescribed are reductions of nearly three-fourths of the present rates. The rates proposed leave low revenue duties. Such rates are manifestly not destructive to the producer, are equitable to the consumer, and will contribute somewhat to meet the fiscal necessities of the Government. I trust the committee amendment may be adopted.

Mr. KENYON. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	Oliver	Smith, Ariz.
Bacon	Hollis	Overman	Smith, Ga.
Bankhead	Hughes	Page	Smith, S. C.
Borah	James	Penrose	Smoot
Bradley	Johnson	Pomerene	Stephenson
Brady	Jones	Ransdell	Sterling
Bristow	Kenyon	Reed	Stone
Catron	Kern	Robinson	Swanson
Chamberlain	Lane	Root	Thomas
Clark, Wyo.	Lewis	Saulsbury	Thompson
Colt	McCumber	Shafroth	Vardaman
Crawford	Martin, Va.	Sheppard	Walsh
Dillingham	Martine, N. J.	Shields	Warren
Fletcher	Myers	Shively	Williams
Gallinger	Norris	Simmons	Works

The VICE PRESIDENT. Sixty Senators have answered to the roll call. A quorum of the Senate is present.

The question is on the amendment proposed by the Senator from Iowa [Mr. KENYON] to the amendment of the committee in paragraph 145.

Mr. REED. I wish to say just a word on this matter before the vote is taken.

We are told that aluminum is controlled by a world monopoly. However that may be, a considerable amount has been imported into the United States, and upon that amount a revenue of some magnitude has been derived by the Government. If it be true that there is a world-wide monopoly in this product, and we were to take off the tariff entirely, we would put in the pockets of this monopoly just the amount of money it now, for some reason, pays to the Government, because it does import.

If I were convinced that this is an American monopoly and that there is possible a substantial competition from abroad, I should desire to vote to place aluminum upon the free list, because by doing so I should stimulate the competition between the foreign producer and the domestic monopoly; and just in proportion as that competition was stimulated the consumer in this country would obtain benefit. But it is charged and not substantially denied—indeed, it is alleged by my very good friend, the author of the amendment—that the entire production, or substantially the entire production, is under the control of one great monopoly, having its headquarters in this country.

If that contention be sound and well taken, then every dollar of revenue we get at the customhouse is a tax levied upon the monopoly, and taking away that revenue seems to me to be in the interest of the monopoly, because it relieves it of that much taxation.

I desired to say that much before the vote should be taken.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 42, line 15, beginning with "Aluminum," strike out all down to the word "barium," on line 18, and insert: "That aluminum, aluminum scrap, aluminum in plates, sheets, bars, strips, and rods, shall be admitted to this country free of duty."

Mr. KENYON. I ask for the yeas and nays upon the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. McCUMBER (when his name was called). Announcing my pair with the senior Senator from Nevada [Mr. NEWLANDS], I withhold my vote.

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from Oklahoma [Mr. OWEN] and will vote. I vote "nay."

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced and will vote. I vote "nay."

The roll call was concluded.

Mr. CHILTON. I announce my pair as on former occasions, make the same transfer to the junior Senator from Nevada [Mr. PITTMAN], and will vote. I vote "nay."

Mr. BRYAN. I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], which I transfer to the senior Senator from Tennessee [Mr. LEA] and will vote. I vote "nay." I am requested to announce that the senior Senator from Tennessee [Mr. LEA] is necessarily absent.

Mr. SMOOT. I desire to announce that the senior Senator from Delaware [Mr. DU PONT] is detained from the Senate on account of illness.

Mr. SUTHERLAND. I inquire if the senior Senator from Arkansas [Mr. CLARKE] has voted?

The VICE PRESIDENT. He has not.

Mr. SUTHERLAND. I withhold my vote, owing to my pair with him.

Mr. SAULSBURY (after having voted in the negative). Has the junior Senator from Rhode Island [Mr. COLT] voted?

The VICE PRESIDENT. He has not.

Mr. SAULSBURY. Then I desire to withdraw my vote.

Mr. LEWIS. I desire to transfer my pair with the junior Senator from North Dakota [Mr. GRONNA] to the junior Senator from Virginia [Mr. SWANSON] and will vote. I vote "nay."

Mr. SWANSON entered the Chamber and voted.

Mr. LEWIS. I am compelled to announce that I will withdraw my vote, the junior Senator from Virginia [Mr. SWANSON], to whom I temporarily transferred my pair, having voted. I being in pair with the junior Senator from North Dakota, I should not have voted, and I wish to withdraw my vote.

The result was announced—yeas 12, nays 55, as follows:

YEAS—12.

Brady	Clapp	Kenyon	Poin Dexter
Bristow	Crawford	La Follette	Sterling
Catron	Jones	Norris	Works

NAYS—55.

Ashurst	Hughes	Perkins	Smoot
Bacon	James	Pomerene	Stephenson
Bankhead	Johnson	Ransdell	Stone
Bradley	Kern	Reed	Swanson
Brandeggee	Lane	Robinson	Thomas
Bryan	Lodge	Root	Thompson
Chamberlain	Martin, Va.	Shafroth	Thornton
Chilton	Martine, N. J.	Sheppard	Tillman
Clark, Wyo.	Myers	Shields	Vardaman
Dillingham	Nelson	Shively	Walsh
Fletcher	Oliver	Simmons	Warren
Gallinger	Overman	Smith, Ariz.	Weeks
Hitchcock	Page	Smith, Ga.	Williams
Hollis	Penrose	Smith, S. C.	

NOT VOTING—28.

Borah	du Pont	Lewis	Pittman
Burleigh	Fall	Lippitt	Saulsbury
Burton	Goff	McCumber	Sherman
Clarke, Ark.	Gore	McLean	Smith, Md.
Colt	Gronna	Newlands	Smith, Mich.
Culberson	Jackson	O'Gorman	Sutherland
Cummins	Lea	Owen	Townsend

So Mr. KENYON's amendment was rejected.

Mr. STONE. The question is on the committee amendments now, is it not, Mr. President?

The VICE PRESIDENT. The committee amendments have been agreed to heretofore.

The SECRETARY. The next paragraphs passed over are on page 87, paragraphs 295 and 296.

Mr. STONE. I think they were disposed of, Mr. President.

Mr. WARREN. They were disposed of for the time being; yes.

Mr. STONE. The Senator desired to be heard on them, and was heard.

Mr. WARREN. Yes.

Mr. STONE. The amendments to those paragraphs have been agreed to.

The SECRETARY. The next paragraph passed over is on page 99, paragraph 332.

Mr. THOMAS. Mr. President, I desire to refer back to paragraph 297, and ask unanimous consent for its reconsideration, for the purpose of offering an amendment which I send to the desk. I presume it will have to be reconsidered.

The VICE PRESIDENT. The amendments to paragraph 297 will be reconsidered.

The SECRETARY. On page 88, paragraph 297, line 10, before the word "all," it is proposed to insert "gloves and mittens."

The amendment to the amendment was agreed to.

The SECRETARY. In line 14 it is proposed to strike out "50" and insert "40."

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question now is on the amendment as amended.

The amendment as amended was agreed to.

The SECRETARY. The next paragraph passed over is paragraph 332, on page 99.

Mr. SMOOT. Mr. President, the Secretary has missed one paragraph—paragraph 326, on page 96, which covers "woven fabrics, in the piece or otherwise."

Mr. THOMAS. Yes. We ask to have that paragraph passed over for the present. We probably shall be ready to report on it some time to-morrow morning.

The SECRETARY. Paragraph 326, on page 96, was passed over on the request of the senior Senator from Utah [Mr. SMOOT].

Mr. SMOOT. I should like to refer to paragraph 267 and call the attention of the Senator from Georgia [Mr. SMITH] to that paragraph. I notice that the statement I made on the floor of the Senate in relation to cords and tassels does not conform to what the present law is. I think there should be a comma after cords.

Mr. SMITH of Georgia. The terms really ought to be used, "cords, tassels, and cords and tassels."

Mr. SMOOT. So as to read:

Bandings, beltings, bindings, bone casings, cords, tassels, and cords and tassels.

Mr. SMITH of Georgia. That is correct. That was the first suggestion we made and we yielded on it, but after a reinvestigation of the subject I am satisfied that those terms ought to be used. When we returned to the cotton schedule we were going to suggest that change, but as it has been brought to the attention of the Senate now, I move for the committee that that modification be made.

The VICE PRESIDENT. It will be stated.

The SECRETARY. In paragraph 267, on page 80, line 21, after the word "tassels," insert "cords and tassels."

Mr. SMOOT. But I want to strike out the word "and" and insert a comma there.

Mr. SMITH of Georgia. The object is to have a separate phrase of cords, and tassels, as well as cords and tassels.

The SECRETARY. On page 80, line 21, after the word "tassels," in the amendment agreed to, and the comma, insert the words "cords and tassels" and a comma.

Mr. SMOOT. Then I want the word "and" stricken out.

The VICE PRESIDENT. There is none in.

Mr. SMOOT. My print shows there is, but if there is none no action need be taken.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. THOMAS. I ask unanimous consent to reconsider paragraph 318. I wish to offer an amendment to it.

The VICE PRESIDENT. Without objection, the paragraph will be reconsidered. The amendment will be stated.

The SECRETARY. In paragraph 318, page 91, line 19, strike out the words "plush or velvets" and insert the word "fabrics."

Mr. SMOOT. "Fabrics" is a new designation in tariff legislation.

Mr. THOMAS. No.

Mr. SMOOT. What I mean is outside of the general basket clause, which refers to fabrics of all classes. This is dealing with the wool schedule.

Mr. THOMAS. But "such fabrics." The Senator will notice that we have already inserted an amendment relating to woven figured upholstery goods. The words "plushes or velvets" might not be sufficiently comprehensive to embrace goods made of that material.

The VICE PRESIDENT. The amendment will be agreed to, without objection.

Mr. THOMAS. One moment. Let it read "such plushes, velvets, or other fabrics."

Mr. SMOOT. I suggest that it be made to read "in chief value of such plushes, velvets, or other similar fabrics."

Mr. THOMAS. Instead of the amendment offered I move to amend by striking out the word "or" in line 19, and inserting after the word "velvets" "or other fabrics."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 91, line 19, after the word "plushes," strike out the word "or," and after the word "velvets" insert "or other fabrics."

The amendment was agreed to.

Mr. BRANDEGEE subsequently said: Let me have the attention of the Senator from Colorado for just a minute, if possible.

Mr. THOMAS. I beg the Senator's pardon.

Mr. BRANDEGEE. I suggest to the Senator from Colorado to be kind enough to have the Secretary read once more the amendment on page 91, which was just agreed to. I want to make sure that it is correct.

Mr. THOMAS. Certainly.

The VICE PRESIDENT. The Secretary will read as requested.

The SECRETARY. Paragraph 318, page 91, as amended, reads as follows:

318. Plushes, velvets, and all other pile fabrics, cut or uncut, woven or knit, whether or not the pile covers the entire surface, and woven-figured upholstery goods, made wholly or in chief value of wool or of the hair of the Angora goat, alpaca, or other like animals, and articles made wholly or in chief value of such plushes, velvets, or other fabrics, 40 per cent ad valorem.

Mr. BRANDEGEE. Is that what the Senator wants?

Mr. THOMAS. Yes. If it is not correct, however, I should like to be informed in what respect it is wrong.

Mr. BRANDEGEE. I am not sure that I am correct. I am asking for information. The language as adopted would cover articles made wholly or in chief value of any fabric.

Mr. THOMAS. No; "of such plushes, velvets, or other fabrics."

Mr. BRANDEGEE. The word "such" was not stricken out by the Senator?

Mr. THOMAS. Oh, no; I do not understand that the word "such" was eliminated.

Mr. BRANDEGEE. If the word "such" modifies the words "other fabrics," the Senator is correct.

Mr. HUGHES. I ask unanimous consent to return to paragraph 347 for the purpose of making a change in the punctuation. I desire to strike out the semicolon, in line 21, and change it to a comma. In reading it over we think there is something in the contention that as it stands the qualifying language may be in conflict with the first part of the paragraph.

Mr. SMOOT. After the word "agate," in line 21?

Mr. HUGHES. Yes.

Mr. SMOOT. I think the semicolon is right.

Mr. HUGHES. I do not think there can be any possible doubt about it if the semicolon is changed to a comma.

Mr. CLARK of Wyoming. Then should not the comma be dispensed with after the word "ivory"?

Mr. SMOOT. I wish to say to the Senator, if that applied only to the last bracket he would be correct, but it applies to all the balance of the paragraph and therefore a semicolon is the proper punctuation. A comma would be all right if it applied simply to that part of the bracket preceding it, but this applies to "all the foregoing and buttons not specially provided for in this section, 40 per cent ad valorem."

Mr. HUGHES. But 40 per cent ad valorem is not supposed to apply to anything beyond the beginning of line 18. Further up in the paragraph there are certain rates provided for various classes of buttons.

Mr. SMOOT. If that is the object of the paragraph the Senator is correct, and it should be a comma.

Mr. HUGHES. That, of course, is the object of the paragraph.

Mr. SMOOT. The amendment is correct if that is the object.

The VICE PRESIDENT. The question is on agreeing to the amendment changing the punctuation as suggested. Without objection, it is agreed to.

Mr. LA FOLLETTE. I wish to offer an amendment in the nature of a substitute for the cotton schedule. I ask to have it printed and laid on the table.

The VICE PRESIDENT. That action will be taken.

Mr. SMOOT. I have an amendment to offer to paragraph 326, but I understand the Senator from Colorado to say that they are considering the paragraph.

Mr. THOMAS. Yes; we will bring it up to-morrow.

The SECRETARY. The next paragraph passed over is paragraph 332, on page 99.

Mr. JOHNSON. The committee wish to offer an amendment to the committee amendment. On page 99, line 22, I move to strike out the words "or its solution" and in lieu thereof to insert the word "leaf," so as to read:

Papers wholly or partly covered with metal leaf or with gelatin or flock, etc.

Mr. McCUMBER. The Senator from Massachusetts [Mr. LONGE] left the Chamber a moment ago and wanted to be sent for when this paragraph was reached. He is in the room of the Committee on Naval Affairs. I have sent for him. I will ask that the vote be delayed for one moment upon this matter until he can return to the Chamber.

The VICE PRESIDENT. The paragraph has not yet been read. The Chair suggests that the paragraph be read.

The SECRETARY. The amendment of the committee is to strike out from line 3, on page 99, to line 21, in the following words:

Papers, including wrapping paper, with coated surface or surfaces, or with the surface wholly or partly covered or decorated with a design, fancy effect, pattern or character whether produced in the pulp or otherwise, all of the foregoing not specially provided for, whether or not wholly or partly covered with metal or its solution or with gelatin or flock or embossed or printed except by lithographic process, cloth-lined or reinforced paper, parchment papers, and grease-proof and imitation parchment papers which have been supercalendered and rendered transparent, or partially so, by whatever name known; all other grease-proof and imitation parchment papers, not specially provided for in this section, by whatever name known; bags, envelopes, printed matter other than lithographic, and all other articles composed wholly or in chief value of any of the foregoing papers, not specially provided for in this section, and all boxes of paper, papier maché, or wood covered with any of the foregoing paper, 35 per cent ad valorem.

And in lieu thereof to insert from line 21, on page 99, to line 16, on page 100, as follows:

Papers wholly or partly covered with metal or its solution or with gelatin or flock, papers with white coated surface or surfaces, hand dipped marbled paper, and lithographic transfer paper, not printed, 25 per cent ad valorem; all other papers with coated surface or surfaces not specially provided for, whether or not embossed or printed except by lithographic process, 50 per cent ad valorem; uncoated papers, gummed, or with the surface or surfaces wholly or partly decorated or covered with a design, fancy effect, pattern, or character, whether produced in the pulp or otherwise except by lithographic process, cloth-lined or reinforced papers, parchment papers, and grease-proof and imitation parchment papers which have been supercalendered and rendered transparent or partially so, by whatever name known, all other grease-proof and imitation parchment papers, not specially provided for in this section, by whatever name known, bags, envelopes, and all other articles composed wholly or in chief value of any of the foregoing papers, not specially provided for in this section, and all boxes of paper or papier-maché or wood covered with any of the foregoing papers or covered or lined with cotton or other vegetable fiber, 35 per cent ad valorem.

Mr. LODGE entered the Chamber.

The VICE PRESIDENT. The Secretary will state the amendment to the amendment proposed by the committee.

The SECRETARY. On page 99, line 22, after the word "metal," strike out the words "or its solution" and insert the word "leaf."

Mr. LODGE. That does not concern me. The part I am interested in is the last provision.

The amendment to the amendment was agreed to.

Mr. JOHNSON. In line 23, after the word "surfaces," I move to insert the words "calender plate finished."

The amendment to the amendment was agreed to.

Mr. JOHNSON. In line 23, on page 99, after the word "paper" and the comma, I move to insert the words "parchment paper."

The amendment to the amendment was agreed to.

Mr. JOHNSON. In line 24, on page 99, I move to strike out the comma following the word "paper."

The amendment to the amendment was agreed to.

Mr. JOHNSON. In line 25, I move to strike out the words "all other."

The amendment to the amendment was agreed to.

Mr. JOHNSON. In line 25, after the word "surfaces," I move to insert the words "suitable for covering boxes."

The amendment to the amendment was agreed to.

Mr. JOHNSON. On page 100, line 2, after the semicolon following the words "ad valorem," I move to insert the words "all other paper with coated surface or surfaces not specially provided for in this section" and a semicolon.

The amendment to the amendment was agreed to.

Mr. JOHNSON. On page 100, in lines 6 and 7, I move to strike out the words "parchment papers" and the comma.

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee as amended.

Mr. SMOOT. The effect of the last amendment is, I suppose, to reduce the rate on parchment paper from 35 per cent ad valorem to 25 per cent.

Mr. JOHNSON. The parchment papers are changed from 35 to 25 per cent. Looking at the present law I find that they bear a duty of about 25 per cent, or a little less than that; but there seemed no place to put them. I think 22 per cent was the ad valorem equivalent. We placed them in that lower classification of 25 per cent. The imitation parchment papers under the present law bear a duty of about 65 per cent ad valorem.

Mr. SMOOT. The two classes of papers combined carry an equivalent ad valorem of 49 per cent.

Mr. JOHNSON. We made the separation. I am not talking about the two combined. We looked into that pretty carefully. It is the imitation parchment papers which, under the present law, bear a duty of about 65 per cent. We left them under the 35 per cent bracket, and the parchment papers we carried to the 25 per cent bracket.

Mr. SMOOT. That is what I said the effect of the amendment was, to take parchment papers from the 35 per cent bracket and place them in the 25 per cent bracket.

Mr. JOHNSON. That is true.

The VICE PRESIDENT. The question is on agreeing to the amendment as amended.

The amendment as amended was agreed to.

The SECRETARY. The next amendment passed over was, in paragraph 332, on page 100, line 18, after the word "purposes," to insert the words "25 per centum ad valorem."

The amendment was agreed to.

The SECRETARY. The next amendment passed over was, in paragraph 332, on page 100, line 20, before the words "per cent," to strike out "25" and insert "15," so as to read:

Plain basic papers for albuminizing, sensitizing, baryta coating, or for photographic or solar printing processes, 15 per cent ad valorem.

Mr. LODGE. Mr. President, plain basic papers have been heretofore included with the others. The House put them under a rate of 25 per cent. Now they have been separated, and I should like to know why these particular papers, which are important and valuable papers for the photographic business, should have been separated and the duty on them so much further reduced?

Mr. JOHNSON. Mr. President, the reason was this: We placed photographic films upon the free list and we gave the papers here a reduced rate of duty for that reason, reducing them from 25 per cent to 15 per cent.

Mr. LODGE. But you have left the rate on albuminized and sensitized paper the same as it was in the bill as it came from the House, while you have made a distinction between the two photographic papers.

Mr. JOHNSON. The Senator will notice that the papers which may be used for albuminizing, sensitizing, and baryta coating are at 15 per cent, but after they are sensitized and albuminized they are then placed at 25 per cent—a little higher rate of duty.

Mr. LODGE. Mr. President, I am not going to take time over it, but I think that is a very severe reduction. The duty is 30 per cent in the existing law on these basic papers, and the House put it at 25. Now, the Senate committee have separated them and reduced them to 15 per cent. It seems to me a pretty severe reduction. The men who are engaged in making those papers have short hours and high wages, and this reduction of duty will put a great burden on that business. I would be glad if the duty could be left at the same rate as in the present law.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

Mr. JOHNSON. Mr. President, before going to the next amendment passed over, which is in paragraph 341, I wish to revert to paragraph 335 and to ask that it now be taken up for consideration.

The VICE PRESIDENT. Paragraph 335 will now be considered.

Mr. JOHNSON. The committee wishes to offer an amendment to paragraph 335, on page 104. After the word "flat," in line 3, the committee propose to strike out the words "plain, bordered, embossed, printed, tinted, decorated, or lined," and to insert the words "not specially provided for in this section."

The VICE PRESIDENT. The amendment proposed by the Senator from Maine on behalf of the committee will be stated.

The SECRETARY. In paragraph 335, on page 104, line 3, after the word "flat," it is proposed to strike out "plain, bordered, embossed, printed, tinted, decorated, or lined" and to insert "not specially provided for in this section."

Mr. SMOOT. That would effect envelopes other than plain, folded, or flat, and place upon them a higher rate of duty.

Mr. JOHNSON. That is true, because they are provided for in paragraph 332. This was in conflict.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Maine on behalf of the committee. The amendment was agreed to.

Mr. BRANDEGEE. Mr. President, while we are on this subject I want to call the attention of the Senator in charge to paragraph 335. I have a letter here from the Meriden Gravure Co. asking that an amendment be inserted on page 104, after the words "ad valorem," to strike out the period and to insert "articles composed wholly or in chief value of paper printed by the photogelatin process, and not specially provided for in this act, 3 cents per pound and 25 per cent ad valorem." They state in their letter:

As far as we can determine the Underwood bill makes no provision for the industry in which we are engaged, namely, photogelatin printing. In the act of 1909, Schedule M, paragraph 412, photogelatin printed matter is excepted and provided for in paragraph 415. In the new

bill the same exception is made under paragraph 412, but no separate provision given.

As we read the text, it would therefore come in at 15 per cent ad valorem as "printed matter."

A large part of the paper used in this industry comes from Germany, on which the duty is 25 per cent. It surely can not be the purpose of the bill to assess raw material at 25 per cent and the finished product at 15 per cent. Our presses are all imported under a duty, our gelatine likewise. With the tariff of 1909—3 cents per pound and 25 per cent ad valorem—we are in many lines in the closest competition with the German product. The new bill as it stands will simply hand the market over to our foreign competitors and close most of the shops in this country.

The process is of German origin, and in that country between 200 and 300 houses are engaged in it. It was brought to the United States in the early seventies. Although protected to the extent of 25 per cent, its growth was slow because of the German importations, and it was not until the act of 1909 that we were in a position to attempt to meet this competition at all. Before the passage of this act there were, to our best knowledge and belief, five concerns in the country engaged in this work. Since that time, wholly because of the ability given by the increased protection to meet the Germans on somewhere near even footing, some nine new houses have been established. Even now approximately 75 per cent of the photogelatin prints used in the country are imported. The 25 per cent footing we have gained will be wiped out under the new bill.

Labor and paper are the two large items in our cost of production. Wages for corresponding men are in Germany from one-third to one-half that ruling on this side. On the paper we are to pay a tariff of 25 per cent. On the machinery to produce the work—none is made in this country—35 per cent.

I am free to say, Mr. President, that I do not at all understand the technicalities of this industry, and so I am compelled to rely upon this firm, the members of which are constituents of mine.

Mr. LODGE. If the Senator will allow me, my attention was called to that matter also, and I meant to bring it up. I am very glad the Senator has done so. There is no question that the articles the Senator has mentioned, so far as I can make out, are not provided for anywhere in the bill.

Mr. JOHNSON. Mr. President, photogelatin papers are surface-coated papers, and in the amendment which I offered these words appear:

All other papers with coated surface or surfaces not specially provided for in this section.

And they bear a duty of 35 per cent.

Mr. LODGE. The Senator thinks that the expression "surface-coated paper" would cover photogelatin paper?

Mr. JOHNSON. It would cover the photogelatin paper.

Mr. LODGE. That is all right.

Mr. JOHNSON. It is also provided in that same paragraph that envelopes made of photogelatin paper or of any paper shall bear the same rate of duty as the paper from which they are made, which would be 35 per cent.

Mr. LODGE. If that is the case it is all right, of course.

Mr. BRANDEGEE. I would not have taken up so much time of the Senate if I had known that; but, as I have said, I was not familiar with the situation. A duty of 35 per cent, as I understand, will be an increase over the existing rate, if these papers now bear that duty.

Mr. THOMAS. Mr. President, I find that I omitted to offer an amendment recommended by the committee in one of the paragraphs in Schedule C, namely, paragraph 152. I ask leave to return to that paragraph. On behalf of the committee, I propose an amendment in paragraph 152, page 44, line 10, by striking out "10" and inserting "6."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 152, on page 44, line 10, after the word "metal," it is proposed to strike out "10" and insert "6."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The SECRETARY. The next amendment passed over is paragraph 341, page 105, which was passed over at the request of the Senator from New Jersey [Mr. HUGHES].

Mr. HUGHES. Mr. President, I move to amend paragraph 341, page 105, line 22, by striking out the words "fabrics, wearing apparel, trimmings" and inserting, before the word "curtains," the words "lamp fringes"; and after the word "articles," in line 23, by inserting the words "not embroidered nor appliquéd and."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 341, page 105, line 22, before the words "curtains," it is proposed to strike out "fabrics, wearing apparel, trimmings" and to insert "lamp fringes"; and, in line 23, after the word "articles," to insert "not embroidered nor appliquéd and," so as to make the paragraph read:

341. Beads and spangles of all kinds, including imitation pearl beads, not threaded or strung, or strung loosely on thread for facility in transportation only, 35 per cent ad valorem; lamp fringes, curtains, and other articles not embroidered nor appliquéd and not specially pro-

vided for in this section, composed wholly or in chief value of beads or spangles made of glass or paste, gelatin, metal, or other material, 50 per cent ad valorem.

The amendment was agreed to.

Mr. SMOOT. Mr. President, the amendment strikes out the words "wearing apparel and trimmings." I have not had time to look back over the bill to find out whether or not those particular articles are taken care of in another paragraph.

Mr. HUGHES. They are provided for in paragraph 368, I will say to the Senator—the embroidery paragraph.

Mr. SMOOT. That is all I wanted to ask the Senator. I have been looking through the bill, but I have not had time as yet, inasmuch as the amendment has just been offered, to make certain as to the matter. Of course if they are not taken care of, we should not strike them out of this paragraph.

Mr. HUGHES. Undoubtedly; and if it turns out that they are not taken care of there will be no objection to reverting to the paragraph, I imagine.

The SECRETARY. The next paragraph passed over is paragraph 355, on page 109.

Mr. LODGE. Is that the match paragraph?

The VICE PRESIDENT. It is.

Mr. SIMMONS. Mr. President, I was just trying to find the amendment suggested by the Senator from Massachusetts to that paragraph.

Mr. HUGHES. I want to ask the Senator from Massachusetts, if he will permit me, if he has examined the law on this subject?

Mr. LODGE. I have, with great care.

Mr. HUGHES. And the Senator is of the opinion that this provision will repeal the prohibition against the importation of white phosphorus matches under the existing law?

Mr. LODGE. This is the later act of the two.

Mr. HUGHES. That is the theory upon which the Senator is proceeding?

Mr. LODGE. Certainly. I think we would run the risk of having it said that this provision repealed that act, and therefore I suggested an amendment to the chairman of the committee in order to preserve the white phosphorus match legislation; that is all.

Mr. SIMMONS. On behalf of the committee I offer the amendment to paragraph 355 which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 109, after the words "ad valorem," at the end of paragraph 355, it is proposed to insert:

Provided, That in accordance with section 10 of "An act to provide for a tax upon white phosphorus matches, and for other purposes," approved April 9, 1912, white phosphorus matches manufactured wholly or in part in any foreign country shall not be entitled to enter at any of the ports of the United States, and the importation thereof is hereby prohibited; *Provided further*, That nothing in this act contained shall be held to repeal or modify said act to provide for a tax upon white phosphorus matches, and for other purposes, approved April 9, 1912.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. SMOOT. Now, Mr. President, I want to call attention to one rate in this paragraph. In lines 20 and 21 it is provided that matches—

when imported otherwise than in boxes containing not more than 100 matches each, one-fourth of 1 cent per 1,000 matches.

The duty in the present law is one-half of 1 cent. The ad valorem equivalent under the present law is only 8.44 per cent, which is a very low rate indeed. I am not going to discuss the question any further than to say that even if the decreases from the present law are made upon all the other classes of matches, it does seem to me that that grade of match should carry at least one-half instead of one-quarter of a cent. With one-quarter of a cent the duty is only 4.22 per cent equivalent ad valorem. If the Senator does not feel justified in accepting the suggestion, I am not going to detain the Senate by an argument, but I shall ask to have certain correspondence put in the Record in connection with this item.

I think if the Senator will examine that particular item he will come to the conclusion that to-day there is the most severe competition. As I say, the equivalent ad valorem upon them is only 8.44 per cent under the present law.

Mr. HUGHES. I can only say to the Senator that we have given the most thorough and exhaustive consideration to this item. It has given us a great deal of trouble. We have been furnished with all sorts of arguments and briefs and an abundance of information, but nothing was laid before the subcommittee or the members of the full committee that seemed to justify them in interfering with the rates made by the House.

Now, I want to call the Senator's attention to something very peculiar in that particular bracket. The Senator will find that the average unit of value in 1912 was 7.3 cents, and it is admit-

ted that matches that fall under that classification are sold in this country for much less than that. I call the Senator's attention to the fact that in 1910 we find them at 4.4 cents. I asked some of the gentlemen who appeared before me why they were so much afraid of foreign competition when the foreign unit of value was so much higher than the market price of matches in this country.

Mr. SMOOT. That is very easily explained. The reason is that the matches of this class sent to this country under the present rate are, of course, the very highest-priced matches of that grade that are made.

Mr. HUGHES. I will say to the Senator that the gentlemen who are interested in raising this rate did not make that explanation. They said there was something wrong with the classification and some other kind of match was coming in here; but all the way across the unit of value seems to me to leave a good deal to be explained.

Mr. SMOOT. The Senator certainly is not going to take that class of match and try to show that the unit of value is as given in this report. There is something wrong, because not only is it higher than the foreign value, but it is higher than the local value. So there is certainly something wrong in relation to the unit of value.

Mr. HUGHES. That point was never satisfactorily explained to me. It may very well be that they are making and selling matches in this country, put up in this way in these large boxes containing more than 100, for less than they are able to put them up in that way and sell them for abroad. That would seem to be the obvious explanation.

Mr. SMOOT. I have before me a letter from Austin Nichols & Co. (Inc.), of New York, importers of foreign matches, addressed to the Fred. Fear Match Co., of New York City, N. Y. The letter is a partial explanation of this situation. They recommend that orders be placed now for these matches, claiming that they can not be made in this country except at certain times of the year, and that since the duty is going to be cut 50 per cent there is no question that the foreign manufacturers will control this market.

As I say to the Senator, the equivalent ad valorem upon this class of matches is only 4.22 per cent. I said I would ask that these papers go into the RECORD. I will not even encumber the RECORD with them. If the Senator has made up his mind that there is no need of making the change, I will say no more, and simply let it rest with the protest I have already made.

Mr. GALLINGER. Mr. President, this is one instance where I very strongly favor a low rate of duty—in the interest of conservation, however. The desolation that the Diamond Match Co.,—and perhaps other match companies—are creating in the forests of the United States, destroying pine timber not much larger than my thumb, is appalling. I am not going to worry over an increased importation of matches if it will tend to save the small trees in our forests, which are now not regarded by these great match corporations.

Mr. SIMMONS. I think the Senator from New Jersey has failed to call attention to the fact that in line 22 the word "fuses" is used, when it ought to be "fusees."

Mr. HUGHES. Yes; I had overlooked that.

The VICE PRESIDENT. That is a matter of spelling. Another "e" should be put in it.

Mr. HUGHES. I move to amend by adding an additional "e," so as to make the word "fusees" rather than "fuses." I ask unanimous consent to make that amendment.

The VICE PRESIDENT. That correction will be made.

The SECRETARY. On page 110, paragraph 357, on August 26, was recommended to the committee on the request of the junior Senator from New Jersey [Mr. HUGHES].

Mr. HUGHES. I ask the Secretary to read the proposed amendments down to the proviso.

The SECRETARY. In paragraph 357, page 110, line 10, after the word "manner," the committee proposes to insert "and not suitable for use as millinery ornaments."

The amendment was agreed to.

The SECRETARY. In line 11, after the word "and," it is proposed to strike out the word "other."

The amendment was agreed to.

The SECRETARY. In line 13, after the word "feathers," it is proposed to strike out the comma and insert "suitable for use as millinery ornaments, artificial and ornamental."

The amendment was agreed to.

The SECRETARY. In line 14, after the word "leaves," it is proposed to insert "grasses" and a comma.

The amendment was agreed to.

Mr. BRANDEGEE. What paragraph is this?

The VICE PRESIDENT. Paragraph 357.

The SECRETARY. In line 19, after the word "other," it is proposed to strike out "materials or articles" and insert "material."

The amendment was agreed to.

The SECRETARY. In line 22, after the word "plumes," it is proposed to strike out the comma and the words "and the feathers, quills, heads, wings, tails, skins or parts of skins, of wild birds, either raw or manufactured, and not for scientific or educational purposes."

Mr. HUGHES. I am directed by the committee to move to lay the committee amendment on the table, thus restoring the original language of the bill.

Mr. GALLINGER. The committee amendment should be disagreed to, then.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was rejected.

The SECRETARY. On page 110, line 25, after the word "prohibited," it is proposed to strike out "but this provision shall not apply to the feathers or plumes of ostriches or to the feathers or plumes of domestic fowls of any kind."

Mr. HUGHES. I move that the committee amendment in that regard be not agreed to.

The amendment was rejected.

The VICE PRESIDENT. The RECORD will show that the committee has rereported paragraph 357.

The SECRETARY. The next paragraph passed over is paragraph 358.

Mr. THOMAS. Mr. President, I ask unanimous consent to recur at this time to paragraph 116, for which the committee offers a substitute, which I send to the desk.

The SECRETARY. On page 33 the committee offers a substitute for paragraph 116, in the following words:

116. Round iron or steel wire; wire composed of iron, steel, or other metal except gold or silver; corset clasps, corset steels, dress steels, and all flat wires and steel in strips not thicker than seven one-hundredths of 1 inch and not exceeding 5 inches in width, whether in long or short lengths, in coils or otherwise, and whether rolled or drawn through dies or rolls or otherwise produced; telegraph and telephone wires; iron and steel wire coated by dipping, galvanizing, or similar process with zinc, tin, or other metal; all other wire not specially provided for in this section, and articles manufactured wholly or in chief value of any wire or wires provided for in this section; all the foregoing, 15 per cent ad valorem; wire heddles and heads; wire rope; telegraph, telephone, and other wires and cables covered with cotton, silk, paper, rubber, lead, or other material; all the foregoing and articles manufactured wholly or in chief value thereof, 25 per cent ad valorem; woven wire cloth made of iron, steel, copper, brass, bronze, or other metal, 30 mesh and above, 30 per cent ad valorem.

Mr. SMOOT. The amendment, as nearly as I could follow it, simply takes cable wires out of the 15 per cent ad valorem bracket and puts them in the 25 per cent bracket.

Mr. THOMAS. Cables and all covered wire; yes. It also broadens the woven-wire-cloth paragraph by including "iron, bronze, or other metal."

Mr. SMOOT. Yes; I was going to refer to that item also.

The amendment was agreed to.

Mr. THOMAS. I should like to inquire whether paragraph 106 has been acted upon. I think it has.

Mr. SMOOT. No; it went over.

The SECRETARY. Paragraph 106, on page 30, was passed over at the request of the junior Senator from Michigan [Mr. TOWNSEND]. It has been read.

Mr. THOMAS. The committee has no amendment to present to that paragraph.

The VICE PRESIDENT. It has not yet been agreed to. It has been read, but it has not been agreed to.

The SECRETARY. On page 30, line 8, after the word "manufactured," the committee proposes to strike out "12" and insert "10."

The amendment was agreed to.

The SECRETARY. On page 111, paragraph 358, all the amendments have been agreed to.

Mr. SMOOT. I believe all the amendments in that paragraph have been agreed to. I asked that the paragraph be passed over, for the purpose of offering an amendment. I will suggest the amendment now, to correct the paragraph as I suggested at the time that I asked to have the paragraph go over.

I move that the words "or repairing" be inserted after the word "dyeing," on line 7, page 111. It would then read:

Furs dressed on the skin, not advanced further than dyeing or repairing, 20 per cent ad valorem.

Mr. HUGHES. I should like to have that amendment pending and ask that the paragraph may be passed over again. There is a proposition before the committee that has not yet been acted upon.

Mr. SMOOT. I will say to the Senator, as I said before, that the word "repairing" has a well-known meaning and has been

passed upon by the courts as designating an article between the raw fur and the manufactured fur. If the Senator desires, I will call his attention to the case.

Mr. HUGHES. I ask that the paragraph may be passed over.

The VICE PRESIDENT. The paragraph will be passed over for the present.

The SECRETARY. On page 114 paragraph 368 was passed over at the request of the junior Senator from New Jersey [Mr. HUGHES].

Mr. HUGHES. I am directed by the committee to offer a substitute for the paragraph, which I should like to have read.

The SECRETARY. In lieu of paragraph 368 it is proposed to insert the following:

368. Laces, lace window curtains not specially provided for in this section, coach, carriage, and automobile laces, and all lace articles of whatever yarns, threads, or filaments composed; handkerchiefs, napkins, wearing apparel, and all other articles or fabrics made wholly or in part of lace or of imitation lace of any kind; embroideries, wearing apparel, handkerchiefs, and all articles or fabrics embroidered in any manner by hand or machinery, whether with a plain or fancy initial, monogram, or otherwise, or tamboured, appliqued, or scalloped by hand or machinery, any of the foregoing by whatever name known; nets, nettings, veils, veillings, neck ruffings, ruchings, tuckings, flouncings, flutings, quillings, ornaments; braids, loom woven and ornamented in the process of weaving, or made by hand, or on any braid machine, knitting machine, or lace machine, and not specially provided for; trimmings not specially provided for; woven fabrics or articles from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving, forming figures or designs, not including straight hemstitching; and articles made in whole or in part of any of the foregoing fabrics or articles; all of the foregoing of whatever yarns, threads, or filaments composed, 60 per cent ad valorem.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The SECRETARY. The next paragraph passed over is on page 118, paragraph 378.

Mr. LODGE. Has it been read?

Mr. GALLINGER. Before that is reached I desire to ask the Senator from New Jersey in reference to paragraph 368. Was the material I called attention to when the matter was discussed some time ago inserted?

Mr. HUGHES. That was discussed and considered by the committee, and the phraseology was changed so as to take into consideration that particular material, which undoubtedly belongs in that paragraph.

Mr. GALLINGER. The Senator has no doubt but that it is taken care of in the amendment as proposed by him?

Mr. HUGHES. I am as certain as I can be of anything of the kind. It is a very complicated paragraph.

Mr. GALLINGER. The amendment, suggested, I think, by a Government expert, was that the words "loom woven and ornamented and in process of weaving" should be inserted.

Mr. HUGHES. That is the language which has been inserted.

Mr. GALLINGER. It has been inserted?

Mr. HUGHES. Yes, sir.

Mr. GALLINGER. I thank the Senator. That is all I cared to have inserted in the paragraph.

Mr. SMOOT. I should like to ask the Senator from New Jersey whether the change made takes care of edgings, insertings, and galloons that were stricken out of the paragraph by the committee? It was hard to follow the amendment as it was read. I ask whether those items were taken care of in the substitute just offered?

Mr. HUGHES. I will say to the Senator they have been taken care of.

The SECRETARY. In paragraph 378, page 118, line 9, after the word "rates" and the colon, the committee report to strike out "India rubber or gutta-percha, 10 per cent ad valorem," and to insert:

Manufactures of India rubber or gutta-percha, commonly known as druggists' sundries, 15 per cent ad valorem; manufactures of India rubber or gutta-percha, not specially provided for in this section, 10 per cent ad valorem.

The amendment was agreed to.

The SECRETARY. The next paragraph passed over is 379.

Mr. LODGE. The paragraph just read includes the item horn combs. It is not a great industry, but the factories which make it have been established for a long time, for periods ranging from 60 to 30 years. Individually they are small concerns. The comb which they make is retailed universally for either 5 or 10 cents, and the reduction in duty on the foreign comb would have no effect at all on the price to the ultimate consumer. There could be no gain in revenue because of the reduction, as there is now a very large importation of combs in competition with ours made at home. To get as much revenue at 25 per cent as is now obtained they would have practically to wipe out the product in this country. There-

fore, there will be a loss of revenue. As a matter of fact, at this rate I do not believe it would be possible for the horn-comb industry to survive.

In line 18, page 118, paragraph 378, I shall move to strike out "25" and to insert "40" before "per cent," and I ask leave to print with my remarks certain statements from two or three of the makers of combs.

The VICE PRESIDENT. Without objection, the matter referred to will be included in the Record.

The matter referred to is as follows:

Among the 4,000 articles covered by the tariff bill now before Congress, horn combs constitute an item of minor importance, and it is probable that it has not received the consideration necessary to a proper understanding of all the facts.

Believing that if the matter was clearly understood the proposed change from 50 per cent to 25 per cent in the Underwood bill would be greatly modified, we therefore ask your careful attention to the following statements which bear on "Combs, composed wholly of horn or of horn and metal," Schedule N, paragraph 383.

If the change is made as proposed, viz, 25 per cent, it will be—

(a) No advantage to ultimate consumer. (See (a), p. 2.)

(b) Great loss to workman. (See (b), p. 2.)

(c) No gain in revenue to Government unless the home industry is destroyed. (See (c), p. 2.)

(d) A severe blow to manufacturers. (See (d), p. 2.)

(e) Great benefit to foreign manufacturers. (See (e), p. 3.)

In outlining its policy in the preparation of the new tariff bill the Democratic Party, through its leaders, has announced the following purposes:

First. "To introduce in every line of industry a competitive tariff basis providing for a substantial amount of importation."

Second. "The attainment of this end by legislation that would not injure or destroy legitimate industry."

In the proposition to reduce horn combs from 50 per cent to 25 per cent we think you will clearly see that these principles have been ignored.

Under the present duty of 50 per cent the importations of horn combs for the fiscal years 1911 and 1912 (see official figures of Department of Commerce and Labor) have averaged \$143,000 duty paid per year. The estimated average United States production for the same period was \$550,000, making a total consumption of \$693,000. The importations therefore are more than 25 per cent of the United States production and more than 20 per cent of the consumption, which amount clearly shows a "substantial amount of importation" and thus conforms to the first principle, even with the 50 per cent duty.

It is clear, in view of this, that cutting the duty squarely in half places our industry absolutely at the mercy of the foreign manufacturers.

In the synopsis on page 1 we state that the change to 25 per cent would be—

(a) NO ADVANTAGE TO THE ULTIMATE CONSUMER.

Horn combs are almost universally retailed for either 5 or 10 cents, principally the latter price, and this would continue regardless of a change in the wholesale price. This condition is largely brought about by the influence of the syndicate stores, now completely covering the country, who have established these uniform prices notwithstanding the fact they purchase the goods at greatly varying prices at wholesale. We therefore claim that the ultimate consumer will not be benefited by the change.

(b) GREAT LOSS TO THE WORKINGMAN.

The percentage of labor cost in making horn combs is very large, being between 40 per cent and 50 per cent of total cost, the other expenses, together with the raw material, horn, which is less than 45 per cent, making up the total. As the cost of materials, including horn, is fixed by the markets, the only opportunity of reduction in cost would be in the wages paid for labor. The wages in Scotland, our principal competitors, are not exceeding one-third those paid in our factories, so that with such a low duty it is clear the workmen must either suffer from a lower rate of wages or from loss of occupation altogether.

(c) NO GAIN IN REVENUE TO GOVERNMENT.

As under the proposed reduction to 25 per cent it will be necessary to double the importations to secure the present amount of revenue, in order to secure any considerable increase of customs duties the importations must be increased very much beyond this total. If this greater total of importations is brought into the country, is it not very clear that the industry will suffer beyond recovery?

(d) A SEVERE BLOW TO THE MANUFACTURERS.

The various firms engaged in horn-comb manufacturing have been established from 30 to 60 years. They are composed of men of respectability, standing well in their communities. They have all been industrious and inventive and devoted to their business, and have none of them accumulated more than a reasonable competence out of the business. In most cases their all is invested in the business, and their income and living depends on a continuation of the same.

(e) GREAT BENEFITS TO FOREIGN MANUFACTURERS.

The only benefit we can discover in the change of duty proposed will be an enlargement of the business of the foreign manufacturers, particularly the British Comb Trust, who are waiting eagerly for the final decision on this rate of duty and are looking forward to greatly increased sales of their manufactures in this country.

No doubt importers who handle the foreign goods will reap increased profit due to the large increase of importations, all of which will displace goods made by American workmen, who will by this be thrown out of employment.

We recognize that the present administration interprets their call to power as being based in part at least on a new tariff bill with downward revision, and in common with many other industries we would expect to share somewhat in the reductions to be made. We submit, however, in view of all the facts heretofore set forth, and particularly the present large importations, that to reduce the duty one-fourth of the present rate of 50 per cent to 37½ per cent would under the circumstances be a very large reduction, and one which would increase the already large percentage of importations, but still give the American manufacturers and workmen a fighting chance. We assure you the above reductions would give us the hardest kind of a fight.

This would then be in harmony with the words of President Wilson spoken at the opening session of Congress. "It would be unwise to move forward toward this end headlong, with reckless haste, or with strokes that cut the very roots of what has grown up amongst us by long process."

"It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it. We must make changes in our laws, whose object is development, a more free and wholesome development, not revolution, or upset, or confusion."

Respectfully submitted.

FRANKFORD, PHILADELPHIA, PA.

JACOB W. WALTON SONS.

NEWBURYPORT, MASS., May 6, 1913.

GENTLEMEN: The foregoing letter of Jacob Walton Sons has been submitted to us for consideration and comment.

We have carefully read and considered every paragraph, and wish to add our indorsement as to the correctness of each statement.

We think that the importations under the present rate of duty is conclusive and unanswerable evidence as to the fairness of a rate of 50 per cent.

The large percentage of imports also meets the rule of "a substantial amount of importation" laid down by President Wilson and Chairman UNDERWOOD.

In addition to the foreign competition just referred to, the domestic competition has been very severe and aggressive. It has therefore been absolutely necessary for us to maintain a high state of efficiency in order to compete successfully.

We appreciate the difficulty of a committee in trying to reach the truth relating to 4,000 items in so short a space of time, and believe that a fuller knowledge of the horn-comb industry will lead to a modification of the duty, so that the industry will not be wholly at the mercy of the foreign manufacturers.

We particularly call attention to the quotation from President Wilson's address to Congress, quoted in the letter of Waltons.

We also call the attention to the speech of Hon. OSCAR W. UNDERWOOD in reporting the new bill, in which he stated that it was "not the intention to injure or destroy legitimate industry."

We respectfully urge upon you that the proposed duty of 25 per cent be increased to 37½ per cent to conform to the above-quoted views.

G. W. RICHARDSON Co.,
G. W. RICHARDSON, Treasurer.

NEWBURYPORT, MASS., May 6, 1913.

JACOB W. WALTON SONS.

Frankford, Philadelphia.

GENTLEMEN: Your letter of the 5th is at hand. We have gone over this letter very thoroughly and fully agree with all the statements you make.

It seems to us that if it can only be fully understood by all the Members of Congress that the wages of the American comb workers are at least three times those paid by our foreign competitors that they would at once acknowledge that a duty of 50 per cent was only a fair duty and not a prohibitive one, as under the present 50 per cent duty the imports of horn combs are 25 per cent of the domestic manufacturers. Now, if this duty is to be reduced it certainly means that the workmen will be obliged to receive less for their labor or the factory closed entirely, as the raw material for the combs is bought in the same market, at the same prices, both by the foreign manufacturers and ourselves.

Yours, truly,

W. H. NOYES & BRO. CO.

NEWBURYPORT, MASS., January 13, 1913.

HON. HENRY CABOT LODGE,

Senator, Washington, D. C.

DEAR SIR: As hearings in relation to a new tariff bill are now under way, we desire to give you the following information in regard to horn combs, dutiable under section N, which section is set for hearing on the 29th instant.

The duty on this article was raised from 30 per cent to 50 per cent ad valorem by the present tariff.

That this advance in rate was fully justified by conditions is clearly shown by the following results:

First. That no advances in price have since been made by any of the domestic manufacturers.

Second. The importations since the increase in rate have been as follows:

Year ending June 30, 1911, \$155,265, duty paid.

Year ending June 30, 1912, \$130,272, duty paid.

These figures are from the official reports of the Department of Commerce and Labor.

The value of importations in each year was fully 25 per cent of the estimated domestic production—the sales in 1912 showing a falling off in common with that of many other manufactured products.

It is not possible to make a comparison with importations under previous tariffs as the present bill is the first one to make a separate classification of this article, but the above large percentage of importations shows very clearly that the present rate is far from being prohibitive.

The conditions existing in this industry are highly competitive, both from domestic and foreign sources.

The manufacturers in this country have factory capacity in excess of production and each is therefore striving keenly to secure more business.

The foreign competition comes principally from Great Britain, France, Germany, and Italy, all countries with a very low wage scale.

The competition of the Aberdeen Comb Co., of Aberdeen, Scotland, is particularly difficult to meet, and we are constantly undersold by them on many styles, they having imitated some of our most important combs, and are making strong efforts to increase their trade in this country.

The above company is a consolidation of all of the important horn-comb factories in Great Britain, and if located in this country would be designated as a trust.

Most of the horn combs sold in this country are retailed at either 5 cents or 10 cents. Owing to this trade condition a change of duty either upward or downward would have no effect on the consumer.

Any reduction in the rate would therefore be solely to the advantage of the foreign manufacturers or to the importers. Such action would necessarily be distinctly to the disadvantage of the domestic manufacturers and to their employees.

As it has been shown that the manufacturers in this country did not take advantage of the increase of duty to raise prices, and as the increased and steadily rising wage scale since the present law was passed makes it even more difficult now to compete with the low wage scale of Europe, we most earnestly hope that the present rate may not be changed.

Yours, very truly,

G. W. RICHARDSON Co.,
G. W. RICHARDSON, Secretary.

LEOMINSTER, MASS., July 24, 1913.

Senator H. C. LODGE, Washington, D. C.

DEAR SENATOR: We have written to Congressman PETERS, as you suggested, who is on the Ways and Means Committee, in regard to the reduction of tariff on manufactured horn goods, which come under section 378 of Schedule N, of an act passed by the House.

We also had the Democratic town committee of Leominster, as well as the Lieutenant governor, write Mr. PETERS, as they were familiar with the conditions here in this industry, against the reduction from 35 per cent ad valorem to 20 per cent ad valorem on the goods manufactured of horn which are imported to this country.

Messrs. B. F. Blodgett & Co. and the Goodhue Co., of Leominster, Mass., manufacture horn machete handles. They are used on a machete knife that is exported to other countries, none of them to my knowledge being used in this country.

We obtained figures from the Treasury Department through the customs service in New York. The amount of these horn handles which are imported to this country under the present tariff of 35 per cent is approximately 250,000 pair of handles, or about one-third of the horn handles used in the country, and B. F. Blodgett & Co. and the Goodhue Co. manufacture the other two-thirds; that is, about 500,000 pair of handles.

Now what would be the result if the tariff on these handles is reduced 15 per cent when the price at present is so near the price of the goods which are manufactured here? It seems to us that the foreigners will take all the business, and there can be no good result from it to anyone. The Government will not receive much more income, and we shall practically lose all our business, and we feel that something ought to be done to exempt these goods manufactured of horn included in section 378 of Schedule N.

We feel that it only does great harm to us and our little business and is not doing the country or any of its citizens any good. There seems to be no wrong to be righted in this matter, but simply makes a sweeping thing of a lot of different little items that are manufactured here and help make up the industries of our town and give employment to our people.

We wish you would look into this on its merits. We dislike very much to trouble you, as we know that the cares and anxieties of a Senator at a time like this are very great, but we feel that this matter is of vital importance to us, and we hope if our wishes are carried out it will be of some benefit to the town and the community.

Hoping to hear from you, we are,

Very truly, yours,

B. F. BLODGETT & CO.
THE GOODHUE CO.
EDWARD F. BLODGETT.

LEOMINSTER, MASS., April 8, 1913.

Senator H. C. LODGE,
Washington, D. C.

DEAR SIR: We have just been informed that there is a prospect of reducing the tariff on manufactured horn goods to 15 per cent, and also on celluloid. This will hit Leominster very hard, as it is all we can do now to compete with foreign countries on these manufactured goods. Would especially call your attention to the reduction on horn machete handles, which we manufacture and have for years.

The large concern which takes our entire output, the Collins Co., Collinsville, Conn., have kindly shown us invoices of horn machete handles shipped from England. Under the present tariff their prices are about \$2 per hundred less than ours. If they can compete with us at the present rate of tariff, what will happen if the tariff is reduced to 15 per cent? It will simply put us out of business, as far as machete handles are concerned. Machete handles are manufactured here in competition with B. F. Blodgett & Co. There is no trust in this matter and only a fair profit is made from same. We are very willing to submit our books, invoices, etc., to the proper persons for inspection in confirmation of what we have written above.

Trusting that you will do what you can to keep the present duty as it is and that we shall have your close cooperation and influence in this matter, we remain,

Yours, very truly,

THE GOODHUE CO.,
By J. A. GOODHUE.

Mr. LODGE. In line 18, before the words "per cent," I move to strike out "25" and insert "40," so as to read:

Combs composed wholly of horn or of horn and metal, 40 per cent ad valorem.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Massachusetts.

The amendment was rejected.

The Secretary read paragraph 379, as follows:

379. Ivory tusks in their natural state, or cut vertically across the grain only, with the bark left intact, 20 per cent ad valorem; manufactures of ivory or vegetable ivory, or of which either of these substances is the component material of chief value, not specially provided for in this section, 30 per cent ad valorem; manufactures of mother-of-pearl and shell, plaster of Paris, papier-mâché, and vulcanized india rubber known as "hard rubber," or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 25 per cent ad valorem; shells engraved, cut, ornamented, or otherwise manufactured, 25 per cent ad valorem.

Mr. HUGHES. I am directed by the committee to offer an amendment to paragraph 379. On page 119, line 2, I move to strike out the numeral "30" and to insert the numeral "35," making the rate 35 per cent ad valorem.

Mr. SMOOT. That is the present rate?

Mr. HUGHES. Yes; the present rate.

The amendment was agreed to.

The SECRETARY. The committee report an amendment to this paragraph on page 119, line 6, by striking out, before "per cent," "25" and inserting "15," so as to read:

Or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 15 per cent ad valorem; shells engraved, cut, ornamented, or otherwise manufactured, 25 per cent ad valorem.

Mr. HUGHES. I am directed by the committee to ask that the amendment be disagreed to.

The amendment was rejected.

Mr. BRANDEGEE. Mr. President, at the time this paragraph was passed over I put in the RECORD a letter from a constituent of mine in relation to ivory tusks in their natural state. The substance of the letter was that ivory in the natural state, the entire tusk, had always been upon the free list. Of course it is not produced in this country. The constituent who wrote me was very heavily interested in the piano business, and it is a leading industry in my State. Piano keys are made from this ivory.

The letter I put in the RECORD, which I will not attempt now to bother with reading in its entirety, made the point that if this duty is put upon this product on the theory that ivory is a luxury in this business, it is a mistaken theory, that the great mass of the pianos made are sold upon the installment plan to people of very moderate means, and the 20 per cent duty levied by this paragraph would certainly result in the raising of the price on these articles and hurt their business.

In this connection I offer an amendment which I send to the desk, and at the same time I offer an amendment to go in on page 139 at the end of line 22. If this duty should be taken off of course the second amendment would be necessary to restore it to the free list. I will ask the Secretary to read both amendments.

The SECRETARY. In paragraph 379, page 118, line 22, strike out the words "in their natural state, or," so as to read:

Ivory tusks cut vertically across the grain only, with the bark left intact, 20 per cent ad valorem.

On page 139, line 22, after the word "unmanufactured," insert:

Ivory tusks not sawed, cut, or otherwise manufactured.

The amendment was rejected.

Mr. PENROSE. Mr. President, the paragraph relating to horn combs was passed over when this schedule was originally under consideration and the understanding was that it should not be taken up in my absence. Inadvertently the paragraph was agreed to and an amendment offered by the Senator from Massachusetts [Mr. LODGE] was voted down while I was temporarily absent from the Chamber. I ask unanimous consent to make just a brief statement and to have some papers printed in the RECORD.

This is a small industry. I think there are only two or three concerns of the kind in the United States. One is located at Frankford, in Philadelphia. Another is located elsewhere in Pennsylvania. These combs are made out of the horns of cattle and are sold very cheaply to the consumer. It is impossible to understand how he can in any way be benefited by a reduction of the duty on the article. The industry, in my opinion, will be absolutely wiped out by this reduction. The competition is so keen with England and other parts of Europe that this little industry, giving employment to a few industrious and deserving mechanics, will have to be closed.

The comb works at Aberdeen are a principal competitor of the American article. The comb makers are the lowest paid skilled workers in Aberdeen. It is 14 years since they had an increase in wages. They have had to submit to insulting conditions, petty tyrannies, and a system of fining, such as no other workers have to endure. For instance, the workers have to pay for broken windows, even though they have not broken them.

I have here a circular of the Aberdeen Comb Makers' Society giving notice of a demonstration to be held on Castle Street, Thursday, June 26, 1913, at 8 p. m., in support of the workers on a strike. The notice goes on to state that addresses will be given by David Palmer, president of the trades council, Joseph F. Duncan, and others, and the notice invites all to "Come and hear the truth about the comb works." It goes on to say: "Support the workers in the fight they are making for tolerable conditions and reasonable wages." That is the condition of the labor element, Mr. President, in Aberdeen, against which the American workman is invited to enter into competition.

I have a letter here from Mr. John Walton, of the firm of Jacob W. Walton Sons, at the head of the horn-comb industry in Philadelphia, with a copy of a brief which he filed with the Ways and Means Committee of the House. I ask to have the letter and the brief incorporated in the RECORD, if there is no objection.

The VICE PRESIDENT. Without objection, that will be done.

The matter referred to is as follows:

JACOB W. WALTON SONS,
Frankford, Philadelphia, April 14, 1913.

HON. BOIES PENROSE,
Washington, D. C.

MY DEAR SIR: Below I submit some statements of the effect of the change of duty on horn combs from 50 per cent to 25 per cent ad valorem. If given opportunity, I can prove the truthfulness of each statement.

1. No advantage to consumer.
2. No advantage to workingmen.
3. No advantage to Government.
4. Severe blow to manufacturers.
5. Advantage only to foreign manufacturers.
1. Horn combs in large proportion retail at 5 and 10 cents, and this will not be changed by the new proposed duty.
- No advantage to consumer.
2. To meet foreign competition employees will either be required to accept lower wages or loss of occupation.
- No advantage to workingmen.
3. Unless the American manufacturers are utterly unable by cheapened methods and lowered wages to meet the competition of foreign manufacturers and are driven from the field altogether, there will be slight increase in the custom receipts.
- No advantage to Government.
4. The various firms engaged in comb manufacturing have been established from 30 to 60 years, all men of respectability, standing well in their communities. They have all been industrious and inventive and devoted to their business; and have none acquired wealth out of the business. In most cases their all is invested in the business, and their income depends on profit in manufacturing.
- A severe blow to manufacturers.
5. The only profit we can discover in the change of duty will be an increase of profit to importers who handle foreign goods due to enlarged purchases and the foreign manufacturers who are waiting eagerly for the final decision on this duty and are looking forward to greatly increased sales of their manufactures in this country, all of this increase displacing goods made by American workmen, any trade that may be retained being under very severe destructive competition.
- Advantage only to foreign manufacturers.

Very truly, yours,

JOHN WALTON.

NEWBURYPORT, MASS., April 12, 1913.

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee.

DEAR SIR: We have just learned with great surprise that your committee proposes to cut the duty on horn combs squarely in halves.

The announced purpose of the Democratic Party has been to revise the tariff along the following lines:

- First. To insure effective competition.
- Second. Not to injure business.

If these principles are carried out no one can have any reasonable ground for objection.

We appreciate the difficulty of a committee in trying to understand the facts and the special circumstances which affect any industry, particularly when it is called upon to adjust so many items in so short a time.

Full information is on file with the committee. We wish, however, to again call your attention to the facts on horn combs, bearing on the above principles.

First. Competition: Under the present rate of 50 per cent the imports of horn combs for fiscal years 1911 and 1912 (see official figures of Department of Commerce and Labor) have averaged \$143,000 duty paid. The estimated average United States production for the same time is \$550,000, making a total of \$693,000. The foreign combs therefore comprise slightly more than 20 per cent of the total consumption under the present tariff, and we submit this clearly shows that effective competition already exists.

Second. Injury to business: Under these conditions it must be clear that when competition to this extent is possible with a duty of 50 per cent a reduction of one-half in the duty would place the industry absolutely at the mercy of the foreign manufacturer.

The labor cost in horn combs is a very large per cent of the total cost, and as the Scotch, German, and Italian workers receive only about 40 per cent of the American wage, and are not hampered by short working hours, a liberal measure of protection is absolutely essential.

If the committee had cut the duty one-fourth, or to 37½ per cent, we would, under the existing circumstances, have "taken our medicine" with the best grace possible, but a cut of one-half is destructive.

Allow us to call your attention to the following quotation from the address of President Wilson on the tariff at the opening of the special session of Congress:

"It would be unwise to move toward this end headlong, with reckless haste, or with strokes that cut at the very roots of what has grown up amongst us by long process."

"It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it. We must make changes in our laws, whose object is development, a more free and wholesome development, not revolution or upset or confusion."

Have we not every right therefore to assume that this was an honest statement, and that the tariff measure would conform to the principles thus stated?

We appeal to your sense of justice and to your sense of honor to "make the performance square with the facts," and ask that you modify the schedule on horn combs so that the industry will have a fighting chance and not be destroyed.

To men who have given 30 to 40 years of hard work to the business and whose property is largely tied up in the industry, the proposed duty of 25 per cent is heart-breaking.

Very truly, yours,

GEO. RICHARDSON CO.
W. H. NOYES & BRO. CO.

Mr. PENROSE. I took a particular interest in this industry four years ago, and with the help of the senior Senator from Massachusetts [Mr. LODGE] we were enabled to have what has proved to be an adequate duty inserted in the Payne bill. During the four years in which the industry has enjoyed the pro-

tection of that duty it has flourished in a reasonable way. A very large number of combs are imported.

It seems to me that this little industry, which will undoubtedly be stricken down when this bill becomes a law, is furnishing as good an illustration as is possible of the unnecessary and wanton effects of the pending tariff bill in many respects.

It is absolutely impossible to see how the American consumer can be benefited to the least extent. There is in the whole tariff bill no greater contrast between the low-grade conditions of labor abroad and the happier conditions of labor in the United States than is exhibited in this industry.

I have here, Mr. President, some copies of briefs heretofore filed by the gentlemen representing this industry, together with some affidavits as to labor cost and other facts pertaining to the industry. I will ask to have these statements also incorporated in the RECORD.

The VICE PRESIDENT. Without objection, that will be done.

The matter referred to is as follows:

JACOB W. WALTON SONS,
Frankford, Philadelphia, July 13, 1913.

Hon. BOIES PENROSE, Washington, D. C.

MY DEAR SIR: I send you herewith a copy of our printed brief and also copy of the typewritten brief which was placed in the hands of the Finance Committee chairman and of which I think I sent you one copy before. You will find on the first page of either of these papers a synopsis which will refresh your memory, I think, on the whole subject.

In addition to these papers I desire to state several facts. First, the experience of the horn-comb manufacturers during the past year has been that, though we have a duty of 50 per cent, the importations of the foreign comb manufacturers have kept prices of horn combs down to the point where our factories have been compelled to run practically with no profits. Our own concern in Frankford, Philadelphia, has scarcely paid the living expenses of the firm let alone interest on investment or other earnings. We can not possibly see how, with the reduction of duty, it will be possible to continue the business against foreign competition.

To refresh your memory, allow me to refer to the following facts: Prior to the last Congress, when the Payne-Aldrich bill was passed, the foreign horn-comb manufacturers had just begun for a few years to engage in aggressive competition with the horn-comb manufacturers of this country. They did not make the styles we used. They did not understand our market, and as a consequence under the old 30 per cent duty in the Dingley bill their competition was not seriously felt. When, however, about six or seven years ago they sent their agents into this country to study the market, and in some instances had opportunity of studying our methods, they took home with them samples of the best selling goods in this country and at once began to undersell us on our own distinctive lines. This they were enabled to do, because the cost of labor in horn combs is quite large and the cost of their labor compared to ours in much less than one-third.

It is sometimes said "that the workmen in these foreign countries are not as efficient as the American workmen." If that were true, our troubles would not be so great; but unfortunately those who work in the comb shops in Aberdeen, Scotland, and other competing countries are men, women, and boys who are thoroughly trained in this particular industry, and because of the necessity to work hard in order to earn their low rate of wages they become very quick and efficient workmen. This we know not by hearsay, but because in the last several years there have come to our factory men who had worked in the Aberdeen shops seeking employment, and we have found them very efficient workmen.

According to the newspapers from Scotland, there is at present a strike on in the comb factories, asking for an increase of 15 per cent in wages, the granting of which seems to us to be remote, and on this subject we inclose you a letter from our New York agents. If, however, they would grant this full increase in wages of 15 per cent, it would not raise the wage of the foreign workmen to much above 33½ per cent of our wage rate.

In view of the fact that whatever the price of the combs may be, the great mass of them are sold at 10 cents apiece, and therefore the ultimate consumer gets no benefit; and also that if there is an increase of importations, it surely throws just so many workmen out of employment, and that in all probability it would utterly destroy the industry before there would be any appreciable gain in revenue to the Government, we can not understand why the change should be made.

If necessary to reduce the duty, why could they not at least give us 37½ per cent, under which rate we might possibly continue in business, though without any profits?

If it will be of any avail, I shall be glad to go to Washington at any time at your suggestion and will see anyone you may desire me to in order to help this matter on.

Thanking you for your many favors, I remain,

Very truly, yours,

JOHN WALTON.

SYNOPSIS OF BRIEF.

Subject: Horn combs, made from cattle horn and used for hair dressing.

Schedule N: Paragraph 463, last clause.

Present duty of 50 per cent ad valorem advanced in the last bill from 30 per cent for reasons given in briefs presented to the Sixty-first Congress, extracts of which are attached herewith (pp. 1 and 2):

(1) This advance was based on the difference of cost of labor. (See pp. 3, 4, and 5.)

(2) The aggressive competition of foreign manufacturers made possible by their low rate of wages. (See p. 6.)

(3) The fact that most of our goods are sold in this country at either 5 or 10 cents, so that a change of duty would have no effect on the consumer. (See p. 7.)

As proof that this advance was justified and should be maintained, we submit the following:

1. Since the change there has been no advance in prices of horn combs by the domestic manufacturers.

2. The importation of foreign combs has continued large. (See p. 8.)

3. The horn-comb business is affected by sharp competition both at home and from the foreign manufacturers. (See p. 9.)

In view of the fact that the duty of 50 per cent ad valorem did not make possible an advance in prices, and the further fact that we have a steadily rising scale of wages since the last tariff bill, and the further fact that according to all advices we receive there has not been any advance in foreign wage scale, we feel justified in urging that the present duty shall not be changed.

EXTRACT FROM BRIEFS SUBMITTED TO PREVIOUS COMMITTEE ON WAYS AND MEANS.

Horn combs are made of cattle horns, and some years ago the production in this country supplied us with all our raw material at a moderate price; but owing to the breeding of short-horn cattle and the process of dehorning, the quantity and quality of American horns have fallen so low that it has been necessary for some years for American manufacturers to buy a large part of their material in European markets where the foreign manufacturers have the advantage of being on the ground.

The product of the foreign comb manufacturers has always found a market in this country, but under present conditions there is an increase in the number of sizes and styles, many of them copies of our makes, which enter our market and drive out the domestic goods. This competition is more keen and difficult to meet each year, particularly in view of the fact that the scale of wages we are required to pay has advanced.

A very considerable item of comb imports consists of fine handmade combs, which sell in all the department stores and among the dealers in better goods. Some of these goods manufactured in France are made in a manner that we could not presume to have sufficient tariff to enable us to compete. In these goods the item of hand labor figures very largely. While in France, in 1904, I was informed by horn brokers and other men familiar with the business that it is the custom of the large manufacturers to prepare the horn stock up to a certain point and then farm it out to families, who take the work home and there put upon it the fine hand labor which produces the superior article. For this work the families, consisting of father, mother, and several children—sometimes five or six—receive the equivalent of about \$5 for a full week's work. This statement had previously been made to me by Frenchmen in this country who were familiar with the comb industry in France.

There is also a line of very cheap combs coming here from Italy, Scotland, and the Netherlands, which we can hardly expect to compete with. Among these are pocket combs in cases, which are delivered in New York for \$1.25 per gross, duty paid, or of a line of fine-teeth combs at ridiculously low prices.

While thousands of dollars of these goods are continually shipped here, we do not advocate such protection as would give the American manufacturers a monopoly in this market.

The burden of our plea is that the tariff should be high enough to enable the American manufacturer, paying decent wages to workmen, to make reasonable profits and retain the market which legitimately belongs to them.

While there has been a large increase in the consumption of horn combs in this country, the industry has not advanced correspondingly. The decline in the cleared horn line of dressing and fine-teeth combs is particularly marked, the foreign manufacturers having this field practically to themselves, although most of our factories are equipped for the work, and if it were possible to compete could give employment to a goodly number of workmen.

If a change were made in the tariff schedule, either lowering or increasing the rate, it would not change the price of the combs to the consumer, except in a limited group of the article. The price that is charged for the comb at retail in this country for probably 75 per cent of the combs sold is 10 cents. The only effect of lowering the duty would be to enrich the dealer at the expense of the manufacturer and by the increase of importations reduce the output of our factories, which would result in the employment of less workmen and possibly the retirement of the industry, in which case the foreigner would undoubtedly increase his prices to this market.

On the other hand, an increase of duty would not increase the price to consumers, the revenue to the Government would probably not be materially diminished, and there would be an enlargement of the industry, which would give employment to more American labor.

Mr. James W. De Graff, representing the Noyes Comb Co., of Binghamton, N. Y., writes:

"About 15 years ago there were 11 horn-comb factories in this country, and to-day there are about 4, as the inadequate duty of 30 per cent does not allow the American manufacturer sufficient protection to enable him to compete with the low wages paid in Aberdeen, Scotland, and in Germany.

"Most of the importations into this country come from one horn-comb works in Aberdeen, Scotland. Our factory obtained a United States patent on a metal-back comb, where the backs extended over the ends, forming the end teeth, which patent expired a number of years ago, and the fair market value for this article is \$7.25 net; but the competing comb offered by the Aberdeen Comb Works can now be landed in New York City, freight and duty paid, for \$5.70; and beg to say that this comb can not be made in America to meet the foreign price mentioned above. Taking 100 as a unit, the wages amount to 45 per cent and a superintendent's charge of 5 per cent. Notwithstanding the fact that foreign combs are brought into this market at the price mentioned above, the consumer pays exactly the same price at retail for his goods as he does for ours, as the comb can not be retailed for 5 cents, and is universally sold at 10 cents, so that the difference in cost to the wholesale merchant is absorbed by him and the retailer at the expense of American labor.

"The wage scale in the Aberdeen Comb Works, Scotland, of which we have positive information, as per attached sworn affidavit, is as follows: Managers receive salaries not exceeding \$15 per week; foremen, from \$6 to \$7.50 per week; the best workmen, from \$4 to \$6.50 per week. Women earn an average of from \$2 to \$3, and boys, who must be 14 years old, start at \$1 per week, and they receive this rate for a considerable period.

"As comb making is not considered a man's work in Scotland, outside of manager, foremen, machinists, and a few men for very hard work, the larger proportion of employees are women and minors.

"On the contrary, our labor is principally men, whose wages are about four times as large as the women who do similar work, and the boys employed by us receive at least four times as much as boys abroad.

"A conservative estimate of the relative amount of the labor cost as between the foreign and domestic manufacturers is that the foreign wages for the same amount of labor would be less than 33½ per cent of the American wage cost. These figures relate particularly to Scotland, and are well within the facts. In other countries the rates would probably be lower."

COPY OF AFFIDAVIT.

FRANKFORD, PHILADELPHIA, PA., December 31, 1908.

I, John Rogers, of 4151 Paul Street, Frankford, Philadelphia, Pa., was in the employ of the Aberdeen Comb Works Co., Aberdeen, Scotland, for 42 years. During this time I worked in the various departments, and for a number of years I was employed as a foreman.

The rates of wages paid by this firm at the time my employment with the said firm ceased were as follows:

Managers, average wages not over 60s., or about \$15 per week.
Foremen, average wages not over 25s. to 30s., or about \$6 to \$7.50 per week.

Men, average wages not over 16s. to 27s., or about \$4 to \$6.50 per week.

Women, average wages not over 8s. to 12s., or about \$2 to \$3 per week.

Boys, average wages not over 4s. to 5s., or about \$1 to \$2 per week, this latter rate gradually increasing as the boys reach manhood.

I have been in constant correspondence since I left Aberdeen with employees of the comb works, who are my old friends and neighbors, and I am sure that rates have not advanced, but rather have decreased since that time.

JOHN R. ROGERS.

John Rogers, being duly sworn according to law, deposes and says that the facts set forth in the above statement, to which he has attached his signature, are true to the best of his knowledge and belief.

JOHN R. ROGERS.

Sworn and subscribed to before me this 31st day of December, 1908.
[SEAL.] THOS. B. FOULKROB,

Notary Public.

(Commission expires January 27, 1909.)

G. W. Richardson Co. and Wm. H. Noyes & Bro. Co., of Newburyport, Mass., write as follows:

"This industry is principally carried on in the States of Massachusetts, Pennsylvania, and New York, and although the various parties engaged in same have given strict attention to the details of the business and have been energetic and ingenious in inventing labor-saving devices, the business has not kept pace with the growth of the country.

"This is largely due, in our opinion, to the strong competition of the foreign manufacturers, notably those of Great Britain, France, Italy, and the Netherlands, who are sending large quantities of combs to this country and underselling us, notwithstanding the present duty.

"We consider that the low wage scale and also low cost of supplies abroad is the secret of their ability to do this, and the cost of the above items is fully 50 per cent of the total cost.

"The supplementary brief recently submitted by Mr. Walton gives facts in relation to the wage scale in Scotland which are of great importance when considering what is a fair measure of protection, and we call your especial attention to same.

"As women perform much of the heavy work in Scotland, for which we employ men at a rate of \$10.50 to \$13.50 per week, it is clear to us that the total labor cost in Aberdeen would not exceed 80 to 33½ per cent of what it is in this country.

"One of our principal items is a 7-inch metal-guard tooth comb, with a metal back of nicolene. This comb has been copied by the Aberdeen people and is now sold in this country by them at \$5.70 per gross, duty and freight paid.

"A fair price for this is from \$7 to \$7.50 per gross. The comb retails at 10 cents.

"ILLUSTRATION.

"On the basis on cost prices in Scotland a tariff of 50 per cent would merely meet the difference in wages alone on the class of combs in general use in this country.

"As stated by us in the briefs submitted to the Ways and Means Committee and printed in their Tariff Hearings, No. 36 (pp. 5395-5397), and in No. 47 (pp. 7075-7077), the proportion of labor cost in the medium goods (most commonly used) of horn combs in America, is about 50 per cent of the total cost.

Take a comb that will cost in America, as example, say, per gross.....	\$6.00
The labor cost would be 50 per cent.....	\$3.00
The labor on same article in Scotland.....	1.00

Which would give advantage to foreigner of.....	2.00
---	------

And make their cost only.....	4.00
-------------------------------	------

To equal the American cost we must add 50 per cent.....	2.00
---	------

6.00

"You will note that this relates to the medium grade of goods, which are made with considerable machinery; but for high-priced goods, which require more handwork, this percentage would be inadequate."

While formerly the foreign manufacturers confined themselves to the peculiar styles of their own countries which were salable here only in limited quantities for perhaps a decade, they have made a careful study of our market and methods of manufacture, and have gradually imitated our largest sellers and, though their product is still somewhat crude, have made great inroads on the business of American manufacturers.

This, of course, is only made possible by the low wage rate they pay. In one style of comb, known in the market as the metal end tooth comb, a comb with a nicolene (nickel-plated zinc) back and end teeth, which material they purchase lower in Europe than we can buy it here, their competition has been especially keen.

The factory of the Aberdeen Comb Co., Aberdeen, Scotland, which is a combination of the factories of Great Britain, and in this country would be denominated a trust, is especially active and determined to capture the American market.

The custom now firmly entrenched in the United States, and very largely brought about by the syndicate stores, of selling small wares at 5 or 10 cents has a determining influence on the prices the comb manufacturers can get for their goods. Except for a few styles especially well made and sold in limited quantities to a select trade, it would be suicidal for us to attempt to ask prices that would not permit the goods to be retailed at 10 cents.

Owing to this trade condition a change of duty either upward or downward would have no effect upon the consumer.

In Europe we found the prices at retail varied very much, running from the equivalent of our 5 cents up to a franc (20 cents) and shilling (about 25 cents), and in most instances, especially in the cheaper combs, the retail prices are equal to our American prices.

From these facts we can fairly assume were the American driven out of business from lack of sufficient duty to meet wage differences, it would not be long before the foreign prices would be advanced, and the

consumer here be compelled to buy inferior goods for 5 to 10 cents, or pay higher prices.

The importations of horn combs have been quite large.

According to reports of the Department of Commerce and Labor, which were handed to the writer, the importations were as follows:

Duty paid year ending June 30, 1911.....	\$155,265
Duty paid year ending June 30, 1912.....	130,272

During the latter years domestic manufactures were reduced in their sales in about the same proportion. These figures would indicate imports in excess of 25 per cent of the domestic manufactures, which clearly indicates that the present rate of duty is by no means prohibitive.

Owing to the fact that horn combs were not classified in previous tariff bills, but were imported under the general head of the "Manufactures of horn," which included many other articles, it is impossible for a comparison with former years to be made with any accuracy. We are inclined to believe, however, that because in the particular combs which sell most largely the foreign manufacturers lowered their prices sufficiently to meet the difference in the rate of duty the sales have been approximately as large.

The equipment of the horn-comb manufacturers for a number of years back, while it has not been materially increased, is sufficient to produce an excess of production, and each manufacturer is necessarily seeking more business continually. Of course the effect of this is to produce sharp competition; sometimes it takes the form of improved quality, and at other times is a question of price, so that at home we have competition that would prevent any serious advance in prices. In view, however, of the large imports, and the fact that our foreign competitors are aggressive, the American manufacturer is compelled to sell as cheaply as possible in order to maintain business enough to keep the factories going.

The countries from which we find competition, all of which have the low wage scale, are Great Britain, France, Germany, and Italy.

The Aberdeen Comb Co., of Aberdeen, Scotland, who are especially aggressive, and are making very strenuous efforts to capture the trade of this country, and who imitate our goods more than the others, are the sharpest competitors we have from foreign sources.

Some years ago all of the important horn-comb factories in Great Britain formed a consolidation which would be denominated a trust if located in this country.

In view of all these facts which show that our present duty is not prohibitive, that the consumer is not overcharged, and that a change of duty could not benefit the consumer, but would injure the industry very seriously, compelling either loss of occupation or lower wages to the workman, we trust that the present duty will be retained.

Mr. PENROSE. Mr. President, of one thing I am certain, that the enactment of this paragraph into law means the shutting down of this industry in Philadelphia and in Massachusetts without benefiting any man, woman, or child in the whole United States.

The SECRETARY. On page 120, paragraph 386 was passed over.

The committee proposes to strike out the paragraph as printed in the House text and to insert a new paragraph, as follows:

386. Paintings in oil or water colors, engravings, etchings, pastels, drawings, and sketches, in pen and ink or pencil or water colors, and sculptures not specially provided for in this section, 25 per cent ad valorem, but the term "sculptures" as used in this paragraph shall be understood to include only such as are cut, carved, or otherwise wrought by hand from a solid block or mass of marble, stone, or alabaster, or from metal, and that are the professional productions of a sculptor only, and the term "painting" as used in this paragraph shall be understood not to include such as are made wholly or in part by stenciling or other mechanical process.

Mr. LODGE. This amendment is interwoven with the one in the free list, and properly they would have to be taken up together.

Mr. SIMMONS. The committee have amendments that may possibly reach some of the objections of the Senator.

Mr. LODGE. I would be very glad to hear them stated.

Mr. SIMMONS. The amendments will be submitted by the Senator from New Jersey.

Mr. HUGHES. I am instructed by the committee to offer an amendment. In line 4, on page 120, the first line of the paragraph, I move to strike out the word "engravings."

The amendment to the amendment was agreed to.

Mr. HUGHES. In line 5, I move to strike out the word "etchings" and the comma.

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question is on agreeing to the amendment as amended.

Mr. BRANDEGEE. Is that the entire amendment made to the amendment, I ask the Senator?

Mr. HUGHES. Yes; that is the entire amendment to the amendment.

Mr. LODGE. Those are the only changes?

Mr. HUGHES. The only changes.

Mr. LODGE. I am very glad that change has been made and that engravings and etchings have been put back where they have always been. They are on the free list in the existing law.

Mr. SMOOT. By striking them out of paragraph 386 they fall back into paragraph 337 at 15 per cent.

Mr. LODGE. Under what paragraph did the Senator from Utah say they will now come?

Mr. SMOOT. Paragraph 337, which provides:

Blank books, slate books and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter, all the foregoing, wholly or in chief value of paper, and not specially provided for in this section, 15 per cent ad valorem.

Mr. LODGE. It puts them in that paragraph with a duty of 15 per cent.

Mr. SMOOT. Yes; it puts them back into paragraph 337.

Mr. LODGE. Under the existing law they are on the free list. In the paragraph where engravings or etchings are now placed, as I understand, in paragraph 337, page 104, it is provided:

Blank books, slate books and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter, all the foregoing, wholly or in chief value of paper, and not specially provided for in this section, 15 per cent ad valorem.

The chief value of an engraving or an etching is not the paper; it is the marks on the paper made by the artist who etched or engraved the plate. It seems to me little short of absurd to put engravings or etchings in that paragraph and put a duty on them because they consist "wholly or in chief value of paper."

Mr. BRANDEGEE. What would be the price of that etching?

Mr. LODGE. Of course, the paper is practically of no value. The whole value of the etching is in the etching and the whole value of the engraving is in the engraving, and here they are classed in the paper schedule with slate books and pamphlets "wholly or in chief value of paper."

Mr. McCUMBER. Mr. President, I should like to ask the Senator from Massachusetts why he objects to the other side of the Chamber maintaining everlasting harmony in this bill?

Mr. LODGE. Why, Mr. President, I do not, as a rule, object to their making the bill in any way they desire; but etchings and engravings are works of art. They have hitherto been free. I feel strongly that it is of very great value to education in this country that etchings and engravings should come in free, as do other works of art. I deplore their being made dutiable. The imposition of a duty on them seems to me a very backward step. As I understand, the House had them under that queer heading at 15 per cent, and the Senate committee has raised the duty to 25 per cent. I wish they could be put back to their old place.

Mr. BRANDEGEE. Mr. President, I do not want to interrupt the Senator, if he objects—

Mr. LODGE. It does not interrupt me at all.

Mr. BRANDEGEE. I was going to ask the Senator if he did not think that this language which he is criticizing would place them on the free list unless the chief value of them was in the paper of which they are composed?

Mr. LODGE. If that is the case, this puts them back on the free list.

Mr. BRANDEGEE. I am not sure what it does; but I wanted to suggest to the Senator that unless an engraving was wholly or in chief value of the paper in its composition it would not seem to be provided for.

Mr. JOHNSON. Mr. President—

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from Maine?

Mr. LODGE. I do.

Mr. JOHNSON. If the Senator will yield to me, I desire to make a motion to amend. In paragraph 337, page 104, line 16, after the word "foregoing," I move to strike out the words "wholly or in chief value of paper" and the word "and," at the beginning of line 17.

Mr. LODGE. Mr. President, before the Senator enters on that amendment, I wish to say that the arrangement about these articles is somewhat confused. They appear in the free list with a 50-year limitation, as I understand; that is, all etchings and engravings more than 50 years old come in free.

Mr. SMOOT. There is also a limitation as to certain institutions.

Mr. LODGE. This paragraph would cover, if I am right, etchings and engravings less than 50 years old whose chief value is paper.

Mr. SIMMONS. The Senator from Maine [Mr. JOHNSON] has just moved to strike out those words.

Mr. LODGE. I understand that; but that will leave the duty on them at 15 per cent, while they are now on the free list, as I understand.

Mr. President, I am glad that so much has been done for engravings and etchings—that they have been freed from a duty of 25 per cent—but I regret the increase that has been made over the House rate, which, I believe, is a repetition of the present law, if I remember rightly. I regret still more the extension of the term to 50 years, but that comes up more naturally in connection with the free list; so I shall not detain the Senate further at this point than to say that I think it is a great pity to increase the duty on paintings and sculpture. I think it is to the interest of the whole country that the duties on articles of this character, if they are to be made dutiable, should be very low. Art museums, which are established for the pleasure and benefit of the general public, are springing up

all over the country from Texas to Maine. They are places of great resort and great pleasure to the people of every town where they are located.

The paintings that are brought in by private individuals are sure to find their way sooner or later to those public museums. Of course, I am aware that public museums can bring these articles in free now, but I think it is a great mistake in public policy to increase the duty on works of art. I wish that this amendment could be defeated and that the House rate could remain.

Mr. JOHNSON. I find on referring to paragraph 416 of the present law that engravings and etchings are made dutiable at 25 per cent ad valorem, and the same language is used in the present law as is used in the pending measure, namely, "all the foregoing, wholly or in chief value of paper." I have moved to strike out those words. We simply followed the existing law in that particular. Under paragraph 337 of the pending bill these articles will be dutiable at 15 per cent.

Mr. LODGE. It was the repetition of a very foolish description, I think, to apply to etchings and engravings.

Mr. JOHNSON. I fully agree with the Senator. It seems to me the amendment which has been offered is necessary.

Mr. LODGE. I think so.

Mr. JOHNSON. The value is not in the paper, of course; it is in the skill of the artist or workman.

Mr. LODGE. I am one of those who were responsible for that law, and I am free to say that that was a piece of folly that I did not know was in it.

Mr. THOMAS. That is not the worst piece of folly in it.

Mr. ROOT. May I suggest to the Senator from Maine that striking out those words from paragraph 337, which corresponds to paragraph 416 of the old law, might involve some difficulty regarding the other articles enumerated in the section. If there were nothing but engravings and etchings, it would be quite simple, but paragraph 337 covers "blank books, slate books, and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter."

The limitation "wholly or in chief value of paper," I suppose, would bear a pretty important relation to a good many articles. For instance, a bound book comes in. That book might be classified quite differently, according as the chief value is in the binding or the chief value is in the paper. A book may come in which has a certain amount of engraving, little vignettes or engraved title pages or incidental engravings or etchings.

Mr. JOHNSON. I suggest to the Senator from New York that the words to which he refers would not apply to books, because that part of the paragraph which relates to books is cut off by a semicolon. The qualifying words "wholly or in chief value of paper" relate only to "blank books, slate books, and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter." It seems to me the criticism made by the Senator from Massachusetts as to engravings and etchings would apply to music in sheets. The value would not be in the paper, but must be in the music and in the skill and art of the composer, and as to a map or a chart that would also be true.

Mr. ROOT. Still there are many things in the paragraph which are subject to the suggestion which I have made.

Mr. JOHNSON. The blank books and slate books—

Mr. ROOT. Pamphlets—

Mr. JOHNSON. And possibly pamphlets.

Mr. ROOT. And possibly maps and charts.

Mr. JOHNSON. It seems to me that with respect to a pamphlet it would be the written matter, the thought of the author, which gives it value and not the paper upon which his thoughts are printed.

Mr. ROOT. That may be, but not necessarily so. I know there is a practical line of distinction in the application of the customs laws on account of these words. Although my memory about it is very vague, I know it exists, and I think the Senator had better not strike out those words now on the floor without further consideration.

Mr. JOHNSON. I shall be very glad to take the suggestion of the Senator and pass the paragraph over.

Mr. ROOT. It is perfectly clear that the chief value of an etching, an engraving, a map, or a chart can not be in the paper on which it is printed. The limitation "wholly or in chief value of paper" could be taken away from etchings, engravings, maps, and charts and applied to blank books, slate books, and pamphlets.

Mr. JOHNSON. I suggest that the amendment may be adopted. Then we can look into it, and, if necessary, recur to it again.

Mr. ROOT. Certainly; the Senator could rephrase it in a few moments so as to make it meet those objections.

The VICE PRESIDENT. The question is on agreeing to the committee amendment as amended on page 120, paragraph 386.

The amendment as amended was agreed to.

The SECRETARY. The next amendment passed over is on page 124, paragraph 403½, alizarin, etc.

Mr. SMOOT. In that paragraph, in line 20, I move that the comma between "alizarin" and "anthracene" be stricken out.

Mr. LODGE. What has become of paragraph 386 and the amendment to it? We have suddenly changed the subject to anthracene.

The VICE PRESIDENT. The amendment was agreed to as amended.

Mr. LODGE. I did not hear the question put.

Mr. ROOT. Mr. President, the agreement to the amendment in paragraph 386 was made through my own inadvertence without my observing it. I should be glad to have put in the RECORD an expression of my strong desire that the duty upon works of art should not be increased. I sincerely hope that in conference the House—

Mr. SIMMONS. I will state to the Senator from New York that we have not been able to hear what he has said over here because of the confusion.

Mr. ROOT. I was expressing a very strong desire that the duty on works of art should not be increased. I think the importation of all the things which are enumerated in this section and which were to be admitted under the House provision at 15 per cent ad valorem, the duty on which is raised by the Senate committee amendment to 25 per cent ad valorem, contributes materially and generally to the happiness and improvement of our people. I think it is a great mistake to increase the duty upon them. The way in which paintings and sculptures get into our museums is by reason of their having come to this side of the Atlantic. They do not stay here very long before they find their way into the places where all of our people can see them, and there are millions of people who themselves can not afford to have works of art who in all of our important cities have an opportunity to see them. I think it is a great pity that we should take a step backward, and I am sorry to see the Senate do so.

Mr. THOMAS. Mr. President, this paragraph has brought into discussion the action of the committee in reference to works of art somewhat prematurely, but perhaps it is as well here as at any other time that I should express my views upon that subject, inasmuch as it is directly connected with paragraph 386.

The committee placed certain works of art upon the dutiable list after full consideration and much disagreement, and provided that they should be free listed under certain circumstances, which are enumerated in paragraphs 657, 658, and 659, as I remember, and which, when complied with, will produce all of the good consequences which are predicated of free listing all works of art, as that term is understood.

There is no question about the educational value of all works of art. There can be no dispute about the fact that in proportion to the extent to which they can be enjoyed and viewed by the public they should be made as free as possible. They appeal to the best that is in human nature among all classes and conditions of men. The desire to have them freely exposed to the public view, thus being practically the property of all men, through their privilege of seeing them at all times, is perfectly natural. But we know that a great many of the most valuable paintings, statuary, antiquities, and other works of art are acquired at enormous prices and brought to this country by many of our very wealthy people for their private collections, immured from all public inspection, and restricted to themselves and to their immediate friends and admirers as something acquired to satisfy a taste or a fad, and to which the public are denied all access.

The prices which are paid for these articles are of secondary importance to those desiring and able to buy them. The fact that they are in the possession of these people is of itself a sufficient gratification of the purpose for which they have been secured. In other words, they are acquired for just the same reasons that beautiful carpets, furniture, and other decorations of the houses and palaces of the very wealthy are acquired.

It is true that in many instances, perhaps in most of them, these collections ultimately reach public institutions, art galleries, and other places for public exhibition and to which all have access. It is true, also, that they are frequently acquired directly by these institutions, and thus go to them at once, in which event there is no duty or the duty is refunded. The theory upon which these paragraphs were finally agreed upon by the committee is, as far as possible, to make these works of art public property and to do away, if possible, with, by discouraging the custom, making private collections of them, in

which event they disappear from the galleries of the Old World and are immune to all but the few after they reach our shores.

Personally, I consider it a great misfortune that any of the great works of art, justly celebrated in all ages and everywhere, should become the private property of any individual or individuals; because just in proportion as they are so acquired and pass into private collections, just in that proportion does the public suffer, and just in that proportion is it deprived of something to which it is not only entitled, but to which these articles are almost a necessity.

We have provided that whenever any work of art or any collection of paintings, statuary, or similar articles, within a period of five years after the time the work or the collection may be secured, are either given or sold or otherwise transferred to any public institution whose doors are open to the public without charge for at least four days a week for eight months in the year the duties which this bill place upon these articles when purchased will be refunded, and when purchased directly by or for these institutions they are admitted duty free. In other words, if an individual to-day obtaining possession, at whatever price, of a painting, a piece of sculpture, or other work of art either presents or sells it to any such public collection or public institution the amount of the duty which has been paid is refunded. We offer, as far as we can, a premium to the liberal spirit—the public spirit, if you please—of those whose means enable them to acquire and to become the owners of these valuable collections and who may desire to become public benefactors as well. Hence, art is not penalized so long as publicity with reference to its objects becomes possible. But wherever these articles are to be secured and collected simply as a matter of personal pride or vanity or self-gratification, and then segregated, so to speak, from the public gaze, I do not know of any principle which justifies the nation that such acquisitions should be permitted without the imposition of a duty, thereby giving a revenue to the Government.

Senators on the other side have bitterly opposed many of the provisions of this measure affecting the various necessities of life, and have tearfully prophesied disaster to certain industries dealing in commodities that are essential to human existence because we propose to relieve them of duty. Now, when we come to articles, in so far as private ownership is concerned, which are absolutely luxuries in their nature, the same gentlemen as tearfully protest, and insist that we are practically levying a tribute upon a means of public education, diverting and perverting the power of taxation from its legitimate uses and applying it to something that should always be exempt from its operation.

Mr. President, the fad or habit of investing in beautiful and valuable paintings and sculptures and other works of art, both ancient and modern, with little regard to expense, has become so common with a certain class of wealthy Americans that the production of their imitations has become an established and recognized industry in the countries of the Old World. Spurious imitations of every conspicuous and famous work of art known to civilization, and of many that were never heard of, are manufactured on an extensive scale and palmed off upon the careless, the unsuspecting, and the ignorant. These are brought here, and will be brought here, free of duty—if present conditions continue—by the credulous and the ignorant purchaser. So that it is now almost a byword that the average American millionaire, eager for his art collection, invests his hundreds of thousands in pictures and in sculptures, and in other so-called works of art, and may or may not have acquired what he thinks he has obtained.

Shall such spurious products be admitted into this country free of duty? Shall we practically place a premium upon the manufacture and sale of these imitations, upon the theory that the genuine works should be admitted free of duty because they tend to elevate and uplift and idealize all sorts and conditions of men?

The purpose of this duty is to penalize, as far as a revenue tax will do so, that industry, which is constantly growing and will continue to grow so long as the acquisition of works of art simply to gratify the personal vanity of those who obtain them continues to be one of the recognized fashionable and popular methods of spending money in large quantities by rich Americans in Europe.

Wherever and whenever any commodities included within this and the other paragraphs relating to the subject are brought to this country by or for public halls and galleries, and are placed where the public can have access to them, no man, Democrat or Republican, would, I think, care for a moment to discuss, much less to insist upon, the assessment of a duty. As a consequence, we have said or propose to say in this bill that while acquisitions of that sort are to be encouraged and made free, private purchasers shall be required to pay a duty upon

what they may purchase and bring here, and to that extent contribute to the revenues of the Federal Government.

A very distinguished Republican statesman some years ago expressed himself so much better upon this subject than it is possible for me to do, and covered the ground so much more fully than I can be expected to cover it upon the impulse of the moment, that I desire to read an extract from his remarks in the House of Representatives on the 22d day of March, 1897. On that occasion Representative Dingley, of Maine, then chairman of the Committee on Ways and Means, whose name the tariff bill of that year bears, and which bill, like ours, included in the dutiable list this sort of property, said:

Inasmuch as there is some criticism of the committee in transferring paintings and statuary from the free list, where they were placed in 1894, to the dutiable list, except where such articles are imported for an established art gallery which has free days for the public, it is proper that the reasons should be presented for the transfer, for when these reasons are carefully considered the critics will, for the most part, see that the change is necessary to cut off abuses.

The subject was brought to the attention of the committee by the president of the Board of General Appraisers, at New York, who pointed out that under the "free-art" provision, so called, about \$4,000,000 in value of these articles had been imported free of duty, and that not 10 per cent of them had gone into any art gallery or anywhere else that the public could reach them. Generally they had gone into private houses.

Let me digress here for the purpose of suggesting that a similar report upon the same subject made to-day would doubtless disclose a similar discrepancy between the number of these articles brought into this country for private collections and the number which have been placed in public institutions.

Mr. Dingley proceeds—and I commend this to the careful consideration of Senators on both sides of the Chamber:

The committee could see no reason why a millionaire should be able to import free of duty hundreds of thousands of dollars' worth of paintings and statuary for the decoration of his own house—not for the cultivation of the general public taste—while every humble citizen of the country is contributing his part toward the expenses of the Government. Therefore, while still allowing the free importation of art articles, paintings, statuary, etc., for museums or galleries or other institutions where the public may reach them, we have so modified this paragraph as to make other importations dutiable.

So far as articles of this class are, when imported, used in such a way that the public may reap the fruits of them, your committee are perfectly willing that they should be admitted free, but they do not think that in the present exigency of the Treasury such articles should be kept upon the free list when they cease to be public educators of the esthetic tastes of the masses of the people.

Of what value to the public are the great collections of some of the wealthy denizens of the leading cities of this country, immured like prisoners in dungeons in their own private collections, to which no man or woman, save by their gracious permission, can have access? Why should we permit importations of that sort to be made free of duty when we levy large tribute, and must do so, upon everything entering into the affairs and daily transactions and affecting the very existence of a hundred millions of people? It seems to me that if a single commodity can be named that ought to bear a duty, and perhaps a prohibitive duty, it is a great and valuable work of art when purchased and retired from the active world by some wealthy and selfish individual.

Futhermore, it is reported by the administrators of the law that there have been abuses of an extensive character. It is the testimony of the appraisers of the customhouse that under this innocent provision, conceived for an excellent purpose, appropriate within its legitimate sphere, there have been imported, under the guise of paintings, fans, worth from five hundred to a thousand dollars, with painted designs on them. These have been admitted free on the ground that they were paintings for the purpose of cultivating the æsthetic tastes of the people of the country.

Articles like these, which are conspicuous, perhaps, as necessities in public and private social gatherings where turkey trots and similar dances form the chief methods of modern enjoyment, Senators contend that works of art like these, dangling from the waists of women and worth thousands of dollars, must forsooth be permitted to come into this country free of duty as necessities, while bread and meat and other necessities of life go there only over the protests of Senators who are so much concerned about the protection and salvation of the æsthetic tastes and desires of the country.

Now your committee believe that in the present condition of the Treasury all articles which are simply for personal adornment, for personal use, for furnishing the houses of individual citizens—whether these articles be called paintings, statuary, or what not—should pay the same duty as similar articles under other conditions, but that where these articles are to be placed in an institution or art gallery, in order that the people of the country may have free admission to them, at least on some day, for the cultivation of æsthetic tastes, it is entirely appropriate that they should be admitted free; but we believe that such admissions should stop here and should not extend further.

That was both Republican and Democratic doctrine then. It is Democratic doctrine now. Let me read further from Mr. Dingley's speech:

Let me call your attention to the fact that under the provision allowing the free importation of antiquities and souvenirs "antiquity" and "souvenir" establishments have been set up in various parts of

Europe manufacturing furniture in antique form, draperies, and other articles of that kind, and these have been admitted free of duty, while other people are paying duty upon the articles which they chose to import.

It is time that some of these abuses should be cut off. The original intention was all right, but in matters of revenue it is found that when the camel's nose gets into the tent for an appropriate purpose the body sooner or later follows and takes possession of the tent.

The truth of the last sentence is obvious and applicable to every industry to which the principle of protection has been extended.

Rich Americans are called "Johnnies" in art purchases, but the June number of the Strand for this year has an article by F. Frankfort Moore, an English collector, which shows that "art dupes" are not confined to the millionaires of the United States. High art has come to be a most artful dodge throughout the world, and the esthetic taste of the people is everywhere fed upon spurious paintings and fake drawings. It is narrated by Moore that a fine-art dealer sold an early Rubens to an English major for \$30 in the frame. A brother officer called and wanted one just like the other, but to cost no more. The dealer told him it could be arranged, but that he would need a day to get Rubens No. 2. He then said, "If you will take a pair of the same Rubens, I might shade the price." A tradesman bought some "old Dresdens" which a leading English magazine of art catalogued as real "Dresden gems." The pictures got into court under some process and every one of them was proven spurious. It may be that the tradesman recouped his loss by working them off on rich Americans, and that they were admitted duty free under the spurious guise of educating the public taste.

But, Mr. President, the hour of 6 o'clock has arrived, and I shall not detain the Senate by a further discussion of the subject. Suffice it to say that the matter has been fully considered and disposed of along the line of the Dingley bill. Where we find a precedent from any source which addresses itself to our sound judgment we accept it, and we have accepted that part of the Dingley bill which declares that art shall be free when it is free in fact, but that it shall be dutiable when the subjects to which it relates are simply garnered as a means of gratifying the vanity and the ostentation of the idle rich.

The VICE PRESIDENT. The question is on the amendment proposed to paragraph 403, to strike out the comma.

Mr. SMOOT. I should like to have the paragraph passed over until to-morrow, because I have another amendment to follow that. It is now after 6 o'clock.

Mr. SIMMONS. I ask that the bill be laid aside for the day. The VICE PRESIDENT. The bill will go over.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes of executive session the doors were reopened, and (at 6 o'clock and 6 minutes p. m.) the Senate adjourned until to-morrow, Thursday, September 4, 1913, at 11 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate September 3, 1913.

POSTMASTERS.

COLORADO.

M. J. Brennan, Leadville.
William A. White, Holyoke.

ILLINOIS.

John H. McGrath, Morris.

MISSISSIPPI.

R. L. Broadstreet, Coffeeville.

WASHINGTON.

George P. Wall, Winlock.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, September 3, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou, who art the All in All, the Alpha and Omega, our God, and our Father, in whom are life, truth, justice, mercy, love; Thou knowest the beginning and the end.

"Behold! we know not anything;

We can but trust that good shall fall

At last—far off—at last, to all,

And every winter change to spring."

Sometimes we stumble and fall, but that is proof of strength. Sometimes we doubt, but that is the evidence of faith. Sometimes we despair, but that is the evidence of hope. Sometimes we even dare to hate, but that is evidence of love. Impart

unto us more strength, more faith, more hope, more love, that we may be what we ought to be, what we all long to be. For Thine is the kingdom, and the power, and the glory forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

CALENDAR WEDNESDAY.

The SPEAKER. This is Calendar Wednesday, and the Clerk will call the roll of committees.

The Clerk proceeded with the call of committees.

Mr. FERRIS (when the Committee on the Public Lands was called). Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. FERRIS. Are we entitled to have the unfinished business disposed of on the California Hetch Hetchy bill under the call of committees? If so, I would like to have it laid before the House at this time, the previous question having been ordered on yesterday.

Mr. MANN. That will come up automatically.

Mr. BARTLETT. The previous question being ordered, it is the first thing in order after the reading of the Journal.

Mr. MANN. I say it will come up automatically.

Mr. FERRIS. When there are 9 or 10 bills on the calendar?

Mr. MANN. It will undoubtedly come up on the call of committees when Calendar Wednesday is disposed of.

The SPEAKER. The question seems to be this, whether or not this bill, being in the state it was in, would be brought up under the call of committees when the Committee on Public Lands is reached.

Mr. BARTLETT. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BARTLETT. While it is true, Mr. Speaker, that ordinarily, where the previous question has been ordered upon a bill and the House adjourns with the previous question attached, it would come up immediately after the reading of the Journal, yet that is not so with reference to Calendar Wednesday, according to the rulings that I understand have heretofore been made.

The SPEAKER. The gentleman is correct in that.

Mr. MANN. My recollection is, Mr. Speaker, that the present Speaker has ruled that when the previous question has been ordered, the bill comes up the first thing on Calendar Wednesday; but regardless of Calendar Wednesday, whether it does or not, this bill will undoubtedly soon be up automatically.

Mr. FITZGERALD. Mr. Speaker, the rule provides that a bill must be either on the Union Calendar or the House Calendar. This is unfinished business.

Mr. FERRIS. It is on the Union Calendar.

The SPEAKER. It is on the Union Calendar until disposed of. However, it can be reached speedily anyway.

Mr. FERRIS. I do not care to raise the question, Mr. Speaker.

GREAT NORTHERN RAILWAY CO.

Mr. BURKE of South Dakota (when the Committee on Indian Affairs was called). Mr. Speaker, I desire to call up Senate bill 2711, No. 15 on the Union Calendar, and I ask that the bill may be considered in the Committee of the Whole.

The SPEAKER. The Clerk will report the bill by title.

The Clerk read as follows:

An act (S. 2711) to provide for the acquiring of station grounds by the Great Northern Railway Co. in the Colville Indian Reservation, in the State of Washington.

The SPEAKER. The gentleman from South Dakota [Mr. BURKE] asks that the bill be considered in the House as in Committee of the Whole. Is there objection?

Mr. FOSTER. Mr. Speaker, is the gentleman authorized by the committee to call up this bill?

Mr. BURKE of South Dakota. I am not, but the chairman of the committee [Mr. STEPHENS of Texas] is absent, and I know he is very desirous to have the bill considered.

Mr. FOSTER. I think unless the gentleman from South Dakota is authorized to make this request the bill can not be called up.

The SPEAKER. There is no question about that, if anybody raises the point.

Mr. BURKE of South Dakota. I ask unanimous consent that the bill may be considered. I have no interest in it. I am simply doing this in the absence of the chairman of the committee.

Mr. FITZGERALD. Unless the gentleman is authorized by the committee—

Mr. BURKE of South Dakota. I am not authorized.

Mr. FITZGERALD. I do not think the gentleman ought to make the request.

Mr. MANN. The gentleman from Texas [Mr. STEPHENS] stated a day or two ago that he was extremely anxious to have the bill passed. It will probably take but a moment. It is a right of way bill.

Mr. FITZGERALD. It grants rights in excess of those granted by the general act. It may involve considerable discussion in the Committee of the Whole House on the state of the Union.

Mr. BURKE of South Dakota. I have no interest in it, Mr. Speaker.

Mr. FITZGERALD. Then I hope the gentleman will not press it at this time. I am anxious to get to the consideration of another bill.

The SPEAKER. If objection is made, the Clerk will proceed with the call of committees.

The Clerk resumed and completed the call of committees.

HETCH HETCHY.

The SPEAKER. The gentleman from Oklahoma [Mr. FERRIS] is recognized.

Mr. FERRIS. Mr. Speaker, I call up the Hetch Hetchy bill (H. R. 7207) as unfinished business, and I ask that it be disposed of at this time.

The SPEAKER. The Clerk will report the bill by title.

The Clerk read the title of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, the Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands of the State of California, and for other purposes.

The SPEAKER. The question is on the engrossment and third reading of the bill.

Mr. MANN. Mr. Speaker, I think that was ordered.

The SPEAKER. The gentleman is mistaken about it. The Chair has examined the Record and it confirms his own memory. The gentleman from Minnesota [Mr. STEENERSON] made his demand just as the Speaker was going to put the question. He did it prematurely, of course, but that did not make any difference. He did it, and that was the end of it temporarily.

Mr. STEENERSON. My recollection was that the Speaker had put the motion, but I do not think it will do any harm to put it over again even if he had.

The bill was ordered to be engrossed and read a third time.

The SPEAKER. Does the gentleman from Minnesota withdraw his demand for the reading of the engrossed bill?

Mr. STEENERSON. Is the engrossed bill here?

The SPEAKER. It is right here, at the Clerk's desk.

Mr. STEENERSON. Then I do not insist on the reading of it. [Laughter.]

The bill was read a third time by title.

Mr. MURDOCK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. On yesterday the gentleman from Minnesota [Mr. STEENERSON] demanded the reading of the engrossed bill.

The SPEAKER. Yes.

Mr. MURDOCK. Inasmuch as the House has largely dispensed with the practice of reading engrossed bills, I would like to ask what is the material difference between an engrossed bill and an ordinary bill.

The SPEAKER. The engrossed bill is a clean copy of the bill in exactly the form in which it is going to leave the House.

Mr. STEENERSON. As I understand it, the engrossed bill contains all the amendments up to date.

The SPEAKER. Of course it does.

Mr. STEENERSON. And no other copy of the bill does contain them?

The SPEAKER. That is correct.

Mr. MURDOCK. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. There is no difference between the bill at the time the House passes it and the engrossed bill.

Mr. FITZGERALD. There is a very great difference. The engrossed bill embodies all the amendments which have been agreed to.

Mr. MANN. There is only one copy of the engrossed bill. There may be a thousand copies of the other print.

The SPEAKER. The engrossed bill is taken as embodying the result of the action of the House on the bill, including the amendments.

Mr. MANN. The engrossed bill is the one copy which, if the House passes it, goes to the Senate of the United States, and is the official copy upon which the other body acts.

The SPEAKER. That is true.

Mr. MANN. It is the copy from which the bill is finally enrolled.

The SPEAKER. That is correct.

Mr. MANN. It is the only official copy.

Mr. STEENERSON. A parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. STEENERSON. As I understand it, there is no available way in which I could compare the reading of this bill, even if I insisted on the reading of it at length. That is the reason I withdraw the demand.

The SPEAKER. The only way in which the gentleman could compare it would be to have in his hand a desk copy of the bill, together with the amendments, and as the Clerk proceeded with the reading of the engrossed copy, if the gentleman could read the amendments into it, then he would get the same result exactly, if the bill was correctly engrossed. But, anyhow, the request is withdrawn. The question is on the passage of the bill.

The question was taken; and on a division (demanded by Mr. STEENERSON) there were 99 ayes and 15 noes.

Mr. STEENERSON. Mr. Speaker, I make the point that there is no quorum present.

The SPEAKER. The gentleman from Minnesota makes the point that no quorum is present, and the Chair will count. [After counting.] One hundred and forty-three Members present, not a quorum. The Doorkeeper will close the doors, the Sergeant at Arms will notify absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 183, nays 43, answered "present" 9, not voting 194, as follows:

Gardner	Knowland, J. R.	Porter	Whitacre
Gerry	Korbly	Powers	White
Gillmore	Kreider	Quin	Wildner
Glass	La Follette	Raney	Wilson, N. Y.
Godwin, N. C.	Langham	Reilly, Conn.	Winslow
Goeke	Langley	Richardson	
Goldfogle	Lee, Ga.		

So the bill was passed.

The following pairs were announced:

For the session:

Mr. BARTLETT with Mr. BUTLER.

Mr. SLAYDEN with Mr. BARTHOLDT.

Mr. HOBSON with Mr. FAIRCHILD.

Mr. SCULLY with Mr. BROWNING.

Mr. METZ with Mr. WALLIN.

Mr. FIELDS with Mr. LANGLEY.

Until further notice:

Mr. GRAHAM of Illinois with Mr. MOSS of West Virginia.

Mr. BYRNES of South Carolina with Mr. BARCHFIELD.

Mr. GORDON with Mr. KENNEDY of Rhode Island.

Mr. BOWDLE with Mr. KELLEY of Michigan.

Mr. CANTRILL with Mr. CAMPBELL.

Mr. HOWARD with Mr. ANDERSON.

Mr. MCGILLICUDDY with Mr. GUERNSEY.

Mr. DALE with Mr. AVIS.

Mr. BUCKNER with Mr. HAWLEY.

Mr. RICHARDSON with Mr. FREAR.

Mr. MCCOY with Mr. STEVENS of Minnesota.

Mr. FOWLER with Mr. MILLER.

Mr. TALBOTT of Maryland with Mr. MERRITT.

Mr. FRANCIS with Mr. PARKER.

Mr. CANDLER of Mississippi with Mr. HAMILTON of New York.

Mr. GERRY with Mr. FESS.

Mr. J. I. NOLAN with Mr. GOULDEN.

Mr. AIKEN with Mr. AINEY.

Mr. BAKER with Mr. ANTHONY.

Mr. BEALL of Texas with Mr. BROWNE of Wisconsin.

Mr. BUCHANAN of Illinois with Mr. CARY.

Mr. CARAWAY with Mr. DANFORTH.

Mr. CLARK of Florida with Mr. COPLEY.

Mr. DIES with Mr. DUNN.

Mr. DIFENDERFER with Mr. FARR.

Mr. DOREMUS with Mr. FORDNEY.

Mr. EDWARDS with Mr. GRAHAM of Pennsylvania.

Mr. ESTOPINAL with Mr. GRIEST.

Mr. FINLEY with Mr. HAUGEN.

Mr. GLASS with Mr. HOWELL.

Mr. GODWIN of North Carolina with Mr. HUGHES of West Virginia.

Mr. GOEKE with Mr. KIESS of Pennsylvania.

Mr. GREGG with Mr. KREIDER.

Mr. GUDGER with Mr. LA FOLLETTE.

Mr. HAMLIN with Mr. LANGHAM.

Mr. KEATING with Mr. MCGUIRE of Oklahoma.

Mr. KORBLY with Mr. MANAHAN.

Mr. LEE of Georgia with Mr. MARTIN.

Mr. LEE of Pennsylvania with Mr. MONDELL.

Mr. LEVY with Mr. POWERS.

Mr. MORGAN of Louisiana with Mr. CHANDLER of New York.

Mr. PALMER with Mr. VARE.
 Mr. PATTEN of New York with Mr. SHREVE.
 Mr. PETERS with Mr. ROBERTS of Massachusetts.
 Mr. RAINEY with Mr. SMITH of Idaho.
 Mr. REILLY of Connecticut with Mr. SUTHERLAND.
 Mr. SHACKLEFORD with Mr. TREADWAY.
 Mr. SHARP with Mr. WILDER.
 Mr. SMALL with Mr. WINSLOW.
 Mr. STEPHENS of Nebraska with Mr. MOTT.
 Mr. STEPHENS of Texas with Mr. MOORE.
 Mr. WALKER with Mr. MORIN.
 Mr. WHITE with Mr. PATTON of Pennsylvania.
 Mr. DRISCOLL with Mr. PORTER.
 Mr. KEY of Ohio with Mr. ROBERTS of Nevada.
 Mr. SHERLEY with Mr. RUPLEY.
 On this vote (on Hetch Hetchy bill):
 Mr. BROWN of New York (in favor) with Mr. TOWNER (against).
 Mr. CARTER (in favor) with Mr. GREEN of Iowa (against).
 Mr. KAHN (in favor) with Mr. THACHER (against).
 Mr. MURRAY of Massachusetts (in favor) with Mr. GOOD (against).
 Mr. J. R. KNOWLAND (in favor) with Mr. ROUSE (against).
 The result of the vote was announced as above recorded.
 On motion of Mr. FERRIS, a motion to reconsider the vote by which the bill was passed was laid on the table.
 A quorum being present, the doors were opened.
 Mr. STEENERSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the bill which has just been passed.
 The SPEAKER. Is there objection?
 There was no objection.
 Mr. TALCOTT of New York. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the bill which has just been passed.
 The SPEAKER. Is there objection?
 There was no objection.
 Mr. HAYES. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD, but not upon the bill which has just been passed.
 The SPEAKER. Is there objection?
 Mr. BORLAND. Mr. Speaker, reserving the right to object, I would like to ask the gentleman upon what subject he desires to extend his remarks in the RECORD?
 Mr. HAYES. Upon the subject of woman suffrage.
 The SPEAKER. Is there objection?
 There was no objection.

THE PREVIOUS QUESTION.

The SPEAKER. Respecting the point of order which was partially raised, but withdrawn, and therefore not passed upon, during the discussion a short time since, in regard to the order of business where the previous question had been ordered upon a bill upon Tuesday, the Chair desires to state that since that time he has examined the decisions upon the subject and finds that the present occupant of the Chair had occasion once before to pass upon the question, and at that time held that where the previous question had been ordered upon a bill on Tuesday the bill went over until Thursday. The Chair has not before him at this time what was said upon that occasion, but the reason for that ruling is very plain. If the ruling were otherwise, something might occur in respect to the matter which would consume two or three hours of Calendar Wednesday. The ruling of the Chair was and is and ever will be, until it is overruled, that where the previous question is ordered upon a bill on Tuesday the bill automatically goes over until the following Thursday.

KILLING OF ANGELO ALBANO.

Mr. FLOOD of Virginia. Mr. Speaker, I ask unanimous consent to take up the bill (H. R. 7384) to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, an Italian subject, and to consider it in the House as in the Committee of the Whole.

The SPEAKER. The gentleman from Virginia asks unanimous consent to take up the bill (H. R. 7384) to authorize the payment of an indemnity to the Italian Government for the killing of Angelo Albano, and asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, I desire to state that my understanding was that it was another bill that the gentleman desired to call up. I shall have to object to this bill.

The SPEAKER. Does the Chair understand the gentleman from Illinois to object?

Mr. MANN. Mr. Speaker, I shall object, and at the proper time I shall make the point of order that the bill in question is not upon the proper calendar.

Mr. FITZGERALD. The bill which the gentleman from Virginia is calling up is one ordering an indemnity to be paid for the killing of an Italian.

Mr. MANN. Not an indemnity, but to extend a gratuity under very peculiar circumstances, which are not explained anywhere.

Mr. FLOOD of Virginia. Mr. Speaker, they are very justifiable circumstances, and I will say to the gentleman that I shall take pleasure in explaining the circumstances. It would take only two or three minutes.

Mr. MANN. Oh, no; it would take a great deal longer than two or three minutes. I will say to the gentleman.

Mr. FLOOD of Virginia. Will the gentleman withhold his objection for a few minutes?

Mr. MANN. Certainly, if the gentleman desires to make a speech upon it, and then perhaps I shall want to make a speech giving the reasons for objection. I think I had better object.

The SPEAKER. The gentleman from Illinois objects.

Mr. FLOOD of Virginia. Mr. Speaker, I will say to the gentleman that this is a bill to provide an indemnity—

Mr. MANN. Oh, I know what the bill is.

Mr. FLOOD of Virginia. For the killing of a man by a mob when he was in the hands of two deputy sheriffs of Hillsboro County, Fla., on suspicion of having committed a murder.

Mr. MANN. Killed under circumstances where the deputy sheriffs plainly took him to a place to be killed, and under such circumstances that if anybody ought to pay it should be the county of Hillsboro or the State of Florida.

Mr. SPARKMAN. Mr. Speaker, I have just come into the Chamber, and, as Hillsboro is my county, I desire to ask the gentleman from Virginia what it is that is under consideration?

Mr. FLOOD of Virginia. Mr. Speaker, in September, 1910, an Italian was suspected, in Tampa, Fla., of having been implicated in the murder of a bookkeeper in a cigar store. He was arrested under a warrant by two deputy sheriffs. While he was being conveyed from his home, where he was arrested, in West Tampa to the jail in Tampa he was set upon by a mob, taken from the deputy sheriffs, and hanged. The authorities of Hillsboro County undertook to ascertain the members of the mob and to bring them to punishment, but were unable to ascertain who had committed the offense. No punishment was ever inflicted upon the members of this mob.

Mr. GILLET. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman from Massachusetts will state it.

Mr. GILLET. Under what order are we now proceeding?

The SPEAKER. Under the order of the gentleman from Virginia asking unanimous consent to consider this bill in the House as in Committee of the Whole, and the gentleman from Illinois [Mr. MANN] objected and then withheld his objection.

Mr. MANN. Oh, I did not withhold the objection.

The SPEAKER. Then we are proceeding out of order.

Mr. SPARKMAN. I will say, so far as I am concerned—

The SPEAKER. The Chair will recognize the gentleman from Virginia [Mr. HAY] to move to go into the Committee of the Whole House.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7898, the urgent deficiency bill. The call of committees has been completed and, as it has been completed, even on Calendar Wednesday this preferential motion is in order.

The SPEAKER. The Chair knows, but the Chair has just recognized the gentleman from Virginia.

Mr. FITZGERALD. But I insist that this is a preferential motion at this time. The Clerk finished the call of committees, and the gentleman from Virginia did not call his bill up on the call of committees.

The SPEAKER. The Chair will inquire of the gentleman how he makes it that his motion to go into the Committee of the Whole House on the state of the Union is preferential over the motion of the gentleman from Virginia to go into the Committee of the Whole House?

Mr. FITZGERALD. But, Mr. Speaker, the call of committees has been completed.

The SPEAKER. The Chair knows it has.

Mr. MANN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MANN. Under what rule of the House is the gentleman from Virginia in order at all to make a motion to go into the Committee of the Whole House, his bill not being a privileged bill, the call of committees having ceased, and he having failed to call up his bill on the call of committees?

The SPEAKER. The call of committees has been exhausted, and even if it had not been exhausted the motion to go into the Committee of the Whole House at the end of 60 minutes is in order if he can get the floor.

Mr. FITZGERALD. Mr. Speaker, I think the Chair has not looked at the rule carefully. The rule provides—

Mr. MANN. Mr. Speaker, I make the point of order.

The SPEAKER. What point of order does the gentleman from Illinois make?

Mr. MANN. I make the point of order that the gentleman from Virginia is not in order, because H. R. 7384 is improperly on the Union Calendar and should be on the Private Calendar. This is a private claim, a bill to give a gratuity because of the death of a man, which is a private claim under the rules of the House, and hence the bill referred to the Union Calendar should have been referred to the Private Calendar.

The bill provides for the payment of an indemnity to the heirs, or for their benefit, of Angelo Albano, an Italian subject, said to have been killed by a mob. It is plainly a private bill, and should be on the Private Calendar.

Mr. FLOOD of Virginia. Mr. Speaker, this is an appropriation to the Italian Government, to be distributed among individuals as that Government sees fit. It is not a private claim. It is a claim against this Government in favor of the Italian Government. Mr. Speaker, there are a number of precedents for bills of this kind going on the Union Calendar.

Mr. MANN. The gentleman can not produce them, I think.

The SPEAKER. The Chair will hear the gentleman from Virginia. It seems like a conflict of two rules.

Mr. FLOOD of Virginia. Mr. Speaker, the bill says:

That there is hereby authorized to be paid, out of any money in the Treasury not otherwise appropriated, out of humane consideration and without reference to the question of liability therefor, to the Italian Government, as full indemnity to the heirs of Angelo Albano, an Italian subject, who was killed by an armed mob at Tampa, Fla., on the 20th day of September, 1910, the sum of \$6,000.

This bill provides for an appropriation to the Government of Italy, not to any citizen.

The facts in the case are as follows:

Angelo Albano was born in Italy on January 11, 1886.

When he was a boy his father came to this country, but never took any steps to renounce his allegiance to the Italian Government and become an American citizen.

The son, Angelo Albano, followed in his father's footsteps in this respect and never became a citizen of this country.

In September, 1910, he was suspected at Tampa, Fla., of having murdered the bookkeeper in a cigar factory at Tampa.

On the 20th of that month he was arrested on this charge, and while in the custody of two deputy sheriffs of Hillsboro County, Fla., he was seized by an armed mob and killed.

The authorities of Hillsboro County, though diligently endeavoring to do so, were never able to apprehend and punish the members of this mob.

As a consequence, the Italian Embassy, in the name of the Government of Italy, appealed to the sense of equity and justice of this Government for some settlement of this case, and has requested that an indemnity of \$6,000 be granted to that end.

On June 26 of this year the President of the United States recommended that, as an act of grace and without reference to the question of liability of the United States, Congress comply with the request of the Italian Government, the amount appropriated to be distributed by the Italian Government in such manner as it may deem proper.

There are many precedents for the course this bill has pursued.

On March 11, 1895, the corpse of A. J. Hixon, an American saloon keeper, was found in the coal field of Rouse, Colo. A coroner's jury found that he was murdered by an Italian miner named Andinino, who was immediately taken to Walsenburg, 7 miles away, and lodged in jail. Four other Italian miners implicated by the inquest were arrested and held, and on their way to Walsenburg, under the escort of two deputy sheriffs, they were intercepted by half a dozen men on horseback. One of the Italians was killed; another escaped with a wound, but was recaptured and lodged in jail in the cell with Andinino. The other Italians fled. The following night seven masked and armed men got into the jail and killed Andinino and his companion. The Italians who fled were afterwards found wandering in the mountains frostbitten so that their feet had to be amputated. Although the authorities of Colorado cooperated with the Italian consul in his efforts to secure the prosecution of the offenders, various causes contributed to prevent the institution of proceedings. The Italian ambassador formulated a claim, and on June 30, 1896, Mr. Olney reported that the facts were without dispute and suggested that they be submitted to the consideration of Congress.

On February 3, 1896, the President in a message to Congress recommended that without discussing the question of the liability of the United States either by reason of treaty obligations or under the general rules of international law Congress consider the propriety of making prompt and reasonable pecuniary provision for those injured and for the families of those who were killed. The deficiency act approved June 8, 1896, carried a provision for the payment to the Italian Government for full indemnity to the heirs of three of its subjects "who were riotously killed, and to two others who were injured, in the State of Colorado by residents of that State, \$10,000."

This was treated as a public and not a private bill.

In 1896 three persons of Italian origin, who were being held on a charge of homicide, were lynched by a mob at Hahnville, La. Upon the assumption that the unfortunate men were Italian subjects the Government of Italy sought the mediation of that of the United States with the State of Louisiana, to the end of investigating the occurrence, and if the facts warranted making provision for the families of the sufferers. The State of Louisiana promptly instituted an inquiry, expressing regret and a purpose to seek out the offenders. An independent investigation, set on foot by the Department of State, disclosed that all normal precautions for the safety of the prisoners had been taken by the local officers, and that no blame could justly attach to them by reason of the sudden outbreak of mob violence against these three men against whom there was convincing evidence of murder. The investigation further disclosed the fact that the lynched men by participating in the political affairs of this country and voting at its elections appeared to have in effect renounced their allegiance to their native land. It was established that one of the victims of the mob had taken the preliminary steps to abjure Italian allegiance, and it was but natural to presume that the others had also forfeited Italian citizenship, since by domicile and sharing in the electoral franchise they had acquired lawful citizenship of the State of Louisiana, a privilege inuring only to such as could show their declaration of intention to be naturalized. The Italian ambassador complained of a failure of justice in the case, and Congress, in the deficiency act of July 19, 1897, appropriated the sum of \$6,000 to be paid "out of humane consideration and without reference to the question of liability therefor to the Italian Government, as full indemnity to the heirs of three of its subjects."

This was treated in its reference, its report, and its course through this House as a public and not a private bill.

On July 21, 1899, five persons of Italian origin were lynched by a mob at Tallulah, La. The outrage originated in a quarrel concerning a goat which belonged to one of the Difatta brothers, who conducted a grocery business at Tallulah. It seems that the goat was in the habit of climbing on the balcony of the house of a Dr. Hodge, who, becoming annoyed, shot it. The following day Carlo Difatta accosted Dr. Hodge in the street and struck him a blow with his fist. The doctor shot him, and when he fell put his foot upon him, apparently intending to fire again. Giuseppe Difatta then shot at the doctor from a gun loaded with bird shot. A rumor having spread that Dr. Hodge had been killed, a mob quickly collected and went in search of Carlo and Giuseppe Difatta, who had succeeded in getting away and concealing themselves, while the sheriff arrested three other Italians and lodged them in jail. It was stated that two of the men had taken no part in the affair. Carlo and Giuseppe Difatta were found by the mob and were hanged, and the mob then went to the jail and took the other three Italians and hanged them also.

The authorities of the State and a representative of the Italian Embassy having separately investigated the occurrence, with discrepant results, particularly as to the alleged citizenship of the victims, and it not appearing that the State had been able to discover and punish the violators of the law, an independent investigation was conducted through the agency of the Department of State. President McKinley in his annual messages of December 3, 1899 and 1900, strongly urged upon Congress the desirability of enacting legislation making offenses against the treaty rights of foreigners domiciled in the United States cognizable in the Federal courts. Congress appropriated \$5,000 as indemnity in this case.

This was treated as a public and not as a private bill.

On July 15, 1901, the Italian Embassy at Washington urgently presented to the department the case of three Italians, two of whom were killed and the third wounded at Erwin, Miss., and asked (1) that the matter be officially investigated, (2) that the guilty parties be arrested and punished, and (3) that steps be taken to secure to Italians in the locality in question the protection to which they are entitled by treaty. The case was referred to the governor of Mississippi for appropriate action. It

seems that the crime was committed under cover of darkness, and the identity of the criminals was not discovered either at the coroner's inquest or at the subsequent investigation by the grand jury. The Italian Embassy protested against what was pronounced to be "a denial of justice, a flagrant violation of contractual conventions, and a grave offense to every humane and civil sentiment," and referring to the omission of Congress to confer jurisdiction in such cases on the Federal courts, as recommended by the President, declared that until such a measure should have been adopted the Italian Government would not only "have grounds of complaint for violation of the treaties to its injury," but would "not cease to denounce the systematic impunity enjoyed by crime and to hold the Federal Government responsible therefor."

This protest was transmitted to the committees of the Senate and House of Representatives having under consideration the President's recommendation that indemnity be paid to the families of the victims and that legislation be enacted to give the Federal courts original jurisdiction of treaty offenses against aliens.

By the act of March 3, 1903, the sum of \$5,000 was appropriated to be paid "out of humane consideration, without reference to the question of liability therefor to the Italian Government," as full indemnity to the heirs of the men who were slain and to the one who was injured by an armed mob at Erwin, Miss., on July 11, 1901.

There can be no doubt, Mr. Speaker, that this is a public bill and is properly on the Union Calendar.

The SPEAKER. From what committee was it reported? What calendar was it on?

Mr. FLOOD of Virginia. Some of these bills have been reported from the Appropriations Committee and some from Foreign Affairs.

Mr. MURRAY of Oklahoma. Will the gentleman yield?

Mr. FLOOD of Virginia. I yield to the gentleman from Oklahoma.

Mr. MURRAY of Oklahoma. The gentleman, Mr. Speaker, is mistaken as to the 11 Italians in New Orleans. They were all American citizens, with the exception of three. It is true they were all Italians, but there were only three of them who were Italian subjects.

The SPEAKER. That does not make any difference as to the present question.

Mr. MURRAY of Oklahoma. Well, what I wanted to ask was this: Is the gentleman aware that this Italian for whom he is trying to get this appropriation was an Italian subject?

Mr. FLOOD of Virginia. There is no doubt about the fact that he was an Italian subject. There has been a question, I will say to the gentleman from Oklahoma—

Mr. BARTLETT. May I interrupt the gentleman a moment?

Mr. FLOOD of Virginia. Just as soon as I answer the gentleman from Oklahoma. There has been a question in all of these cases, with the exception of one of them, as to whether the party who was killed was an Italian subject at the time of the killing or not. There is absolutely no question in the case the committee has here reported. The evidence that he was an Italian subject is absolutely clear. There is no dispute or question about it. In the case at New Orleans there was a question as to whether the men who were lynched were Italian subjects, and in the Mississippi case and the Colorado case the same question arose. Notwithstanding this fact, this Government, as a matter of grace and without reference to its liability, made an appropriation to pay the Government for killing those about whose citizenship there was no question.

Mr. MURRAY of Oklahoma. I want to state, Mr. Speaker, that if this man is an Italian subject it occurs to me that the appropriation would be just. I merely asked the question in order to know whether he had become naturalized or was at the time of his death an Italian subject.

The SPEAKER. The question at issue is a point of order raised by the gentleman from Illinois [Mr. MANN] as to what calendar this bill ought to be on, not what committee has jurisdiction of it or anything else about it. The question is which calendar it ought to go to.

Mr. BARTLETT. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman from Virginia yield to the gentleman from Georgia?

Mr. FLOOD of Virginia. I do.

Mr. BARTLETT. Mr. Speaker, it seems to me that this is not a bill to go upon the Private Calendar. It is true that there are instances where the citizens of foreign countries have filed and presented claims, or where claims have been presented by Members of Congress in their behalf, which have been referred to the Committee on Claims. But time and time again claims which foreign governments have presented to our Government and which were referred to the Congress by the President and

which were endeavored to be settled by reason of our foreign relations have generally, though not always, gone to the Committee on Foreign Affairs and have been reported by that committee.

This is the substance of a statement which you will find in the fourth volume of Hinds' Precedents, which reads:

The Committee on Foreign Affairs has exercised a general but not exclusive jurisdiction over projects of general legislation relating to claims having international relations.

The Committee on Foreign Affairs has jurisdiction. That is the section which defines the duties of committees. Of course, if this bill went to the Committee on Foreign Affairs and was reported from that committee, it would be by reason of its jurisdiction over foreign affairs, which generally does not apply to claims. But—

The Committee on Foreign Affairs has exercised a general but not exclusive jurisdiction over projects of general legislation relating to claims having international relations.

Now, as I understand the situation this bill is in, it grows out of the fact that the President has submitted to this Congress a message calling the attention of Congress to the fact that a citizen of Italy was killed in Florida and asking that the United States make reparation for it, just as Italy did with respect to certain claims that American citizens had growing out of certain matters some time ago; and the President submitted that message, which was referred to the Committee on Foreign Affairs, not as a private claim—because if it had been a private claim the Speaker would have referred it to the Committee on Claims, and they would have considered it—and the Speaker recognized that it was not a private claim, but that it was a claim that affected our international relations with a foreign country, and therefore sent it to the Committee on Foreign Affairs, to be dealt with by that committee, not as a private claim, not to return to or to pay to the individual the money, but as a bill to respond to a claim of the Italian Government in behalf of one of its citizens who had been killed in the United States, and appropriating money therefor.

Now, it seems to me, Mr. Speaker, if the precedents are examined I think you will find that to which the gentleman from Virginia [Mr. Flood] has called attention. I remember some of those cases since I have been here. You will find that the Committee on Foreign Affairs has, time and time again, reported bills of this sort, and those bills have gone on the Union Calendar and have been considered, not as private claims but as bills to discharge a public duty which the Government of the United States owes to a foreign country in the matter of our international relations. Certainly a bill affecting our international relations with a foreign country can not in any sense be considered a private bill. That is all I have to submit at this time.

The SPEAKER. Does the gentleman from Illinois [Mr. MANN] desire to be heard any further?

Mr. MANN. Mr. Speaker, the third clause of Rule XIII, dealing with the subject of calendars, provides:

Third. A Calendar of the Committee of the Whole House, to which shall be referred all bills of a private character.

Now, what are bills of a private character?

The SPEAKER. What was that citation?

Mr. MANN. That is clause third of Rule XIII.

The SPEAKER. All right.

Mr. MANN. Referring to Hinds' Precedents, volume 4, section 3285, for the definition of a private bill, it is there stated:

A private bill is a bill for the relief of one or several specified persons, corporations, institutions, etc., and is distinguished from a public bill, which relates to public matters and deals with individuals only by classes.

The statutes of the United States provide:

The term "private bill" shall be construed to mean all bills for the relief of private parties, bills granting pensions, and bills removing political disabilities,

And so forth.

To be a private bill it must not be general in its enactment, but for the particular interest or benefit of a person or persons.

Now, what is this bill? It provides for the payment of money to the Italian Government as full indemnity to the heirs of Angelo Alvano, and plainly means that it is a bill to give to the heirs of this deceased Italian the amount of money appropriated by the bill, just as much so as though it had plainly said that it was to pay to the persons specified as the heirs the sum of money stated. The fact that they are not specified by name does not prevent it being a private bill. The fact that the money is paid to the parties through the hands of the Italian Government does not change its character, because this is a bill for the payment of a sum of money as full indemnity to the heirs of a particular person. I do not see how any bill could be more of a private bill than that is.

Mr. FLOOD of Virginia. Mr. Speaker—

The SPEAKER. The Chair does not care to hear anything from the other side, if gentlemen will pardon the Chair.

One of the most difficult things, and one of the most unsettled things, that the Speaker has to deal with is the reference of bills to the committees and to the calendars. There are exceptions all along the line. Sometimes two or three committees have more or less claim to a bill, or the Speaker might refer the bill to any one of three committees with some propriety; sometimes possibly to any one of four. The Chair never found one of that sort, but frequently there are bills which the Chair might refer to either one of two or three committees. The most striking example of it that I remember since I have been Speaker was this: Somebody introduced a bill to fix the dimensions of an apple barrel. The Committee on Interstate and Foreign Commerce claimed that it had jurisdiction of that bill, because it related to barrels that were to be used in interstate commerce. That was the only justification that committee had. The Committee on Coinage, Weights, and Measures claimed the bill on the ground that they were authorized to fix measures. The Agricultural Committee claimed it on the ground that nobody raised any apples except people who were engaged in agriculture. After a good deal of wrangling about it the Speaker referred the bill.

Ordinarily a bill taking money out of the Treasury ought to be referred to the Union Calendar; but there is no doubt that this bill was properly referred to the Committee on Foreign Affairs. It is a matter with a foreign Government. The other day the gentleman from Virginia [Mr. Flood] introduced into the House a bill to appropriate \$100,000 to pay the expenses of Americans getting out of Mexico.

The Speaker referred that bill to the Committee on Appropriations. Ordinarily it ought to have gone to the Committee on Foreign Affairs and would have gone to that committee, and the gentleman from Virginia [Mr. Flood] strenuously insisted that the Committee on Foreign Affairs ought to have charge of it; but the quickest way to get that money was to refer the bill to the Committee on Appropriations, because that committee is going to call up an urgent deficiency bill right away, and the quicker those people get the money the better it will be for them. So the Speaker referred that, as an exception to the general rule, to the Committee on Appropriations.

This bill which the gentleman from Virginia [Mr. Flood] is endeavoring to bring before the House looks on its face very much like a private bill, and in one sense it is a private bill, but in another sense it is a matter of international comity, and it is important because the Italian Government has thought it of enough importance to make it a question with our Government. Therefore the Chair overrules the point of order raised by the gentleman from Illinois [Mr. Mann].

Mr. FITZGERALD. Mr. Speaker, I desire to be heard on the question whether the gentleman's motion is preferential to the one submitted by myself.

The SPEAKER. The Chair will hear the gentleman.

Mr. FITZGERALD. Paragraph 7 of Rule XXIV provides:

On Wednesday of each week no business shall be in order except as provided by paragraph 4 of this rule unless the House by a two-thirds vote on motion to dispense therewith shall otherwise determine. On such a motion there may be debate not to exceed five minutes for and against. On a call of committees under this rule bills may be called up from either the House or the Union Calendar, excepting bills which are privileged under the rules; but bills called up from the Union Calendar shall be considered in Committee of the Whole House on the state of the Union.

Paragraph 4 of the rule provides:

After the unfinished business has been disposed of the Speaker shall call each standing committee in regular order, and then select committees, and each committee when named may call up for consideration any bill reported by it on a previous day and on the House Calendar, and if the Speaker shall not complete the call of the committees before the House passes to other business he shall resume the next call where he left off, giving preference to the last bill under consideration.

To-day, under the rule, business was taken up as provided by the rule under paragraph 4, Rule XXIV. The Speaker called the committees. It would have been in order to call up any bill on either the House or the Union Calendar which was not privileged under the rule. This bill could have been called up when the Committee on Foreign Affairs was reached. It was not called up. The call of committees having been completed, business, as provided for under paragraph 4, Rule XXIV, is ended; and it being ended, the motion to go into Committee of the Whole House on the state of the Union for the consideration of appropriation bills, as a highly preferential motion, is privileged over a motion of the gentleman now to consider a bill which at this time has not a privileged status.

The SPEAKER. The Chair will ask the gentleman if he is contending that you can not go into Committee of the Whole on Calendar Wednesday after the call of committees is finished?

Mr. FITZGERALD. The only way a bill can be considered on Calendar Wednesday is on call of committees.

The SPEAKER. But suppose you get through in 15 minutes, has the House got to adjourn?

Mr. FITZGERALD. Not at all; other business which is appropriate may be called up.

Mr. MANN. Any business in order.

Mr. FITZGERALD. Upon the call of committees on Calendar Wednesday a bill on the House Calendar or the Union Calendar may be called. If there were no privileged business and nobody desired to call up bills upon either calendar, there would be nothing else for the House to do but to adjourn.

The SPEAKER. The Chair will state, in justice to the gentleman from Virginia [Mr. Flood], that he misled the gentleman from Virginia. The two rules are hard to remember. When you have the ordinary call of committees you are not permitted to call up bills on the Union Calendar, but when you have the call on Wednesday, strange to say, you can. The truth is the two rules ought to be remodeled. So the gentleman from Virginia came to the Speaker's desk and asked about it and got the opinion that he could not do it under the call of committees, but could do it after the call was over. So really the Chair was to blame about it. The practice is when there is a call of committees and the business runs 60 minutes, then if any gentleman gets the floor he can move to go into Committee of the Whole House on the state of the Union, or if the call of committees does not last 60 minutes, when the call is over it is considered to be 60 minutes.

Mr. FITZGERALD. Mr. Speaker, the rule is specific on that. The morning hour is 60 minutes.

Mr. MANN. If the Speaker will read paragraph 5 of Rule XXIV, he will find that it is not a matter of practice, but it is the rule:

After one hour shall have been devoted to the consideration of bills called up by committees it shall be in order, pending consideration or discussion thereof, to entertain a motion to go into Committee of the Whole House on the state of the Union.

That is, on any day when there is a call of committees except Calendar Wednesday. That rule, paragraph 5, Rule XXIV, does not apply to Calendar Wednesday, because it is expressly provided otherwise.

The SPEAKER. On page 389, in section 800, I find these words:

The words of the rule "after one hour" have been interpreted to mean a less time in case the call of committees shall have exhausted itself before the expiration of one hour.

Mr. MANN. That is conceded; but, Mr. Speaker, let us look at the rule. Calendar Wednesday rule provides:

On Wednesday of each week no business shall be in order except as provided by paragraph 4 of this rule, unless the House by a two-thirds vote on a motion to dispense therewith shall otherwise determine.

That refers, now, only to paragraph 4. Paragraph 4 is the paragraph that controls business on call of committees, not the one that authorizes going into Committee of the Whole after 60 minutes. No business shall be in order except under paragraph 4, and then the further provision that Union Calendar bills are permitted.

On Calendar Wednesday it is not in order at the end of 60 minutes to take a committee off the floor and move to go into the Committee of the Whole on another bill.

The SPEAKER. That is true. No one has ever claimed that.

Mr. MANN. But that is what the Speaker is claiming now.

The SPEAKER. Oh, no.

Mr. MANN. The Speaker stated a moment ago, and I think he did it erroneously, that because we had had a call of committees it was therefore in order to move to go into the Committee of the Whole House on the state of the Union at the end of 60 minutes or at the end of the call of committees; but that motion is not in order on Calendar Wednesday because, if it were in order on Calendar Wednesday, then, at any time where a committee had occupied the floor for 60 minutes, paragraph 5 of Rule XXIV would authorize that motion to be made.

The SPEAKER. Then how does the gentleman from New York come in with his motion?

Mr. MANN. Under the rule providing that it is in order at any time for the Committee on Appropriations to move to go into the Committee of the Whole House on the state of the Union for the consideration of a general appropriation bill.

The SPEAKER. Does the gentleman contend that as soon as the Journal is read on Calendar Wednesday the gentleman from New York has a right to move to go into the Committee of the Whole House on the state of the Union to consider his appropriation bill?

Mr. MANN. I do not; but Calendar Wednesday has been practically disposed of by a full call of the committees. Nothing has been called up. The committees have all been called, and the Chair has heretofore ruled that if there were no busi-

ness on the calendar, no bill on the calendar that could be called up, or that the call of committees be completed, then Calendar Wednesday dispenses with itself, without a motion. The call of committees has been completed and under the ruling of the Chair heretofore Calendar Wednesday is ended. It is then in order for a privileged bill to be called up by a motion to go into the Committee of the Whole House on the state of the Union; but the bill which the gentleman from Virginia [Mr. Flood] calls up is not a privileged bill. If he were moving to go into the Committee of the Whole House on the state of the Union to consider the annual diplomatic appropriation bill, it would be in order.

Mr. FITZGERALD. Mr. Speaker, I call attention to this fact: If, instead of attempting to move to go into the Committee of the Whole House on the state of the Union to consider a bill on the Union Calendar, the gentleman had attempted to call up a bill on the House Calendar, he would not have been in order. The only way he can call up a bill on Calendar Wednesday is under the call of committees, and unless his committee is under call he has no standing to call up a bill from either calendar. The object of Calendar Wednesday—and it brings back the whole philosophy of the rule—was to meet the demand that there be an opportunity at some definite time for Members to call up, without interference, bills on either the House or the Union Calendar. So the rule was framed in such a way that when a committee was called it could call up a bill on either calendar, and it could not be deprived of its place on the floor at the end of an hour, when considering a bill on the House Calendar, by the intervention of a privileged motion to go into the Committee of the Whole House on the state of the Union. The committees have been called, and they are never called twice in one day. Having been called, the business in order under paragraph 4 of Rule XXIV, which is for the call of committees, is ended. The motion to go into the Committee of the Whole House on the state of the Union to consider an appropriation bill is one of the most highly privileged motions and was only cut out earlier in the day until the call of committees had been completed under this rule affecting Calendar Wednesday.

The SPEAKER. The Chair is of opinion in respect to these two sections about having a call of committees that they should be remodeled and consolidated, because they cause confusion all of the time. That, however, has nothing to do with this question.

The motion of the gentleman from New York, even if the motion made by the gentleman from Virginia were in order, is undoubtedly preferential, because it is privileged, and the Chair therefore recognizes the gentleman from New York.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 7898), making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes. Pending that motion, I ask unanimous consent that general debate be limited to four hours, two hours to be controlled by the gentleman from Massachusetts [Mr. Gillett] and two hours by myself.

Mr. MANN. Mr. Speaker, reserving the right to object, may I ask whether the four hours are likely to be occupied or whether it will be the intention to proceed with the consideration of this bill under the five-minute rule to-day?

Mr. FITZGERALD. No; it would not. When the four hours are occupied I will move that the committee rise.

Mr. MANN. After the general debate is concluded does the gentleman intend to move to rise if that should occur before 5 o'clock? I think the House ought to know whether we are going into the bill under the five-minute rule to-day.

Mr. FITZGERALD. It depends upon how early we conclude. If the gentleman expects to use all the time on that side I am quite certain that the two hours will be used on this side.

Mr. Gillett. I will say to the gentleman I hope we can get through on this side with something less than two hours.

Mr. FITZGERALD. How much less?

Mr. MANN. We want two hours if you do.

Mr. Gillett. Of course we do not waive the two hours, but I mean it is quite possible we may not use it all.

Mr. HINEBAUGH. I want half an hour.

Mr. Gillett. That is taken care of.

Mr. MANN. The House will have to meet to-morrow evening to finish the bill; why not have an understanding?

Mr. Gillett. I have no objection to having an understanding that at the conclusion of the general debate to-day the committee shall rise.

Mr. EDWARDS. Will the gentleman from New York yield for a question?

Mr. FITZGERALD. Certainly.

Mr. EDWARDS. How much of the two hours on this side is spoken for already?

Mr. FITZGERALD. Well, the gentleman from Maryland [Mr. Lewis] wants from 45 minutes to an hour, and the gentleman from Missouri [Mr. Borland] is in the same position; I think he wants an hour.

Mr. EDWARDS. It is practically all spoken for. I have no objection.

Mr. FITZGERALD. Those are the only requests that have been made for time.

Mr. ADAMSON. Mr. Speaker, I assume there will be sufficient liberality under the five-minute rule so that important matters can be discussed.

Mr. FITZGERALD. There are some matters which will arise during the consideration of the bill of considerable importance, and so far as I am concerned Members will have opportunity to discuss them within reasonable limits.

Mr. MURDOCK. When does the gentleman expect to get through with this bill?

Mr. FITZGERALD. It depends upon the ability of Members to curb their desire to discuss items.

Mr. MURDOCK. Does the gentleman expect to conclude it by Friday?

Mr. FITZGERALD. I should like to conclude to-morrow night, so far as my personal convenience and comfort are concerned.

Mr. MURDOCK. It all depends, I will say to the gentleman, on how liberal he is under the five-minute rule, for if continued extensions are given—

Mr. FITZGERALD. If Members are interested very deeply in items in the bill or in those which are eliminated, I doubt if it would be proper to try arbitrarily to decline to give opportunity to such Members to discuss such matters.

Mr. MURDOCK. I think the gentleman is right about that.

Mr. FITZGERALD. I think important matters should be discussed liberally.

Mr. MURDOCK. When we reach a matter of the magnitude of the Commerce Court I do not think it is fair to hold Members down to the five-minute rule.

Mr. FITZGERALD. I do not either, and I believe we should arrange liberally to have matters fully discussed.

The SPEAKER. Before the Chair puts that motion the Clerk will read the following change of reference.

Mr. FITZGERALD. Is there objection to the request?

The SPEAKER. No.

CHANGE OF REFERENCE.

The SPEAKER. If there be no objection, the Committee on Railways and Canals will be discharged from the further consideration of the bill (H. R. 6854) to provide for the purchase or condemnation of the Chesapeake & Delaware Canal, and the same will be referred to the Committee on Rivers and Harbors. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, I would like to ask whether this change of reference is made at the request of the two committees?

The SPEAKER. It is made at the request of Mr. Moore, of Pennsylvania, who introduced the bill.

Mr. MANN. Well, it plainly was referred to the correct committee in the first instance.

The SPEAKER. The gentleman from Pennsylvania [Mr. Moore] informs the Chair that sometimes that kind of a bill has been referred to the Committee on Rivers and Harbors, although the Chair can not see why—

Mr. MANN. The Rivers and Harbors Committee does not have jurisdiction, and if it reported the item in the river and harbor bill it would be subject to the point of order, although I do not care who has the bill.

Mr. SPARKMAN. I think the proper reference of a bill like that is to the Committee on Rivers and Harbors. We have had that matter up quite a number of times, and I think the precedents of late years certainly are in that direction.

The SPEAKER. Is there objection to the change of reference? If not, it stands.

There was no objection.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. DIES, for two days, on account of sickness.

To Mr. MORGAN of Louisiana, for two weeks, on account of important business.

URGENT DEFICIENCY BILL.

The SPEAKER. The gentleman from New York moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7898, and pending that motion he requests that general debate be limited to four hours, he to control one half of that time

and the gentleman from Massachusetts [Mr. GILLET] the other half. I suppose the gentleman from Massachusetts has some arrangement with the gentleman from Kansas [Mr. MURDOCK] as to their division of time. Is there objection? [After a pause.] The Chair hears none.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7898, the urgent deficiency bill, with Mr. FLOOD of Virginia in the chair.

The bill was reported by title.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent to dispense with the first reading of the bill.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] asks unanimous consent that the first reading of the bill be dispensed with. Is there objection? [After a pause.] The Chair hears none.

Mr. FITZGERALD. Mr. Chairman, I yield 45 minutes to the gentleman from Georgia [Mr. BARTLETT].

Mr. BARTLETT. Mr. Chairman, I yield to the gentleman from Maryland [Mr. LEWIS] 45 minutes, or so much thereof as he may desire. [Applause.]

The CHAIRMAN. The gentleman from Maryland [Mr. LEWIS] is recognized for 45 minutes.

Mr. LEWIS of Maryland. Mr. Chairman and gentlemen of the committee, I had not anticipated that it would be necessary for me to revive the discussion of the subject of parcel post in the Sixty-third Congress. My apology for doing so this afternoon lies in the fact that greatly misinformed attacks have been made upon the Postmaster General for his administrative acts in the development of the great parcel-post service, one of which was made in the other Chamber and one here. I consider those attacks to be most unfounded, and therefore unjust. But in order to test their merit it will be necessary, with the patience of the committee, that the whole subject of the parcel post and its functions should be reviewed.

Gentlemen, we are living in a time when the workman is perhaps receiving higher wages than ever before and yet finds it increasingly difficult to make both ends meet on pay day. The condition responsible for this is known as the "high cost of living," especially in the vital necessities, which have about doubled in price in the past dozen years.

The problem is here to be solved, if possible. The Democratic Party has promised to solve it, and this promise is accepted as sincere by a majority, although many who do not distrust our purpose doubt our prospects of success. I believe the reform of our tariff laws will, in some instances, work in that direction, but I believe, too, that more than one instrumentality will be necessary for relief, and I now propose to discuss what I consider to be a very direct and substantial instrument. While the facts in connection with the high cost of living are pretty well known, they will bear, I think, a little further statement in the interest of analysis.

The report of the Secretary of Agriculture for 1910 gives the following as the percentages of the prices paid by the consumer which the farmer received for the foodstuffs named:

	Per cent.
Poultry.....	55.1
Eggs, by the dozen.....	69.0
Celery, by the bunch.....	60.0
Strawberries, by quart.....	48.9
Oranges, by dozen.....	20.3
Melons, by pound.....	50.0
Potatoes, by bushel.....	59.3
Watermelons, singly.....	33.5
Turkeys.....	63.4
Cabbage, by the head.....	48.1
Apples, by bushel.....	55.6
Apples, by barrel.....	68.0
Onions, by peck.....	27.8
Green peas, by quart.....	60.0
Parsnips, by bunch.....	60.0
Turnips, by bunch.....	60.0

The following table, giving the prices of six of the vital necessities as sold by the farmer, by the wholesaler, and the prices finally paid by the consumers, is based on the quotations of the Washington market some time back for a single day:

Country produce sold in Washington Aug. 5, 1913.

Article.	Sold to consumer for—	Wholesale price.	Farm price.	Parcel post.
Eggs (2 dozen).....	\$0.56	\$0.40	\$0.32	\$0.07
Dressed chicken (3½ pounds).....	.77	.56	.42	.03
Butter (3 pounds).....	1.05	.75	.60	.07
Country sausage (3 pounds) (as of October, 1911).....	.54	.33	.24	.07
Country ham (10 pounds).....	2.20	1.20	.90	.15
Apples (half bushel).....	(1)	.40	.25	.24

1 65 to 80 cents.

The only function performed by commerce in this case was to convey these articles from producer to consumer, for which it employed three broken acts of transportation and as many or more necessarily costly processes of commerce. For these the prices are made to jump from \$2.73 at the farm to about \$5.82 to the consumer. We shall see later that the cost of direct transportation from the farm to the kitchen need be actually almost inconsiderable. There are no actual data showing the gross figures for prices at the farm or the total paid by the consumers for these table necessities, but the following estimate is probably not far from the mark for farm products as a whole:

Last year's agricultural products were worth \$9,000,000,000 to the farmers. The Government used farm values in getting figures for this total. Assuming that the farmers kept one-third of the products for their own use, the consumers paid more than \$13,000,000,000 for what the producers received \$6,000,000,000. The cost of getting the year's products from producers to consumers amounted to the enormous sum of \$7,000,000,000. The real problem to deal with is not high cost of living. It is high cost of selling. (B. F. Yoakum, chairman St. Louis & San Francisco Railroad.)

That is to say, the farm surplus products were sold by the farmer at a sum about equal to half the value of our railways, but cost the consumers twice that much, or a sum about equal to the market value of the railways as a whole.

Gentlemen, I call your attention to a significant circumstance in this connection. With rare exceptions, the necessities we use on our tables are originally produced on the farm in retail quantities; that is, in quantities small enough to suit the needs of the consumer as a retail purchaser. The eggs, butter, hams, sausage, chickens, etc., are retail and not wholesale products on the farm before entering the roundabout processes of commerce. Nearly all the vital necessities begin in retail quantities on the farm, but at present go to (a) the selling agent, who converts them into wholesale quantities for (b) the wholesale market, which passes them on in wholesale units to (c) the retail market, which reconverts them into retail quantities and passes them to (d) the consumer, the fourth buyer, at a price which about doubles that paid by the first buyer to the grower. Here are three broken acts of transportation and four costly processes of commerce which must all be charged up in the final price.

Can the fourth buyer, the consumer, now become the first buyer? Yes; when the farmer brings his supplies to town and sells direct from the street. But this method of distribution, even when possible, and it can not be used for the cities, entails such wastes of effort and maledconomy for the farmer that the price to the consumer is little, if any, better than the cumulative commercial one. At the same time the mere cost of transportation, if it were direct, would be inconsiderable.

DIRECT TRANSPORTATION.

The difficulty now lies in the absence of a transportation conduit which will receive the small shipment at the farm and convey it, like a letter, direct to the consumer. And as a result when the article leaves the farm, its ultimate consumer being unknown, it goes into commerce instead of to him; is converted into wholesale or commercial forms, only at last to reach the consumer as the third or fourth buyer at double cost. The additional price is the payment, not necessarily too large, which the consumer must pay to commerce for its troublesome and costly processes. If our manufacturers had to secure their coal as fourth instead of first buyers, the accumulated price would bring many of their industries to a stop. But, thank Providence, they can buy direct. Why? Because they buy in wholesale quantities, according to their needs, direct from the mine, and have the railway conduit to ship such wholesale purchases direct to the factory. If the consumer had a like conduit for his retail purchases direct from the farm to the kitchen, he could phone or write the farmer direct and have the articles sent him direct at their first price, and fresher in the bargain. The first order would grow into a standing order, where the articles, their prices, and payment proved satisfactory, and permanent supply relations would develop, with the consumer having his regular farmer or trucker as he now has his doctor, and with the wastes of commerce—the high cost of living—largely removed.

Why should not the retail purchaser have the same privilege of buying from the retail producer which the manufacturer has to buy from the wholesale producer? He has, and would, but he lacks the transportation facilities to bring him his retail purchase. Do the facilities exist? Yes; they are all here, and he is paying now for their maintenance and service.

I do not mean to contend that all retail forms can thus be made the subject of direct sale and transportation between producer and consumer. One qualification that suggests itself is that at long range, where producer and consumer were strangers, the article would have to be standardized; i. e., it would have to possess known characteristics of value and adaptability to the intended service to enable them to deal

direct. How far the standardization of manufactured products has progressed I do not undertake to say, but it is clear that the consumer will not purchase direct from the producer, even at a lower price, without definite conviction that the article will measure up to his requirements. But where the commodity is such—i. e., where it is standardized—it is equally clear that the consumer and producer ought to deal direct. They are under an obligation to society to accomplish the act of exchange or distribution in the most economical way. And in the cases of the standardized retail forms, adequate direct transportation being provided, the intermediate economical processes only add burdens to the price, and in the case of farm products deterioration to their quality. Another qualification to this direct-dealing program is found in those products that are produced in wholesale forms which the merchant must cut into retail forms to suit his patron's needs. And to these must be added such retail forms as, traversing great transportation distances, can only be economically transported in wholesale lots. Commerce in these cases performs a distinctly valuable function. The direct-to-consumer proposition does not imply the destruction of the true business of the merchant or any interference with the natural fields of commerce where the merchant performs a useful and worthy service for society.

With these explanations I hope to be understood when I use the expression "the retail shipment" as having in view those standardized forms of production and consumption which are produced in forms and sizes suited to the needs of the ultimate consumer or the ultimate unit of purchase. And now I call attention to another significant circumstance in connection with this retail product. It is that we are practically without any means of transportation for it; without any present agency adequately performing the function of moving it to its market. Let me take time to illustrate this statement by the facts of American transportation.

THE RAILWAYS AND THE RETAIL SHIPMENT.

When we think of transportation, naturally we turn first to the railways of the country. I call attention to this circumstance in that connection. The railways are doing now, have always done, a wholesale business, as distinguished from a retail business. The ultimate unit of purchase, the consumer, rarely goes to a freight depot for his supplies. The railway minimum unit of shipment is a hundred pounds and its minimum charge is 25 cents. But the consumer rarely requires a hundred pounds of anything, certainly not of meat, butter, eggs, or the other vital necessities. So the railway does not handle the shipment in sizes small enough for him, and thus the shipment takes its way from the producer, not to the consumer, but by reason of its wholesale size it goes into the commerce of the country.

It may seem that the railways are acting arbitrarily in thus drawing the line on a hundred-pound shipment and the 25-cent charge. Let me say that when you come to investigate railway practices you will find that the hundred-pound minimum and the 25-cent fee are reasonable enough from their standpoint. When you consider the acts of attention which a railway must give a shipment, be it large or small, be the journey short or long, you will find there are 20, which all must bear alike. I insert a list of them compiled by a railway traffic expert:

The railway company employee—

- (1) Unloads article from consignor's vehicle.
- (2) Loads article in car.
- (3) Ascertains rate to be paid.
- (4) Makes out bill of lading.
- (5) Makes out waybill and sends copy to auditor and the train conductor.
- (6) Receiving agent, destination, receipts to conductor—
- (7) Sends notice to consignee.
- (8) Unloads package from car.
- (9) Takes receipt of consignee.
- (10) Loads it on consignee's wagon.
- (11) Agent gets money for shipment—
- (12) Copies bill of lading into record of freight forwarded.
- (13) Copies bill of lading into record of freight received.
- (14) Sends statement of freight "sent" to auditor.
- (15) Sends statement of freight "received" to auditor.
- (16) Auditor checks bill of lading against records of sending agent—
- (17) Checks bill of lading against record of receiving agent.
- (18) Advises treasurer of money due by each agent.
- (19) Makes statistical report from bill of lading.
- (20) Calculates, per bill of lading, amount payable the different railways.

Of those 20 acts of "transportation attention," 15 are at this moment replaced by the postage stamp in the carriage of the shipment by the postal system. On the large shipment the hindrance of their cost is not so great, and it can move; but their effect on the small shipment is to penalize it out of the transportation of the country.

Here are 20 acts of service which the railway—and mutatis mutandis the express company—must perform for the shipment

whether the weight or journey be great or small. Their total cost constitutes nearly the whole expense when the journey is the shortest or the weight is the lightest, while this expense tends to lessen correspondingly with the increase of the weight and the journey.

Railway tariffs frequently show rates per 100 pounds of 8, 7, and 6 cents for short distances; and we shall see later that the average rate, sixth class, for 36 miles is but 9 cents and for 100 miles but 11 cents; in fact, nearly all minimum distance rates for all the classes are below 20 cents per 100 pounds. Yet the railways must decline to carry for this published tariff and require instead a minimum fee of 25 cents however low the rate may be, even when 6 cents a hundred; and in the same way they refuse to charge the shipper on less than 100-pound lots however much less the actual weight may be. This fee of 25 cents may be said to be the irreducible minimum in freight charges.

Speaking relatively, railway accounting practices are designed and fitted for the large and not the small consignment; for the large buyer rather than the little and ultimate buyer. The desirable business of the railway comes from the wholesale unit rather than the final unit of trade or the ultimate purchaser. Accordingly the transportation practices and processes through which every shipment goes, before going in the car, while in transit, after leaving the car, and before its receipt by the consignee, are the relatively necessary incidents of the large shipment, the cost of which it can reasonably bear. But when they are applied to the small shipment or the retail unit under 100 pounds their cost has driven it out of transportation commerce.

THE EXPRESS COMPANY AND THE RETAIL SHIPMENT.

When we think of the "small" shipment, we think of the express company. It ought to carry this shipment, at least between the railway towns and cities, and meet such needs as the parcel post. It does not, and for two reasons, neither of which can it remedy: First, it does not reach the farm or country store either to receive or deliver the shipment; second, it does not carry it on sufficiently economical terms. It is burdened down with the same condition of "transportation accounting" that prevails with the railways. I insert a list of express processes, 11 in number, which are replaced by the postage stamp in the postal carriage of the shipment:

The express company—

1. Ascertains the rate to be paid.
2. Makes out waybill.
3. Copies waybill into record of shipment "forwarded."
4. Copies same into record of shipments "received."
5. Makes statement of "shipment sent" to auditor.
6. Makes same of shipment "received."
7. Auditor checks waybills against record of "sending" agent.
8. Auditor checks same against record of "receiving agent."
9. In case of "through" waybills, previous items repeated.
10. Auditor makes division of percentages going to express company and the railway or railways.
11. In case of "through" waybills, auditor makes like divisions of percentages between express companies and railways.

The above acts alone account for an immense proportion of the expenses of the express companies, and are fatal to the making of a rate proportioned to the small shipment.

No railway or express company has so far ventured an experiment of elimination of these accounting practices. It is, perhaps, not too broad a statement to say that railway and express transportation accounting are necessary to intercorporate dealings and the large shipment, and can not be dispensed with by either. As long as the individual railway and express companies are our agencies of transportation for the small shipments we can not complain at paying for the practices they find necessary, and neither is institutionally qualified to economically handle the small shipment.

I think it is sufficiently obvious that the express company can not be made to reach the farm or the country store. This circumstance renders it incompetent to discharge at least half its functions, for farm-to-town traffic in retail shipments would constitute at least half the potential traffic. But the express company is unable to fully perform its function of moving the potential traffic even between railway points; and this because its rates are relatively prohibitive.

PROHIBITIVE EXPRESS CHARGES.

We should expect express charges to be higher per ton here than abroad—as much higher relatively as our freight-per-ton charges. But no necessary economic cause is known which justifies a substantially higher proportion or ratio of the express to the freight charges here as compared with other countries. The average express charge per ton here is shown to be \$31.20, while the average freight charge is \$1.90 per ton, giving a ratio of the express charge to the freight charge of 16 (16.42) to 1. This express charge includes the cost of such collect-and-delivery service as is rendered, covering, it is thought, about 90 per cent of the traffic. In the table now inserted the element of the expense of the express companies for collecting and de-

livering, amounting to 11.50 per cent, is excluded, because many of the countries do not include this factor of cost. The table embraces 10 countries, while the specific data upon which the ratios are based are set forth in Senate Document No. 379, page 64, Sixty-second Congress. All countries have been included where the express data are clearly distinguishable from general freight statistics.

Ratios of average express charges to average freight charges in 11 countries.

Countries.	Average express charge per ton.	Average freight charge per ton.	Ratios of average express to freight charges.
Argentina.....	\$6.51	\$1.95	3.2 to 1
Austria.....	3.77	.74	5.0 to 1
Belgium.....	14.92	.53	19.3 to 1
Denmark.....	5.49	.87	6.3 to 1
France.....	6.88	.95	7.2 to 1
Germany.....	3.80	.76	5.0 to 1
Hungary.....	3.68	.93	3.9 to 1
Netherlands.....	2.43	.67	3.6 to 1

¹ Belgium and Denmark deliver parcels.

From this table it appears that while Argentina charges three times, Austria five times, Belgium nine times, Denmark six times, France seven times, Germany (including Prussia) five times, Hungary, the Netherlands, and Norway about four times as much for carrying a ton of express as of freight, the express companies of the United States charge nearly fifteen times as much, excluding the cost of their collection and delivery.

No further statement need be made to show that the charges of American express companies are prohibitively excessive and such as to disqualify this service as a transportation agency. The instances given represent matter carried by passenger trains in all instances. The abnormal and prohibitive effect of American express rates are only too marked. In the 10 countries referred to the rates are such as to permit the movement of 1 (1.06) per cent of the total rail traffic by express, at a gross charge of about 6 (5.89) per cent of the general freight revenues. In the United States the express matter moved amounted to only one-half (0.517) per cent of the total freight tonnage, but for it the express companies collected a gross sum equal to about 8 (7.776) per cent of the railway freight revenue, or a charge equal to 316 per cent of the normal rate as indicated in these 10 countries.

REGULATION OF EXPRESS RATES.

It may be suggested that such inhibitory high charges may be remedied by the regulatory action of the Interstate Commerce Commission. While the express reports show that the profits of the companies are clearly out of all proportion to the investment, they also show that these profits were but 8.44, 9.17, and 6.70 per cent of the gross receipts, or the average express charge, for the years, respectively, of 1909, 1910, and 1911. If all the profits were taken away the rate would not be substantially reduced, while of course no such reduction would be asked of or considered by a Government tribunal. A simple illustration of the regulatory function at work on a transportation rate will suffice to show the inapplicability of that method to the present express business. To illustrate: The weight of the average package in 1909 was 33 (32.52) pounds, which brought a gross rate of 51 cents. Of this 47.50 per cent was paid to the railways, leaving a net profit to the express company of 4.25 cents in 1909, and 4.50 and 3.35 cents in 1910 and 1911, respectively, on the average package, or a general profit on the business of 8.43 per cent, 9.17 per cent, and 6.70 per cent for the years named, but yielding the companies more than 100 per cent returns on the real investment for each year. What does all this mean? Simply that, although securing utterly egregious returns on the investment, they must rely for their profits on a percentage of the rate, or a margin so small that they can not safely make it smaller and be sure of any net return. The arithmetical margin of one-half of 1 per cent would, if it came, give the 10 per cent return, but the slightest unfavorable perturbation of the traffic might convert this favorable margin into an unfavorable one, i. e., from a profit to a deficit.

It has been proposed that the express company be abolished and the railway companies compelled to do its work. Obviously, the railway could not be expected to articulate with the farm or nonrailway points any better than the express company. But even so, it is doubtful whether converting 14 express com-

panies into as many companies as there are operating railways, perhaps 700 in all, would help matters. The probable result of such a change is, perhaps, not overstated in the following extract from a letter of the president of one of our largest railway systems. He says:

It is gravely to be doubted if the railways, as a rule, could transact the (express) business so as to net as much out of it as the express company pays them.

Assume that the roads radiating from Chicago should cancel their contracts with the express companies and organize to handle small packages, the first result would be an enormous economic waste in the duplication, triplication, and quadruplication of terminal expenses. At present the collection and delivery for a dozen roads is in the hands of one agency. Multiply this by the hundreds of cities and towns where the same conditions would prevail and it is easy to see that the \$11,000,000 of profit the express companies secure might readily fall short of what the railroads would lose should they discard the agency.

THE REMEDY.

And now it is asked if neither railway or express company does or can discharge the function of transporting this retail shipment, why does not our parcel post do it? This is a fair question, and upon its answer, I think you will agree, depends the whole solution of the problem.

Gentlemen, it is exactly true to say that our parcel post does not discharge the function, only because it is not permitted to do so; only because of restrictions upon its free operation, which can be administratively removed. I make these strong statements only with the object of proving them. Sirs, the restrictions upon the parcel post which prevent its achieving its great function are:

(a) The weight limit, 11 and 20 pounds, which prohibits it from moving a normal shipment.

(b) The pound rates, which, excepting on the first 150 miles, are prohibitively high and many times as high as the cost of the service.

On the rail zones the pound rates, excepting the charge on the first pound, are:

On the 300-mile zone, three and one-half times the cost of service.
On the 600-mile zone, two times the cost of service.

As a matter of fact, except for 150 miles, the pound rates only correspond with the cost of service at 2,900 miles, where the rate is 12 cents a pound; which is, of course, a prohibitive rate and distance.

I will insert a chart (Chart "A"), showing graphically the disparity between the present rates, express rates, and the rates indicated by the costs of service. Since the chart was made the rates for 150 miles have been reduced from 3 and 4 cents to 1 cent a pound. (See p. 4160.)

In an appendix I set out the three-day test reports for the 50 largest cities doing, as experience has shown, one-half the ordinary postal business of the country. This shows the average weight of the shipment to have been just 1 pound, or, omitting the old fourth-class matter from the computation, the new shipments average but 3 pounds each. Now, since the shipment by express averages over 32 pounds, it is not difficult to see how the weight limit and utterly irrational rates operate by their restrictive influences to prevent the parcel post from giving relief from abnormal express charges, as well as an agency for direct-to-consumer transactions.

Gentlemen, if these restrictions—I mean the weight limit and irrational rates—are removed from the operation of the parcel post, I confidently predict substantial relief to the consumers of the country.

Gentlemen, I congratulate the country that the Wilson administration is in a position to remove these restrictions, and thus to provide a system adequate to meet our great need of direct transportation. The legislation provided by the last House (Congress) is ample to enable the postal system to fully achieve this great result. And it can do it without an additional line of legislation by administrative process.

SUBJECT EXPERIMENTAL AND CONSTRUCTIVE.

To begin, I should say that the work of establishing and conducting this service is essentially experimental and constructive in character, and this fact was distinctly recognized in the act itself. Congress clearly saw that the task of adjusting the features and processes of the service—i. e., the weight limit, the classification, the zones, and other conditions—to the various requirements of commerce could not well be encompassed by legislative regulation, and so it charged the responsibility in this respect to the administration of the Post Office Department. The act provides that if the Postmaster General—

find on experience that the classification of articles mailable as well as the weight limit, the rates of postage, zone or zones and other conditions of mailability or any of them are such as to prevent the shipment of articles desirable, or to permanently render the cost of the service greater than the revenue, he is hereby authorized, subject to the consent of the Interstate Commerce Commission, to reform from time to time such classification, weight limit, rates, zone or zones or conditions (of mailability) or either in order to promote the service to the public or to insure the receipt of revenue adequate to pay the cost thereof.

Chart "A"

CHART SHOWING AVERAGE EXPRESS RATES, AND PRESENT PARCEL POST RATES, FOR 1 POUND UP TO 100 POUNDS, FOR A DISTANCE OF 300 MILES, AS COMPARED WITH THE INDICATED COST OF THE PARCEL POST SERVICE.

And now, Mr. Chairman, comes the more particular occasion for my address this afternoon. I am sure the older Members will remember the circumstances attending the passage of the parcel-post measure in the last Congress, a copy of which I will append to my remarks. On the part of the House I am sure the feeling was that the rates included in the measure as it passed the Senate were utterly inordinate and extravagant as compared with the cost of the service. The House realized, as I believe all men will realize who give this subject a common-sense and businesslike investigation, that, after all, the making of transportation rates is not a legislative function. In all the history of this body it has never assumed to make transportation rates. The subject of railway freight rates is referred to a tribunal specially constituted with reference to qualifications to do that work well. So, too, of the express rates. This body has never attempted to formulate express rates. Therefore the House wisely, in my judgment, inserted in the bill which it passed, and which I had the honor to prepare, a provision giving the Postmaster General the power to make these changes of the rates, the weight limits, the zones, the classification, and all the conditions of mallability. He therefore enjoys over that subject matter the same power that a railway president and its board of directors enjoy over the making of transportation rates, with, however, the same qualifications that such changes in rates, and so forth, must secure the approval of the Interstate Commerce Commission. If this power were denied to the Postmaster General he would be the only shipper, not to say the biggest shipper, in the United States who could not go to the Interstate Commerce Commission to have wrong rates righted.

In quarters inimical to this legislation, or especially to the acts of the Postmaster General in extending the weight limit and in rationalizing the rates, it is suggested that the power in this bill as it passed the House was an utterly unprecedented power. I beg to make correction of that statement. The English parcel-post act contains the same power, if not in the same words, and the whole schedule of rates and weight limit of the English parcel post had to be revamped by the Postmaster General almost before a pound of traffic moved. At first the weight limit was 7 pounds. It is now 11 pounds by administrative revision. The rate was 4 cents a pound. It is now made 2 cents a pound by the same process. In Austria, in Hungary, in Belgium, and in other countries the same power has been given to the administrative officer, because the function itself is administrative and therefore can be exercised wisely only in that way.

I will claim as much as any man ought to claim for the wisdom of this body and the other body of Congress, but there is one thing that distinguishes the multitude from the specialist, or the tribunal constituted in small numbers. The multitude will act upon principles as reflected in general feelings and general ideas, with, perhaps, the best attainable results; but the multitude is not organized for performing the operations of algebra or of fractions. And in this sense Congress is a multitude. Indeed the necessity for having this work done administratively will appear, I am sure, when we come to analyze the functions of a transportation rate.

What must a rate do? Pardon me if I am repeating a mere truism. A transportation rate has two things to do. First, it ought to move the potential traffic. If it does not move the potential traffic it is a mere paper script, utterly valueless, and might as well be written for the planet Mars as for our own people. The rate therefore must move the traffic in order to be a rate. But at the same time it must protect the Treasury, because transportation will soon cease if it must be conducted with recurring deficits or permanently at a cost less than operative expense.

Now, the delicate task of adjusting the rate to perform the maximum of service in moving this potential traffic at the same time that it conserves the Treasury is, I submit, not one that could be well performed by a legislative body. There are plenty of men in the United States who, with some instrumental aids, can look at the sun to-day and tell us within five seconds the time of the day; but we, with all our wisdom, would hardly be able to duplicate that work. And I submit that the illustration is none too strong for the question of the rates necessary in order to make our parcel post a success.

Now, there was another criticism made. It was that the rates instituted by the Postmaster General were too low to pay the cost of the service. I believe the gentlemen who made those criticisms will be willing to reform their views upon that point upon further minute and painstaking study upon this subject and join the rest of the country in its just applause of a loyal and capable Postmaster General, who after generations of neglect is engaged in building up, upon sound foundations, a postal express system as promised in the Baltimore platform, with the

greatest of profit at the same time to the postal system and the people.

The assertion was also made that this power had not been considered except in conference. I have already disposed of that statement. The power was the principal feature in the House bill.

Mr. MURDOCK. Mr. Speaker, will the gentleman yield?

Mr. LEWIS of Maryland. Certainly.

Mr. MURDOCK. I confess that I have never heard the explanation, and if it will not take too long I would like to hear it at this time.

Mr. LEWIS of Maryland. What explanation is that?

Mr. MURDOCK. The gentleman said that this discretion which had been granted the Postmaster General did not originate in conference.

Mr. LEWIS of Maryland. It originated in the House. The Senate passed one bill without this power, a bill I think it a duty to characterize as a mockery of the parcel-post institution. That bill came over to the House, and at the request of Leader UNDERWOOD I prepared a substitute measure. The substitute bill passed this House and contained these powers. In conference all of the principles of the House bill, the inclusion of farm and factory products, the right of insurance, the C. O. D. privilege, and others, without the House rates, were adopted, and the rates of the Senate bill were temporarily adopted, but only accepted on the part of the House because these powers retained in the bill were ample to correct the excessive and impossible rates the Senate had seen fit to impose.

Mr. Chairman, the Postmaster General, then, subject to the corrective examination of the Interstate Commerce Commission, has been placed under responsibility for the constructive development of this great service; and the act gives him plenary power to meet that responsibility.

In this work of construction let us notice briefly the elements most essential to a complete structure:

ELEMENTS ESSENTIAL TO AN ADEQUATE SYSTEM.

- (a) Simplicity and universality.
- (b) A public-service motive.
- (c) Expert administrative, and not rigid, law-made rates.
- (d) Rates insuring mobility of traffic. Passenger and fast-freight express.
- (e) Business weight limit; and classification permitting movement of desirable traffic.
- (f) Rate of railway compensation just to railways, and to the potential traffic. Collect and delivery.
- (g) Administrative efficiency.

UNIVERSALITY AND SIMPLICITY.

Gentlemen, the postal service sustains relations to the world of men and of business interests, perhaps the most direct, simple, and universal of all economic if not all human institutions. I will not enlarge upon this theme except to say that its transportation network reaches where no other extends—to the farm, with over a million miles of rural conveyance, over our railways 250,000 miles in extent, across every sea and ocean, and by co-ordination with the postal systems of other countries, it embraces every hamlet on the globe, with a universality of manual service practically coextensive with the human family. It covers all this mass of complexity with the fewest and the simplest rules. Ask the child on the street how to send the smallest of shipments, the mail piece, to a person and a place unknown to him, even to Timbaktu, and he will tell you what to do, and correctly. But make that shipment 12 pounds, and you may be lucky to find an acquaintance who knows how to ship it outside your own country. The postal system possesses almost perfect universality in the way of extension, but it possesses besides the highest simplicity of method and process; and with these a directive force and intelligence to match its ubiquity. Seventeen billions of mail pieces last year traversed 2,000 railway systems as if they were but one, such is the postal faculty for converting the complex into the simple. And, need I repeat it, it is just this kind of simple and therefore economical treatment that the small package requires.

SIMPLICITY—ZONES AND RATES.

On the Prussian railway system, which moves nearly 400,000,000 tons of traffic, or nearly half the traffic of the railways of the United States, the class traffic travels on a rate schedule not larger than one's hand and nearly simple enough to carry in one's memory, while the freight rates of the United States are said to number 800,000,000,000, counting place-to-place rates. In Prussia, the shipper, by ascertaining the class, weight, and distance of his shipment, can inform himself exactly what the cost of shipment will be. The express rates of the United States are said to fill, like books, 120 feet of shelving in the offices of the Interstate Commerce Commission, and number probably not

less than thousands of millions. No shipper can ascertain what his rate may be without appealing to the express agent, and such is the complexity and confusion of the rates that, off the beaten lines of traffic, even the agent in practice can not measurably well quote them with accuracy. The individual railway or express company can not correct this great evil for want of that uniformity of relation to the subject which alone permits of simplicity; and yet the trouble burdens of rate finding are often as serious, economically considered, as the resulting excessive rates themselves.

Gentlemen, it is patent that the parcel-post zones now in use fail to meet the great public need for simplicity. There is no constancy of extent in the zones, and no such constancy in the pound charge as to enable one to determine the progressive rate for increasing distances without a rate sheet. After the local, the zones are now 50, 150, 300, 600, 1,000, 1,400, 1,800 miles and above, while the pound rates are 1, 3, 4, 5, 6, 7, 9, 10, and 12 cents. Now, all this irregularity and complexity is without, as we shall see later, any necessity or justification in the actual costs of conducting the service.

But the postal system has no purpose to serve in having a complex rate structure. It is only under one limitation in the effort of making a simple rate, and that is that the rate shall not be less than the cost of service. And that condition involves but two factors, the circumstances of weight and distance. We shall see later that these factors permit of a rate for all weights and distances of—

(a) Three cents for the first pound the first 100 miles carried;

(b) Plus one-half cent for each additional pound for each 100 miles of distance.

This simplicity is attained by merely getting sufficiently acquainted with the facts of cost, and letting such facts express themselves in a generalization to make the rate. Here the rate units are almost self-memorizing, the zone always 100 miles, the rate always a half-cent per pound per zone, and the equally constant charge of 3 cents for the initial pound.

THE PUBLIC-SERVICE MOTIVE.

In institutions, as with individuals, motive is everything. The motive to serve one's self is the common motive, and to impose sufficient restraint upon its operation when too unsocial is, stated in a broad way, the principal object of government. There is much illogical complaint in this respect against what are called "public utilities." Their owners, who have invested their money with the purpose of gain, are expected to behave differently from investors in general. Of course they do not, but why should we expect them to? Because they have a monopoly, it is argued. Well, this may impose an inferential duty, yet who will say that it can have any decisive influence upon the normal motive of the investor to gain all he can?

Where public needs and social considerations, as in this instance, become the principal and dominating purpose, where imperative public service is the object, the world naturally has not yet found the restricted private motive adequate to the work. Now, besides proficient rate makers and elastic rates to move the traffic, something else is required in order to get the best results out of this small-shipment traffic. I hope I shall not be misunderstood when I suggest that the private motive has shown itself to be inadequate. Suppose you go to an express company to-day and say, "You moved 4,000,000 tons of express last year, and your gross receipts were \$132,000,000, and your profits were \$11,000,000. Cut your rates in two this year and the traffic will amount to 8,000,000 tons. Your profits may be less, but the service to the public will be doubled." What would an express company do?

It would do just what the average individual would do—act on the natural private motive, retain the higher profits and the smaller business. But you go to a public-service institution like the postal department and you find a wholly different motive. The postal system would say, "If cutting the rate in two will double the service, I will take my chances with the profits." That is exemplified in the reduction of postal rates throughout their history.

Even a small deficit for experimental purposes would be justified, especially if the rate were elastic and the postal department could protect itself by adjustments of the rate. If, for example, you were to start out with the assurance that the service would be doubled, but that there would be a deficit of 1 per cent, to ultimately disappear with the development of the traffic, a public-service agency like the post office would be more than justified in such a step, because in that instance while it is losing 1 per cent in one pocket it is making 100 per cent in the other pocket—the people and the postal system being identical terms.

Now, the express companies constitute the most irrefragable monopoly; and where monopoly obtains rates can be made relatively high or low, within limits, according as you wish to regard the dividend. An English railway some 60 years ago had the question presented to it as to how to graduate its passenger rates to secure the best dividend. Much as one adjusts his opera glass in the theater to obtain the clearest line of vision, these railway officers adjusted the passenger rates. They tried rates all the way from 6 cents a mile to one-half cent a mile, and found that as the rate was $3\frac{1}{4}$ cents a mile or one-half cent a mile, the higher charge produced 6 per cent and the lower charge, with much greater traffic, only 5 per cent dividends; and acting on the private motive they rejected the rate which produced the greater public service. But in such a case all would say that a system in which we all are stockholders, like the postal department, would be foolish to prefer the 3-cent rate and kill so much useful traffic. Like the attendant at the theater, proficient rate makers in postal transportation would adjust their rates to move the greatest amount of traffic consistently with the cost of the service, and in order to reduce the average cost of each shipment the greatest possible amount of traffic should be moved.

PROFICIENT RATE MAKERS AND ELASTIC RATES.

One of the boasts of American railway administration has been that in spite of obstacles and the admitted evils of discrimination, taking their freight rates in a larger view, they have been made so as to move the products of the farm and the factory to their natural market, when once gotten to the rail, and usually with a profit to the producer. In order to do this there has been for two generations an adaptation of the rate to what the article will bear and move to its natural market. They could not have accomplished this measurably well, as they have, either on flat rates or mileage-distance rates, nor yet by charging each shipment a quantitative proportion of the cost of the whole service. To adopt rates that an article can not pay and move to its market with a profit is, in effect, to deny the article the right of transportation. Any universal rate, i. e., law-made rate, incapable of change with changing conditions must, on this account, with respect to a large part of the traffic, be prohibitive. The express companies have yielded somewhat to this consideration, for they have rates which will permit some articles to move as to which their merchandise rates would be mere destruction. It is patent enough that law-made rates would be too rigid, even if first rightly made.

It is only once in a generation that Congress commonly gives its attention to a noncurrent subject, and as traffic conditions would require almost constant adaptation of the rates in the interest of the service and the public served, an administrative agency is wisely charged with the duty of making rates and determining the many other minutiae of the system. In no country where government ownership of railways obtains are the rates legislatively made. The subject is one calling for administrative rather than legislative attention. Congress in practice would either make the rates too high, the actual parcel-post situation, and inhibit the potential traffic, or make them too low, like second-class mail, and work a needless deficit on the department, saying nothing of the special-rate privileges thus created and always hard to dislodge. With the progress of government and civilization, Congress, without rate making, will have more than enough general legislative work to do, and it is only the dreamer and toy maker who should wish to impose a nondepartmental and equally inexpert and unadapted rate condition upon the commerce of a country. With our long distances and corresponding dependence on adequate transportation conditions, the argument for real competency in the rate makers, rather than a "bill writer," becomes unanswerable. Congress has never undertaken to make freight or express rates. It assigned the work instead to the commission, which has a like corrective power under the parcel-post law.

There is as much reason for leaving it there and as little for taking it away under the proposed system as the present.

RATES TO MOVE POTENTIAL TRAFFIC TO ITS NATURAL MARKET.

Speaking categorically, gentlemen, the function of transportation tariffs is twofold:

(a) The function of the whole body of rates, taken collectively, is to produce sufficient revenue to pay the costs of the service, including capital charges.

(b) The function of the individual rate is to move the potential traffic to its natural market.

If the body of rates is so low as to defeat the first object, transportation will soon cease; if it is so high as to prevent the movement of shipments in the amount demanded by normal needs, then to that extent transportation can not take place at all. This is what has happened with our parcel post. It has

been prevented from moving the potential traffic by the weight limit and the excessive rates, which, as we shall see presently, simply amount to economic robbery of the shipper when compared with the costs of the service. I shall now proceed to discuss in detail the economics of these restrictions, as well as some subsidiary incidents, together with the changes necessary to be made.

THE WEIGHT LIMIT.

Gentlemen, there is a gap in the transportation of this country between the 100-pound minimum of the railways and the 11 and 20 pound maximum of the present parcel post. It is a gap which the express company can not fill, because its service does not reach the country, about one-half of our population, and because its rates are prohibitive for the larger part of the potential traffic even where its service obtains, as I have shown at an earlier point in my remarks.

With respect to the weight limit for the parcel or express post service the practices of different countries differ somewhat, not for any formal or stated reason, but more probably from the accidents of legislative growth, when not as the result of transportation conditions that render the higher postal weight limits unnecessary. Principal among these reasons, as in Great Britain, is the circumstance that the railway itself provides a weight limit so low as to enable the smaller shipments to move. The railway rates of England are graduated down to 2 pounds, with a collect-and-delivery service attached which embraces all the class traffic. All the continental railways give a weight limit, or rather graduate their rates down to a weight minimum, as low as 22 pounds, and have in fact an organized collect-and-delivery service, conducted by "spediteurs," which assembles the small shipments into wholesale or carload lots, insuring thus not only a door-to-door service for the small shipment, but the lowest transportation rates. In the United States the parcel or retail shipment function so far as discharged is in the hands of the express company, our de facto parcel post. They have no maximum weight limit, but justly leave that incident elastic to the exigencies of the shipment and to the effectual limitations imposed by the burden of the higher rates exacted as compared with fast freight. That the railway minimum of 100 pounds is not frequently exceeded in the express traffic is shown by the circumstance that less than 5 (4.94) per cent of the aggregate number and but 24 (24.21) per cent of the total weight of express shipments exceeded this 100 pounds in 1909, while the average weight of shipments was 33 (32.80) pounds. In Austria there is in fact no parcel-post weight limit, while other countries give a weight limit of 110 pounds or more, as follows:

	Pounds.
Germany.....	110
Belgium.....	132
Switzerland.....	110
Hungary.....	110
Russia.....	120
Roumania.....	110
Luxemburg.....	110
Sweden.....	110
Norway.....	110

That the comparative expensiveness of the rate can be relied upon to effectually exclude the weightier shipments from the postal service is recognized by our own postal statutes. The postal law, as to weight limits, provides as follows:

First class.....	No weight limit.
Second class.....	No weight limit.
Third class.....	No weight limit on single books.
Franked matter.....	No weight limit.

It may fairly be asked, What is the logic of fixing a weight limit on fourth-class matter—parcels—when there is no limit on first class, second class, franked matter, or on indivisible articles, such as single books, in the third class?

Mr. KELLY of Pennsylvania. I would like to ask the gentleman a question. The rate is now on a limit of 20 pounds?

Mr. LEWIS of Maryland. Within 150 miles.

Mr. KELLY of Pennsylvania. What was the reason for fixing that limit at 20 pounds in the 150-mile zone?

Mr. LEWIS of Maryland. The reason was a trivial one, apparently, and yet one absolutely obligatory in character. The post-office system did not have scales weighing more than 20 pounds, and it would take five or six months to get them.

Mr. KELLY of Pennsylvania. I would like to ask the gentleman a question along that line, as to where the responsibility rests as to putting in scales that would weigh only 20 pounds when the obligation reaches 100 pounds or more?

Mr. LEWIS of Maryland. I do not know.

Mr. Chairman, two conflicting requirements are to be considered, it seems to me, in determining the weight limit, requirements that, however, can be reconciled. The first calls for a weight limit high enough to enable the system to discharge its function of transporting the retail shipment when called upon.

The second calls for a weight and size limit restricting the shipment to a form which may be economically handled by postal agencies; that is, a form calling only for the usual facilities employed for such handling. It would not be economical to equip every post office, and certainly not the rural routes, with the unusual trucks and implements necessary to handle the exceptionally heavier and unusual weights. I believe the express companies do not commonly so equip themselves even where they undertake such deliveries, but hire as occasion requires, or leave the act of collection and delivery in such cases to the consignor or the consignee. Such a rule imposes no serious hardships upon the shipper or impediment to commerce not now borne with freight. Now, the difficulty of handling these greater or unusual weights would not be met while the shipment was on the rail; and it is therefore suggested that any weight limit fixed upon should apply only to such shipments as the postal authorities undertook to collect and deliver, and not to those delivered direct to or taken direct from the postal termini at the railways.

Let the rule then be 100 pounds limit where collect or delivery service is extended, with no weight restriction where the shipment is delivered to or taken from the railway, as in the case of funerals, by the shipper. Such a regulation would protect the postal administration from unusual and therefore costly and uneconomical pick-up and delivery labors, while extending the service extensively enough to discharge the full function of providing transportation for the retail shipment of all weights and sizes direct from producer to consumer.

Assuredly the 11-pound weight limit is an unnecessary denial of a necessary privilege to the farm, where the express company can not go, and seems quite unnecessary in the towns where the wagon delivery service now is working and capable of delivering the 100-pound shipment as well as the others. A constituent writes me that she sent her son John a turkey, 10 pounds, but that the one designed for Henry was rejected because it weighed 12 pounds. Of course, the weekly market basket filled with a worth-while load must exceed the 11-pound limit in nearly all cases, and what with the irrational and economically unjustifiable parcel rates, which I will discuss later, can only have the effect of preventing the movement of farm products direct to the consumer.

A rather pathetic illustration of the occasion for relief from the weight limit and express charges is found in the shipment of corpses, a case falling exactly within the rule of no weight limit for cases of delivery to and collection from the railway termini, where both services are customarily performed by funeral agencies and not by the express companies. Their charge for this service, mere rail transportation, is twice the first-class passenger rate; that is, about 6 cents a mile, with a minimum charge of \$5 for the shortest distance. The express-railway contracts, however, provide that the railway may carry the corpse as baggage at the rate of one first-class fare, coupled with the condition another first-class fare is bought by a passenger—i. e., a friend of the deceased, who will make the journey to the destination. Obviously it costs no more in service to carry the remains by express without a coincident passenger on the train, and just as obviously it costs no less for the railway if there be such a passenger. I understand the fact that railway rates are necessarily taxes, but the double charge of the express companies is not taxation; it is a mere case of wanting the money and of taking advantage of the dearest emotions and holiest sentiment to extract it. Assuredly a merely arbitrary weight-limit restriction should not be permitted to prevent express-post relief in such cases, when the citizen is facing the most necessitous situation of his life.

THE SIZE LIMIT.

Gentlemen, with the enlargement of the weight limit would have to come some modification of the size limit; and this is a feature involving some difficulty to resolve by any single rule.

Mr. MURDOCK. In the change made by Postmaster General Burleson he increased the weight from 11 to 20 pounds. Did he do anything with the maximum physical dimensions of the package?

Mr. LEWIS of Maryland. The size limit was not changed, but the power to make the change applies equally to size limitations, and the size limits will doubtless be raised as the service expands. Plainly, the size limit of 72 inches in length and girth combined, now imposed, would work injustice to higher weights; and yet when the question is asked, what shall be the size limit for 50 or 100 pounds, no self-evident answer is vouchsafed. Obviously, there should be some relation of the rate to specially bulky shipments, to cover increased cost in space consumption and handling. The railways meet the problem by highly differential classifications, and especially by placing the "set-up" articles in a higher rate class than the "knocked-

down" article. We could not, however, well copy them, because it would lead to a complexity and confusion of rules more expensive in trouble and time consumption economically for the public than of profit to the Government.

The marine rule is to treat 40 cubic feet as equal to a ton, i. e., 50 pounds to the cubic foot, when the shipment does not weigh more; and in stage-coach days their rate formula treated the cubic foot as weighing 20 pounds, a rule that obtained railway adoption in the beginnings of railway tariffs.

The express companies have a rule of minimum weights, determined by "exterior measurement," i. e., the length, width, and height added together, when, if the shipment does not weigh more, it should be rated as weighing—

	Pounds.
Over 70 inches to 75 inches.....	30
Over 75 inches to 80 inches.....	40
Over 80 inches to 90 inches.....	50
Over 90 inches to 100 inches.....	60
Over 100 inches to 110 inches.....	70

Such a rule works out at about 3 pounds per cubic foot, and has the merit, at least, of protecting the service from exorbitant space demands until, looking forward to administrative experience, a simpler guide could be evolved sufficiently conservative of economic interests.

The 3 pounds per cubic foot formula, or 5 pounds, as I should suggest, could be graduated down to the initial cubic foot, and applied to the size of the shipment, by the simple expedient of a tape, with figures, giving the imputed weight equivalents for the different dimensions, in ordinary sizes, of the various shipments. Meanwhile, the greatest length limit, approximately 70 inches at present, would require modification; and here express practices, e. g., as to hand implements, ought to afford a reasonable guide.

PACKING AND SHIPPING REGULATIONS.

Mr. MURDOCK. What has the development of parcel post been on the rural routes of the country?

Mr. LEWIS of Maryland. The data are not yet sufficient to answer that question. Under the old rates it was very disappointing. The hope which the House had that rural products might be moved was disappointed, but the new rate ought to move that traffic.

Mr. MURDOCK. What was the development under the old rate within a given city?

Mr. LEWIS of Maryland. Per capita?

Mr. MURDOCK. As compared with parcels which moved out of one town into another.

Mr. LEWIS of Maryland. The indications were that we were carrying about two parcels per capita for the whole country. The statistics are not in such order that you can differentiate city from farm traffic.

Mr. MURDOCK. Then as the parcel post was applied to the postal system of the country under the old rates, not the new ones, the larger development was in the larger cities?

Mr. LEWIS of Maryland. Oh, yes; because high-priced manufactures, like a suit of clothes or a hat, could very well afford to pay those higher rates, while a lot of potential traffic, like butter and eggs, could not afford to pay rates of 4 or 5 cents a pound.

Gentlemen, I shall not enter into these packing and shipping methods with any particularity. The present parcel regulations for packing look mainly to the mail bag for the test of fitness. I think it well that this should be so where the character of the shipment readily permits, for the reason that the mail bag can be craned, or let off and taken on the car, while the train is in motion; but in other cases the department should adopt the rules and practices which the express companies have found necessary to let the traffic move; and I can not fancy any reason against doing so. These rules may be found in the express classifications, and have the merit of having been tested out as actually adapted to the requirements of the traffic.

MISCELLANEOUS.

Just a word of the C. O. D., of insurance, and the shipment of money. I can not take time to do more than suggest that the postal department, as an arm of the Government, with its splendid personnel, is peculiarly qualified to give an efficient, safe, and economical service by the mere extension of its present processes.

THE CLASSIFICATION.

The privileges of classification, or right of admission of the parcel to the mail, justifies the same reasoning applied to the weight limit. When the House passed its parcel post bill, which I had the honor to prepare, the classification was made to cover—

1. Fourth-class matter;
2. Farm and factory products;
3. Books; and
4. All matter shipped by express.

The Senate conferees omitted the third and fourth elements so that now books can not go at all as parcels, but must pay a flat rate of 8 cents a pound, no matter how short the journey. It is true that the exclusion of books is the most serious defect in the present classification. Yet there are doubtless many other important omissions. But the trouble does not end with the articles excluded. Some historical fourth-class articles, above 4 ounces in weight, are denied the old flat rate of a cent an ounce, and treated as a pound in weight. The effect is to withdraw a rate which was amply compensatory to the Government, and subject them to higher and discouraging rates. Members, I am sure, have all received complaints because of the disturbance of the old fourth-class rates—a disturbance which would have been avoided had not the Senate conferees stricken down the House provision that the rate should in no case exceed 12 cents a pound of actual weight.

Mr. OLDFIELD. Mr. Chairman, will the gentleman yield? Mr. LEWIS of Maryland. Certainly.

Mr. OLDFIELD. I had an experience this morning which I desire to relate. I wanted to send a book to New York. It was a small book, containing probably 200 pages. I found when I sent it to the post office in the House Office Building that they claimed they could not send the book by parcel post.

Mr. LEWIS of Maryland. How much did it weigh?

Mr. OLDFIELD. The postage upon it was 16 cents. I could not tell how much it weighed.

Mr. LEWIS of Maryland. Did it weigh over 4 pounds?

Mr. OLDFIELD. Oh, no. It was a small book. It was 6 by 9 or 8 by 10 inches and weighed probably 2 pounds.

Mr. LEWIS of Maryland. Now, the gentleman has raised a question which illustrates the utter absurdity of leaving these administrative points to a legislative body. The House did include in its bill a provision that books should be carried by parcel post. The Senate conferees had that provision stricken out. The state of affairs to-day is this, which may not be generally known to the country, but it is a fact, however, that books and all third-class matter above 4 pounds in weight are shippable by parcel post. Books below 4 pounds in weight are not now shippable by parcel post, but I may say I know the Postmaster General has under advisement a proposition to extend the service to include books; so the gentleman's difficulty, I think, will soon be removed. Above 4 pounds all articles of the third class unquestionably have the parcel-post right now. The Postal Department will not deny this.

Mr. BURKE of South Dakota. Will the gentleman yield?

Mr. LEWIS of Maryland. With pleasure.

Mr. BURKE of South Dakota. Will the gentleman state in what respect the Postmaster General has made rates or increased the weights over what the law provided? He stated, I believe, as to the compensation.

Mr. LEWIS of Maryland. The principal change made by the Postmaster General is the change of the weight limit from 11 to 20 pounds within a zone of 150 miles. The rate was 5 cents for the first and 3 cents for succeeding pounds for 50 miles and 6 cents for the first and 4 cents for succeeding pounds for 150 miles. Those two rates have been reduced to 1 cent a pound, with the charge of 5 cents for the first pound, and for local and rural delivery now a half a cent a pound and 5 cents for the first pound charge.

Mr. OLDFIELD. Will the gentleman yield for one other question? In accordance with the gentleman's answer, a man might send a book weighing 5 or 6 pounds by parcel post.

Mr. LEWIS of Maryland. Yes.

Mr. OLDFIELD. You can send that book cheaper than you can a book of 2 pounds under the ordinary rate.

Mr. LEWIS of Maryland. Absolutely so within the 150 miles. The books weighing 6 pounds would cost 10 cents. A 2-pound book costs 16 cents under the third-class privilege. Those are the incongruities that will inevitably develop when legislative attention only is given to a subject of so much detail. I wish to say I am authorized, I think, to say that the change in the rate made by the Postmaster General is not intended to represent at all a completed scheme of thought. When the extension was limited to 20 pounds and 150 miles, under the new rate, it was done merely to try out the postal machine and see what his personnel would be able to accomplish, face to face with any novelties the new situations might create, and be able to conquer them. He wished to try his machine out section by section before adopting the complete function of the parcel post, which he himself has proclaimed to be the 100-pound weight limit.

Mr. NORTON. Will the gentleman state briefly what, if any, is the reason for excluding from the parcel post books weighing less than 4 pounds?

Mr. LEWIS of Maryland. The gentleman will have to ask his Father in Heaven or the Senate conferees for an answer to that question. I can not give it to him.

Gentlemen, I suggest that the remedy to apply is that the Postmaster General change the classification for parcels by restoring the old fourth class with its rates and creating an additional parcel class to be known as "fourth class No. 2," to include parcels of—

- (a) All classes of mail, when desired.
- (b) Farm and factory products.
- (c) Matter shipped by express.

With reference to the first element (a), I wish to say that the inclusion of all classes of mail matter in the parcel privilege would work no reduction of postal revenues, even from the first class, except in a possible few cases where the application of the first-class rate is simply outrageous. It would, however, develop a line of first-class traffic for nondelivery offices that ought to prove highly profitable to the department and advantageous to the public. Let us take the case of a candidate for public office. Perhaps in half of his district the mail is sent to nondelivery offices where a drop-letter 1-cent rate obtains. If he could send his pouch of letters to that point as a parcel with 1-cent stamps on each individual letter, paying only the parcel rate on the pouch, he would use the mails in a half dozen cases where he may not do so in one at the 2-cent rate. These observations apply with even greater vigor to the commercial advertiser. Meanwhile there is no conceivable reason why the second or third classes should be debarred from the parcel service when in parcel form. The exclusion simply means less business and less revenue.

Mr. FAISON. Mr. Chairman, will the gentleman tell us why seeds for planting are not allowed to go under the parcel-post rate?

Mr. LEWIS of Maryland. The gentleman will also have to ask a higher power or the Senate conferees about that.

Mr. FAISON. What is the difference in their nature between seeds for planting and seeds for food?

Mr. LEWIS of Maryland. I have never heard it explained.

Mr. Chairman, it is submitted that every form of parcel mail should enjoy the parcel privilege, on demand, the postal revenues being amply protected by the rates imposed. The legal power to make such provision is clearly given. The statute reads:

Fourth-class matter shall embrace all other matter, including farm and factory products, not now embraced by law in either the first, second, or third classes, etc.

But—

If the Postmaster General shall find, on experience, that the classification of articles mailable * * * or other condition of mailability are such as to prevent the shipment of articles desirable * * * he is hereby authorized, subject to the consent of the Interstate Commerce Commission, to reform from time to time such classification * * * or condition (of mailability) in order to promote the service to the public, * * * etc.

Since "all other matter" not included in the first, second, or third class is now embraced within the parcel classifications, it is clear the present classification can operate "to prevent the shipment" of only such "articles" as are now included or confined within the first, second, and third classes, as to which the Postmaster General may "reform" the "classification" or "condition of mailability," "in order to promote the (parcel) service to the public."

Gentlemen, the change suggested, the restoration of the old fourth class and its rates, and the creation of a supplementary or second fourth class to which all mail parcels and express matter should, with proper exceptions, be admitted, would, I submit, end all the troubles of the post office with the people as to mailing privileges.

COLLECT AND DELIVERY.

The collect and delivery service of our postal agency extends to-day throughout more than a million miles of rural routes, serving twenty millions of our farming population, as to which no other organized transportation exists, or is at all likely to exist. The service will cost the coming year some \$40,000,000 and will continue to extend. The cheap autotruck seems ready to replace the horse and wagon, and what with this and the three or twice a week service on less fertile routes, practically every farm and country store will eventually be reached. Substantially every element of expense involved in extending the entire postal express function to nonrailway points is now being paid in the maintenance of the rural service. It is only when the carrier may have to enlarge his conveyance or shorten his trip by reason of the increased traffic and only to such extent that additional cost might be incurred, but before such line has been reached it is likely that the whole service will be rendered self-sustaining by the profits of the added traffic. These routes are now yielding less than a fifth of the

cost of service. With rates and weight limits permitting the movement of the natural traffic from farm to town and town and country store to farm it is highly probable that the service would be self-sustaining. Meanwhile the augmented traffic must at least reduce the deficit in proportion to its own increase.

Besides the rural collection and delivery there is the well-known carrier service in the towns and cities. This is now supplemented by the parcel-post wagons, which are restricted now to the delivery of the 11-pound parcel, but which could handle it up to 100 pounds as well. Here no new organization would be required, but simply such added conveyances as traffic developments would justify. Congress has authorized experiments in mail delivery in towns of 1,000 population; and, in fact, it may be stated that the postal agency is now organized nearly completely for the most extensive collect-and-delivery service. The express companies give this service to towns of about 5,000 population and up, while the railways do not give it at all, except in a few eastern cities. What is obviously required is a service as extensive as the postal system, and for this, especially in the matter of rural delivery, we can look only to the postal organization.

Mr. KELLY of Pennsylvania. Will the gentleman yield?

Mr. LEWIS of Maryland. Certainly.

Mr. KELLY of Pennsylvania. Regarding the method of procedure in purchasing and sending packages by parcel post, is not it an awkward system, and should not there be a better one of getting the purchaser and shipper in communication?

Mr. LEWIS of Maryland. If the gentleman refers to the failure of the Post Office Department to adequately collect the parcels, I agree with him; but when it comes to it it will do the collecting service, as it does the other, in the most efficient way in the world. [Applause.]

Gentlemen, coming to the matter of the costs of collection and delivery, I have collected together the obtainable experience throwing light upon the subject; and for the purpose of clarity I now insert a table giving progressively the cost lines indicated by these experiences for shipments from one-fifth of an ounce up to a ton in weight:

Collection and delivery costs. [Collated from various experiences.]		Cents.
Per letter.....	-----	1.2
4-pound parcel (postal cost).....	-----	2.1
4-pound parcel, Chicago delivery.....	-----	2.7
Up to 11 pounds, Merchants' Transfer & Storage Co.....	-----	5.0
Average New York merchants' delivery, all weights, no limit.....	-----	5.0
Massachusetts Institute of Technology, parcel delivery, no weight limit, all weights.....	-----	5.0
33 pounds average express company shipments.....	-----	7.0
67 pounds, Connecticut Express Co.....	-----	11.6
Average Baltimore & Ohio Ry. delivery: 100 pounds.....	-----	10.0
500 pounds.....	-----	50.0
Furniture delivery, all weights, Massachusetts Institute of Technology.....	-----	35.0
Ton of coal, Massachusetts Institute of Technology.....	-----	71.0

RATES OF POSTAL RAILWAY COMPENSATION.

Mr. Chairman, having discussed the costs of postal handling of parcels, I come now to the next element of expense involved in the postal shipment—that is, railway compensation for its part of the service. I shall not go into the merits of the rate of postal pay to railways at this time beyond a brief description of existing conditions.

Mr. HELGESEN. I presume that the attention of all of us has been called by the railroad people to the statement that they are not treated fairly under this parcel post—that they are carrying the parcel post under the weighing of four or five years ago, which is only 5 per cent. When you speak of the actual cost to the Government, what is your basis for railway carrying charges?

Mr. LEWIS of Maryland. The basis is the regular rate of railway pay paid the railways in 1912, before parcel post began. It is true they are not being actually paid for much of this new traffic, but I have no doubt, pending a final determination of the rate of railway pay for postal-express matter, the Postmaster General will find a way to right this delinquency.

Mr. STEENERSON. The gentleman has stated that under the law railroad companies are only receiving 5 per cent additional for the increased traffic involved in the parcel post, and he has further stated that the increase in pounds of the postal business by reason of the parcel post is very much more than that 5 per cent; and, as I understood him, the railroads would be entitled to more pay. And he further stated—

Mr. LEWIS of Maryland. I hope the gentleman will be considerate. I have just a moment left.

Mr. STEENERSON. I know, but we will get an extension of the gentleman's time. This is very important. The gentleman further stated that he thought the extra revenue from the

parcel post would be about \$7,000,000 to \$10,000,000. Now, the railroad companies claim they have lost about \$30,000,000 by reason of losing the traffic from the express companies. If you compensate the railroad companies for what they say they have lost beyond the 5 per cent, how much will you have left of the \$7,000,000 extra received from the sale of parcel-postage stamps?

Mr. LEWIS of Maryland. I can not go fully into that subject. The claim of the railroad companies may be correct, and yet the inference the gentleman draws is entirely incorrect. While the post pays the railways 8 cents a ton-mile and the express companies average but 7 cents a ton-mile, the post pays it as a broad average, without distinction as to the particular weight of the parcel. It is different with the express companies. They do not pay according to weight, but pay one-half the rate, which works out as follows:

Table showing rates of compensation per ton-mile paid the railways by the express companies on the contractual average bases of 47.5 per cent of the express "merchandise" rates, according to weight of package and distance carried.

Miles.	5 pounds.	10 pounds.	20 pounds.	30 pounds.	40 pounds.	50 pounds.	60 pounds.	70 pounds.	80 pounds.	90 pounds.	100 pounds.
36.....	\$1.42	\$0.86	\$0.42	\$0.36	\$0.29	\$0.25	\$0.23	\$0.20	\$0.18	\$0.16	\$0.14

2,500.....	.06	.05	.05	.05	.04	.04	.04	.04	.04	.04	.04
3,130.....	.05	.05	.04	.04	.04	.04	.04	.04	.04	.04	.04
3,652.....	.04	.04	.04	.04	.04	.04	.04	.04	.04	.04	.04

Down to the line drawn diagonally across the table the express railway pay on merchandise packages exceeds the amount which the Government would have to pay under present postal railway compensation laws. Below the line, a parcels traffic being added, the Government would have to pay 8 cents a ton-mile, and the express companies' as much less as the figures in the table indicate.

From this it can be seen that although we should be paying a normal rate, yet in confining our traffic to 11 pounds we are taking from the express companies what pays the railways rates as high as a dollar a ton-mile and leaving the low-priced traffic. Thus a 5-pound package by post from Washington to Baltimore would pay the railway just 8 mills, while by express the railway would get 12 cents out of the 25-cent charge. The obvious permanent remedy for the railway is to dispense with the express company, when all express matter would go by post, and the railway receive an equal rate of 8 cents a ton-mile from all the postal express traffic, instead of the 3 and 4 cents it is getting now on the larger weights and longer distances from the express companies. If the railways would cooperate with the Postmaster General for the attainment of this object they would be promoting alike their own and the public interests. I know of no other remedy for their situation, for even when the mails are reweighed they must still lose heavily if the post is to do only the small-package and short-journey and the express company the heavy-package and long-journey business. They would be, as now, getting only the thin end of the stick from the divided business.

Nobody seems to be satisfied with the present amount or method of railway payment, and this is necessarily true; perhaps not so much because the railways are overpaid or underpaid in the aggregate as, unfortunately, because there exists no formula or standard for determining just what is the right rate of compensation. It is not a difficulty peculiar to postal railway rates, but results from the circumstance common to all railway rates, namely, that the expenses of a particular railway service can not be allocated to such service with enough precision to determine its real cost. Under these circumstances a conflict of opinion is unavoidable and only general comparisons can be employed.

EXPRESS-POST RAILWAY PAY.

Gentlemen, in the 10 countries reporting express statistics the ratio of the express to the freight charge has been shown to be about 5 (5.23) to 1; and in those countries the railway performs

the whole and not merely the locomotive part of the service. In the United States the railways receive as a whole for the locomotive act alone nearly eight (7.80) times their charge for the average freight shipment; or, stated in the concrete, the railway receives \$1.90 and \$14.82 for the average ton of freight and express matter, respectively. In the other 10 countries the like average charges are, by freight, per ton, \$0.87, and by total express rate, \$4.37. In the absence of a satisfactory cost standard, these comparisons indicate that our railways receive nearly twice what they should for their part of the express service. But domestic conditions may differ enough to measurably impair this reasoning. However, the census of 1890 shows the express traffic to have been 1,646,273 tons, while that of 1909 was 4,248,355 tons, with railway pay of \$19,327,280 and \$64,032,126, respectively, representing an increase in the rate of express railway pay of 26 per cent. During the same period the average freight charge declined about 5 per cent per ton-journey, and the passenger rate per mile declined 6 per cent. Meanwhile the freight traffic increased in volume 32 per cent more than the express traffic and the passenger mileage quite as much, clearly indicating the inhibitory effect of increased rates upon the potential traffic, an effect as unfavorable to gross railway revenues as to express commerce.

On the assumption of a 200-mile haul, the freight haul being over 250 miles, the railways received for hauling express matter in 1890 about 6 (5.87) cents per ton-mile, and 7 cents for the same service in 1909. The Interstate Commerce Commission has ordered reductions in express rates which the express companies say equal 25.6 per cent, but which the commission estimates at 17.5 per cent. Taking the commission's estimate as correct, the effect on the amount paid by the express companies (47.53 per cent of express revenues), the railway ton-mile rate of pay would be reduced from 7 cents to 5.77, or about the rate paid them in 1890. The diversion of the very small shipment to the parcel post would likely further reduce this ton-mile rate to 5 cents.

The joint effect of these comparisons would suggest that, waiting the time when cost determination can be applied to postal railway pay, a rate of 5 cents a ton-mile, excluding the weight of equipment, would not be unjust to the railways as an aggregate payment; while such a rate in connection with postal-service economics would permit the making of postal express rates with concessions to the mobility of the potential traffic that would save three-fourths of it, now penalized out of transportation commerce by prohibitive express tariffs. It may be confidently asserted that the railway would not suffer by such a change in its rate of pay, for it would convert from five to fifteen millions of tons of relatively lower-priced freight traffic into the postal, the highest-paying railway freight, with little added cost of plant or locomotion.

Gentlemen, the ton-mile standard is the ideal one for Government purposes. Its parcel-express rates are all predicated on weight and distance; and if it is to know how much to load such rates to pay the railways for their service, such service must be measured in terms of weight and distance. If this standard should be replaced by a car-space standard alone, it would require years to learn the conversion values or convertible ratios of parcel weights with parcel-space consumption. Meanwhile, the loading for railway pay, without definite standards, must either be too high or too low, with attendant effects disastrous to either the potential traffic or the Treasury; but this weight-distance standard, so ideal for the Government, is quite as unideal for the railways. If paid only by the weight and distance carried, the railway company having a line of full-car traffic would receive two or three times the compensation for moving its car a mile as would the small railway company moving a car one-half or one-third full. And yet it is obvious that the expensiveness of the services to both railways would be substantially the same. What a railway company does in the mail, express, or passenger service is to move the car; and whether it is empty or partly empty or loaded slightly affects the expense of movement. We have thus two contradictory interests here in the matter of standards or units of service. What is absolutely necessary to the Government in its rate making, the weight-distance unit of pay, would mulct the small railways with half or one-third pay; while the car-mile standard, the only measure of costliness of railway service, would be quite impracticable for postal-express or parcel purposes.

Now, with all modesty on a subject so inherently difficult, I make this suggestion as a solution. Let us apply both standards—the ton-mile unit to make certain the amount the Government shall pay the railways, and so intelligently load its rates for parcel service to the public, and the car-foot mile unit, to effect a just relative distribution of the fund thus derived

among the railways according to the amount of car-foot mileage service rendered by each. The details of this proposal, briefly, are these:

(a) The postal department would make notations of the weight and zone findings for each parcel, which occur in determining the rates to be charged the shipper. The gross weights of such parcels, in each zone, when multiplied by the average mile journey of the respective zones would, by a simple computation, give the total ton mileage of parcel matter receiving railway transportation. Let this ton mileage be multiplied by the rate to be paid per ton-mile, say, 5 cents, and the gross sum due the railways as a whole is obtained.

(b) The total sum thus payable to the railways would then be divided by the total number of car-foot miles of car movement performed by the railways as a whole, which would give the common car-foot rate payable, when each railway company would be paid this rate for the car-foot mileage service performed by it, under orders from the Post Office Department. Now, the postal car mileage is a matter of easy ascertainment and record for any railway—while the weight-distance parcels statistics, in the larger offices at least, can be automatically recorded in the act of weighing, and elsewhere by pencil notation, as now, upon blanks having columns for the several zones. These latter data are necessary in postal administration for other important purposes, and can be obtained with practically no expense. I am informed that the present Auditor for the Postal Department, Mr. Kram, has perfected an invention by which these notations may be carded by the local postmaster, and thus totaled by machine.

LETTER RAILWAY PAY.

It is obvious that more than one rate of pay will be necessary to fit the widely different services rendered by the railways in the carriage of letter as distinguished from express matter. No single rate could be just to both lines of traffic. Stated in terms of ton-miles, the letter mail would tend to consume much greater car space than that consumed for the like weight of express matter. Anyone who suggests but one rate of railway pay for these differing services must have neglected to give sufficient time to the problem to understand its conditions.

Now, it is suggested that for the carriage of the ordinary mails—that is, other than express matter—the same methods above proposed might be employed, with a change in the amount of the rates, and in two or three of the incidents to meet the circumstance that the weight-distance journey of each letter and paper could not be economically ascertained, and that the rate of railway pay ought to be higher per pound for such matter. The total weight of the railway-moving mails, including equipment, was ascertained to be 887,278 tons for 1908. Postal receipts increased 28.34 per cent in 1912 over 1908. This would indicate the total weight of mail and equipment for 1912 to be 1,138,692 tons, which, divided into the gross railway pay for 1912, gives a rate of \$43.65 per ton, or on the experience of the average mail journey in 1908 (620 miles), 8 (8.12) cents a ton-mile. Assuming that this rate be continued—I do not here discuss its justice—all nonparcel or express mail during the weighing period would be pouched in bags by itself and weighed at the post office before going to the railway. These weights totaled into tons for the country would give the gross amount of service rendered, and multiplied by the ton-rate agreed to be paid the railways, say, \$43.65 per ton, as now, would give the total fund payable to the railways for this branch of the service, which should be, then, distributed among the railways according to the car-foot-mile basis employed for the payment of express transportation.

We should thus have a rate of 5 cents a ton-mile for postal express matter, excluding the weight of equipment, and of 8 cents a ton-mile for the other mails, equipment weight included. These bases of compensation and methods of distribution having been legislatively established, I should provide that either the Postmaster General or the railways should have access to the Interstate Commerce Commission to make any changes necessary to move the potential traffic, or to meet future contingencies in railway operating costs. In consideration of the lowered rate proposed for express-post railway pay, the burden of delivering the mails from the depot to the post office should be shifted from the railway to the local postmaster. This general plan would have signal advantages for all the interests concerned. For the Government it would save the great expense of the railway weighings and provide it with simple standards for determining its obligations to the railways. For the shipping public, through reduced postal express rates, it would provide a means by which the potential traffic in life's necessities could be moved direct from producer to consumer, and lower our aggravated price levels. And for the railways it offers the great ad-

vantages of distributing postal transportation compensation equitably between them, of paying them for the actual weights carried rather than the outdated weighings, while assuredly doubling and probably quadrupling the volume of their highest-priced traffic.

Gentlemen, this problem must be settled, and should be considered with a view to the interests of all concerned. I submit the plan just outlined as an earnest proposal to reconcile all the interests involved.

PRESENT PARCEL RAILWAY COMPENSATION.

The preceding discussion has been a diversion into a question of prospective legislation. But parcel-post development need not and surely should not await its uncertain contingencies. Gentlemen, the present cost of postal transportation by rail, stated in terms of weight and distance, or ton-mile units, is sufficiently known and definite to enable the postal authorities to ascertain the necessary loading of parcel rates for transportation pay.

Mr. HAUGEN. Mr. Chairman, I would like to ask the gentleman how he ascertains the cost of carrying the mails by the railways.

Mr. LEWIS of Maryland. That is ascertained, I will say, by the weighings of the mails. The mails are weighed every fourth year. Not only is the weight of the mail taken, but the distance it traverses. The mail traffic is therefore convertible into ton-miles, and the ton-miles being divided into the total amount of money paid the railroads, gives you the ton-mile rate which I have quoted.

Mr. HAUGEN. Yes, exactly; the average cost per pound being 4 cents a pound. I was curious to know who had made this calculation and who had ascertained the annual cost of carrying the mail matter.

Mr. LEWIS of Maryland. The figure the gentleman quotes of 4.06 cents per pound covers the average journey of 620 miles, and excludes the weight of equipment. If the equipment be included, the figure is 2.49 cents per pound.

Mr. HAUGEN. Well, I would like to have the gentleman answer the question as to who ascertained the facts.

Mr. LEWIS of Maryland. The postal authorities ascertained the facts in the following manner: The ton-mileage was officially determined in 1908 (486,130,773 ton-miles), and adding to it the increase of 28.34 per cent indicated by the postal revenues for 1912, and dividing the increased ton-mileage (622,783,951) into the total railway pay for the latter year (\$50,703,323), we should have 8 (8.12) cents a ton-mile as the necessary loading for transportation. However, under the present law the pay declines as follows:

Table showing compensation for carrying mails, excluding car-space compensation.

	Annual compensation per mile of line.	Equaling a rate per ton-mile of—
For daily weight of (pounds)—		
211.....	\$42.75	\$1.13
499.....	63.27	.70
999.....	84.64	.475
1,999.....	127.39	.36
3,000.....	141.93	.26
4,000.....	156.46	.217
4,999.....	170.14	.189
6,000.....	180.74	.167
7,040.....	191.30	.15
8,000.....	201.05	.14
9,000.....	210.80	.13
10,000.....	221.35	.123
11,000.....	231.10	.117
20,000.....	322.45	.09
30,000.....	423.95	.078
40,000.....	525.45	.073
48,000.....	606.67	.07
60,000.....	722.11	.067
100,000.....	1,106.91	.06
200,000.....	2,068.91	.057
300,000.....	3,030.91	.056
400,000.....	3,992.91	.055
500,000.....	4,958.91	.054

In reducing these rates of compensation to a ton-mile basis I have adopted 360 days as constituting the average number of days for all railway routes upon which the mails were hauled, as on some of the lines of small traffic no Sunday service obtains. In practice this scale, with car-space pay added, works out a ton-mile rate of 7 (6.97) cents on routes of 25 tons traffic per day, and of 6½ (6.42) cents on routes of 236 tons daily traffic, as in the instances of the Charlotte to Atlanta and New York to Philadelphia routes. The average for all

routes in 1912 was 8.12 cents per ton-mile. I believe it is beyond doubt that a great increase in weight of the mails, as the addition of express matter, would reduce gross railway pay to an average of less than 7 cents a ton-mile for mail and equipment weights—so that parcel rates loaded for railway pay at the rate of 8 cents a ton-mile, or its equivalent, a cent per pound for each 250 miles of journey, would provide a margin sufficient to cover the weight of the parcel equipment and an element of profit besides. The equipment constitutes about 20 per cent of the ordinary letter and paper mail, railway weights. It is judged that it would not be more than 7 per cent of the express mail, leaving at the loading proposed about 7 per cent of the railway pay loading as a margin of profit.

The postal regulations make ample provision for such train and terminal service as may be needed.

Mr. MURDOCK. Mr. Chairman, I would like to ask the gentleman this: Does his table, which he is to print in the Record, giving the cost accounts of the parcel system, include the increase in the amount of space it will take to take care of the parcel post? I ask that for this reason: Recently I was in the post offices at New York and Boston. I saw that the parcel post had called for one thing that I do not think the House foresaw when the bill was under consideration, and that is an immense amount of room for the handling of parcels. Parcels can be handled with facility only by keeping them separate. That is, you can not pile a great lot of them together and handle them with facility; you must keep them separate, so that all addresses are visible. Does the gentleman take that into account in his table, because it seems to be of major importance?

Mr. LEWIS of Maryland. The cost elements to be stated include the railway post-office pay, as well as the ton-mile pay, and to the extent that space pay is involved in railway post offices, which is about 10 per cent of the total pay, that factor is included.

Mr. MURDOCK. Does the gentleman take into consideration the space at the terminals, which seems to be an important matter?

Mr. LEWIS of Maryland. Yes. It takes into consideration all of the elements of postal expense. It is not based upon a suggestion of the mere additional expense, but upon the facts as to the entire economic expense involved in the service.

Mr. Chairman, the postal regulations make ample provision for such train and terminal service as may be needed. Section 1186 of the regulations reads:

The specific requirements of the service as to due frequency and speed, space required on trains or at stations, fixtures, furniture, etc., will at all times be determined by the Post Office Department, etc.

The postal laws compensate the railways for the "transportation" of the mails. The act to regulate commerce defines the word "transportation" to include—

all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, and handling of property transported.

With the passing suggestion that this clause invalidates the exclusiveness of all contractual express rights to railway facilities, whether on the train or in the railway terminals, I stop to say that postal and railway practice has given to the word "transportation" the same meaning as given it by the interstate-commerce act.

THE PROPOSED RATE.

Gentlemen, starting with the fact that there are two elements of expense, the transportation pay and the postal handling, to be covered by the loadings for the parcel rate, we have adduced the amounts of these elements and found them to be (a) for transportation by rail, 8 cents a ton-mile; (b) for postal handling, collect and delivery, and so forth, less than 2 cents for the first pound, running to 15 cents for 100 pounds.

Of course the loadings for postal handling must be treated as the same for all distances, since the slight variances in actual costs are negligible and incapable of computation. But the loading for railway transportation, 1 cent per pound per 250 miles, is a mathematically constant factor, progressing arithmetically with the distance of the parcel journey.

And now, having gathered our facts together and analyzed them, let us organize them into rates for the respective weights to be carried and distances to be covered. In a preceding table the experiences in costs of collection and delivery were given. To these expense elements I now add the cost of railway pay, giving the total costs of the service for the weights, stated within a zone of 100 miles. There is added a column showing the proposed rates and another giving the margin of profit contained in the proposed rates above the total cost of the service.

Table showing costs (in cents) of service and proposed rates for the first zone of 100 miles.

Weight.	Cost of handling (experience).	Railway pay (1 cent per pound for 250 miles).	Total cost of service.	Proposed rate.	Margin of profit.
1.....	¹ 0.017	0.002	0.019	0.03	0.011

90.....	² (.14)	.18	.32	.48	.16
100.....	² (.15)	.20	.35	.53	.18

¹ Economic postal costs.

² Figures in parentheses are estimates of economic cost.

³ Out of pocket expense costs of private companies.

To get the rate for longer distances add one-half cent per pound for each additional zone of 100 miles, and to ascertain the cost of such added service add 4 mills per pound for each 100 miles to cover railway transportation (the only extra service), which equals 1 cent per pound for each 250 miles of journey.

It will be observed that the additional rate for each successive 100-mile zone, one-half cent per pound, is 20 per cent greater than the added cost, four-tenths of a cent, for transportation. But since postal distances are direct lines and mail-rail distances are computed on the usual roundabout routes of the railways, 10 per cent of the excess rate will likely be consumed in covering the distance lost through the indirection in rail routes. This would leave some 10 per cent margin of profit for each additional 100-mile zone besides the margin of profit contained in the first zone. In practice the average journey of the shipment will fall halfway between the termini of the zone to which consigned. Thus in the first zone of 100 miles the average journey will be 50 miles; in the second zone of 200 miles the journey will average 150 miles, and so on for each additional zone. In like manner the actual weights will fall below those charged by a half pound in each shipment except the first. Two pounds will average but 1½ pounds, 3 pounds but 2½ pounds, and so on for each weight with the pound unit, giving another small but constant margin of profit out of the loading for railway pay.

We have in these cost elements, then, the bases for a formula giving the rates for all weights and distances. Succinctly stated, it is:

(a) Three cents for the first pound and a half cent for each additional pound in the first zone.

(b) Plus one-half cent per pound for each subsequent zone of 100 miles.

This formula contains indicated margins of profit in each rate of 25 per cent and upward.

Gentlemen, this rate and zone system commends itself not alone because of its comparative simplicity, although it is the simplest in the world, but rather because, taking full cognizance of the cost of service, it fully covers all its elements and leaves a substantial profit margin besides. But its recommendation does not stop with these virtues. It gives actual relief to all shippers from the abnormal express charges now prevalent and, from almost equally abnormal law-made parcel-post rates. And here I shall introduce a table giving the rates proposed in comparison with the rates of the express companies and the present parcel-post rates for distances of 100 to 1,000 miles, embracing an area within which 85 per cent of the parcel traffic now takes place.

Comparison of rates proposed with present parcel rates and rates by express.

Gentlemen, before continuing further with the above table, it may be well to notice its comparative significance. In the third, fourth, and fifth zones, embracing altogether 500 miles of distance, the present parcel-post rates are about two and one-half, and the express rates three and one-third, times as high as the rates proposed, as deduced from a cost study of the subject. It is not difficult to understand how rates three times as high as the cost of service have failed to permit the movement from producer to consumer of the necessities of life, saying nothing of the restrictive influence of the weight limit of the parcel post. The first zones, equaling 500 miles, have been selected to illustrate the preventive and destructive effect of these rates, because it is within such an area that the potential traffic mainly lies.

And now, resuming the rate comparison, let us see the relation of the proposed rates to the averaged express rates of the country for weights from 20 up to 100 pounds.

Comparative table of average express rates and proposed parcel-post rates.

Pounds.	First zone, 100 miles.	Second zone, 200 miles.	Third zone, 300 miles.	Fourth zone, 400 miles.	Fifth zone, 500 miles.	Sixth zone, 600 miles.	Seventh zone, 700 miles.	Eighth zone, 800 miles.	Ninth zone, 900 miles.	Tenth zone, 1,000 miles.

For a clearer elucidation of the above comparisons between the express rates, the present parcel post, and the rates pro-

posed, I now insert chart B, the upper line representing the express, the middle representing the present parcel post, and the lower line the rate indicated by the costs of service, embracing the expenses of railway pay, postal handling, and collection and delivery. Since the chart was prepared the rates up to 150 miles have been reduced from 4 and 3 cents to 1 cent a pound. (See p. 4170.)

It may be instructive to see how the rates feasible here compare with foreign parcel rates on the different weights. The comparison can only be made between the first zones of each of the countries, because of their varying sizes. This is, in the main, a fair method of comparison, for other postal rates are as low here as abroad, while postal costs are generally lower here per mail piece handled.

Table comparing first-zone rates of various countries with first-zone costs and rates proposed for United States.

¹ These countries do not graduate the parcel rates below 11 pounds, but charge the 11-pound rate for lower weights.

² The first zone in Austria, Germany, and Hungary covers a distance of 46 miles.

³ The Belgian and Luxemburg rates cover any distance; and so the Swiss up to 44 pounds; beyond 44 pounds the rates given are for 62 miles, a half a cent a pound being added for each additional 62 miles.

⁴ The Luxemburg rates are subject to an additional charge for delivery of about 2 cents for weights up to 50 pounds and of 4 cents up to 110 pounds.

Mr. Chairman, attention is invited to the comparisons of average European rates for the different weights with the indicated costs of service for the same in the United States, and then with the rates proposed. At no point does the cost of service exceed 75 per cent of the proposed rate, while on 100 pounds the cost of service is indicated as but 65 per cent of the rate. While the proposed rate is the mere result of a formula seeking to obtain a general rule expressing the closest approximation to the costs of service, it is interesting to observe that its application to the first zone results in the same coincidence with European parcel rates that our letter rates show. Comparisons can not be made for subsequent zones, because of their variety and dissimilarity. This is not of serious moment, however, because increasing distances involve only the element of railway pay, which we have seen is constant in effect at 8 cents a ton-mile, or 1 cent per pound for 250 miles. The foreign zones do show an increase of the rate, however, for increasing distances of about a half cent per 100 miles per pound. There is, however, a circumstance in the parcel-weight rate minimum of some of the countries—Belgium, Austria, Hungary, and Germany—which calls for special remark. These countries have failed to graduate the rate for weights below 11 pounds. This is a very serious omission, because of its deterring effect upon the potential traffic in the smaller weights, as is shown in a comparison of the Swiss and German parcel traffic. The Swiss graduate their rate down to 3 cents for the first pound, and under their rates eight (7.97) parcels per capita moved the last year. Germany fails to graduate below 6 cents for 11 pounds, and but four (3.91) parcels per capita moved there. In Great Britain, where the minimum rate is 6 cents and the weight limit but 11 pounds, less than three (2.64) parcels moved.

The legislative dabbler in rate making was of course thinking of the Treasury in making these minima. It is optically visible. Unfortunately the potential traffic has not been optically visible to him or the express company in the United States, and so this great public service is now denied us, and has been denied us for generations.

THE POSTMASTER GENERAL'S ORDER.

Mr. Chairman, we have seen that there are two main factors in instituting a parcel-post rate. One of those factors is what it is going to cost us to pay the railway for carrying the matter, and on the longer distance and heavier weights that fac-

Chart "B"

CHART SHOWING AVERAGE EXPRESS RATES AND THE PRESENT PARCEL POST RATES ON A 10-POUND PACKAGE, FOR ALL DISTANCES UP TO 3,700 MILES, AS COMPARED WITH THE INDICATED COST OF PARCEL POST SERVICE ON PRESENT RATE OF POSTAL RAILWAY PAY.

tor will be almost the entire element of expense. Now that is a fact which is well understood by students of the subject. The average cost of paying our railways, including the weight of equipment, for carriage of the mails in 1912, is ascertained to be 8.12 or 8 cents per ton a mile. Eight cents a ton a mile would mean a cent a pound for every 250 miles the pound is carried.

Very well, the next element; what will that cost? We come back to the mail piece and we ascertain that the average piece in 1912 cost about 1½ cents. About 22 per cent was for railway, so we have 1.12 cents as the cost of handling a letter.

Now a letter represents the same processes of attention and of postal handling that a parcel does except one very material one. That process is the act of delivering it to the addressee. Experience shows that when the parcel exceeds 2 pounds in weight it is necessary to employ a wagon at the delivery offices of the country, and experience also shows in the most definite fashion that the cost of special delivery by wagon or vehicle of these parcels above the 2 pounds has been 4.14, or 4 cents per parcel, as will appear in an appendix of such experience I am adding to my remarks. The Postal Department has reported to the parcel-post commission, of which I am a member, that the cost of postal handling per parcel for all the new traffic was just \$0.0153, or a cent and a half per parcel of all weights, excluding railway pay. Thus we have the cost of postal handling plus the cost of delivery well ascertained and we therefore only have to add these two cost items together in order to constitute our rates.

Now, let us apply these elements to what the Postmaster General and his parcel-post committee have so wisely done, in my opinion. They were slightly referred to here the other day as inferior to corner-grocery clerks. I wish here to say of that committee that in the year of its experience with this subject it has displayed more and better knowledge of express economics than the express companies have ever shown. The Postmaster General found an ensemble of legislatively made rates. For example, a charge of 6 cents on the first pound for 150 miles, plus 4 cents on each additional pound. I want to say to the House, with all the sense of responsibility I should feel, that this rate was more scandalous than the express rates. Four cents a pound literally represents five times the cost of service for that 150-mile journey, for, when you come to think of it, 150 miles represents the extreme exterior to which a shipment can go. On the average it will go just halfway from the point of origin to the point of extreme distance, or not more than 100 miles, considering roundabout distances. In short, its tendency will be to travel about 100 miles, and so you have a charge for transportation of certainly not over 8 cents for 20 pounds for a journey of 150 miles.

Put these two factors together.

For a 20-pound parcel you would have to charge 8 cents for the railway and not more than 6 cents pay for postal handling. That is 14 cents. As the parcel-post charge on 20-pound parcel within 150-mile zone is 24 cents, it is certain that we stand to make from 8 to 10 cents on the average 20-pound parcel to be shipped under the Postmaster General's order.

And yet in that case he has reduced the rates from 46 cents to 15 cents on 11 pounds, and from 82 cents to 24 cents on 20 pounds, and is giving the public a service that it is true has been granted in nearly all other countries of the world, but which would not have been granted in this country had not this body had the wisdom to insert in the bill the provision giving Postmaster General Burleson the administrative power he has so wisely exercised for the public good. [Applause.]

Mr. TAYLOR of Colorado. Does the gentleman have any information of whether it is in contemplation to extend this zone or allow this service to apply to other zones in the near future?

Mr. LEWIS of Maryland. I only have the information, for discussion here, which the Postmaster General has given the country. It is that he means, and the chairman of the Interstate Commerce Committee joined with him in the statement, to carry it forward to 100 pounds, as experience warrants the extension—

Mr. TAYLOR of Colorado. And have it extend all over the United States?

Mr. LEWIS of Maryland. Surely. The rate now, for example, in the next zone, 300 miles, is 5 cents a pound. Now, that is three times the cost of service; and let no one deceive himself with the idea that the Treasury is getting the profits of such an excessive and abnormal rate. The Treasury is not getting the rate at all. The excessive rate is simply killing that traffic.

Mr. HELGESEN. Will the gentleman yield?

Mr. LEWIS of Maryland. Yes.

Mr. HELGESEN. After doing away with the parcel-post stamp, has the department any system by which they can keep

track of the expenditures of the parcel post—that is, what the parcel post costs?

Mr. LEWIS of Maryland. Yes; and they do it accurately by postal methods. The stamp was valueless, because it did not distinguish between the fourth-class revenue which was new and that which was old. It threw no light upon the distance or the size of the shipment or anything of the kind. It did not show the parcel revenue and threw no light on the expense. The stamp was another illustration of legislative impotency when it endeavors to encompass administrative details.

Mr. Chairman, we have taken from the express companies in our parcel-post service about 50,000,000 shipments below 11 pounds in weight, and about 10 per cent of their revenues, judged by former years. But we are actually carrying 150,000,000 shipments, not merely the 50,000,000 taken from the express service; all of which goes to prove the original statement that the express rates were prohibitive. Two-thirds of the potential traffic was being killed by their rates. So it is in this 300-mile zone, with a charge of 5 cents per pound; the shipper simply desists from shipping in, perhaps, two cases out of three, if not even more. And a rational rate means revenue to the Treasury, when it is moving the potential traffic. There is a point at which the rate can be such as to yield 10 to 20 per cent profit, say, to the agency, and at the same time move the potential traffic. And the Postmaster General has found it for the 150-mile service—

Mr. BURKE of South Dakota. Can the gentleman tell us whether or not the operation of the parcel post has yet had any effect in delaying the movement of trains by reason of the increased quantity of mail and packages that move as parcel post?

Mr. LEWIS of Maryland. I am not able to answer that question, but I am able to answer one I esteem of greater importance: Has the parcel post paid? It has paid, and paid handsomely. We shall assuredly have a surplus of from seven to ten million dollars at the end of the year, due to the introduction of the parcel post, a continuing surplus for the future.

Mr. AUSTIN. Mr. Chairman, in that connection, will the gentleman tell us how many parcel-post packages have been handled by the Government, and how much the sale of stamps has amounted to?

Mr. LEWIS of Maryland. The indications are that we shall handle some 200,000,000 shipments this year. This is about 2 per capita, which is only about one-half the number handled in Germany and only about one-fourth the number handled in Switzerland.

Mr. AUSTIN. Now, will the gentleman give us the revenue from that?

Mr. LEWIS of Maryland. The revenue for six months was \$14,000,000, of which \$8,000,000 was from parcel post and \$6,000,000 from the old fourth-class mail.

Mr. HAUGEN. Will the gentleman yield?

Mr. LEWIS of Maryland. I will yield for a simple question.

Mr. HAUGEN. The surplus that the gentleman has referred to is due to the fact, is it not, that the railroad companies have not been paid in full; the postmasters and carriers have not been paid for the services that they have performed?

Mr. LEWIS of Maryland. Assuredly not. The express companies of this country earned 2 cents per shipment on 33 pounds last year. The Government is earning from 2 cents on the pound shipment to 40 cents profit on the 11-pound shipment in the 300-mile zone, where it gets this extortionate 57-cent rate. It is killing potential traffic in other directions, however, and would make more profit by having a reasonable rate.

Mr. HINEBAUGH. Mr. Chairman, as I understood the gentleman, he said we said we had too many merchants, too many distributors. I would like to ask the gentleman if he believes that the extension of the parcel post will have an effect on the country merchant; and if so, what effect it will have?

Mr. LEWIS of Maryland. I am glad the gentleman asked that question. There are two kinds of commercial processes. The kind I described were those roundabout processes between the farm and the kitchen which seemed to me to be unnecessary, because farm products are standardized, are retail in form, and might go direct. There are many other commercial processes which require the services of the retail dealer, and especially the country store. Articles that are not standardized can not safely become the subjects of sale between strangers at a distance, and articles produced in wholesale forms require the services, too, of the home retailer, whom we trust for his integrity and knowledge of the relative value of the article. It is here that the retailer plays a most useful part, and especially the country retailer, whom I have found to sell more cheaply than the city store.

I ask the gentleman to follow me in this analysis of the country store. I have gained the facts from experience itself.

The country store is frequently a crossroads store. Often there is competition, too. That country store serves a community, let us say, of three or four hundred persons scattered within an available distance around it. Now, those three or four hundred persons have the same number of needs and probably the same kind of needs that 300,000 people have in the city of Washington. If the country storekeeper were to keep in stock sufficient goods to meet the needs of these 300 farmers around him he would have to carry a stock of at least \$100,000. Obviously he could not carry such a stock. He could not pay insurance. The community could not sustain the interest and other charges. What happens? The House will pardon me for the simplicity of the illustration I am going to employ. David gets the notion that he will propose to Mary, on the adjoining farm. He wants to trim up for the purpose, and he goes to the country store to get a natty hat or pair of shoes. They are not there. The merchant can not carry so varied a stock as the haberdasher. What happens? David loses a day to go to the nearest town or city and the country store loses the transaction in the hat and pair of shoes. But if he had transportation for this retail shipment—the pair of shoes and hat would weigh not more than 4 pounds, would cost just 8 cents for postal transport—the local merchant would save the transaction by taking the size of David's head and foot and writing or telephoning to his supply house to send the shoes and hat direct to his patron. The patron would save his day's work and the country merchant would save his transaction. Indeed the country merchant—I am talking about the real country merchant—could thus couple up with a million-dollar stock, perhaps a day or two late and 40 or 50 miles distant, but couple up with it none the less, and be able to serve his customers and retain his local trade. We can trust the country store to realize this advantage, and in a short time make more use of this method of transportation than anyone else. He has had no transportation in the past.

And, Mr. Chairman, I want to add, anyone who opposes improved transportation, cheapened transportation, in the name of modern commerce mistakes the fundamental object of commerce itself. Its function is to cheapen or lower prices by bringing the producer and consumer together and performing the exchange of products more cheaply for them than the producers could do it themselves.

In our days of wayward and shifting fashions the merchant's problem is to vary his stock enough to satisfy demands, and yet keep his total investment down to a point that will permit some profit on his possible sales. The leaders in mercantile affairs advise more frequent purchases, adapted to the specific demands of the trade as they arise, in small orders. This the prohibitive express rate largely prevents in the towns, and the nonextension of the express service to the country wholly prevents for the country store. Nor will the retailer, as a class, necessarily suffer by the loss of his trade in the farm products. What the workman saves on these he will be enabled to spend with the retailer on other things in his store. It is a mistake to suppose that no transportation, or deficient transportation, is an advantage to any class, and surely no one stands to benefit more than the merchant by reasonable express rates and a wider extension of the service. Think of what the half cent a pound rural route may mean for the country store in making daily deliveries for him to his farmer patrons who have phoned him their orders.

Mr. HINEBAUGH. Mr. Chairman, just one other question, if the gentleman will yield. Assuming that the crossroads man in the little place you mention has been eliminated and the buyer or consumer goes to the town of 10,000 and gets his shoes there, what will prevent the elimination of that merchant in time by the man still higher up, with still larger capital, who can furnish the same shoes to the consumer at a lower price?

Mr. LEWIS of Maryland. The great Lord above us gave the consumer, at least, when he is a laborer, rights that are primordial and superior to the rights of any kind of commerce. The man who earns his dollar in the sweat of his face is entitled to get the produce of the other laborer with as little of intermediate commercial addition to the price as is possible. The plate-glass front, the electric lights, the immense extravagances that now attend the conduct of the commercial business in our large cities are self-imposed additions to the price, and commerce has no right to call upon the simple laborer at the end of the week to sacrifice half his wages on these futilities. The true function of commerce is to cheapen and not exaggerate the prices of merchandise. [Applause.]

Mr. BARKLEY. Will the gentleman yield there? Does the gentleman know of any concerted action upon the part of country merchants to petition Members of Congress to endeavor to pass some sort of a law taxing interstate commerce that goes through this parcel post, in order to cripple it?

Mr. LEWIS of Maryland. That subject has been brought to my attention.

Mr. BARKLEY. The reason I ask that question is because I have received several petitions, which were gotten up somewhere in Iowa, but sent to my district to be signed and mailed to me by local merchants, asking that a law be passed taxing all this commerce that goes by parcel post, which in effect would cripple the service if any such attempt was made. I wanted to find out about it.

THE SHORT AND THE LONG DISTANCE PARCEL RATES.

Mr. LEWIS of Maryland. Gentlemen, it is apparent that on full passenger train service rates at 8 cents a ton-mile the rates swell beyond the utilizable for distances above 400 miles where they exceed \$40 per ton of traffic. Even with a changed rate of railway pay for this express post service, say 5 cents a ton-mile, not more than about 700 miles could be encompassed by a traffic-moving rate, and of course, even less so at 12 cents a pound or \$240 a ton, although we are bound, if we can consistently with the cost of service, to organize a governmental institution like the postal agency with a view to extending its service to all persons and places within the Republic.

I do not mean by this any flat or nonself compensatory system of rates. The necessary effect of that must be to centralize, and thus monopolize production at the points of greatest natural fertility by adding to their natural advantages an utterly artificial advantage; a transportation subsidy abhorrent to every principle of justice, of sound economics, and our ultimate social welfare. The natural advantages of place and the tariff are doing too much of this now—centralizing our industries and diverting our young manhood from the health and vigor and independence of the farm to the nickelodeon civilization and dependency of the cities.

But what I do mean is that the citizen in one part of the Republic should have for his single shipment some form of utilizable transportation to any other citizen. Rates which mean \$240, or at the best which can be hoped \$160, a ton for coast-to-coast traffic merely constitute a denial of transportation. We have heard much of the railway taking all the traffic it would bear. But a rate of 12 or 8 cents a pound would not tax; it would simply prohibit the traffic from moving at all, except in negligible instances. It does not boot to say that the express rate is as high or higher; for it does not move, but simply aborts traffic in its womb. We shall have to look in some other direction than the passenger-train service for utilizable transportation rates for these long distances. But before doing so, let us see what can be accomplished under the rates feasible and proposed for the passenger express post. To begin with, the great volume of the freight and express traffic of the United States has its substantial flow within an area of less than 500 miles from the point of consignment. This is shown in the fact that the average journey of all railway freight is but 253 miles, and that of express about 200 miles; and yet the freight haul includes journeys of the export grain traffic flowing largely from the interior of the country. As a broad proposition, it may be stated that rates competent to move the potential traffic within an area 500 miles from its center will move nearly every article of traffic in the higher prices from its place of production to its natural market. Supposing this traffic for the 100, 200, 300, 400, and 500 mile zones to average for the whole as if in the 300-mile zone, as does freight at 253 miles, then the average charge would be 1½ cents per pound, or \$30 per ton; a charge nearly all of the domestic necessities, except coal, potatoes, and so forth, could easily bear, and a charge that would rarely exceed 5 per cent of the prices now paid by consumers. To illustrate, I will recur to the half dozen articles referred to in the beginning of my remarks, with their prices on the farm as compared with the Washington retail market something over a year ago, and will add the proposed rates to the farm prices to compare the direct-to-consumer price with the roundabout commercial price.

Country produce sold in Washington Aug. 5, 1913.

Article.	Sold to consumer for—	Wholesale price.	Farm price.	Parcel post.
Eggs (2 dozen).....	\$0.56	\$0.40	\$0.32	\$0.06
Dressed chicken (3½ pounds).....	.77	.56	.42	.03
Butter (3 pounds).....	1.05	.75	.60	.08
Country sausage (3 pounds) (as of October, 1911).....	.54	.33	.21	.08
Country cured ham (10 pounds).....	2.20	1.20	.90	.15
Apples (half bushel).....	.65	.40	.25	.24

A shipment of the following, weighing with container 20 pounds, would cost for transportation from the farm over the rural mail route and by the railroad to the city, up to 150 miles of direct distance (possibly 225 miles by railroad) and then delivered by the city mail carrier, 24 cents:

Article.	Farmer gets.	Whole-sale price.	Consumer pays.
Eggs (2 dozen)	\$0.32	\$0.40	\$0.56
Chicken (3 pounds)36	.48	.66
Butter (2 pounds)40	.50	.70
Ham (10 pounds)90	1.05	2.20
Add container (2 pounds)	1.98	2.43	4.12

All of which means that even now the Washington consumer, other things being equal, might order these necessities direct at a total cost of \$2.22, as against \$4.12, price levels remaining static.

All but the very largest cities can be supplied with farm necessities within the area of the first zone, it being 31,416 square miles in extent, or over 20,000,000 acres. Within the second zone of 200 miles, covering 125,664 square miles, at a cent a pound, every city, except possibly New York and Boston, might derive such table necessities, while even those cities might depend on the land included in the area of the third or 300-mile zone, having 282,744 square miles of surface, with a total transportation charge of but a cent and a half per pound to add to the price at the farm, or \$3.60 for the direct order, as against \$5.75 for the indirect transaction with the producer.

In instances where the farmer and consumer were unknown to each other a small charge of from 3 to 5 cents would have to be added to pay the cost of collecting the price and remitting it to the farmer. But where established custom obtained even this charge would not be necessary, as periodic settlements would take the place of the C. O. D. practice. A line in the local paper would inform the consumer as to prices and producer, and a postal card or a phone call would inform the producer of the consumer's wants. The postal conduit would then pass the article direct and collect and remit the farmer the price, if required. The latter would not, as an intelligent constituent writes me, have to leave his farm to market a small allotment, when, as he explains:

It sometimes happens that on the day that I must go to market a field is in ideal condition to be prepared for planting a crop or to cultivate a growing crop, or a field of hay or grain is ready to be put in the mow; but I must go to town to dispose of my produce.

FAST FREIGHT POST.

Manifestly, there will be many instances covering a large part of the potential traffic where the article can not pay the relatively high-priced transportation rates provided by the passenger express post when subjected to a very long haul; such articles, for example, as are relatively low priced in relation to their bulk or weight, and for which when weighing less than 100 pounds the railways provide no proportional rate, or in any instance articulation with nonrailway points. What I have already said as to the cost of postal handling, including collection and delivery, may be taken as applying to such cases, the railway transportation economies of which I shall now proceed to discuss.

A shipment now goes by express rather than by freight in order to—

- (a) Obtain highest expedition of movement.
- (b) Obtain security and delivery.

But it often goes by express to obtain a lower rate, where the 100-pound minimum rate of the railways, e. g., the coast to coast first-class traffic with a 100-pound minimum rate is \$3.70, while the express charge for 5 pounds is 85 cents, 10 pounds \$1.54, 20 pounds \$2.89.

Then, too, a very large proportion goes by express because the minimum express and railway rates are the same for short distances and light packages, while the express grants additional facilities. The scientific rate maker has an axiom that rates should be—

- (a) Sufficiently low to enable the shipment to move to its natural market with a profit, and yet
- (b) Sufficiently high to pay all the out-of-pocket expenses of the services, and as large a share of the fixed charges as the fiscal exigencies of the carrier may require.

Our railways have gone a long way to gratify the first element—mobility—with respect to the larger articles of commerce, but their practices have, in effect, condemned the small, low-priced consignment to commercial immobility. The Germans

have worked out the possibilities of transportation in this respect. They have not only the parcel post, available to 110 pounds, at a rate which works out at \$13.67 per ton on 13-pound packages for 225 miles, but have also the passenger express at rates four times the freight rate, and what is here called the "fast freight" commanding just twice the freight rate. The latter service makes the rate concession necessary to enable any package, small and cheap, or larger shipment requiring speed, to move to the markets.

I come now to discuss this method of fast transport, which obtains in Prussia and perhaps in Austria. It is a mixed fast-freight service supplemented by passenger train on the branches. When the place of consignment or destination does not coincide with a fast-freight stopping place, the shipment is expedited either to such point or from such point by the accommodation passenger train. The rate for this service is twice the freight rate, according to its class, while the rate for passenger-train express is four times such freight rate. The conditions obtain for the adoption of this fast-freight express in the United States. On all our trunk lines fast-freight service exists, with an average speed of from 20 to 25 miles per hour. Speaking generally it is only on the branches that this fast service is wanting where, of course, the accommodation passenger train may always be found.

The system works quite simply in Prussia. There the class traffic by which the rates are determined travels on a rate formula literally comprised in a single page, and by which the weight and distance of destination of the shipment being stated, the rate can be computed by the application of the formula.

This simplicity of rates does not obtain in the United States. As we have seen, its existence is necessary to a feasible rate for small consignments.

Since in both ordinary and secondary express we shall substantially always be dealing below the 100-pound line the "transportation-accounting" burden will be present if either be conducted by private corporations. The practices must be kept up by them in their individual relations to the package and each other and they can not dispense with this accounting. Accordingly, under present railway and express conditions rates proportioned to the diminished weight of the package can not reasonably be asked of the railway or express company, while rates based on the necessary minimums of the railway and express company operate to prohibit, perhaps, more than half of such shipments. The act of moving the small package grows relatively less costly with its weight. The complex series of acts looking to its fiscal relation to the company grow relatively egregious as the weight of the shipment and the journey on any weight approaches the minimum. The latter is then the problem to be solved if we are to secure a feasible package rate.

To solve it adequately, the shipment must be divorced completely from the "transportation-accounting" practices of the transportation company. It can be stated that the only instance in which this divorce is now accomplished is in the case of packages carried in the mail, of which no record is kept and no accounting takes place. The railways trust the Government to pay them for carrying those packages upon bases of aggregate weights and the volumes of traffic; and while there is some complaint both from the public and the railways that these bases are unjust, neither would think of resorting to the piece-accounting method of the express company for computing the service rendered. Such a method would weigh down the whole Railway Mail Service with accounting expense.

The parcel rate would have to be picked out from the 800,000,000 place-to-place rates (Stickney), an act (off the beaten lines of traffic) so expensive in its character, saying nothing of its fallibility, as to eat up the fiscal loading which the small article might bear and still move. Moreover, with a feasible rate for the diminutive consignment, the whole character of rate finding would likely change. Now an immense proportion is on beaten lines familiar to the freight agent, and in quantities large enough to sustain the cost of the "rate hunt" when otherwise. Accordingly, fast-freight express, as adopted here, in the interest of a feasible rate and the operating economy of the carrying railway, would have to have a rate formula as simple as the Prussian.

THE CLASSES.

In ordinary express, most articles being treated as of the first class or higher, we were not required to consider a question now before us. It is, How many classes for rate purposes should be adopted? Simplicity makes a very natural, if uninstructed, appeal for one class. But I think the conditions render such a treatment either insufficient or impracticable. To adopt rates exclusively based on the rail charge for carrying the sixth-class freight traffic would be unjust to the railways, and result in

largely diverting the higher classes of traffic from the railways to the secondary express. To adopt rates based wholly on the first or higher classes would be, in effect, to deny admission of lower-class shipments to the secondary express service. The conclusion reached is that the German method should be followed and class rates made, recognizing all classes. This would require the postal officials on receipt of the shipment to ascertain the class to which it belonged in the uniform classification, not an expensive task. The article would have in a general way the same adaptation of the rate to the ability of the article to bear it, and move with a profit to its natural market, which freight rates possess.

DISTANCE RATES AND DECLENSION OF RATES.

I call attention now to the Talcott formula with reference to freight rates. Broadly stated, it means that the cost of freight carriage tends to increase, not in arithmetical proportion to the increase of mileage, but in proportion to the increase of the square root of the added mileage; or, less technically stated, the cost tends to double as the distance quadruples. There has been an instinctive recognition of this truth by the rate makers in the express traffic, as well as in freight. There is now given a table comprising the average of nine representative rates for the first and sixth classes, and for distances running from 36 to 900 miles, covering all sections of the United States. It shows that, substantially, the Talcott law holds good for both classes (and doubtless for all classes) up to 900 miles. Data is wanting for greater distances, but it is probable that the rate curve from 900 miles up tends to decline at a lessening rate. For the purpose of this discussion it is treated as flat, i. e., as nondeclining, after 900 miles.

Table of first and sixth class freight less-than-carload rates based on averages of 9 actual rates for each distance, compared with rates by the Talcott formula.

[Per 100 pounds.]

Distance (miles)—	Square root.	First class.		Sixth class.	
		Actual rate.	Talcott formula.	Actual rate.	Talcott formula.
25.....	5				
36.....	6	\$0.205	\$0.205	\$0.09	\$0.09
100.....	10	.302	.371	.115	.15
196.....	14	.461	.477	.163	.18
324.....	18	.56	.613	.217	.27
484.....	22	.725	.75	.28	.33
676.....	26	.969	.886	.369	.40
900.....	30	1.102	1.023	.418	.45
1,024.....	32	1.297	1.091	.547	.48
1,156.....	34	1.357	1.169	.577	.51

As a matter of fact, the sum total of the formula rates for the two classes slightly exceed the sum total of the actual rates up to 1,024 miles, so that the Talcott law may be said to hold good on the whole for that distance.

The above table is given with a view to ascertain what zones are practicable in harmony with existing railway freight rates. It is beyond argument that in a country like ours a considerable number of zones would be necessary. My own impression is that there should be about 24, both for the purpose of correlating express rates with the freight as well as adapting the rate measurably to the service involved. This condition would not involve us in any complexity, for what can be made simple may be so regarded ab initio.

The above elaborate statement is essential to an understanding of the first difficulty in formulating a feasible rate for small packages, for the elements of such are not merely (a) that it be high enough to produce sufficient revenue to pay all the cost of the service, but also (b) that the rate be low enough to enable the article to move with a profit to its natural market.

Gentlemen, the work of the Postal Department in the proposed secondary express would be that of receiving or collecting shipments less than 100 pounds in weight and assembling them into carload lots, to be transported by the railways to fast-freight stopping points, where the department would receive them and deliver them to the respective consignees, using the branch-line passenger train when necessary. The weight limit should not exceed 100 pounds, for from that point up the railway company now provides a service with rates graduated to the actual weight carried. Now, the railways give what is called carload-lot rates to shippers, when they ship under one bill of lading weights aggregating from 15 to 25 tons, such rates being from one-half to two-thirds only of the rates charged for less than carload shipments. In official-classification territory

81.63 per cent, in southern 65.61 per cent, and in western 70.50 per cent of the class articles are given such carload-lot ratings by the railways. It is in consideration of the fact that the railway is released from the large accounting burden involved in the small shipments and the great number of stops it has to make for way or accommodation freight that these lower rates are given. Since the Post Office Department as an assembler on the trunk lines would be furnishing carload quantities it ought to pay only carload rates, and this as an abstract statement the railway interests will all admit. But when we come to apply it we find such a complexity of rules as would effectually deny the right. For example, there are numerous classes in the official classification which are somewhat different in the western classification and yet different in the southern. Now, there is no distinctive carload-lot class, but there are numerous classes for the different 100-pound shipments. Thus agricultural implements may be class 1 and in carload lots class 5, while crated berries or fruits would fall in class 1 in 100-pound lots and class 4 in carload lots, respectively, for these different services, while typewriters fall in first class and have no carload rating at all. Nor does the complexity end here. Another rule is that the carload shipment shall take the carload rate appropriate to the highest carload tariff of any article in the car. These rules have been made to protect the railway revenues from the assembler for private profit who otherwise might contrive to capture all the less-than-carload traffic, and, converting it into carload form, reap the difference in rates as a profit for his cunning.

It is submitted, gentlemen, that such protective practices do not apply to an effort of the Post Office Department to secure transportation for the less than 100-pound shipment, and that instead of loss of revenue, the railways could only gain increased revenue through the admission of this shipment to transportation. And I do not anticipate that the railways would make opposition to a reasonable program, having in view such simplification of carload rate conditions as would enable the department as an assembler to utilize their fast-freight service for the transportation direct from producer to consumer, and otherwise, of shipments now largely denied transportation by the 100-pound minimum, and denied it wholly for rural shippers. It is not proposed that these carload rates should be reduced. They are low enough. But it is desired that they should be rendered available to move a line of potential traffic otherwise lost to the public and the railways, namely, traffic in less than 100-pound lots.

I confess, sir, that it is far from easy to form a rule that will meet the situation without working substantial interference with the rate structures of the trunk lines, and yet a remedy is necessary if we would attain a great public object. Without such a rule the specific railway rate on each diminutive shipment in the assembled carload would have to be ascertained, a task so costly as to wholly defeat the object; and moreover, a process that would only defeat the granting of the carload rate.

Gentlemen, although the task is difficult, I believe it can be accomplished if the Interstate Commerce Commission and the railways undertake it in a truly public spirit, and with the idea of suggestion only, I propose the following plan:

A POSTAL CARLOAD RATE.

The great railways know the weight volume of the traffic in each article and class, and thus the percentage of the class traffic which moves on their respective roads, or can readily learn it by an inspection of their bills of lading. Let them treat the Government carload as composed of such percentages of each article and class, and affixing to each such percentage its carload rate on a given route, compound such rates to secure a composite carload rate on all postal traffic carried on their fast-freight lines, which shall be treated as composed of like percentages. Let us suppose that this average would approximate its third-class (less than carload) rate in a greater number of cases. In such case the postal carload rate would be taken as the third-class rates on all its lines. In this way it is designed to work out for each trunk line a joint or merged carload rate approximating the collective revenue which it would derive under its rates as separately applied. The same disposition could be made of postal less-than-carload traffic. In such case the railway would haul the cars, take account only of the gross weight of their contents, and submit its bills periodically to the department for payment. The department and the railways would be saved the impossible expense of rate hunting and accounting on multitudinous shipments, and the department secure the carload rates its traffic both needed and deserved, while it could ignore, as if some foreign language, the minutia and diversity of the various and contradictory classifications and literally innumerable tariffs, in formulating a rate

system for the patrons of the service. Such compound rates should be given only to the Government, and considering the peculiarities of the traffic I do not think it would constitute a "preference."

Of course it is not to be expected that every railway manager would, upon the mere request of the Postmaster General, file such a postal tariff. We are deterred from such a hope by the example of the few railways ever present, recalcitrantly preventing the adoption of a uniform classification. But the Interstate Commerce Commission has jurisdiction, and the Postmaster General as a shipper, or the Government as a body politic, can invoke its powers to establish such rates and practices as may seem just and necessary. A petition to the commission making all the trunk lines parties and asking for the establishment of the desired rates is the method of solution of this problem which anyone would suggest. I should greatly prefer it to being obliged to force a legislative solution upon the railways, as we do for postal pay.

FAST FREIGHT POST RATES.

Having purchased from the railways the transportation in wholesale quantities, when the weights justified, the Post Office Department would sell it to the public in retail quantities of 100 pounds and less, at uniform rates, compounded from averages of the 100-pound rates of the railways for the different distances. To do this it should have zones, as in the passenger-train express post. But it should also establish classes approximating as nearly to those of the railways as practicable.

There is one difficulty in the work to which I will now specifically refer at the risk of being unduly tedious. Railway revenues ought not be impaired through the use of the carload rate; and so I believe the rates to the public ought not be made so low as to divert important or substantial traffic from the railway. The purpose is to secure for the less than 100-pound shipment the right to move at proportions of the 100-pound rates, plus the costs of postal handling, in order to articulate the railways with the farm and secure transportation that will move all standardized forms of retail production direct to consumer. To formulate such rates uniform rates for the entire country, which are not so high as to prohibit and yet not so low as to seriously divert from the railway its accustomed traffic, is, I own, a laborious but yet far from an unfeasible task.

In an appendix I give an expository table showing the rates which are feasible by the proposed fast-freight express. For the first class they begin for the shorter distances at about half of the present express charge, decreasing gradually with the distance, until at 3,600 miles they are but one-third. For the sixth class they begin also at one-half, but decline to about one-eighth of the express charge for the longest distances. It is easy to see the influence which such rates would have in moving the Florida and California market basket. There would be a very great margin of profit for the Government in such rates. The difference between the carload rate which it would pay and the proportions of the 100-pound rates which it would charge would, I think, give it a profit of not less than one-third of its gross receipts.

Gentlemen, I think that in two, at most in three, years by energetic action the postal authorities might have this fast-freight post in operation. Meanwhile all the subordinate problems of postal handling would be worked out in the development of the passenger-train postal express service.

ADMINISTRATIVE ECONOMY AND EFFICIENCY.

The problem is to get the package rate somewhere as diminutive as the package. In order to do this the simplification and not the multiplication of processes and agencies is the great essential. And we have seen also in the treatment of "transportation accountings" that a small package is now penalized to comparative extinction by the complexity of processes and agencies, unavoidable in intercorporate relations, and which only a unification of the agencies and simplification of the processes can remove.

Gentlemen, speaking of simplification of processes, I make bold to say that if the practices applied by the express companies to the small shipment were applied by the Post Office Department to its small shipment, the mail piece, our letters would cost us at least 6 cents, and, taking into account the resultant diminution of the traffic, perhaps even 10 cents apiece. What do the express companies do? They actually burden down this small shipment with the same accounting processes applied by the railway to carload lots. Simply affixing the stamp replaces all these processes in postal transportation. The thoughtful man will surely see that the problem before us is to reduce the cost of handling, and with it the rate for this small shipment to something like its own size. To do this,

manifestly we should apply letter and not carload transportation practices to it.

There is one transportation agency in the United States which is able to divorce the package from the accounting burden. It is the postal system. It is doing so now. If we except the stamp account of the local postmaster with the department, absolutely none of the express accounting described takes place. It is the only transportation institution which has accomplished this distinction. And this statement is not made with the purpose of invidious comparison with other transportation agencies. The condition results from its uniformity, universality, and consequent simplicity of relation with other transportation agencies and the world at large.

It may be urged that some of these accounting items are necessary safeguards against the loss of the shipment by theft. At present the postal system finds it more economical to locate and punish actual thieves than to keep watch over all its employees in an obviously vain enterprise of preventing the occasional miscreant. For those articles of traffic especially susceptible to this danger, such as money and other valuables, adequate protective processes and insurance indemnification should be provided, to be specially paid for.

Gentlemen, we have seen the superiority of postal over express methods in administrative practice. It remains to inquire the relative working efficiency of the postal personnel.

WORKING EFFICIENCY.

There has been a disposition among a certain order of writers to refer the conceded excellency of the operation of public utilities in Germany to the military spirit or to the alleged presence there of a class accustomed to command and a working class equally accustomed to obey. Obligated to admit that Germany's experience with public functions has been satisfactory, these writers insist that our democracy precludes any such hope in America. They do not speak of mere irregularities here, although these are what they hold up as evidence for inefficiency, and since such irregularities in foreign countries do not get into our press, a kind of unfavorable impression is made. Talk of postal deficits is indulged in as if such deficits were not merely definite statements of the amount of service given the public for which it is not called upon to directly pay; but the point of efficiency involves a wholly different element—the amount of service rendered by the employees. The table shows this service and its extraordinary advancement during a generation, notwithstanding the added burdens, notably the rural free delivery.

Comparative table of the number of pieces of mail matter handled per employee in England, France, Germany, and the United States at different periods.

Countries.	Average number of pieces of mail matter handled per employee in—					
	1890	1895	1900	1905	1908	1912
England.....	22,230	28,775	28,646	31,945	31,117
France.....	34,590	45,700	38,309	41,958	38,241
Germany.....	17,287	15,638	20,552	22,160	25,901
United States.....	24,611	26,235	32,569	42,739	51,591	60,504

These averages were reached by dividing the total number of employees engaged in the postal service into the total number of pieces of mail matter for the years given. In the cases of France and Great Britain the number of employees was diminished by one-fourth, the estimated number employed in the telegraph and telephone service; in the German figures the same reduction for the telegraph and telephone employees is also made, but is raised to one-third in 1908. The statistics are found in the *Union Postale Universelle Statistique Générale*, published at Berne, Switzerland.

There are, of course, some slight differences of conditions in the work done by the respective postal plants. Postal savings and parcels are all the subjects of more extensive service in the foreign examples; but it is believed that these are much more than made up in the United States service by its low density of population, entailing greater railway mail, free rural delivery, and other work expenditures upon the average mail piece. The marked extent of this condition is shown by the mere statement of the population per square kilometer of area: Eight for the United States, 73 for France, 146 for Great Britain, and 112 for the German Empire.

Agreeably different from the express service, this postal efficiency has shown itself in the decline of the service cost per letter to the patrons of the postal system, progressively, for a generation.

Comparative unit cost of postal system, 1886-1912.

Year.	Number of employees.	Estimated number of pieces mailed, including foreign matter.	Number of mail pieces per employee per annum.	Cost per average mail piece in cents.	Cost per average mail piece in cents, excluding assignable cost of Rural-Delivery Service.

1910.....	291,820	14,850,102,559	50,975	1.47	1.22
1911.....	291,113	16,900,552,138	58,054	1.23	1.12
1912.....	290,701	17,588,658,941	60,504	1.34	1.10

If further evidence were desired as to the adaptability and the capacity of the system to assume and discharge the work in mind, then assuredly the experience of the last eight months supplies it. The duty of handling an express traffic which promises to exceed in number of shipments if not in volume that of the express companies, has been accepted and discharged with admirable success and unprecedented profit. In my judgment the efficiency of our postal system is without comparison in small-shipment transportation.

The plain people of the United States have an abiding confidence in the service value of the American post office; and this is not because of patriotism, but of appreciation of what it does for them. It is the one great transportation institution whose single purpose is "servamus"; and this purpose it does accomplish in a truly wonderful way. Taking a postal card half around the planet for a penny. How this strikes the imagination. But does it pay? Perhaps not. But what other institution will render such a service to the beggar, and for a beggar's mite? Where others fail, it mounts. Where private initiative and private capital, acting on the instinct of self-preservation, refuse to go, it harnesses the dog and the reindeer, and there it goes, carrying the mother's missive and bringing back the filial succor of the explorer's new-found gold. In individuals this would be but ephemeral heroism, and bring certain failure. But the postal system grows with it, and seems to thrive. Last year, after giving a subsidy of nearly half its service to educational publication, it made the 2-cent stamp furnish revenue to pay for the whole service.

All this, of course, is not a mere product of patriotism; but it is the joint product of unification of function and a motive to render the utmost service. There is the individual motive, first, to serve yourself, and thus serve others. There is the social motive, practicable in a limited number of cases, and it is the motive which, acting under conditions of complete coordination of functions, explains the truly incomparable service of our postal organization.

THE EXPRESS POST AND SUBURBAN GARDENER—A NEW INDUSTRY.

I have had an intelligent farmer go over the incidental products of his farm, which, when delivered in less than wagonload quantities, can only be marketed at terrific economic expense. His list includes the following, as to which, if the service included the collection of the price when required, he says he would ship by the postal van and save the value of his presence on the farm:

Eggs, butter, dressed poultry, meat (country cured), celery, tomatoes, fruits, berries (various), cauliflower, cabbage, turnips, apples, pears, string beans, string peas, carrots, parsnips, beets, sweet corn, salsify, and honey.

I do not undertake to describe in detail the manifold effects economically and socially involved in such a system. One of the very important results would be the establishment of a *modus operandi* for the truck farmer and suburban gardener to connect with his patron.

Mr. MURDOCK. Originally they had great hope of moving farm products. Now, have they moved them to any appreciable degree?

Mr. LEWIS of Maryland. They are beginning to move under this new rate, as I happen to know.

Mr. MURDOCK. Are they moving from the farm in the original shape, such as a roll of butter, to the town?

Mr. LEWIS of Maryland. To a certain extent. But it will take time to develop the new practice, because you have to deal to a certain extent with psychological factors. One of the problems is to secure the packing containers sufficiently cheap and yet sufficiently reliable to carry products safely from the consignor to the consignee. The canning trade has accomplished this. Such containers are now made, but the cost of them is rather high, and indeed it will require time to put this new agency through the gamut of human factors before it reaches its fruition. I may say that our hopes are not likely to be disappointed, for in other countries where they have a rational parcel post these things move from the farm to the kitchen, notably in Germany.

THE AGRICULTURAL POST.

In the present state of things the truckster and farmer must devote considerable time to marketing; that is, to the transportation of his product, however little it may be, to the place of demand. He must also for this purpose provide himself with transportation facilities, however small his business. These involve a horse and its maintenance and care, and a barn, and the expense of both during the unproductive period. And yet in a socio-economic sense his work and expense of transportation is the smallest element in his service to the public, although it requires the maximum of upkeep and expense, if not of capital. The proposed postal collect and delivery eliminates all these, and would enable the truck farmer and suburban gardener to enter the business on a minimum of capital and pursue it on a minimum of labor and expense. The field service of a horse he could hire as occasion might require. Thus the truck-farming industry would receive a necessary impetus, and the cost of such foods be greatly reduced to the consumer, saying nothing of the advantage in quality coming from a speedier forwarding to the market by daily allotments instead of the delays now incurred to gather a worth-while load.

On the margin where the railway terminates and the great rural and agricultural supplies begin there are transportation conditions, or want of conditions, which seem to be vital to the economic prosperity of the country. Take a coal miner at about 60 years of age. He is still an athlete, but his lungs have become incapacitated to breathe the vitiated air of the coal mines. His arms are good and strong, and he is willing to work, but under present conditions he finds himself unable to shift from the mines to another employment. He may be able to raise \$300 or \$400 to buy a few acres—and there is nearly always plenty of land available for truck farming near the coal mines—and a little cottage to shelter himself and his wife.

But that is not all he would have to buy to-day in order to go into truck farming—raise the necessities of life for himself and his wife and sell the excess to those who needed it in the city. Outside of the land and cottage, as things are now, he would have to buy himself a transportation system—a horse and wagon, a barn, and hay. He would have to maintain this transportation system throughout the year, however short the period of actual employment. Moreover, since the excess production available for sale would be very small, he would be taking a great deal of time wagoning his small allotments to the town and looking for a market. But articulate the railway and the city with the country through the means already in existence—a structure almost complete at this moment—the rural free delivery. The miner could then go into the truck business. He would not have to buy a transportation system and maintain it; he would not need to rush to the town with every 10-pound load at great expense of time and labor and with very little economic benefit to the public. Every day, or every other day, or every third day, as might be feasible, the postal van would pass his little truck farm and receive his allotment packed according to regulations.

Let me say that this is no dream. I know it is the situation presented to nearly every coal miner at some period of his life. How far it would be true of men who have tired of the city, of the laborer who has been thrown on the scrap heap, unable to secure his old employment there; to what extent he would want to become a small truck farmer—poor, perhaps, but independent and self-sustaining—I can only have a speculative opinion. But ought not the opportunity be present?

Even under the largely impossible conditions of land values in Great Britain, this result has largely worked itself out. The vital necessities can be obtained fresh from the suburban

gardener and farmer with the certainty and the celerity of the mail. Besides creating a new industry here—suburban gardening—where land is plenty for this purpose, it should introduce another element of great desirability. Now, the consumer has no one to blame for bad butter, and so forth. The producer or the time of production he does not know. In the new situation the producer has a personal relation with his customers, who can hold him responsible, and, if necessary, punish delinquency with loss of trade.

PENNY POSTAGE.

Gentlemen, there is spreading through the country a demand for 1-cent postage. It is true that the 2-cent rate is nearly universal, but in terms of European price levels we really have 1-cent postage now; for our 2 cents represents but half the labor that it does beyond the seas. Of course the proposition, if feasible, is desirable, and so raises nothing but a question of financial feasibility. The reduced rate ought to be granted if with it the Post Office Department can be made to pay its way. The proponents of it rely mainly on the argument that the letter pays greatly in excess of its cost of service, and is subjected to a 2 instead of a 1 cent charge mainly because the second-class newspaper, periodical, and magazine are charged but a cent a pound, when they average a cost of about 7 cents per pound. But admitting the facts, their argument does not surely follow. The average mail piece, including all kinds of mail, in 1911 cost the department \$1.41 per 100; and the department deduces a cost of \$1.24 per 100, or over 12 mills each, for the letters; which at 2 cents yield a profit of 39 per cent, while the proposed reduction amounts to 50 per cent. It is no answer to say that the second class should pay its proportional or economic cost of service, say, \$1.41 per 100 pieces. It could not. It would simply disappear, leaving as little revenue for what remained of it as we secure at present, with a reduced expenditure for railway pay, say, of less than \$10,000,000, but a postal organization the expense of which would remain practically unredressed. As much could be gained by conserving this second-class traffic at the rate of 2 cents a pound, recommended by the commission, with Justice Hughes as chairman, to which the whole question was referred, yielding about ten millions of yearly increase in revenue without, it is thought, a material reduction of the traffic.

Such, however, is the insistency that penny postage can not long be delayed and will come, and under such circumstances the postal authorities would do well to cast about for repulsive revenue. The second class can not be made self-compensatory, although it may be required to help somewhat, as indicated. Now, there is another service alike unremunerative, which similarly no one would destroy—it is the rural free delivery, yielding revenues of about one-sixth of its cost. Can it be made remunerative or nearly so? It is costing this year about \$47,000,000. Gentlemen, I believe that ultimately it can be made to pay its way through the simple expedient of opening the rural wagon to farm and factory products, by removing the restrictive rates and weight limit which now prevent the movement of the potential traffic in factory and farm products from town and country store to the farm, and from the farm to town and city consumers. If this expectation be realized a new revenue equal to from twenty to forty millions would result. Meanwhile a fully developed passenger, express, and fast-freight posts should add as much more as the added rate on second class and the fully utilized rural service. If all these hopes, very speculative it is true, should be measurably attained, an increment of from forty to eighty millions of dollars might be secured to meet the immediate deficit in postal revenues sure to follow the introduction of 1-cent postage.

And now, as to the extent of that deficit. What would it be? Our only definite experience is that of the reduction from 3 to 2 cent postage in 1883-84. The net decrease of the total revenues of one-third in the rate was 12.80 per cent. Assuming that the percentage of loss would be proportional for a 50 per cent or one-half reduction, the loss in 1912 would have been 19.20 per cent of the total revenues, or \$49,424,000; say, \$50,000,000. This reasoning assumes that the reduced rate would have effects in all respects proportional to the experience of 1883-84, i. e., in increasing the first-class traffic in the matter of railway pay, and in the matter of the cost of the increased postal personnel, an assumption that is logical and probable, so far as I can see.

I am not here advocating the penny postage idea. In discussing it I am simply recognizing inevitable tendencies. It is going to come, and as an advocate of sound business economics in the Post Office Department I have merely been pointing out the ways in which the shock of its accompanying deficit can probably be met. Unless that deficit is to be met by the highly unjust and uneconomic methods of indirect taxation it can

only be met by allowing the postal system to recoup from the profits of its passenger and fast-freight express traffic, together with the increment which must arise from a full utilization of the rural routes when the weight limit and the absurd rate restrictions on the traffic have been removed.

RECAPITULATION.

Object: To reduce the cost of living and express rates.
Means: Provide adequate transportation for retail shipments, i. e., in sizes to suit consumers' needs, direct from producer to consumer.

Example: Farm products are usually produced in retail form—eggs, chickens, butter, hams, etc., but no direct transportation existing to carry them direct from producer to consumer—from the farm to the kitchen—they now must go into the roundabout processes of commerce, which double the price to the consumer.

Retail transportation: There is now no transportation for retail shipments. The railway is engaged only in the wholesale or commercial business. Its minimum weight is 100 pounds—too high for retail purchasers. Besides, it does not articulate with the farm. The express company does not articulate with the farm; and its rates are three times normal, and prohibitive. Transportation accounting burdens prevent both railway and express companies from making rates proportional to the weight of diminutive shipments.

Parcel post: The natural agency to carry retail shipments. Does not do so now, because of two restrictions upon its operation—the prohibitive weight limit, and abnormal pound rates—from four to six times the cost of service on short distances.

Remedy: The Postmaster General has legal power, with consent of the Interstate Commerce Commission, to reform the rates, weight, limit, zones, classifications, and "other conditions of mailability," or the committee on a general parcel post may report necessary bill.

Costs of service and service conditions warrant the following changes:

Raise the weight limit to 100 pounds.

No weight limit on shipments delivered to the railway terminal by the consignor and collected from it by the consignee.

A zone system of 100 miles to each zone, including the local zone.

A rate of 1 cent per pound for each such zone plus the initial charge of 3 cents, arbitrary, for the first pound.

An improvement of classifications to include books, etc.

Results: Farm and standardized products can be marketed direct to consumer at 1 cent a pound in the first zone, embracing an area of 20,106,240 acres; at 1 cent per pound in the second zone, with additional area of 60,318,720 acres; and 1½ cents a pound in the third zone, with additional area of 100,531,200 acres.

Suburban gardening: A new industry will develop, such transportation being provided through the utilization of rural delivery, and the possible trucker being released from the necessity of buying and maintaining an independent transportation system of his own.

Farm outlet: The articulation of railways through the rural delivery with the farms.

Express rates cut in two.

And now, gentlemen, I shall take the time briefly to epitomize the restrictions on the parcel post which should be removed in order that it may be free to discharge its function; I mean its function of moving the retail shipment from producer to consumer and lowering the prices of the necessities of life. Categorically expressed, I should recommend that the Postmaster General—

(a) Remove the restriction of the weight limit on shipments below 100 pounds.

(b) Remove all restrictions of the weight limit on shipments delivered to or collected from the railway termini by the consignor or consignee.

(c) Establish a simple system of zones, namely, 100 miles to each zone, the first (the local) zone to include a distance of 100 miles.

(d) Establish a rate about 20 per cent above the cost of service—i. e., a rate of 3, 4, or 5 cents for the first pound, plus a half cent for each additional pound in the first zone, and for subsequent zones an additional half cent per pound for each additional zone of 100 miles; no charge to exceed 12 cents per pound.

(e) Restore the old fourth-class rates and establish a supplemental parcel or express fourth class, admitting express matter generally, with proper exceptions, to which the zone rates shall apply.

(f) Reform the packing regulations so that articles carried by express may be carried in containers when necessary. Re-state the insurance and C. O. D. rates to correspond with the quantitative values of shipments.

(g) Take the steps necessary before the Interstate Commerce Commission to utilize the fast-freight service for less than 100-pound shipments, thus extending the benefits of this relatively low-priced service to farm and country store through rural delivery.

Gentlemen, does this seem a too difficult task? I do not think so. Obviously, with regard to the weight limit and these percentages of the rates which are so clearly excessive, the task is merely one of rationalizing the system by removing anomalies and abnormal restrictions from the service. But does it seem too large a program? Let us see what the program is:

(a) Reduce express rates by one-half, through a system of postal express.

(b) Lay the foundations for a new industry: The suburban gardener, who can utilize the system to market his products,

relieved of the largely prohibitive burden of purchasing and maintaining an uneconomic system of his own.

(c) Clear out a "stopped-up" conduit through which, when cleared, farm and other standardized products may flow direct from producer to consumer, giving the consumer the benefit of farm and factory prices, plus the mere cost of transportation, by merely ordering direct, and furnishing thus a competitive determinant of market-price levels for such products approximating farm and factory prices, plus transportation costs.

Mr. ESCH. Will the gentleman yield?

Mr. LEWIS of Maryland. Yes.

Mr. ESCH. I was not here when the gentleman began his interesting address, and if he has covered the ground he will say so. What effect will the recent order of the Interstate Commerce Commission reducing express rates have upon the parcel-post traffic in the first and second zones?

Mr. LEWIS of Maryland. It will have no effect, I may say to the gentleman from Wisconsin. These express rates ordered by the Interstate Commerce Commission are very much higher than the parcel-post rates on the lower weights and within the 150-mile limit. It is only when you come to the longest distances—say, from 1,200 miles and upward—and on 100-pound shipments that the proposed express rates would be as low as the postal rates which are feasible to the Postmaster General even now and under the present law as to railway pay. It seems to me impossible that even now the postal system will not take practically every shipment of 20 pounds and under that has not more than 150 miles to traverse. Let me say to the House that when the weight limit goes to 100 pounds it will have covered 90 per cent of the total express business. Less than 5 per cent of the shipments carried by the express companies exceed in weight 100 pounds, and although the express companies should be eliminated, as I think will follow the further extension of this service, the post office could take care of its whole traffic, restricting the weight limit to 100 pounds, where delivery or collection was involved, by giving the shipper the privilege of shipping, as the express company now does, in any weight, provided he deliver the shipment to the railway and collect it from the railway.

Now, I have repeatedly stated here this afternoon that the postal system is destined to discharge the whole express function. The express company has been in the past our de facto parcel post, discharging this part of the postal function from the beginning of its history. Now, what situation does it meet to-day? Tried before the bar of actual economic efficiency it means a situation like this: Out of its 25-cent charge for a 5-pound shipment it is doubtful whether it makes a cent. It certainly does not make more than 1 cent, for it only makes 2 cents on its average shipment of 51 cents—33 pounds—and yet at this very moment the postal system is making 2 cents profit out of its 5-cent charge for a 1-pound shipment. Now, the law of efficiency is as old as human history, and its sway accounts for the fact that we have any civilization at all. There are no exceptions. What is that law? It is that the inefficient must give way. For centuries the less efficient man has given way to the more efficient machine. If this law has no exception for the breadwinner and the right of God's creatures to earn their bread in the sweat of their faces, why should its operation be suspended in favor of the express companies that have been rendering only half service for generations and collecting double pay? [Applause.]

Gentlemen, let me ask again, Does this seem too large a program? Well, sirs, it is just the program which the Democratic Party at least pledged the administration to accomplish. Its platform assuredly promised a "parcel post or postal express" system—I use its exact words. The President emphasized this promise by himself declaring in his speech of acceptance, "We must add to our present post office a parcel post as complete as that of any other nation." And for what purpose? Assuredly to give the people relief from abnormal express charges; and in the words of the Democratic platform again, to secure "the development of a modern system of agriculture and a systematic effort to improve the conditions of trade in farm products so as to benefit both the consumers and producers."

And now, sirs, it appears that these great purposes can be advanced by merely removing some anomalous restrictions upon the normal action of our great postal system. What human institution may be called upon for such a purpose, if it be not this greatest and most efficient of cooperative societies—the one great business organization in which all are actual corporators and from which all receive just and equal service. Yes; it is a great program. But it was the President who said:

We have set ourselves a great program, and it will be a great party that carries it out. It must be a party without entangling alliances with any special interest whatever. It must have the spirit and the point of view of the new age.

Mr. Chairman, I ask unanimous consent that these charts may be inserted in my remarks and that I may have permission to revise and extend.

The CHAIRMAN. The gentleman from Maryland asks unanimous consent to print certain charts in his remarks and to revise and extend. Is there objection?

There was no objection.

APPENDIX.

PARCEL POST BILL PASSED BY HOUSE OF REPRESENTATIVES, SIXTY-SECOND CONGRESS.

SEC. 8. That the Postmaster General is hereby directed to establish in the United States, including its Territories and the District of Columbia, an experimental parcel post, which shall embrace fourth-class mail matter, farm and factory products, and books and matter commonly shipped by express companies, not exceeding 15 pounds in weight nor 72 inches in length and girth combined, nor in form likely to injure the person of any postal employee, and subject to such packing and shipping regulations as the Postmaster General may prescribe for the protection of the mail equipment and mail matter. The Postmaster General shall make provision by regulation for the indemnification of shippers, for shipment injured or lost, by insurance or otherwise, and, when desired, for the collection on delivery of the postage and price of the article shipped, fixing such charges as may be necessary to pay the cost of such additional services.

That the rates of postage on such parcels shall be as follows: For parcels shipped to any point within the county where mailed, or to a point in a contiguous county not more than 100 miles distant, hereby designated as the "local" zone, 5 cents for the first pound or fraction thereof and 1 cent for each additional pound or fraction thereof; for parcels shipped beyond points included in the foregoing local zone, 6 cents for the first pound or fraction thereof, and at the rate of 2 cents for each additional pound of actual weight for the first 150 miles or less, and an additional cent a pound for each additional 150 miles of distance from the point of mailing or consignment to the point of destination: *Provided*, That for no distance shall the charge exceed a rate of 12 cents a pound for the actual weight shipped, and that the rate for shipments of 4 ounces and less shall remain as hitherto established by law.

The point of consignment, except in the local zone, shall be taken as the county seat of the county in which the parcel is mailed, and the point of destination as the county seat of the county to which the parcel is consigned, and measurements of distance between such points shall be made by radial measurement on maps to be provided by the Postmaster General. The word "county," as used in this section, shall include a parish and similar political divisions.

That the classification of articles mailable, as well as the weight limit, the rates of postage, and other conditions of mailability under this section, shall be treated as experimental only, and if the Postmaster General shall find on experience that they or any of them are such as to prevent the shipment of articles desirable, or to permanently render the cost of the service greater than the receipts of the revenue therefrom, he is hereby directed to re-form from time to time such classification, weight limit, rates, or conditions, or either, in order to promote the service to the public or to insure the receipt of revenue from such service adequate to pay the cost thereof.

That in order to the more economical administration of this section, the President is hereby authorized, subject to the consent of the Senate, to appoint three persons expert in transportation matters at salaries of \$5,000 per annum, respectively, to act as board of experts under the direction of the Postmaster General, in the execution of this section, and for the efficient conduct of the service hereby established.

That the Postmaster General shall have power from time to time to cause to be weighed the matter shipped by the express companies by post road common carriers, by rail or water, and ascertain the rate of compensation per pound or ton-mile payable therefor by such express company to such post road common carrier, by rail or water, on shipments, and thereupon it shall be the duty of such post road common carrier, at the request in writing of the Postmaster General, to transport and carry parcels mailable under this section, for the Post Office Department, at the rate of compensation per ton-mile thus determined: *Provided*, That if there be a dispute as to the substantial accuracy of such weighing and computations by the Postmaster General, such post road common carrier shall be entitled to appeal from the request or order of the Postmaster General to the Interstate Commerce Commission, which shall thereupon have power to determine the facts in controversy.

That the Postmaster General shall have power by regulation to determine from time to time the points at which collection and delivery shall be established for such parcels, and the weight limit thereof, to correspond with the facilities of the Postal Department for rendering such service, and he shall provide such special equipment, maps, stamps indicating weight of shipment and distance traversed, directories, and printed instructions as may be necessary for the administration of this section; and to supplement existing appropriations, including the hiring of teams and drivers and other vehicles, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$750,000.

That the establishment of this experimental parcel post shall go into effect two months after the passage of this act, and that all acts or parts of acts in conflict with this section are hereby repealed.

That for the purpose of a complete and full inquiry and investigation into the feasibility and propriety of the establishment of a general parcel post, or system of postal express, a joint committee of six persons (Members of Congress), three of whom shall be appointed by the Speaker of the House of Representatives and three by the President of the Senate, is constituted, with full power to appoint clerks, stenographers, and experts to assist them in this work. They shall review the testimony already taken on the subject of parcel post and postal express by Senate and House committees and take such other testimony as they deem desirable. That the Postmaster General and the Interstate Commerce Commission shall furnish such data and otherwise render such assistance to the said committee as may be desired or available. For the purpose of defraying the expenses of this committee the sum of \$25,000 is hereby appropriated out of the moneys in the Treasury not otherwise appropriated. The committee shall report fully to Congress on the first Monday in December, 1912.

Information requested by committee appointed under Postmaster General's Order No. 6941, with reference to fourth-class mail, based on a count and weighing Apr. 16, 17, and 18, 1913.

¹ This shows separately the ratio to the total gross revenue of the revenue derived from packages weighing 1 pound, 2 pounds, etc., up to 19 pounds, inclusive; also from all packages weighing 1 to 11 pounds, inclusive; also from all packages 1 to 19 pounds, inclusive.

² This shows separately the ratio to the total number of pieces of express matter carried of those parcels weighing 1 pound, 2 pounds, etc., up to and including 19 pounds; also all packages from 1 to 11 pounds, inclusive, and all packages from 1 to 19 pounds, inclusive.

³ This shows separately the ratio to the total weight of all express matter carried of those parcels weighing 1 pound, 2 pounds, etc., up to and including 19 pounds; also of all packages weighing from 1 to 11 pounds, inclusive, and of all parcels weighing 1 to 19 pounds, inclusive.

PARCEL-POST DELIVERY COSTS.

A computation of their expenses in this service shows that it costs the express company an average of about 5½ cents per package of 32.80 pounds which, allowing for the proportion not collected or delivered, I place for its pick-up and delivery service at 7 cents. Other experience on the subject is that of the New York merchants given at the 1911 hearing of the House Postal Committee (pp. 104-105 and 301), to the

effect that it costs them an average of from 3½ to 4 cents per package, size and weight not limited, to deliver their sales within an area of 20 to 30 miles around the city.

The familiar ice and milk agencies probably show the lowest cost at which this service can be performed, with the value of article delivered included in a 4 or 5 cent charge, and without return traffic.

To this may be added the experience of the Merchants Transfer Co. of Washington. (Senate parcel-post hearings, 62d Cong.) This company proffered to make deliveries of postal parcels up to 11 pounds at 5 cents each, and within a zone of 15 miles at 10 cents. Its president, Mr. Newbold, stated that on city private delivery they aimed to secure 6 cents per parcel up to 25 pounds, with three daily deliveries, including C. O. D. service; and that an expert delivery man and his assistant could handle 375 parcels per day, of such shipments, if the loads should run evenly; but that 225 deliveries per day was a high normal; adding that the collect service from merchants constituted but 10 per cent of the total cost.

There is also the very definite experience of the Connecticut company for the month of January, 1913. For the 7 cities of New Haven, Bridgeport, Meriden, Waterbury, New Britain, Stamford, and Hartford it collected and delivered 20,506 packages, weighing 1,364,662 pounds, the average shipment weighing 67 (66.98) pounds. Its cost of service per package for collection and delivery was less than 12 (11.6) cents per shipment, with no weight or size limit on the traffic. To these data may be added the cost of collection and delivery of class freight by the railways serving Baltimore and, until recently, Washington. Their experience is that it costs from platform to store sidewalk, and vice versa, \$1 per ton; that the average shipment collected and delivered covers 500 pounds to the bill of lading embracing 5 pieces of 100 pounds each, costing, thus, each 5 cents (per 100-pound piece) for collect and a like amount for delivery, or 10 cents per 100-pound piece for the combined services. It is to be noted that this involves 5 packages, aggregating 500 pounds, delivered at each stop, a numerical condition as likely to occur in postal collections, if not in the same degree, for its deliveries.

In Germany delivery charges for packages per post on schedule trips are 2½ cents for urban up to 11 pounds and 3½ cents up to 110 pounds, while rural delivery is 2½ cents for 5½ pounds and 5 cents up to 110 pounds, with 22 cents for special rural delivery and 10 cents for special urban delivery. In France the delivery charge is 5 cents for packages up to 22 pounds. And now we come to the postal experience itself. It is such as to supply a guide up to 11 pounds, and from 5 ounces to 11 pounds; this experience being initiatory, it probably indicates a line of cost that will be substantially reduced with the enlargement of the traffic and perfection of the service.

Before giving it I wish to say there are two standards to be kept in mind in considering the costs of postal handling with collection and delivery. The first I denominate the "economic" cost, which charges to each service its proportion of the total cost of postal service, including those expenses which would have been incurred even if the parcel service were not added. The second I denominate the "out-of-pocket" standard, which includes only those elements of cost made necessary by the new or added service. It is important to keep these distinctions in mind, not in order that rates should be made below the economic standard, but that we may feel as safe as we should in hewing as close to the economic line as we should in formulating the rates necessary to promote the public service. Unless we can have this feeling there will be a tendency to overstate the rates, and thus inevitably kill the potential traffic, a result nearly as much to be deplored in a public-service agency as a deficit in operating accounts.

The economic costs of handling, including collection and delivery (but excluding railway pay) were found by the postal authorities to be as follows:

Class.	Costs.	Weight.
	<i>Cents.</i>	<i>Ounces.</i>
First.....	0.0199	0.355
Third.....	.01237	1.870
Departmental, free.....	.01462	2.980
Second.....	.01185	3.333
Fourth.....	.01392	5.063
Fourth, parcel.....	.02502	16.004

Thus we have, as the full economic cost, excluding railway transportation, a progression, for increasing weight and size, from 12 mills for the letter weighing seven-twentieths of an ounce, to 16 mills for the parcel weighing a little more than 5 ounces, and 25 mills for 16 ounces, the average weight of the fourth class in the 50 largest cities since the introduction of the parcel post. This 16-ounce datum does not embrace the inexpensive postal experience of such post offices as do not have any collect or delivery service, so that 25 mills is likely a too high economic cost figure for present fourth-class matter.

The out-of-pocket expense of the Chicago post office with parcel post, for six weeks commencing with March 3, was as follows:

Number of parcels delivered.....	1,076,914
Average cost per parcel for delivering.....	\$0.0034
Cost per auxiliary carrier (14,183) per piece.....	\$0.0430
Cost by wagon and driver, at \$1,054 per annum (106,737 parcels), per parcel.....	\$0.0147
Cost of same, with auxiliary carrier added.....	\$0.0123
Cost of same (4½-pound parcel) with driver and auxiliary together.....	\$0.0270
Number of parcels delivered by wagon per day.....	232

Analyzed, the Chicago experience means that one-third of the 1,076,914 parcels represents the old business, leaving 717,943 parcels of the new, which divided into the new expense would mean a delivery cost of 4 mills per package instead of 3 mills. We have 14,183 delivered by auxiliary carriers alone, and 106,737 by wagon, driver, and auxiliary in combination; and charging to these 120,920 parcels the total delivery expenses of \$3,230.74 we should have a cost per 4½-pound parcel of 27 mills, treating the other 600,000 parcels as small enough to be delivered without added cost by the usual carrier service. Again, the special deliveries, 120,920 parcels, weighed 4½ pounds each; add 8 mills for collection and general postal attention, we should have 3½ cents as the economic cost of a 4½-pound parcel, barring railway pay. In one of the largest delivery districts, saying nothing of the large population in towns and country with no collect and delivery, where such expense would not obtain. The Chicago experience shows, too, that only parcels exceeding 2 pounds require the vehicle form of delivery, the lower weights being absorbed by the regular carrier service; so that the 3½-cent parcel cost experience applies only to shipments of 3 pounds and upward.

It should be kept in mind that this service is entirely new and is in its most expensive stage. One suggestion seems very strong. It is that the auxiliary with an auto for long-haul deliveries could probably reduce the expense by a quarter or a third for light traffic. Meanwhile, it is to be noted that a performance of 232 deliveries per day, as in Chicago, compares well with the 225 deliveries of which President Newbold, of the Washington Merchants' Transfer Co., speaks. With the restrictions off, and thus a normal flow for the postal traffic, the maximum number of 375 stated by Mr. Newbold might be reached with two persons to the vehicle.

Thus postal experience gives the economic cost of the fourth-class average weight of 1 pound as 25 mills where delivery takes place. From this point, 1 pound to 100 pounds (for urban service), we have the experience of the express companies, which shows a cost of about 7 cents for delivering and collecting the average package of 33 pounds, while the experience of the railways in the cities named shows a cost of 25 cents for shipments averaging in weight 500 pounds, for the act of collection, and the like amount for the act of delivery, five separate packages being embraced in each such shipment. From all these we have a line of progressive expense for increasing weights, beginning with 12 mills for the letter, 16 mills for the 5-ounce parcel, 25 mills for 1 pound, 7 cents for 33 pounds, 11.6 cents for express collect and delivery of 67 pounds, and 100 mills, or 10 cents, for the 100-pound weight, as representing the economic cost experiences relevant to the retail-shipment delivery function, from its smallest unit to 100 pounds, and a ton.

Table of analyses of expenses and performances of cities in delivery of parcels for six days in April, 1913.

¹ Figures not obtained.

The expository rates above given for first class start at about one-half the express average rates and decrease gradually until at 3,600 miles they are about one-third the express charge.

The rates suggested under sixth class begin at about one-half also, but decrease more rapidly. At 3,600 miles they are nearly one-eighth of the average express rate.

NOTE.—The distance up to 100 miles may be accomplished about as cheaply at postal rates for first class as by the combination of fast freight (75 miles) and postal (25 miles) service. Thus 100 pounds, at postal rates for 100 miles, would be 40 cents, which, added to "collect and delivery" and "general expense" (20 cents), makes a rate of 60 cents the first-class rate for the combination.

Comparative express data.

Increase in express railway pay, 1909 over 1890, per cent	26

Mr. BORLAND. Mr. Chairman, I will ask the gentleman from Massachusetts to use some of his time now.

Mr. GILLET. Mr. Chairman, I wish to occupy a few minutes in discussing the much-vaunted Democratic policy of economy, as illustrated by this deficiency appropriation bill. Of course this bill does not represent the administration. It does not as yet represent the House. It represents only the Committee on Appropriations. It is their report and conclusion, and I wish at the beginning to admit frankly that I think the committee has exercised a wise judgment in passing upon the estimates sent them by the administration. I wish also to say at the outset that the chairman who conducted the hearings evinced in his examinations toward this friendly administration practically the same kind of scrutiny which he did last session toward a hostile administration. I admit I was somewhat surprised; I was not entirely prepared for it; but I think it is only fair to say that he subjected the representatives of the administration of his own party to the same rigid and rigorous cross-examination that he did those of the opposing party in the last Congress, and this bill in the main, although there are some things in it which I criticize, is characterized by an impartial spirit of economy.

But, Mr. Chairman, we have before us not only the bill reported by the committee but we have the estimates which exhibit what this Democratic administration—this administration of simplicity and economy—desires. It is the first exhibition we have had under the new administration of how they were going to carry out their pledges. I presume you all have in mind the clause of the last Democratic platform upon this subject, which is as follows:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toll. We demand a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

That is the pledge which we have a right to expect this Democratic administration will carry out. Those of you who were here in the Sixty-first Congress will remember with what a boastful manner the chairman of the present Democratic caucus, the then chairman of the retrenchment committee, came before the House and showed the economies which they were going to accomplish here, and the much greater economies they were going to compel in the various departments of the Government. It is but fair to say that I think Mr. PALMER's committee did at the outset accomplish very useful reforms in this House. I think they cut off a vast number of superfluous offices, offices which would never have been gotten rid of except through a change of administration, and in that way they rid Congress of the charge which could fairly have been made against us, of being the most extravagant branch of the United States Government. You will remember that he said they were going to save in this House \$88,000 in salaries, and I rather think they did it. I think the trouble with that committee was that it did not go far enough. If they really had wished to accomplish permanently their economic purpose, and put it upon a stable perpetual foundation, they ought to have put it under some kind of civil service. As it was, they left it just as it had been, that each Member of the House should have his certain amount of patronage.

I understand the way they arranged was to add up the salaries of all the different officers of the House and divide the amount by the number of Democratic Congressmen, and the quotient was the amount of patronage which came to each Congressman. I notice that the day before yesterday, according to the press, they had a caucus upon that subject, and apparently, having

left it under the old system. It has already come back to plague them. The Washington Post of the day before yesterday had in it an article respecting that caucus, which reads as follows:

HARD TO DIVIDE THE JOBS—HOUSE DEMOCRATIC CAUCUS GIVES UP PATRONAGE PROBLEM IN DESPAIR.

After a two-hour discussion of the patronage question, the House Democratic caucus adjourned in despair late yesterday. One of the Members said that the trouble was solely one of mathematics.

The committee having charge of the distribution of plums reported that there are 236 available jobs, worth in the aggregate \$278,000; that these must be divided between 232 Members, but that already all of them but 94 have been handed around, and yet there are 114 Members who have not received anything. The fortunate ones are holding tight to their patronage, and the caucus was unable to find a way to divide 114 evenly into 94.

It will make another attempt Tuesday night.

So that although they established, as I am free to admit, a useful economy they did not put it upon a permanent footing by taking away from Members the patronage. The result is that now every one of you Democrats has a personal motive to increase both the salaries and the number of the employees of this House, because the more they are the more patronage you get; and as long as that condition exists we can not expect a real, permanent economical administration here.

Mr. LLOYD. Will the gentleman yield for a question?

Mr. GILLET. Certainly.

Mr. LLOYD. What instance can the gentleman point to where we have increased salaries of the House employees or increased the number of the House employees except—

Mr. GILLET. Oh, yes; there have been a number of cases—

Mr. LLOYD (continuing). Except those employees which are necessary for the increased membership of the House.

Mr. GILLET. That is a very elastic term, of course.

Mr. LLOYD. And the necessity for the use of the Maltby Building.

Mr. GILLET. There were various necessities springing up, and I have no doubt in the future, as the gentleman expresses it—

Mr. LLOYD. The gentleman wants to be fair.

Mr. GILLET. I do.

Mr. LLOYD. The membership of the last House was 391 or 392 and now it is 435. There is considerably more work in the folding room than there was before. There is more elevator service needed than before. There is quite a good deal more work necessary to be performed because of the greater number of Members, and it is no reflection upon the economy and efficiency of this side of the House that they are furnishing the men necessary to meet those needs.

Mr. GILLET. Certainly it is not, and I have not affirmed so, although I think there were in the last Congress a few increases aside from those of which the gentleman speaks. But all I am asserting is that you gentlemen in the future will not be relieved from the temptation to break down your plan, and I believe it will be broken in the future.

Mr. LLOYD. I want to call the attention of the gentleman to the fact that there is no increase in the number of employees after we did cut them off except in one instance, and that was one to the minority leader.

Mr. GILLET. There is one case, and there always will be an excuse offered, as the gentleman now offers one, on account of the increased membership. I will admit I am surprised they have not been larger up to date, and I believe under the practice you have adopted of patronage to the Members there will be a constant increase, because there is a constant temptation to increase.

The gentleman from Pennsylvania [Mr. PALMER], when he made the speech in which he explained with much partisan exultation this saving of \$88,000, made this remark:

Every platform of the Democratic Party during the past 16 years has contained a ringing denunciation of the waste, the extravagance, and the profligacy which has entered into every department of the Government.

And then he quotes from the Democratic platform:

Large reductions can easily be made in the annual expenses of the Government without impairing the efficiency of any branch of the public service. We favor the enforcement of honesty in the public service, and to that end a thorough and rigid investigation of those departments of the Government already known to teem with corruption, as well as other departments suspected of harboring corruption.

And the gentleman from Pennsylvania said that this reduction in the House was only the first step, and we were to see similar reductions in all the various departments of the Government. Then he said:

It is no secret, and I am divulging no secrets, either of the committee which named the majority members of the committees of this House in the first instance or the caucus which adopted its recommendation, when I say that this House and this Congress is deliberately organized, as far as its committee assignments are concerned, with an eye single to putting into force that principle of democracy which we know is economy in the public expense.

That is the declaration which met us at the beginning of the control of this House by the Democratic Party. I admit that in the affairs of this House they have accomplished that \$88,000 reduction, but what have they done to offset it in this House? Why, immediately they put to work committees of investigation to find out, apparently, these facts which he speaks of, "the departments of the Government already known to teem with corruption." They appointed other committees to investigate other departments and cut down there the corruption and the expense.

And what was the result there? This House in the last Congress had a bigger contingent fund than ever before in the last 20 years. They saved \$88,000, to be sure, right here by cutting off these offices, and yet in the one item of the contingent fund they expended \$60,000 more than the previous Congress. There goes so much of your boasted saving. And what was the result of it? You have investigated those departments "which were known to be teeming with corruption," but you have not found the promised corruption, and you have not made the promised reduction of expenses. You spent money lavishly; you gave curiosity free scope. The contingent expenses of this House were largely increased, but you have produced nothing at all commensurate with your efforts, your expectations, or your predictions. The reason is obvious. The departments of the Government are under civil-service rules. If they were not, if the ordinary impulses of selfishness had there the same free play that they had in this House, I presume similar results would have followed and you would have found then what you apparently expected—corruption, demoralization, and extravagance.

Those various committees have done nothing commensurate with the amount of money which they have spent. Here and there a little valuable information has been doled out to the people, but apparently the great purpose was to spend money and to use up in some way this \$88,000 which it must have been so distasteful to a great part of that side of the House to give up. That is the first accomplishment which they made.

Now, there are a number of things that happened in the last hours of the last Democratic Congress which we have not had an opportunity to discuss. I read to you the statement of the gentleman from Pennsylvania [Mr. PALMER], that it was "no breach of confidence to say that this House and this Congress is deliberately organized, as far as its committee assignments are concerned, with an eye single to putting into force that principle of democracy which we know as economy in the public expense." There was one committee of the House which is the one of all others liable to extravagance.

There is one committee over which the Democratic Party, organizing, as the gentleman from Pennsylvania says, its committees for the purpose of economy, must have exercised the most careful scrutiny. That is the Committee on Public Buildings and Grounds. That is the committee which is generally known as the "pork" committee. That is the committee where the interests of individual Members come up against the interests of the great public. There, then, is the best test of the genuineness of this economical purpose of which the gentleman from Pennsylvania boasted. Now, let us look at the test and see how the Democratic Party carried out this boastful assertion of their chairman that their committees were organized along the lines of economy. I did not know at the time that bill was reported, and probably very few knew, its details. I found out about it recently from the annual tabulated statement of the expenses of the last Congress. You remember that when the Committee on Public Buildings and Grounds made its report it was stated that the bill probably carried at the outside \$30,000,000—probably much less than that. This tabulated statement, which was recently prepared, shows that the authorizations in that bill alone amounted to \$45,000,000, half as much again as the outside estimate which was put before us by the committee. And not only that, in addition they appropriated for over 130 sites of buildings. Every one of those sites involved a building in the future. It is not an authorization. I do not blame them for not counting that in the expense which they estimated, but, after all, we all know that it is just as much a burden on the country to put in the purchase of a site, as if they put in at the same time the building, because it necessarily involves the subsequent construction of a building. So on those 130 sites, admitting that they only put the smallest and least expensive buildings on them which they ever erect, which is \$50,000, there are \$6,500,000, which, added to \$45,000,000, makes over \$51,000,000, which is practically burdened upon the Treasury by this committee which was selected by the Democratic caucus so carefully in order to carry out the Democratic principles of simplicity and economy.

And the details of that bill, as you investigate them, make it even more of a monstrosity than the mere figures themselves. Personally, I do not believe that it is economy or that it is wise

for this Government to put up a public building in any place of less than 100,000 inhabitants, certainly in a town of less than 50,000 inhabitants. When you look at the interests of the Government and not to the interests of the individual, not to the desire to make ourselves popular in our locality, to ornament and adorn a town, in these small towns of 2,000 or 3,000 or 4,000 inhabitants, the construction of a Government building, costing as they do \$50,000, is an outrageous extravagance. How much does it cost in those towns before the Government building goes up, do you suppose, on an average, to rent a suitable, commodious, proper post office? The statistics show somewhere from \$200 to \$1,000. From that sum all the annual expenses of the post office are paid. What does it cost after you put up a building costing \$50,000? It costs between \$2,500 and \$3,000 just to run the building—the expense to the Government. Before they only had to pay on an average \$500 for rent and fuel and light and janitor service and everything. Now, besides the interest on the building, you have to pay about \$3,000 for simply running the building—six times as much as you paid before for everything.

And then the interest in the building, say at 3 per cent, adds \$1,500 more per year, so that there is an annual expense of \$4,500 as against the previous annual expense of \$500.

It is preposterous. No business concern, no business enterprise would ever think of erecting a building at a cost of \$50,000 in any of these small towns, where they do not need it, where it is merely an ornament, where it is entirely out of keeping with all the other buildings in the place. Why, as soon as you go into one of these towns at once you are struck by the contrast between the United States building and all the other buildings of the place.

Of course it is argued that that is an incentive to patriotism. I think the probable result on the people is just the contrary. I think the probable result is for them to say: "There is certainly something easy in Washington. If we can get a building like this for our little town, what else can we not get from that overflowing Treasury?" And it constantly inculcates and encourages a feeling throughout the country, which unfortunately is too rife already, that the United States Treasury is simply a huge grab bag, and that anybody who wants to can get his hand in it. It also brings pressure to bear upon all of us, a constant pressure from our constituents, to get something for them out of the Public Treasury. So that instead of looking out for the welfare and the benefit of the United States, there is a constant impulse upon us to look out for the selfish good of the locality. To spend \$50,000 for a post office in a little town of 1,000 or 2,000 or 3,000 inhabitants is an outrageous extravagance, and yet that is the policy of this committee, so carefully selected for economy.

Now, of these 120 sites that are authorized over 100 are in towns which do not have annual postal receipts of \$10,000, towns of 1,000 to 3,000 inhabitants. Up to this present Democratic, economical administration it was the rule that no place which had less than 1,000 inhabitants and \$10,000 of postal receipts should have a public building.

Mr. LLOYD. If the gentleman will permit, the rule was 10,000 inhabitants or \$10,000 of postal receipts.

Mr. GILLET. I thought it was 1,000 inhabitants and \$10,000 of postal receipts.

Mr. LLOYD. No. It was 10,000 inhabitants or \$10,000 of postal receipts.

Mr. GILLET. I thought it was the other way. But it makes no difference. This committee violated that rule in over 100 places. Yet the committee itself recognized the value of that rule. They thought apparently that that was a proper limit, because at the end of the bill they put in a provision that in the future, after their looting of the Treasury had passed by, after the Democratic simplicity had fully illustrated itself, no place with less than \$10,000 postal receipts should be allowed a building. They admitted by their very language that they were violating what they thought was a proper principle. Yet this was the committee which was selected with such care to carry out this Democratic fundamental purpose of a simple, economical government. The result was the most indefensible distribution of "pork" Congress has ever perpetrated.

There was another illustration which happened at the very end of the last Congress, to which I should like to allude. Those of you who were here in the Sixty-first Congress will remember that one of the most tempestuous and violent contests on this floor—a contest in which the Democratic Party was aligned most solidly, and in which they showed a violence and fury quite disproportionate to the size of the appropriation involved—was over an increase of salary for the Secretary to the President. The subcommittee of which I was chairman

reported that provision favorably. There was then a Republican President and a Republican Secretary to the President.

That side of the House selected that item for a most tremendous assault. Anybody who did not know the Democratic Party would have thought they were certainly sincerely and genuinely in earnest that time. They denounced that proposed increase as an unjustifiable extravagance. They said the Secretary to the President was not entitled to any such sum; that he had enough already; that they would never allow it when the bill came back from conference, and they fought it as violently and as vigorously and bitterly as possible.

If there ever was a method by which a party could show its sincerity, it was the way in which the Democratic Party as represented in Congress made that assault upon the increase of salary to the Secretary to the President. In the next Congress, when they had a majority, they were at first consistent, and they really imposed on me and led me to think for a while that they were sincere; for the committee, of which I was still a member, although a minority member, reported the salary back and cut it down from \$7,500 to its old figure. But they were magnanimous. They said, "It shall be \$7,500 until the 4th of March, when the term of the present Secretary to the President shall have expired," but they provided that after the 4th of March it should revert to its previous figure.

When they reported that they did not know who was going to be President after the 4th of March. That was before the election. They put the salary back to its former figure after March 4, and I thought they were magnanimous and generous in allowing the Republican Secretary to the President to continue to receive the raised salary throughout the remainder of his term. But they declared that after his term was ended no such extravagant and indefensible appropriation should be allowed.

And yet what happened, Mr. Chairman? Last winter, after a Democratic President had been elected, after his Secretary had been selected, despite all their argument and denunciation, there was smuggled into the appropriation bill, and went through at the very end of the session, a little clause providing that the salary of the Secretary to the President should be \$7,500 again. And not only that, but instead of leaving it as it had been before, simply a clause of an appropriation bill, they made it permanent law, and so insured themselves that they should have it for the next four years.

Mr. FITZGERALD. Will the gentleman yield?

Mr. GILLET. Certainly.

Mr. FITZGERALD. The gentleman does not want to be unfair?

Mr. GILLET. I certainly do not.

Mr. FITZGERALD. The gentleman says this matter was smuggled into the appropriation bill. Now, the fact is that the House passed the legislative bill with the salary of the Secretary to the President at \$6,500.

Mr. GILLET. Yes.

Mr. FITZGERALD. The Republican Senate increased it to \$7,500 and made it a permanent provision.

Mr. GILLET. Yes.

Mr. FITZGERALD. And when the bill came back to the House the Republican leader moved to concur in the amendment; and in view of the fact that a Republican Senate and the Republican minority leader, with knowledge of who was to be Secretary to the President, were insisting that he should have \$7,500, the Members of the House, on a record vote, decided to acquiesce in that, and adopted the amendment.

Mr. GILLET. I will admit—

Mr. FITZGERALD. I do not think the gentleman can fairly say that the Democratic Party was guilty of an impropriety when it made at least one concession to the Republican minority and to the Republican Senate.

Mr. GILLET. I will admit that I made a mistake when I said it was smuggled in, because I was not aware of the fact that there was a vote on it. I was not present. I never knew that the provision had gone through until afterwards, and I assumed that there was no vote on it.

Mr. FITZGERALD. The gentleman from Illinois [Mr. MANN] moved to concur in the Senate amendment.

Mr. GILLET. In view of the gentleman's statement I have no doubt of that. I do not question the gentleman's statement at all, and therefore I retract my statement that it was smuggled in. But, Mr. Chairman, that does not alter the fact that that side of the House opposed it vigorously and violently so long as a Republican was to receive the benefit, but when a Democrat was to receive the fruits of it they acquiesced.

The Republican side was always consistent. We thought \$7,500 a proper salary for the office and we voted for that sum

whether the beneficiary was a Republican or a Democrat. But the last House was overwhelmingly Democratic, and though the Republican leader might have made the motion it could only be carried by Democratic votes. I only allude to it as a good illustration of the sincerity of the Democratic platforms and pledges and boasts about economy.

Mr. JOHNSON of South Carolina. I wish to call the attention of the gentleman to the fact that the salary of the Secretary to the President was reduced from \$10,000 to \$7,500 in the legislative bill.

Mr. GILLET. Oh, no; you are mistaken. It never was \$10,000.

Mr. JOHNSON of South Carolina. It was in the legislative bill. The gentleman and I made up that bill and brought it into the House.

Mr. GILLET. Certainly, and it was \$7,500.

Mr. JOHNSON of South Carolina. The legislative bill for this year carries the salary at \$7,500.

Mr. GILLET. Yes.

Mr. JOHNSON of South Carolina. The change was made in the Senate, in the sundry civil or deficiency bill.

Mr. GILLET. It was made in the deficiency bill.

Mr. JOHNSON of South Carolina. So far as the people who were responsible for the original reduction are concerned, they have been consistent, and they voted against the increase.

Mr. GILLET. Mr. Chairman, this being consistent is very easy when it does not accomplish anything. But the Democratic majority was not consistent. They opposed it with violence and unanimity when they were in a minority and there was a Republican President, but when there was a good Democratic majority the Democratic House concurred in an amendment allowing to their man what they would not allow to us. I am perfectly aware that the Republican Senate put it in. But does anybody doubt where the suggestion came from that it should be put in? Does anybody doubt what the influence really was that carried that through this House?

Mr. DONOVAN. Will the gentleman permit an interruption?

Mr. GILLET. I will permit a question.

Mr. DONOVAN. This is not exactly a question.

Mr. GILLET. Then I can not yield. The gentleman can get time from his own side.

Mr. DONOVAN. Perhaps I am on the gentleman's side. [Laughter.]

Mr. GILLET. How much time does the gentleman want?

Mr. DONOVAN. Oh, eight seconds or a minute.

Mr. GILLET. Very well.

Mr. DONOVAN. If the gentleman will stop to think, he will see that the occasion of it was to reward virtue; that in giving the increased salary the gentleman mentions they were following the dictates of nature, because the present secretary has six or seven children and the other one had none. It was really an honorable act to do—to reward nature, to reward virtue, to reward humanity—and I am surprised that the distinguished gentleman from Massachusetts should find error in it.

Mr. GILLET. Oh, I am not finding error in it. On the contrary, I believe that the Secretary to the President is well entitled to \$7,500. I would have voted for it under any administration, and I did vote for it when it came up in a Republican administration, not because the secretary was a Republican, but because I believed that the office ought to have it. I thoroughly believe that the gentleman who now holds the place is worth that salary, and I am very glad that the House passed it.

The gentleman from Connecticut misconceives my remarks if he thinks I am criticizing the size of the salary or the work of the gentleman who holds the position. What I am criticizing is not that the Democratic Party increased the salary, but I am criticizing the humbug, the hypocrisy, of that side of the House in violently and ferociously attacking that salary when it was for a Republican, and then when they have a big majority and one of their own party is going to draw the salary swallow their own words, reverse their conduct, and provide for their own secretary what they had most solemnly insisted he ought never to receive.

Mr. HELGESEN. Will the gentleman yield?

Mr. GILLET. Yes.

Mr. HELGESEN. Is it not a fact that this question was settled by a party vote, the Democrats voting for it and the Republicans not voting at all?

Mr. GILLET. I was not aware of it.

Mr. HELGESEN. I think the record will show that, and that they are as hypocritical now as they were then.

Mr. GILLET. There is another clause in the bill that I wish to advert to, and that is the appropriation of \$39,000 for the Civil Service Commission to conduct examinations of the

fourth-class postmasters. I appreciate how dear that appropriation must be to that side of the House. We know why it is given. It is given to remove Republican postmasters. It is given because the President two or three months ago issued an order by which all fourth-class postmasters should be examined, and that by the result of that examination it will be determined whether they shall hold their offices.

We know, of course, the purpose of that provision. The purpose of it is to give the Democratic Party as many fourth-class post offices as possible of those covered into the civil service partly by President Roosevelt and partly by President Taft. It seems to me that if there was any class of officers that were entitled not to be interfered with it was the fourth-class post offices.

When I came to Congress 20 years ago it was generally understood that whereas most of the clerical offices had been taken out of the patronage spoils class, the postmasters throughout the country were still a matter of congressional patronage. If there was a vacancy in my district and I wanted to fill it, all I had to do was to send a recommendation and that settled the question. If I wanted to get rid of a postmaster, all I had to do was to suggest it and he was removed.

That was the generally accepted position up to that time. President Roosevelt made a great change in that when he sent word to Congressmen that in future when a postmaster's term of office expired, or when he was to be removed, it would not be simply a question of the volition of the Congressman, but the question would be what criticism could be made upon the service of the man as postmaster. As I remember the language which we used to receive it was that the term of such and such a man has expired and that the records of the department show that he has rendered satisfactory service. Then the question came, Have you any reason to submit why he should not be continued in office? And, unless we could give reasons—not political reasons, but charges against his efficiency—that man was continued in office; and that has been the custom for the last 10 years.

Mr. LLOYD. Was that the custom immediately following the election of William McKinley in 1896?

Mr. GILLET. Oh, no; it was not. I said it was not.

Mr. LLOYD. The Republicans waited until they had secured all of the post offices in the United States, and had Republican postmasters filling them, and then they were willing to have the civil service apply to them, and now they are disposed to complain when the Democrats say that there shall be a genuine civil-service examination, and that the man filling the office shall fill it because he has attained it under that examination.

Mr. GILLET. Mr. Chairman, I am complaining of what I believe is a device under which the men in a large section of the country, many of whom are now in office, can be removed.

Mr. BARKLEY. Is it not also a fact that the order of Mr. Taft covering 40,000 fourth-class postmasters into the civil service was a device to keep them in office as a reward for assisting him to be nominated as against Mr. Roosevelt at Chicago? [Applause on the Democratic side.]

Mr. GILLET. No; it was not. It was not the fourth-class postmasters who were active in politics, but it was the postmasters higher up.

Mr. BARKLEY. They were active in proportion to their importance.

Mr. GILLET. They were not important enough to be active.

Mr. BARKLEY. They were important enough to be rewarded by being retained in the civil service.

Mr. GILLET. That is just what they were not.

Mr. BARTLETT. How long did it take President Roosevelt after he came into office to realize the importance of putting these fourth-class post offices into the civil service?

Mr. GILLET. The gentleman is not referring to what I have referred to.

Mr. BARTLETT. It was after President Taft had been elected in 1908, was it not?

Mr. GILLET. No; it was long before that.

Mr. BARTLETT. I have the date of the order. I have a copy of the order in my hand.

Mr. GILLET. I am not talking about the order. That is where the gentleman has not followed me.

Mr. BARTLETT. I am sorry that I have not.

Mr. GILLET. I will speak about the order at this time.

Mr. BARTLETT. I have a copy of it in my hand.

Mr. GILLET. Then President Roosevelt, later, as I say, after preventing Congressmen from using the offices as a mere matter of patronage, classified all of the offices north of the Ohio, I think, and east of the Mississippi.

Mr. BARTLETT. Does the gentleman know what the date of that was?

Mr. GILLETT. The date does not make any difference.

Mr. BARTLETT. It was November 30, 1908, after the Republican candidate had been elected to the Presidency.

Mr. GILLETT. Then that was not to keep them from Democratic changes, was it?

Mr. BARTLETT. Oh, no.

Mr. GILLETT. That would be the intimation the gentleman would seem to indicate.

Mr. LLOYD. It was Mr. Taft who was elected?

Mr. GILLETT. Yes; it was Mr. Roosevelt's own choice that had been elected.

Mr. LLOYD. He regretted it afterwards?

Mr. GILLETT. Yes, certainly; but at that time his best friend had been elected to office. He had no personal ambition to gratify, no personal devotion to reward, and at that time he said that in future in that section of the country the fourth-class postmasters should be under the civil service.

Mr. LLOYD. Is it not true, as a matter of fact, that Mr. Roosevelt wanted to retain his own friends in office, and that that is the reason he made that order at that time?

Mr. GILLETT. I do not think it is.

Mr. LLOYD. So that Mr. Taft, when he came in after the 4th of March, could not change these postmasters?

Mr. GILLETT. I do not think it is, Mr. Chairman. I do not believe Mr. Roosevelt was actuated by any such purpose. I believe he and Mr. Taft were at that time most intimate friends, and I believe his purpose was a genuine belief in the civil-service principle and a belief that it would improve the administration of the fourth-class postmasters. He extended the service in the same way all previous extensions had been made.

Mr. LLOYD. Is not—

Mr. GILLETT. Please let me finish this. I want to state further that at the time, I confess, I thought he made a mistake.

Now, I have been a thorough believer all my life in the civil service, and I did not believe that the fourth-class postmaster was an official who could be best selected by an examination; but in this case, as in various cases where the system had been extended and where theoretically a man would say that an examination would not get the best man, in this case as in the other cases I think experience has proven that it was a good way and it got a better service than under the old system of patronage. Now I will yield to the gentleman.

Mr. LLOYD. Is it not true that where Mr. Roosevelt parted company with Mr. Taft was in the fact that Mr. Taft failed to keep the men in office that Mr. Roosevelt had in office, and he failed to carry out the policies which Mr. Roosevelt had said to the country he would carry out?

Mr. GILLETT. Mr. Chairman, I am not going to enter here into that question, for I think neither the gentleman nor myself knows the secret cause of the lamentable breach between those two distinguished men; I do believe that President Roosevelt issued that order, not for any partisan or selfish purpose, but he issued it for what he thought was for the good of the service.

Mr. BARKLEY. Will the gentleman yield?

Mr. GILLETT. I will.

Mr. BARKLEY. Is it the gentleman's opinion that these fourth-class postmasters were appointed originally as a reward for their political activities?

Mr. GILLETT. I think a good many of them were and a good many were not.

Mr. BARKLEY. Does not the gentleman think that the real spirit of the civil service put into effect will eliminate those who are not qualified and bring about a higher standard of service in those offices?

Mr. GILLETT. They can be eliminated to-day; there is no trouble about it if a man is not a proper official.

Mr. BARKLEY. I wish the gentleman would indicate to me how it can be done.

Mr. GILLETT. The gentleman shows his zeal—

Mr. BARKLEY. I want it done in a way so that it will give good service to the people and not be a reward for political services.

Mr. NORTON. Will the gentleman yield?

Mr. BARKLEY. The gentleman from Massachusetts has the floor.

Mr. NORTON. Has the gentleman talked to Postmaster General Burleson recently?

The CHAIRMAN. To whom does the gentleman yield?

Mr. GILLETT. I guess I will keep the floor myself.

Mr. BARTLETT. May I interrupt the gentleman?

Mr. GILLETT. Oh, yes.

Mr. BARTLETT. At the time President Roosevelt issued that order, on November 30, 1908, placing fourth-class postmasters in certain sections of the country north of the Ohio

under the civil service, what good reason was there for withholding from the operation of this beneficent law those down south of the Potomac?

Mr. GILLETT. Now, Mr. Chairman, I do not care to go into that [laughter on the Democratic side], because it is a delicate question, and of course I do not know President Roosevelt's reasons, and I will simply say I believe that it was out of a consideration for the South that he did it and not from any selfish or partisan consideration.

Mr. BARTLETT. I think so, and I think he did it out of consideration of the fact that the delegates to the Republican convention generally consisted of fourth-class and other postmasters.

Mr. GILLETT. I think the gentleman is mistaken there. I do not believe the fourth-class postmasters throughout the country or in the gentleman's region are very thoroughly partisan. I think they are by no means all Republicans who hold fourth-class postmaster places in Democratic States.

Mr. BARTLETT. Not when they get them, but they very often become Republicans afterwards.

Mr. GILLETT. That does not seem plausible; if they got them as Democrats, I think they will stay so.

Mr. BARTLETT. They are not very loyal Democrats in a great many instances.

Mr. GILLETT. One of the good results of President Roosevelt's policy, followed by President Taft, was that it made the postmasters less partisan and made their tenure depend on efficiency and not on partisan activity.

Mr. BARKLEY. You made the statement a moment ago that you did not think a better class of men could be obtained by holding these examinations than by covering them into the service without an examination. Now, will the gentleman explain how that can be done, and just what he meant by that?

Mr. GILLETT. What I meant by that was that the men who are now in the offices have the benefit of experience. The poor ones can be removed at any time by the Postmaster General. It does not require any new authority for that to be done, and the men who are in there now have had experience. Now, Mr. McIlhenny, the man who is going to carry out this scheme—

Mr. BARKLEY. Does the gentleman realize that vacancies are constantly occurring in these fourth-class post offices, and to fill these vacancies examinations are now being held under the civil service?

Mr. GILLETT. I appreciate that; and that obviates the need, so far as that goes, of any of those new powers. But Mr. McIlhenny, the chairman of the Civil Service Commission, when before the committee said that the rules contemplate that the actual test of fitness be given during the first few months of service as a probation. That is to say, the best test of a man's fitness is his experience in the office, and these men who have been holding these offices now for 10 years, under the rule of President Roosevelt that you could not displace a man for partisan purposes, have had that experience. Whether, under the rules, the Postmaster General will allow that experience to weigh heavily, I am not sure. I have great confidence and admiration for the Postmaster General as a wise and high-purposed man, but all of us who have been associated with him in this House know that he has that sense of partisanship which I am sure will endear him to that side of the House. I expect he is one of the men who wants the very best men in the service of his country, but he thinks the best men are to be found among the Democrats.

Mr. BARTLETT. He is a wise man.

Mr. MONDELL. There is no question that the appropriation the gentleman is discussing, of \$30,000 for examination, will give the Democratic brethren an opportunity at the fourth-class post offices. That is what it is intended for.

Mr. GILLETT. I suppose so.

Mr. MONDELL. It is practically admitted, as a matter of fact. Is not this a fact, that any one of the three highest names on the list may be appointed? There must be at least three Republicans better fitted for the office, according to the examination, than any Democrat in order that a Republican may be appointed under these rules?

Mr. GILLETT. That sounds logical.

Mr. LLOYD. That sounds logical, does it not, because that is the way it has been enacted heretofore?

Mr. GILLETT. They have not had the examination heretofore.

Mr. LLOYD. Prior to the 4th day of March, when you provided for the examination east of the Mississippi and north of the Ohio, did you not make the certification of the three to the Congressman and he chose from the three?

Mr. GILLETT. The Congressman never had anything to do with it, in my district at least.

Mr. MONDELL. Oh, no; we did not do that. That is what is being done now. The gentleman assumed that because it is being done now we did it under the Republican administration, but that is not true.

Mr. GILLETT. Mr. Chairman, will you kindly tell me how much time I have remaining?

The CHAIRMAN. The gentleman has consumed 50 minutes.

Mr. LLOYD. I want to make one observation with reference—

Mr. GILLETT. I can not yield to that.

Mr. LLOYD. With reference to the Postmaster General.

Mr. GILLETT. If the gentleman wishes to make an observation, I wish he would make it in his own time.

Mr. LLOYD. You made the statement yourself, and I do not think you wish to be unfair to the Postmaster General.

Mr. GILLETT. Certainly not.

Mr. LLOYD. The Postmaster General is undertaking fairly and honestly to administer the civil-service regulations in his department, and you will see that that is being done, if you will make inquiry, in reference to the post-office inspectors. There were 15 division inspectors and 1 chief inspector who were nearly all Republicans; he is now making an equal division, showing that he is endeavoring fairly and honestly to administer the law.

Mr. GILLETT. I have as much confidence and admiration for the Postmaster General as the gentleman has.

Mr. HARDWICK. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Georgia [Mr. HARDWICK]?

Mr. GILLETT. I will.

Mr. HARDWICK. Does the gentleman think it right, or does it accord with his idea of propriety, that thousands of fourth-class postmasters who never stood an examination in their lives, and who are all Republicans, should be covered in and allowed to stay there?

Mr. GILLETT. Why, Mr. Chairman, that is exactly what has always been done in extensions of the civil service by both parties, as the gentleman well knows.

Mr. LLOYD. Exactly. Does the gentleman think that ought to be allowed to stand?

Mr. GILLETT. Yes; I do. For 10 years those men have been there.

Mr. LLOYD. The Republicans have been there all the time.

Mr. GILLETT. By no means all Republicans.

Mr. BARTLETT. Permit me to say that the gentleman ought to have gone down during Mr. Hitchcock's administration and endeavored to get one appointed in his district, as I did, and see how many he could have appointed.

Mr. GILLETT. I do not suppose the Postmaster General consulted the gentleman any more than he did myself. I understand those appointments had ceased to be a matter of Congressional patronage.

Mr. BARTLETT. I will say to the gentleman that the Postmaster General did not consult me, but he did consult some one whom he called a "referee," who did not live in my district.

Mr. STEENERSON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. GILLETT. Yes.

Mr. STEENERSON. Is not the difference in this, that under the Republican administration the civil-service machinery was not used to create a vacancy in the fourth-class offices, but only to fill the vacancies, and that the rule that the gentleman spoke about, where the Congressman could show cause why the incumbent should not be reappointed was limited to appointments to presidential offices?

Mr. GILLETT. I am not sure about that.

Mr. STEENERSON. I believe that is correct.

Mr. GILLETT. Now, Mr. Chairman, there are some other items to which I wish to allude in further illustration of this Democratic simplicity and economy. The bill here, which the committee reports, is pretty good evidence of the administration's attitude. This new Democratic administration asks for something over \$8,000,000.

Mr. FITZGERALD. Nine million dollars.

Mr. GILLETT. The committee has granted something over \$3,000,000. Throughout this bill I have looked in vain for some indication by the Executive of obedience to the command of the Democratic platform that these useless offices should be eliminated. Not one has been suggested in the recommendations that have come to us. Instead of that, many increases have been suggested, from, I think, all the departments. The Treasury Department asks for a very large increase of force. In the Interior Department there was a modest request of \$50,000 for a board of lawyers outside of the civil service, to be

appointed as a board of appeals—an excellent opportunity for patronage. In the Department of Commerce they asked for \$100,000 for agents, to be appointed outside of the civil service, and the committee very generously, and unwisely, as I believe, gave them \$50,000.

Mr. BARTLETT. Mr. Chairman, may I ask the gentleman a question?

The CHAIRMAN. Does the gentleman yield?

Mr. GILLETT. I have not the time. I am sorry. I have only a moment more.

Mr. BARTLETT. That was in pursuance of an act of Congress that we appropriated that money.

Mr. GILLETT. Oh, no.

Mr. FITZGERALD. I will say to the gentleman that that is not outside the classified service.

Mr. GILLETT. I understand it is outside the classified service. I took the pains to telephone to the department, and found out that it was.

Mr. FITZGERALD. The official who informed the gentleman to that effect was probably some incompetent Republican holdover. [Laughter.]

Mr. GILLETT. Then I do not suppose he will hold over long. [Laughter.]

Mr. ELDER. He ought not to.

Mr. GILLETT. I suppose this force is intended to carry out the extraordinary suggestion which Secretary Redfield made, to the effect that in the hard times coming under a Democratic tariff if any Republican manufacturer goes to the wall the Secretary will send out one or more of his agents to ascertain that the manufacturer did not suffer on account of the Democratic tariff, but for lack of skill and economy and unscientific management in the administration of his business affairs. I have no doubt these agents selected outside of the civil service will always be able to find explanations for any business failure which will exempt the Democratic administration from responsibility. I think it is a wasteful appropriation, but it is a good illustration of the fact that this administration is increasing and not reducing offices, as pledged by its platform.

The Department of Commerce also wanted for its solicitor exactly the same force that it had before, although the Department of Labor has been taken away with all its bureaus. I was rather amused to note that one of the duties that this solicitor said he was performing was framing bills for Congress. As I remember, in the last administration great indignation was expressed in Congress because the administration undertook to frame bills and submit them to Congress for enactment.

But that is another instance where the Democratic Party has changed its point of view, for we have certainly seen enough already under this administration of Executive influence on Congress to close the mouths of that side of the House from any such criticism.

The Attorney General, among other requests, wished to increase the salary of an assistant from \$7,000 to \$9,000. The committee gave it to him. No reductions of salaries were anywhere recommended, only increases. There are many of these appropriations which I do not criticize. I think they are wise. I think this for the Attorney General was wise, and I voted for it; but the purpose of my comments is to point out the inconsistency of the conduct of the Democratic Party after election and before election, the absolute refusal on their part to follow the promises which they made in their platform, and which they gave us in the House, and the apparent absolute indifference of the administration to any economies which might be suggested.

Take the Department of Labor. The administration recommended to us that we grant to the Department of Labor two automobiles; \$5,000 for the Secretary and \$2,500 for an electric automobile for the family. Personally I was in favor of giving the Secretary an automobile. I believe that is the modern mode of conveyance; but I recognize that it is a little more consistent for that side of the House, after all the denunciations we have heard them make in the past about the abuses by Republican officeholders with carriages and horses, not to vote an automobile for the new department. So the Secretary of Labor must be content with the old system of horses and carriages.

As I say, I do not criticize many of the requests of the administration in this bill, but what I wish to point out and enforce is that so far there has not been a single suggestion by the administration that it was paying any attention to the pledges on which it was elected. As Mr. PALMER quoted in his speech from all the Democratic platforms of the last 12 years, they have claimed to be the party of simplicity and economy, and so I looked for this administration, in this first opportunity, to show some evidence that they stood on their platform pledges, and that they are not merely a humbug and pretense; but as in so many other cases I suspect that after they have been elected

the platform is forgotten, and they will continue to perpetrate and probably exaggerate the very abuses for which they have so fiercely and tempestuously reviled us. [Applause on the Republican side.]

Mr. FITZGERALD. Mr. Chairman, the gentleman from Massachusetts [Mr. GILLET] covered so much ground that I have no doubt it was purely through inadvertence that he omitted to call attention to a very striking illustration of this administration effectively performing promises made to eliminate useless offices. On page 419 of the hearings before the Committee on Appropriations, while Mr. Harris, the Director of the Census, was being interrogated, the following occurred:

Mr. BARTLETT. I have heard that there was a \$3,000 official in the Census Office who did not do any work, and that you dispensed with his services?

Mr. HARRIS. When I took charge of the bureau I found that Mr. Allen was drawing a \$3,000 salary, and I could not find that he had done any work for two years. He never reported there. Of course we dispensed with his services the first week.

The CHAIRMAN. What was his position?

Mr. HARRIS. Mr. Allen was a patent expert. He had been occupied in regard to the bureau's mechanical appliances and in a lawsuit the Government had with the people who claimed that their patent rights had been infringed.

The CHAIRMAN. The tabulating machines?

Mr. HARRIS. Yes; but that had been settled for some time, and I saw no necessity for his services.

Secretary REDFIELD. Mr. Harris, did you find a man employed in New York as a special agent?

Mr. HARRIS. We found that one of the divisions in the office was in charge of a Mr. Hourich, who lives in New York, and he would come down one or two days. He was supposed to have charge of the work connected with mines and mining. In fact, he did not wish his division chief to have anything to do with it; he wished to manage it directly.

The CHAIRMAN. Is that the man who wrote a book in which he compiled and condensed the report of the Immigration Commissioner?

Mr. HARRIS. Yes.

The CHAIRMAN. He was supposed to be employed in the Census Office?

Mr. HARRIS. Yes. Since then I have proposed to enter into a contract with him to complete that work for a certain amount instead of leaving it to him to say what time he should work and what pay he should receive for expenses, etc. He was also allowed a stenographer.

Secretary REDFIELD. You found that he was doing business in New York?

Mr. HARRIS. Yes.

Mr. BARTLETT. And drawing pay from the Government?

Mr. HARRIS. Yes; for this extra work. He was allowed to work on Sundays.

Mr. GILLET. Was he paid a salary or a per diem?

Mr. HARRIS. A per diem. He was doing the work there and we had no way of telling just what he was doing.

Mr. BARTLETT. How long did Mr. Allen continue without doing any work?

Mr. HARRIS. There is no record in the office to show that he did anything for two years.

Mr. HASTINGS. He worked in connection with an invention for improved mechanical appliances.

Mr. BARTLETT. There was no report from him?

Mr. HASTINGS. No written report whatever.

Mr. HARRIS. That had been settled two years before. I could not find that he had done anything for two years.

Secretary REDFIELD. His services were dispensed with?

Mr. HARRIS. Yes, sir.

Mr. Chairman, I know it was purely a matter of inadvertence that the gentleman from Massachusetts, in his very instructive speech, omitted to call attention to this very significant conduct of the Census Office under the recent Republican administration.

Mr. DONOVAN. Is the Mr. GILLET mentioned there the Member of Congress from Massachusetts?

Mr. BARTLETT. Oh, yes; he was a member of the subcommittee.

Mr. DONOVAN. It was the same Mr. GILLET, of Massachusetts?

Mr. FITZGERALD. The same gentleman. [Laughter.]

I yield the remainder of my time to the gentleman from Missouri [Mr. BORLAND].

Mr. BORLAND. Does the gentleman from Illinois [Mr. HINEBAUGH] wish to use 10 minutes?

Mr. HINEBAUGH. Yes.

Mr. BORLAND. I want to yield five minutes first to the gentleman from Georgia [Mr. BARTLETT] and then I will ask the gentleman from Illinois [Mr. HINEBAUGH] to use a part of his time.

Mr. BARTLETT. Mr. Chairman, I intended to wait later in the discussion of this bill under the five-minute rule to say something in reference to this civil-service proposition regarding fourth-class post offices. This matter I regard as a kind of deception and a snare, and as far as I am concerned I do not hesitate to declare that instead of appropriating \$39,000, as we do in this bill, to hold examinations to determine whether men are fit to be appointed to the position of fourth-class postmasters, by the Civil Service Commission and post-office inspectors, I would revoke the order made by President Roosevelt on November 30, 1908, and the Executive order by President Taft, October 15, 1912, and the modification of that order by

President Wilson, and have these postmasters appointed on the recommendation of Congressmen.

I give gentlemen on this side and on the other side notice that they will have an opportunity to vote for the repeal of these orders, because it is in order on this bill, and we will save the Government \$39,000. It is true that President Roosevelt inaugurated it on the 30th of November, 1908, after Mr. Taft had been elected, at the very time Postmaster General Hitchcock, who had conducted the campaign and was on the Republican national committee, was Postmaster General. He remained Postmaster General until the 4th of March, 1913. I say it without fear of successful contradiction that, so far as my part of the country is concerned, the post offices and other Federal offices were used as machinery to obtain delegates to the Republican national convention in the years that the Republican Party was in power.

I have instances of it where postmasters requested to be appointed, indorsed by the patrons of the office, were turned down and refused appointment, and the only reason finally given was that one of the delegates from that district to the Republican national convention had recommended another, and that delegate, in order to be held in line in Chicago, had to be placated by the appointment of the person he had recommended.

It is true that Mr. Roosevelt inaugurated it in order to have Mr. Taft nominated in 1908, and he himself had been the beneficiary, under the skillful guidance of the Postmaster General, who was at the time the chairman of the Republican national committee. Then when the prospect of defeat in 1912 was so clear that he who ran might read and the wayfaring man, though a fool, could not have erred therein they placed the 36,000 fourth-class postmasters under civil service, and the only opportunity that we will have to have men who represent the people appointed is under the modification of this order by President Wilson.

As far as I am concerned, I am ready now to vote, as I have voted before, to revoke the whole business and put the appointment of the fourth-class postmasters where it belongs, in the hands of the Postmaster General, and I will go further and say upon the recommendation of the Representatives of the people in Congress. [Applause.]

Mr. BORLAND. Mr. Chairman, I understand the gentleman from Illinois is entitled to some time in opposition, and I will ask him to use some of that time.

The CHAIRMAN. The gentleman from Illinois is in control of one hour which the minority has.

Mr. HINEBAUGH. Mr. Chairman, I will yield 10 minutes to the gentleman from Pennsylvania [Mr. KELLY].

Mr. KELLY of Pennsylvania. Mr. Chairman, I have listened with great attention to the labored argument of an hour's duration by the learned gentleman from Massachusetts [Mr. GILLET], in which he laid down the proposition that the Democratic Party at the present time has thrown down all doctrines of economy and is embarking on an extravagant and wasteful career. We also listened to the distinguished gentleman from Georgia quoting Scripture in his effort to show that the Republican Party when in power did exactly what the Democratic Party is doing now, and we are willing to admit both contentions. The subject matter of this bill is a different proposition, however. It is not a matter of party history, because both parties have degenerated in a large degree from the real purpose of parties in this country, and instead of a government through parties they uphold a government by parties and for parties. We are simply hearing the results of that attitude in this debate to-day. The title of this bill is that it is to make appropriations to supply urgent deficiencies in appropriations, and yet I notice in one part of the bill, on page 18, there is a matter which seems to me is not for urgent deficiencies, but is a matter of new legislation and added expenditure. It comes under the heading "Department of Justice," and the paragraph is as follows:

Office of the Attorney General: For salary of the Assistant to the Attorney General, which is hereby fixed at the rate of \$9,000 per annum; in addition to the \$7,000 heretofore appropriated, for the fiscal year 1914, \$2,000.

That is an item inserted in this deficiency appropriation bill. It is not a matter of party procedure, and the gentleman from Massachusetts [Mr. GILLET] in all his argument only endeavors to prove that the Democratic Party is doing exactly what the Republican Party had done and would do again. It is not a matter of one party's action. I want to point out that it is a matter of tendency and has been the consistent tendency from almost the time of the establishment of the Government. Let us take the Attorney General's office, for example, and see the increases in salary. It gives the key to all of the extravagance to be charged against successive administrations. I role

that in 1789 the first law was passed regarding the salary for the Attorney General of the United States, which was fixed at \$1,500 a year. That amount lasted only until 1791, when the salary was made \$1,900 a year. Then it was made \$2,300 a year in 1792, and in 1797 it was increased to \$2,800. In 1799 it was made \$3,000 and in 1819 it was increased to \$3,500, and on February 26, 1907, the increase was to \$12,000, making the increase in salary from \$1,500 at first to \$12,000 at the present time. In this bill we have an Assistant Attorney General's salary raised to a point where it is more than the amount the Attorney General received in toto in the first case. The increase alone in this bill is more than the entire salary that the Attorney General received in the days when this Government was being formed. That is true not alone of the Attorney General's office, because I would have you notice that in the Secretary of State's office the increases have been from the first original amount of \$3,500 a year up to \$12,000 a year through various salary grabs at different times. The salary of the Secretary of the Treasury has been increased from \$3,500 to \$12,000, the Secretary of War from \$3,000 to \$12,000, the Secretary of the Navy from \$3,000 to \$12,000, and the Postmaster General from \$1,000 to \$12,000.

Mr. BARTLETT. Mr. Chairman, will the gentleman yield?

Mr. KELLY of Pennsylvania. Certainly.

Mr. BARTLETT. It is true that up to 1908, or rather up to March, 1908, the salaries of Cabinet officers were \$8,000?

Mr. KELLY of Pennsylvania. The bill was passed on the 26th of February, 1907, making it \$12,000.

Mr. BARTLETT. I thought it was 1908.

Mr. KELLY of Pennsylvania. In 1907; and that was continued in every department.

Mr. BARTLETT. Except the Secretary of State's office; and the Secretary of State at that time was allowed to receive \$8,000 during the term to which he had been elected to the Senate, and the change was made as to the Secretary of State's salary with the understanding that it was not to be an increase, but as soon as the term to which he had been elected to the Senate expired the Republicans increased the salary to \$12,000.

Mr. KELLY of Pennsylvania. Certainly; and that was only a measure of deception.

Mr. BARTLETT. I for one did not vote for any of these things.

Mr. KELLY of Pennsylvania. However, that has nothing to do with it. Individual judgment is not under consideration, but the result of such legislation is, and that legislation was continued by giving the Secretary of State and every other Cabinet officer a salary of \$12,000 a year. The Secretary of the Interior, an office created at a later date, was increased in salary from \$6,000, in 1849, to \$12,000, in 1907.

Mr. GARNER. But the gentleman does not give the connecting link between \$6,000 and the \$8,000. Cabinet officers received \$8,000 for a number of years.

Mr. KELLY of Pennsylvania. Yes; in 1853 a bill was passed making the salary \$8,000. I did not give those connecting links, but in all the departments there were links connecting the successive increases. Also the Secretary of Commerce and Labor was given \$8,000 in 1903 when the department was created, and his salary was raised to \$12,000 later.

Mr. GARNER. Mr. Chairman, will the gentleman yield for another question?

Mr. KELLY of Pennsylvania. Certainly.

Mr. GARNER. Does the gentleman believe that now Cabinet officers are receiving more money than they should receive?

Mr. KELLY of Pennsylvania. Certainly I believe they are, Mr. Chairman, in spite of the fact the distinguished premier of the Cabinet and the peerless leader of the Democracy can not live on the sum of \$12,000 a year. I note in the hearings on this "urgent" deficiency bill that the argument advanced by Attorney General McReynolds for the increase of the salary of his first assistant from \$7,000 to \$9,000 is on the same ground, that he can not live on \$7,000 in the city of Washington. I would like to know what the standard of measurement is to be concerning a living wage in Washington officialdom.

Mr. JOHNSON of Washington. Will the gentleman from Pennsylvania state what he thinks to be a fair salary for the Secretary of State?

Mr. KELLY of Pennsylvania. I would assure the gentleman from Washington that I have my own opinion. I said in answer to the other question that \$12,000 was more than sufficient salary. I would not want to set any definite figure, but I would set the figure considerably under \$12,000 a year.

Mr. BARTLETT. From the foundation of the Government, with very rare exceptions, we have gotten the head of the profession in the United States in the office of the Attorney General at this small and at smaller salaries.

Mr. KELLY of Pennsylvania. Yes, sir; that is absolutely correct.

Mr. BARTLETT. From Randolph down to P. C. Knox.

Mr. KELLY of Pennsylvania. It was not a matter of cash payment for their service, but because they could serve with faithfulness and patriotism the country they loved, and therefore were willing to sacrifice something instead of clutching at every dollar they might grab from the Public Treasury.

Mr. BARTLETT. Esteeming it an honor to belong to a noble profession, they illustrated their patriotism in serving their Government.

Mr. KELLY of Pennsylvania. I thank the gentleman from Georgia for putting the matter so clearly and well. I am making the point that after all we have to recognize the relation between salaries of those in high official circles and the average man down on the street who is compelled to face the cost of living just as well as the First Assistant Attorney General. When the Attorney General comes before a committee of this House and says that his assistant can not live on \$7,000 a year, and when the Secretary of State publishes that he can not live on \$12,000 a year, we have the right to say that the cost of living is a question facing others than themselves.

Mr. BARTLETT. If the gentleman will allow me to interrupt him again. Of course I understand the gentleman's position, but it is a fact, however, that these salaries of heads of departments, Cabinet officers, were \$8,000 for quite a number of years and were changed by a Republican administration upon a vote that most of the Democrats voted against. That is true.

Mr. KELLY of Pennsylvania. Certainly; without a doubt. No one can deny that proposition; but you see the situation to-day, when conditions are reversed.

Mr. BARTLETT. I understand the gentleman's position.

Mr. KELLY of Pennsylvania. I want to say that this tendency is one of all parties. It is not an offending of the Republican Party alone or the Democratic Party alone. It is an ever-increasing tendency down through all departments of government, and that is the point that is worthy of our consideration. It is not only in the case of these executive departments, but also in the legislative department, because the salaries of the Members of this House, formerly \$6 a day and only while they were in active service, now amount to \$7,500 a year. There have been increases in the judicial department—Chief Justice from \$4,000 to \$13,000 and associates from \$3,500 to \$12,000. In the executive department the salary of the President has been raised from \$25,000 to \$75,000 a year and with \$25,000 additional for expenses. The Vice President's salary has been raised from \$5,000 to \$12,000.

Mr. BARTLETT. If the gentleman will pardon me again, that \$25,000 salary was accorded on a kind of promise, or it was held out, at least, that the \$25,000 increase in salary would be in lieu of \$25,000 for traveling expenses, and I am an offender again in that particular, as I voted against both propositions.

Mr. KELLY of Pennsylvania. The gentleman deserves congratulation, it seems to me, on that stand. But that has nothing to do with the fact that the result comes back to the people of this country. They are facing the cost of living just as much as the Secretary of State and the Assistant Attorney General. The income of the average man in this country who works with his hands and does the labor of this land is \$435 a year, and yet we dare stand before them, the men who give this Nation its strength and its riches, and tell them it is impossible to live on \$7,000 a year. It is brazen effrontery to say the least.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HINEBAUGH. I yield five minutes more to the gentleman.

Mr. ROBERTS of Nevada. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Nevada?

Mr. KELLY of Pennsylvania. I do.

Mr. ROBERTS of Nevada. I would like to know of the gentleman if he is in favor of cheap labor and a grape-juice administration. He said some time ago that the Attorney General was allowed \$1,500. That was at the beginning of the Government, was it not?

Mr. KELLY of Pennsylvania. Certainly.

Mr. ROBERTS of Nevada. The gentleman knows how much the Government has increased up to this time, does he not? At that time we had very few people, while at this time we have nearly 100,000,000 people.

Mr. KELLY of Pennsylvania. I do not know anything about the "grape-juice" administration that is spoken of, but I was talking of the cost of living as applied to the average man more than to those individuals in high office who are drawing \$1,000 a month.

The average man in this country to-day, as you know, has an income of \$435 a year, and that is including all wage earners as tabulated in the census report. They make less than \$40 a month, and are brought face to face with the statement in their lawmaking body that the Secretary of State can not live on \$12,000 a year, and the Assistant Attorney General can not live on \$7,000, but must have the \$9,000 which is provided in this bill. I simply want to draw attention to the fact that all of these salary grabs are paid by the people. We talk of the Treasury of the United States as though it was some kind of a golden stream, and all that is necessary is to tap it and draw out a certain amount. And we bring in a deficiency bill of \$3,000,000, and it is passed without attention. Let me say to you, gentlemen of the committee, that every dollar that goes into that Treasury comes out of the pockets of the people in some way or other. You can not possibly, by mere ledger-deman or hocus-pocus, draw money out of the Treasury without putting it in there through tax or some way or other first. Yet new burdens are laid on the people to pay salaries which are exorbitant in every degree. The Members of the House should remember that the salary grabs of the past have only led to added increases, and that they are setting up a standard, as suggested by the gentleman from Georgia, to which others will be brought. If you pay this \$9,000 salary to the first assistant, you will raise other salaries. You have a solicitor in that department who is drawing \$10,000 a year, which is more than all members of the Cabinet drew when Washington became the first President. Therefore, it seems to me in all justice this paragraph should be stricken out. This new legislation which is asked to be inserted in here should be stricken from this bill, and the amount left at \$7,000, which is more than fair.

Mr. BARTLETT. The gentleman will do the committee the justice of saying that, while we were appealed to to grant about \$9,600,000 worth of claims as deficiencies, we reported only about one-third of the demand upon the committee?

Mr. KELLY of Pennsylvania. Yes; and that is worthy of credit.

Mr. GARNER. The gentleman will observe that the rules of the House give him the power to prevent this increase.

Mr. KELLY of Pennsylvania. If it is possible to introduce an amendment to strike this out, I will be glad to do it.

Mr. GARNER. I think a point of order against the increase in salary, under the rules of the House, will be sufficient to take it out of the bill.

Mr. KELLY of Pennsylvania. Regardless of the point of order which might be raised against it, as a matter of individual decision every Member of this House ought to put the purpose of fair dealing and justice in legislation at the front and vote as his conscience dictates on this item.

It is only justice, for there are other things to be considered than a declaration that a man can not live on \$7,000 a year. I count of vastly more importance the situation which is due in part to these high salaries, a situation where the average man of the most powerful and wealthy Nation in the world can not keep his family in a manner befitting an American citizen; can not educate his children as they should be educated; can not lay up a penny for the days of old age.

I am convinced that the men who are forced by bitter necessity to practice the closest economy in their homes will not stand much longer for the burdens imposed by governmental extravagance. To-day the average family contributes \$50 a year in taxes to the support of the Government, and that means more to the average family than to the average executive department official.

But even that is not enough, for here is a deficiency bill appropriating more than \$3,000,000, and this one paragraph adds \$2,000 to one salary. Little wonder that there is perpetual need for deficiency bills.

It is time to call a halt on reckless expenditure of public funds. The sphere of government will without doubt be widened in the coming years. Instead of a policeman's club it will become an instrument for the promotion of the general welfare; instead of trying always to cure evils it will enter upon the field of prevention.

That is all the more reason why every dollar should be wisely spent and why in fixing salaries some regard should be paid to their relation to the income of the average man, whose social condition and opportunities and standard of living, after all, set the mark for the Nation.

Mr. BORLAND. Mr. Chairman, I understand the gentleman from Illinois [Mr. HINEBAUGH] wants to yield time to the gentleman from Washington [Mr. HUMPHREY].

Mr. HINEBAUGH. Yes. I yield 30 minutes to the gentleman from Washington [Mr. HUMPHREY].

The CHAIRMAN. The gentleman from Washington is recognized for 30 minutes.

Mr. HUMPHREY of Washington. Mr. Chairman, I desire to thank the gentleman from Missouri [Mr. BORLAND] for his courtesy in permitting me to speak now.

When the Diggs-Caminetti case was under consideration a few days ago my colleague, Mr. BRYAN, took advantage of the 20 minutes that was extended to him to make a speech in regard to the disturbance that recently occurred in Seattle between the Industrial Workers of the World and soldiers and sailors and certain citizens of Seattle. He has given this speech wide circulation, sending out thousands of copies into the State of Washington. I greatly regret that he has seen fit to take this action. In my judgment, his speech was most untimely, ill-tempered, and uncalled for. I can not believe that any good will come from giving this wide publicity to the affair. It was not a matter that in any way concerned Congress. I can see no justification for this speech, unless it was to furnish the mayor of Seattle the opportunity to defend himself by circulating it at Government expense. I doubt if a Member of this House is ever justified in doing this for anyone, and especially about a matter not before Congress. However, this is a question that must be left to the sense of propriety and judgment of each Member.

While such utterances as my colleague made has no effect here, where their value and their purpose is well understood, yet often they may, to a certain extent, mislead the public. I am convinced that the wide circulation given this speech has done great harm. It has attracted wide attention to the affair. It has increased and intensified local feeling in Seattle. The delivery of this speech is especially to be regretted, because it has led those industrious patriots, the Industrial Workers of the World, to believe that they have a champion and defender in the Halls of Congress. This can but encourage them to further acts of lawlessness and treason. These disreputable agitators have an insane desire for notoriety, and the delivery and circulation of my colleague's speech has flattered and pleased them greatly.

My colleague devoted a large part of his speech to attacking certain persons in private life, some of whom were in no way whatever connected with the trouble. But he was especially unbridled in his denunciation of Col. A. J. Blethen, owner of the Seattle Times. He also published, as a part of his remarks, a long letter attacking Col. Blethen written by the mayor of the city of Seattle.

Although he asserted many times, as he always does, that he wanted to be fair, my colleague did not give nor attempt to give but one side of the controversy. Inasmuch as these attacks are not only personal upon Col. Blethen, but attempt to fix the responsibility for the riots upon the articles published in the Times, common fairness demands that the other side of the controversy be made public.

If this is a matter that must be paraded before this House, then both sides should be heard and Congress should know the truth.

A resolution has been introduced both in the House and in the Senate to investigate the affair. Those who claim to have lost property as a result of the disturbance are asking damages against the Government, and their representative is on his way here to press these claims. I am absolutely convinced that the only result of the introduction of these resolutions will be to encourage these unsavory agitators and give them a much-desired publicity, and I believe that this was the main purpose of the introduction of these resolutions. Yet this has been done, and it places upon me the duty, however unfortunate or distasteful, of placing before Congress, in so far as I can, the facts in the matter.

Now, Mr. Chairman, I ask unanimous consent to extend my remarks by inserting in the Record certain newspaper editorials and items in regard to the affair.

The CHAIRMAN (Mr. ALLEN). The gentleman from Washington [Mr. HUMPHREY] asks unanimous consent to insert certain matters in the Record. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Mr. Chairman, I very much regret that my colleague [Mr. BRYAN] is not present. I dislike to deliver a speech of this character in his absence. But inasmuch as he is not here and a good portion of this speech refers to local conditions, I shall ask unanimous consent to extend that portion of my speech in the Record.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] asks unanimous consent to extend another matter in the Record in connection with his speech. Is there objection?

Mr. FOSTER Is that in reference to the gentleman from Washington [Mr. BRYAN], the gentleman's colleague?

Mr. HUMPHREY of Washington. It refers to his speech.

Mr. FOSTER It is nothing more than that?

Mr. HUMPHREY of Washington. It refers to his speech and to certain attacks which he made on people residing in the State of Washington.

Mr. FOSTER Is this a personal attack upon the gentleman's colleague?

Mr. HUMPHREY of Washington. It is not a personal attack.

Mr. FOSTER It is just an answer to his speech?

Mr. HUMPHREY of Washington. Yes.

The CHAIRMAN Is there objection?

Mr. HUMPHREY of Washington. I regret very much the gentleman's absence, but I do not feel like taking up the time of the House in discussing a personal matter unless the gentleman concerned is here.

Mr. FOSTER The only objection is to putting any matters of that kind into the RECORD in the absence of the Member concerned.

Mr. HUMPHREY of Washington. If the gentleman from Illinois has any objection I will not read it. I am simply asking this because my colleague is not here, very much to my regret.

Mr. FOSTER I shall not object.

The CHAIRMAN The gentleman from Washington may proceed.

Mr. HUMPHREY of Washington. As to the action of my colleague in attacking various persons in private life here upon the floor of the House, where he has the protection of the Constitution thrown about him and can not be called to account elsewhere for what he may say, one of the highest privileges that the Government can confer, I do not care to comment. Such action is perhaps justifiable when a Member has been personally attacked, and it is to be commended if it is necessary in the public interest to prevent or secure legislation. But under ordinary conditions, for mere political purpose, or personal animosity, or to defend some one else, should a Member, under the protection given him, denounce and assail a citizen in private life? This is a question that each Member is called upon to decide for himself, and it must be left with the House and the people of the country to judge whether it is a courageous thing, a manly thing to do, and whether or not it commands their admiration and respect.

It was with great regret that I found that in order to defend the mayor and the Industrial Workers of the World my colleague found it necessary to assail and denounce almost everything and almost everybody in the State of Washington. He found it necessary to attack the Democratic Party and the Republican Party. He found it necessary to reflect upon the good name of his State. He found it necessary to blacken the reputation of the city of Seattle. He found it necessary to declare that the courts of the State of Washington were corrupt. He found it necessary to denounce private citizens. He found it necessary to condemn the men that the people had honored by electing them to office. He found it necessary to reflect upon the soldiers and sailors of the United States. He found it necessary to insinuate that the Secretary of the Navy had made an ill-tempered speech. He found it necessary to denounce almost everything and everybody, except the Industrial Workers of the World and their sympathizers. These noble patriots, preachers of social justice and followers of the red flag, alone escaped his wrath.

He would have you believe that Seattle has been worse than the wicked cities of old that by divine decree were blotted from the face of the earth for their iniquities, and that the State of Washington for years has been controlled by a band of crooks and grafters. He charges in so many words that the courts of Washington have been corrupt and controlled by corporations and money; that the governors have been dishonest and the pliant tools of the same interests sitting ever ready to pardon any criminal that might, as he says, be by "judicial accident" convicted. He says that United States Senators have been bought and sold. What monstrous charges these are if not true.

Is it true that the people of Washington have been so stupid or dishonest that they have elected scoundrels or weaklings from the time it became a State up until a few months ago, when in a moment of moral regeneration and mental awakening they elected my colleague? Let me read the honored names of some of the distinguished men who have received the people's confidence in the State of Washington.

The governors have been Elijah Ferry, John H. McGraw, John R. Rogers, Albert E. Mead, and Samuel G. Cosgrove.

These are the men that the people of the State of Washington have honored by electing them to the office of governor. Henry McBride and Marion E. Hay came into office by the death of the elected governor. The men that I have mentioned are the men that my colleague would have you believe were ever ready to favor the criminal that a corrupt court might by accident permit to be convicted.

I challenge the history of this Republic to show a more splendid line of governors in any State of the Union. These men were of that grand type of pioneers that have made the Pacific coast the marvel and the admiration of the modern world. They were men of courage and of patriotism and of devotion to their State, men of the highest reputation and unblemished integrity. Never until it was uttered on the floor of this House by my colleague did I ever hear friend or foe reflect upon their honor. I challenge the gentleman now to point to a single blot on the record of any man that ever sat in the governor's chair in the State of Washington. I ask him to give the name or the names of those who were ready to carry out corrupt bargains by peddling pardons. I ask him in the name of justice to the two now living, and the four that were elected and have passed beyond, to name the crooks that have disgraced and dishonored the governor's chair in the State that has honored him and honored me.

He says that United States Senators have been bought and sold, and by specifically excluding from this list the present junior Senator he by implication includes all the others. Who are the men that my colleague, with his cry for "fair treatment" and his demand for "justice for all," has upon the floor of this House asserted have been bought and sold? Is it the Hon. WESLEY L. JONES, who was for many years an honored and esteemed Member of this body; a man as universally respected as any man that was ever a Member of either the House or the Senate; a man that has given as conscientious and honest service to his country as any living public servant; a man whose public and private life is as clean as that of any man that ever walked beneath the Dome of this Capitol? Has he been bought and sold?

Who are the others? Watson C. Squire, Levi Ankeny, Addison G. Foster, Samuel H. Piles, distinguished Republicans. George H. Turner, a distinguished Democrat.

These men are still living and are capable of defending themselves and need no eulogy from me.

Two men who have served my State in the Senate are no more and can only speak through those who live:

The Hon. John B. Allen, a man of great ability and spotless reputation. Surely no man would defame him.

The Hon. John L. Wilson, a man of great talent and tremendous energy and industry, and I never heard his integrity questioned before or since his death by personal or political friend or foe except here upon the floor of this House by my colleague, Mr. BRYAN. Which of these men that are dead were bought and sold? Let the name be given and not blacken the memory of both.

I feel that I should mention two other names of the many public men that have served my State with distinction and highest honor. One was Judge R. O. Dunbar, who was a member of the supreme court from the time of its admission as a State until his death a short time ago—a just judge, an honest man, a true servant of the people, and universally respected and mourned.

The other, my late colleague, the loved and brilliant Francis W. Cushman. I never knew a man that revered his country more or more faithfully or with a higher purpose served his State and country.

I have given the names of the men who have been indicted by the insinuations of my colleague when he says, referring to the State of Washington, that United States Senators were bought and sold, pardons were peddled, and that the public men of Washington were dishonest and corrupt. I ask him to be specific in his charges. I ask him to give the names of the men that have disgraced and betrayed the people of my State. I demand that he do this or apologize for his statements. I appeal to him in the name of common justice and common decency, in the name of the memory of the dead and fairness to the living, to give the names and not cast over the reputation of all these men that the State of Washington has loved and honored the putrid filth of slimy insinuation.

My colleague should remember that he has been honored by the State of Washington by a seat in the highest legislative body in the world. He must realize that his words, owing to his position, have a certain weight throughout the country. This responsibility should sober him, and he should not in a moment of hysteria or political frenzy, in order to protect his

friends, make such unbridled accusations against the people of his own State and the men that they have honored unless he stands ready to produce the facts.

My colleague would have you believe that the whole body politic in the State of Washington for years was a malignant cancer and a festering mass of corruption. When the people have an opportunity to express themselves directly it is not often that they for any length of time select men that do not represent the average intelligence and honesty of the voters. If they do, then popular government is a failure. During the time when he would have you believe that graft and dishonesty completely dominated the politics of that State Hon. W. L. Jones and the late Francis W. Cushman represented that State for 10 years in this body. For six years of that time I also had the honor to be sent here by the powers of crookedness and corruption. If W. L. Jones and Francis W. Cushman were crooked and corrupt; if they represented the powers of "pillage and special privilege"; if they were enemies of the people and a disgrace to the State, then I ask the odium of being placed in the same class. No doubt my colleague can explain how a State so completely in the power of darkness, so absolutely controlled by the forces of evil, could elect such men as they did for governor and Members of Congress. This State, so boss ridden and money controlled; so absolutely dominated by the influences opposed to liberty, to decency, and independence; so crushed by the foul and criminal hand of special privilege, at the very moment it touched the uttermost depth of infamy gave to Theodore Roosevelt the largest majority, according to population, of any State in the Union.

According to my colleague, Col. Roosevelt is the sinless saint of American politics, the anointed prophet of the people, the sanctified emblem of purity and holiness.

How could the people in the State of Washington be so depraved in many things and so divine in one?

Another thing. During most of these years of political depravity the Republican Party controlled the State of Washington. My colleague was a member of that party and held office in it. Why did he not denounce it then as he does now? Is it possible that while he was a member of the Republican Party his moral perception was so dulled that he did not see any of this universal corruption, and that he had attached himself to a salary and an office in another party before he was able to realize this awful condition?

For 20 years I have been a resident and a citizen of Seattle. I am proud of that fact every day that I live. During these two decades the growth and development of Seattle has been one of the marvels of the modern world and not surpassed in all the records of civilization. The growth of our schools and churches and all that is best in Christian civilization has kept pace with our material development.

Seattle is the cleanest and the healthiest city in America, and spends more per capita to educate her children than any city in the world. Seattle does not have to-day, and never has had, a slum section—a proud distinction of which few cities in this world can boast. Seattle was not built upon a foundation of corruption and dishonesty.

Seattle, all conditions considered, has been as well governed and as free from vice and crime as any city in America. Such achievements are not the triumphs of crooks and grafters.

Many of the very best men and women that the world could furnish have been attracted to our country. No State in the Union ever had better citizens of higher average intelligence and integrity and honor than has the State of Washington. No State has had courts freer from corruption or dishonesty or improper influence.

The gentleman proudly prates about the primary law and equal-suffrage law. They are both upon our statute books, but the only thing his party ever had to do with them or with any other law in the State of Washington was to loudly try to claim credit for those that were popular after the Republican Party had passed them. It is true that the State of Washington has upon its statute books as many laws for the general good, and especially in the interest of the weak and poor and of the laboring classes, as any State in the Union. In fact, I believe that it is true that in the true sense of the word that the State of Washington has more progressive legislation upon her statute books than any State in the Union, but not a word or line of any one of these laws was written there by the so-called Progressive Party. Not one.

I have known my colleague for many years and we have always been friends and I have always had great respect for him. I regret most sincerely that what he has said has made it necessary for me to reply. I assure him that there is nothing personal in these remarks whatever. But I would be ashamed

to go home to the people that so long have honored me with their trust and confidence and would feel that I was too cowardly to associate with them if I did not resent this unfortunate and wholly unjustifiable attempt to blacken the reputation of my city and my State and that of the many public men that have served it with distinction and honor.

Now, I wish for the benefit of the committee to dwell for just a moment on the cause of the Seattle riots. All this shouting and tumult about who caused the Seattle riot is sham and pretense. There is no chance to be mistaken about it. The frothy ravings of the Industrial Workers of the World and their sympathizers on the streets of Seattle was the cause. For weeks and months every night these Industrial Workers of the World, despised alike by those who labor and by those who employ labor, stood on the streets of Seattle and denounced and condemned the Government and the law. For months they had assailed the soldiers and sailors of their country and poured forth their filth and slime upon every man that wore the United States uniform. They had circulated literature containing most indecent and defamatory attacks upon them. They cursed the flag that the soldiers and sailors were taught to honor, and defamed the country that they were sworn to defend. Finally this vilification and abuse was followed by assaulting and badly beating several soldiers. What the circumstance of this assault was is of little importance. It was simply the culmination of a series of offenses by these disreputable agitators. Certain it is that if these defamers of our country's institutions and our country's defenders had been kept off the streets of Seattle no riots would have occurred. These enemies of society placed themselves outside of the law and taunted the soldiers and sailors to practice what they had been preaching. When this was done, and force was used against these advocates of force they whined for the law that they had defied to protect them. If there is anything about one of these lazy soap-box performers larger than his mouth it is his streak of yellow.

The sailors did take the law into their own hands. They were wrong; but they did it under provocation so great and under circumstances so extenuating that many good citizens condoned their action, and very few, if any, have any sympathy for their Industrial Workers of the World victims. It is to be regretted, of course, that in wreaking their vengeance upon the Industrial Workers of the World that some innocent ones also suffered. The conditions in Seattle had grown intolerable, and, as is always the case, one lawless act led to another.

I shall place in the Record a statement from the soldiers and sailors themselves that gives their reasons for their actions. So far as the Secretary of the Navy is concerned, I read his speech as it has been reported. I approve every sentence and every word that he uttered [applause], and so do the people of Seattle. His words were the words of a patriotic American citizen, and as a Republican I am proud of such a Democrat in the Cabinet. I pay to him the tribute of my admiration. If the conditions of my city were such that a brilliant and patriotic speech eulogizing the flag and praising our country and denouncing those who would destroy our institutions caused a riot, then I thank God that such speech was made. [Applause.] If this be true, it should have been made sooner. If there is any other spot in this Nation where such a speech will start a riot, then I trust that before another day dawns that some man will have the patriotism and the courage to make one there.

What was the cause of the riot in Seattle? The same cause that almost daily causes business disturbances, strikes, riots, and murder in some part of our country. It is the liberty and license shown to the Industrial Workers of the World under the misguided cry of "free speech." These enemies of society have become a menace to the Nation. These men will not work themselves, nor permit others to do so if they can prevent it. These defamers of their country and their country's flag, who defy the law and denounce the courts, who scoff at religion and curse the church, who sneer at the family relations and revile all that is honest, decent, and respectable; these men who vilify all who wear the uniform of their country; these preachers of force and destruction, of anarchy and treason, of lawlessness and murder, of the riot and the torch, had been permitted for many months to stand on the streets of Seattle and indulge in their filthy and violent harangues, disgusting, irritating, and insulting to all decent people. These agitators are always a menace to the community and are constantly inciting riot and bloodshed. These loathsome human parasites were the cause of the riots in Seattle. But for these men my colleague finds no word of condemnation; not even by insinuation does he blame them.

In his universal denunciation no word is to be found against these men. To them alone he gives the praise of his silence. If we are to believe his speech then all other classes are to blame for the shame and humiliation that has been brought upon the city of Seattle, and these immaculate soap-box saints alone stand innocent and without fault. [Applause.]

I will now insert clippings from the Seattle Times, Post-Intelligencer, the Argus, Town Crier, the Pacific Naval Monthly giving the sailors' own version of the trouble, and from the Bremerton News an article giving the report of the naval board on the affair and the order of the Secretary of the Navy based thereon.

These articles, together with those from the Seattle Sun, which have already been inserted in the RECORD by my colleague, Mr. BRYAN, give most of what has been published about the controversy, and I trust will aid Congress in ascertaining the facts about the unfortunate occurrence and enable them to judge as to where the fault lies for its happening.

[From the Seattle Times, Friday, Aug. 18, 1913.]

I. W. W., DENOUNCED BY HEAD OF NAVY, ATTACK SOLDIERS AND SAILORS—WHILE DANIELS AROUSES PATRIOTISM OF RAINIER CLUB DINERS BY SPEECH, ANARCHISTS ATTACK WEARERS OF BLUE—SCORES EXECUTIVE WHO FOSTERS LAWLESS MOBS—HIS BRILLIANT CASTIGATION OF UN-AMERICAN MAYORS EXCITES UNPARALLELED DEMONSTRATION OF ENTHUSIASM.

Practically at the very moment a gang of red-flag worshipers and anarchists were brutally beating two bluejackets and three soldiers who had dared protest against the insults heaped on the American flag at a soap-box meeting on Washington Street last night, Secretary of the Navy Daniels, in the great banquet hall of the Rainier Club, cheered on by the wildly enthusiastic and patriotic Americans present, flayed as a type the mayor of any city who permits red-flag demonstrations in the community of which he is the head.

Frantic with delight over the Secretary's bitter denunciation of the conditions which have so long disgraced Seattle, the members of the Rainier Club and their guests of the Army, Navy, and National Guard cheered themselves hoarse, climbing on their chairs to wave napkins at the speaker and give tongue to regular rebel yells of approbation and pleasure.

Three times Mr. Daniels was compelled to stop and wait until his audience had grown tired of applauding his fierce arraignment of a man who would hold the chief office in the gift of an American city and permit insults to his country and its honor by the display of red flags in the streets.

What the Secretary's expression of contempt and disgust with methods which permit the fostering of anarchy by the means employed in Seattle and the almost simultaneous assault on the country's uniform by the "reds" of the city in which he was then speaking will mean to Seattle can not yet be forecasted. That neither the Secretary of the Navy nor the Secretary of War will pass the insult by is sure enough, but whether the outrageous occurrence will mean injury to Seattle's hopes for further naval exploitation and the cancellation of Secretary Garrison's plans to visit this city is not yet known.

SITUATION EXCEEDINGLY SERIOUS.

The situation is exceedingly serious because of Mayor Cotterill's repeated refusal to interfere with the "reds," the various "red-flag" incidents occurring during his term of office and his permitting the anarchistic soap-box meetings of the last few months, which led as directly to last night's assault on the soldiers and sailors as water falls over the precipice to the pool below.

The most representative gathering of the business and social interests of Seattle ever assembled in one room partook of the Rainier Club's dinner to the Secretary. From the beginning the occasion was auspicious and tremendously patriotic in tone. Mr. Daniels was visibly impressed with the immense American flag that covered the entire ceiling and greatly pleased to find his own flag of office covering the wall back of his seat of honor.

The Secretary was welcomed by Mayor Cotterill, who, also a guest of the club, spoke for the city of Seattle. Thomas M. Vance, a former attorney general of this State, aided Judge R. B. Albertson, the toastmaster, in extending the greetings of the North Carolinians who now live in Washington. Judge George Donworth spoke brilliantly on the prosaic subject of the Keyport torpedo station. Admirals Reynolds and Cottman spoke straight to the point on subjects nearest their hearts. After an ovation lasting several minutes, Judge Richard A. Ballinger spoke of the resources and artificial difficulties of this State and Alaska.

Finally Judge Albertson presented the Secretary of the Navy, who was warmly received. Mr. Daniels spoke to the toast "Our Country," digressing to many personal topics of interest to the club and its guests. He repeated his promises that the whole battle fleet of the United States would soon be in Seattle Harbor, and hinted at other naval affairs of importance to the community. Then, reaching his peroration, he pointed to the American flag over his head and began his denunciation of American executives who permit the display of red flags in their streets and the fostering of anarchistic ideas in their communities.

"This country has no place for the red flag and it has no place for the believers in the red flag," he exclaimed.

Instantly the first great demonstration for the Secretary and his patriotic beliefs began. Members of the club and their guests of the Army and Navy cheered, stamped, laughed, and yelled. When order was restored, Mr. Daniels began the story of the mayor of Boston, who jailed the red-flag paraders first and found a law to fit the case afterwards. The second demonstration followed at once, longer and more enthusiastic than before.

Warning to his topic, the Secretary proceeded with a merciless denunciation of the cowardly un-American who, occupying the highest position in the gift of an American city, fosters anarchy in the streets by permitting the display of the red flag and the demonstrations of its adherents.

DEMONSTRATION UNPARALLELED.

It was then that the audience rose in the third demonstration, one never before paralleled in the history of the Rainier Club. The previous demonstrations seemed weak by comparison, the noise continuing

until the members and their guests were worn out. The Secretary was much gratified by the enthusiasm he had invoked, little thinking that at almost the same instant the "reds" permitted to exist in Seattle by Mayor Cotterill were beating and stabbing soldiers and sailors of the United States for expressing sentiments far weaker than his own.

Directly following the dinner, impromptu jubilation parties were held all over the Rainier Club by the members, who as a body are noted for their patriotism.

Maj. Harold E. Cloke, commanding officer at Fort Flagler, to-day started an investigation into the assault of the three soldiers and two sailors. A board of inquiry will be called together to make a careful and thorough inquiry into the circumstances of the outrage.

WILL BE PUT UP TO MAYOR.

It was stated that if preliminary reports absolving the men in uniform from all blame for the attack were borne out by the inquiry, the entire matter would be put up squarely to Mayor Cotterill and an explanation demanded from the city for the unprovoked insult offered Seattle's guests. Col. C. J. Bailey, commanding officer of the three forts of which Flagler is one, could not be reached to-day, but it was understood that he would assume direct charge of the matter upon his arrival at Fort Worden.

Patrick Coyle, A. E. Wallace, and a Third Artillery man who refused to make known his identity, comprised the trio of soldiers; while Frank Brady, sailor from the submarine tender *Fortune*, and George Becker, of the cruiser *Chattanooga*, were the sailors involved. Coyle was gashed under the eye. Wallace was stabbed and bruised, while the third soldier was badly cut about the head and otherwise injured. The two sailors, who, according to eyewitnesses, put up a plucky fight against overwhelming odds after they had rushed to the assistance of the soldiers, wore the skin completely off their knuckles, but were otherwise uninjured.

That fatal injuries to the men would have resulted had some one not turned in a riot call and brought Capt. L. J. Stuart, the emergency squad of patrolmen and three motorcycle police to the scene was the belief of all who saw the outrage. As it was, the men were rescued with difficulty after the mob had been dispersed, and the ringleaders escaped only because none of the injured could identify their assailants.

SOLDIERS' UNIFORM INSULTED.

The three soldiers, following the military parade of the afternoon and the aeroplane flights, were strolling down Washington Street when they were spotted by an I. W. W. speaker occupying a soapbox near the Occidental Avenue corner and immediately attention was called to them, their uniform being derided and the service to which they have given their lives insulted.

"Don't be a soldier, be a man," shouted the speaker, amid the jeers of the I. W. W. Works. Although stung to the quick by the insults which followed, the soldiers appeared to pay no attention to them until the speaker made way for a woman, who began to pour out coarse epithets directed at the enlisted men. Her words lashed the horde into a fury and a near-by I. W. W. struck at the three as they were passing him. Wallace received the blow and his comrades rushed to his assistance.

Immediately the mob of several hundred pressed about the struggling group, with cries of "Kill 'em!" "To h— with the flag!" and similar expressions. Coyle was seized by two heavy lumberjacks, one of whom grabbed the soldier around the neck and forced him to his knees, while the other smashed him in the face, cutting a gash under one eye.

Another I. W. W., armed with a small knife, gashed Wallace in several places. Finally, all three men went down and members of the mob jumped on them with their heavy shoes.

BECKER PUT UP FINE FIGHT.

Brady, who, all agree, is "some scrapper," and Becker ran to the aid of the soldiers. They managed to work their way toward the soapbox and Brady, it was asserted, laid out a score of the I. W. W. Works before he was downed. Becker was not far behind him.

Sergt. Joe Mason, who was in the vicinity, did what he could with the mob, and when the emergency squad arrived in response to the riot call, the men in uniform were pulled from under the feet of their assailants and taken to the city hospital. After their wounds had been dressed the men left and reported to their respective forts or vessels.

Widespread condemnation of the insult was expressed on every hand this morning. Col. W. M. Inglis, commanding the Second Regiment, Washington National Guards, declared that severe measures ought to be adopted toward disciplining the I. W. W.'s.

"The participants in last night's outrage ought to be rounded up and driven out of town," he asserted.

Among the most outspoken in their disapproval of the outrage were local veterans of the Spanish-American War. These former soldiers, as members of the military order of Serpents, will lead to-night's Potlatch parade across Washington Street and past the scene of the attack.

"If they start anything with us," one of the prominent leaders of the organization asserted, "they will meet something they never did before. Our men will be armed with everything from bolos to head axes, and we will be ready for them."

TROUBLE BREWING FOR I. W. W.

The police were notified through underground channels late last night and again this morning that a large force of enlisted men in the city on leave would circulate about the I. W. W. headquarters this evening. The prediction was freely made that any stigma cast on either their uniforms or the flag will meet with speedy and decisive answer.

Several soldiers declared that they had never before heard of authorities in an American city permitting public insults to be directed toward defenders of the Nation or its flag.

Maj. Cloke said this morning that he had been assured that all three of the soldiers assaulted were sober and were conducting themselves in a gentlemanly manner.

This statement was borne out by eyewitnesses to the disgraceful affair.

[From the Seattle Times, Saturday, August 10, 1913.]

MAYOR MAKES FUTILE ATTEMPT TO SUPPRESS PUBLICATION OF TIMES—IN EFFORT TO SHIFT RESPONSIBILITY FOR LAST NIGHT'S RIOTING TO PAPER, EXECUTIVE ISSUES REPRESSIVE ORDER.

Refusal of police officers to obey the order of the court this afternoon resulted in Cotterill and Chief of Police Bannick being arrested and hustled before Judge Humphries on bench warrants. They were ad-

vised to promptly change their attitude. This they agreed to do without delay. After their session with Judge Humphries a telephone message was sent to headquarters by Bannick to rush a man with all haste to the Times office and remove the guard.

The Times was issued practically on time, and its appearance was greeted with cheers by hundreds who had assembled near the Times building.

Mayor George F. Cotterill, in a puerile attempt to clear his own skirts of blame for last night's clash between I. W. W.'s and the soldiers and sailors they had vilified and insulted, this morning assumed charge of the police department and ordered the Times to suspend publication of all its issues for to-day and to-morrow. At the same time he ordered the closing of all saloons and the breaking up of all street meetings. As an afterthought, the executive made the brilliant suggestion that the Times might publish, as usual, provided proofs of all matter to appear in its columns be submitted to his eye for censoring.

Satisfied of the illegality of such an order, the publishers of the Times took the matter before Judge John E. Humphries in an application for a temporary restraining order. In a few moments the application had been granted and Cotterill in turn had been suppressed by a peremptory order that he and his subordinates refrain from interference with the Times or its affairs.

That there might be no mistake, Judge Humphries stated from the bench that the order was made to be obeyed, and that any violator would be committed immediately for contempt. Thus Cotterill, the person responsible for last night's disturbances through his policy of fostering the growth of the anarchistic colony in Seattle as a result of his policy of "hands off," finds himself between the horns of a dilemma created by himself.

Instead of shifting the blame for the soldiers' and sailors' attack on the I. W. W. and every other red flag headquarters in Seattle, Cotterill, who has assumed control of the police department, must shoulder the blame for any trouble growing out of his impertinent interference or his known partiality toward the incendiaries who a year ago trampled the Nation's emblem in the streets and finds the blame for the occurrences of last evening placed squarely back on his shoulders, where it belongs.

The action of the sailors was the direct result of the affair of Wednesday night when red-flag adherents on Washington Street attacked several enlisted men, one of whom was stabbed.

The sailors were entirely orderly last night with the exception of their attack on the Reds. Every I. W. W. headquarters in the city was raided and wrecked, and every anarchist and I. W. W. who offered resistance was roughly handled.

Those who witnessed the destruction of I. W. W. headquarters and literature assert that the leaders of the attacking force were continually warning their followers against the mistake of too much zeal, and especially against the use of liquor in any form.

STATEMENT BY DANIELS.

Secretary of the Navy Josephus Daniels, interviewed in Tacoma this morning concerning last night's disturbance, said:

"I have only just heard of what happened in Seattle last night. I understand it was provoked by trouble between the I. W. W. people and sailors or soldiers the night before. If the sailors made the attack without provocation it was not right."

"I have been told there were many more civilians in the party than naval men. If Army and Navy men or civilians destroy property, they should be punished. I have no doubt the authorities will face the responsibility."

"Respect for the law and respect for the flag are the basic principles on which America rests."

Cotterill, planning his extraordinary course, was in his office at the city hall at 9 o'clock, despite the sign announcing that he had declared to-day a legal holiday in Seattle. His perennial loquaciousness, however, did not extend to the Times.

"Could I see the mayor?" queried a Times reporter of Private Secretary Frederic B. Chandler, who quit work on a proclamation long enough to approach the mayor in the adjoining room.

"The mayor says he has nothing to say to the Times," Chandler replied upon his return.

"The Times would be glad to publish any statement that the mayor may have to make regarding the affair of last night," insisted the reporter.

"The mayor says he has nothing to say," reiterated Chandler, as he resumed work on his proclamation.

MAYOR'S OFFICIAL PROCLAMATION.

The text of the official proclamation follows:

PROCLAMATION.

THE CITY OF SEATTLE, EXECUTIVE DEPARTMENT.

Whereas a condition of riot, tumult, and violent disturbance of public order, accompanied by destruction of property and endangering of human life, prevailed in the city of Seattle for several hours last night (Friday, July 18, 1913); and

Whereas there is imminent danger of a renewal of such lawless and rioting outbreaks in the present excited state of the public mind, with great liability of further destruction of property and probable loss of life by reason of the crowded conditions of our streets during the closing day and night of the Potlatch Festival: Now, therefore,

I, George F. Cotterill, mayor of the city of Seattle, acting pursuant to the power and duty imposed and vested in me by virtue of section 2, article 5, of the city charter, do hereby assume control for the time being of the police force of the city of Seattle.

Proclaimed at 9 a. m. this Saturday, the 19th day of July, A. D. 1913.
GEORGE F. COTTERILL, Mayor.

JUDGE HUMPHRIES'S ORDER.

The text of Judge Humphries's restraining order follows:

In the Superior Court of the State of Washington, in and for the county of King.

Times Investment Co., a corporation, plaintiff, v. George F. Cotterill, as mayor of the city of Seattle and individually, Claude G. Bannick, as chief of police of the city of Seattle and individually, defendants. No. —. Temporary restraining order and order to show cause.

This matter having come on duly for hearing upon the application of the plaintiff herein for a temporary restraining order and an order to show cause, and it duly appearing to the court from the complaint herein and the affidavit in support thereof that an emergency exists and that this is a proper case for the issuance of a temporary restraining order, and that irreparable injury will be done to property and

property rights and to business interests without the issuance of said temporary restraining order:

It is therefore hereby ordered, adjudged, and decreed that the defendant, George F. Cotterill, as mayor of the city of Seattle and individually, and the defendant, Claude G. Bannick, as chief of police of the city of Seattle and individually, and each of them and all officers and employees of the city of Seattle subordinate to said defendants, and all servants and agents and employees of the said defendants, or either of them, or the said city of Seattle be, and they are hereby, enjoined and restrained from in any manner enforcing that certain order made by the said George F. Cotterill and referred to in the complaint herein, dated the 19th day of July, 1913, and which order provides as follows:

"Inasmuch as the exaggerated, false, and perverted publications which have been made by the Seattle Times, and particularly the issue of Friday evening, July 18, 1913, included a plain and willful inciting of the riot which followed and indicated on the part of those responsible for that publication a knowledge of the lawless and riotous intentions which were consummated that night, you are hereby directed to stop the issuance, sale, circulation, or any form of distribution within the city of Seattle of the Seattle Daily Times during this day (Saturday, July 19, 1913) and to-morrow (Sunday, July 20, 1913), unless the proprietors of such paper shall have first submitted to me the entire proofs of any proposed issue and it shall have been found and certified to you by me as containing nothing calculated to incite to further riot, destruction of property, and danger to human life."

And are enjoined and restrained from taking any action or doing anything whatever to interfere, obstruct, or impede the printing, publication, distribution, and circulation of the Seattle Daily Times in the city of Seattle on Saturday, the 19th day of July, 1913, and on Sunday, the 20th day of July, 1913, or on any other day or days until the further order of this court, and said defendants and each of them are hereby ordered to appear on the — day of July, 1913, in department No. — of this court, then and there to show cause why a temporary injunction should not issue continuing in force this restraining order pending the trial of this case upon the merits.

This temporary restraining order to be in force upon the filing by the plaintiff of a bond conditioned according to law in the sum of \$5,000.

Done in open court this 19th day of July, 1913.

JOHN E. HUMPHRIES, Judge.

PROCLAMATION SERVED ON EDITOR.

The first notification of George F. Cotterill's latest bumptious dive into the sea of impertinence and illegality came when Chief of Police Claude G. Bannick and a plain-clothes officer, acting on instructions from the self-constituted head of the police department, appeared at the office of Col. Alden J. Blethen, editor in chief, and served the executive's proclamation.

Immediate communication was established with the Times' attorneys, and within the space of a very short time Attorney Walter Fulton appeared in superior court before Judge John E. Humphries with an application for an order restraining Cotterill in his pernicious effort to shoulder blame for last night's disturbances on the Times.

After hearing the circumstances Judge Humphries signed the order, at the same time declaring with finality: "This order is made to be obeyed, and anybody violating it will be promptly dealt with."

Later in chambers the court announced that any effort to go behind the literal meaning of the order restraining Cotterill and his newly-kidnaped minions from interfering with the Times and its publication will mean immediate arrest and commitment for contempt of court.

Judge Humphries then notified the sheriff's office of the issuance of the restraining order and at the same time served official notice on Sheriff Ed Cuddehe that he would be held responsible for seeing that the order was carried out to the letter. As a result, a sufficient force of deputies was ordered to be on hand in the sheriff's office to arrest anyone from Mayor Cotterill to the city hall janitor who might attempt to interfere with the publication of the Times.

Before press time, when it appeared that Cotterill might see fit to pit his egotism against the majesty of the law and attempt interference, a squad of deputy sheriffs under Deputy Ted McCormick appeared at the Times office with instructions to jail anyone interfering in any manner with the publication of the paper.

Coincident with the taking over of control of the police department and his order suppressing the publication of editions of the Times to-day unless all proofs first were submitted to his august eye, Cotterill ordered the closing of all saloons.

In many cases the proprietors obeyed unquestioningly. Others, particularly down-town cafes and clubs, declined politely but firmly to permit their business to be interfered with, and the doors remained open.

As a result of defying Cotterill's plainly illegal order, G. F. Wilson, bartender at the Savoy Hotel, was arrested by Motorcycle Policemen D. M. Elaine and J. F. Heath. At the Rathskeller, the police found defiance, but a few moments later, on instruction from James Morrison, the bar was closed.

At the time of taking over control of the police department, Cotterill issued the following order to Chief of Police Bannick, taking for his authority section 2 of article 5 of the city charter:

ORDER ISSUED BY MAYOR.

To the Chief of Police:

Acting under the direct authority imposed upon me by the proclamation assuming control of the police force, of even date herewith, the following orders are hereby promulgated for the suppression of any further tumult and for the restoration of order:

(1) All general laws and ordinances shall be enforced in the ordinary and usual manner, as prior to the issuance of the emergency proclamation, except as set forth in the following emergency orders.

(2) As a safeguard and measure of protection against a renewal of disturbances of public order, you are hereby directed to cause all saloons and other places where intoxicating liquor is sold to be closed and to stop the sale of any intoxicating liquor in any form. The closure to continue throughout this day, Saturday, July 19, and the State law to be rigidly enforced through Sunday, July 20. Unless otherwise ordered, this emergency closure shall be superseded by the usual regulative provision of the license ordinance on Monday morning, July 21, 1913.

(3) Inasmuch as the exaggerated, false, and perverted publications which have been made by the Seattle Times, and particularly the issue of Friday evening, July 18, 1913, included a plain and willful inciting of riot which followed, knowledge of the lawless and riotous intentions which were committed that night, you are hereby directed to stop the issuance, sale, or circulation or any form of distribution within the city of Seattle of the Seattle Daily Times during the day (Saturday, July

19, 1913), and to-morrow (Sunday, July 20, 1913), unless the proprietors of such paper shall have first submitted to me the entire proofs of any proposed issue, and it shall have been found and certified to you by me as containing nothing calculated to incite to further riot, destruction of property, and danger to human life.

(4) During this day (Saturday, July 19) and to-morrow (July 20, Sunday) you will cause all and every character of street meeting and public speaking thereat to be suspended and stopped, that there may be no further exciting of the public mind which might lead to renewed riotous outbreaks or reprisals. This shall not apply to any religious meeting of a regular religious organization.

Witness my hand this 19th day of July, 1913.

GEORGE F. COTTERILL, Mayor.

Section 2 of article 5 of the city charter is as follows:

PROVISIONS OF CHARTER.

"The mayor shall see that all the laws and ordinances in force in the city are faithfully executed and shall direct and control all subordinate officers of the city, except in so far as such direction and control is by the provisions of this charter reposed in some other officer or board, and shall maintain peace and good order in the city. He shall have power at all times, in any emergency, of which he shall be the judge, to assume command of the whole or any part of the police force of the city. In case of riot, tumult, or violent disturbance of the public order the mayor shall have, as the exigency in his judgment may require, the right to assume control for the time being of the police force, but before assuming such control he shall issue his proclamation to that effect, and it shall be the duty of the chief of police to execute orders promulgated by him for the suppression of such tumult and the restoration of order."

I. W. W. TALKS AS MAYOR SUPPRESSES TIMES.

While Mayor George Fletcher Cotterill was busy this morning attempting to suppress the Times and taking charge of the police force of the city he permitted an I. W. W. street speaker to mount a soap box on the streets and there harangue away to his heart's content. Officer 243 watched the speaker for a time and then sauntered away. The "speech" was delivered near the alley between the Globe Building, on First Avenue, and the National Grocery Co. Building, on Western Avenue.

COURT PREVENTS MAYOR FROM CLOSING SALOONS.

Under the leadership of Joseph Goldie, of the Goldie-Klenert Distributing Co., representatives of the following liquor houses in the city presented themselves at Judge John E. Humphries' court to-day and obtained a temporary restraining order preventing the mayor or the chief of police from closing their places of business: James W. Morrison, president of the Rathskeller Co.; Goldie-Klenert Distributing Co.; Hyde & Co.; Samuel Hyde; The Savoy Hotel; Bollong Liquor Co.; Merchants' Café; Transfer Co.; Jaffe & Co.; Gill & Gill; Mission Liquor Co.; Pioneer Exchange; Germania Café; P. E. Sullivan; Berhl & Rooney; The Stratford (Inc.).

After granting injunctions Judge Humphries ruled that all that was necessary for the enforcement of the court's mandates was the posting of the injunction on the doors of the establishments securing them. Judge Humphries assured the saloon keepers it would not be necessary to consult mayor or chief of police before reopening their doors.

Their complaint alleges that as to-day is neither a Sunday nor a holiday, neither the mayor nor the chief of police has a right to interfere with their business. The temporary order was made returnable before Judge Humphries next Wednesday morning.

ANARCHY IN SEATTLE STAMPED OUT WHEN SAILORS GET BUSY.

Anarchy, the grizzly hydra-headed serpent which Seattle has been forced to nourish in its midst by a naturalized chief executive for 18 months, was plucked from the city and wiped out in a blaze of patriotism last night. Hundreds of sailors and artillerymen, who carefully planned the entire maneuver yesterday morning, led the thousands of cheering civilians to the attack and successfully wrecked the Industrial Workers of the World headquarters and "direct-action" Socialist headquarters in various parts of the business district.

That the attackers were determined to stamp out the evil itself rather than to inflict personal injury on its unfortunate adherents was indicated by the fact that the only casualty reported was that of an Industrial Worker of the World, whose nose was broken. Squads of police who hovered about the scene of eradication handled the situation in such a manner that no trouble resulted.

The causes of the onslaught was the unprovoked attack made by a mob of Industrial Workers of the World on three artillerymen and two sailors at Washington Street and Occidental Avenue Thursday night. Patrick Coyle and A. E. Wallace, of Fort Flagler, together with another, whose name was not learned at that time, were thrown down, trampled on, and stabbed by the infuriated red-flag adherents. The matter is now being made the subject of an inquiry at Fort Flagler.

Fired with patriotic enthusiasm and armed only with small American flags, the men in uniform wrecked the Industrial Workers of the World headquarters on Washington Street, demolished the news stand of Millard Price at Fourth Avenue and Pike Street, cleaned out the Industrial Workers of the World headquarters in the Nestor Building on Westlake Avenue and the Socialist halls at the Granite Hotel, Fifth and Virginia, and in an old church at Seventh and Olive Streets.

The proceedings were thorough and determined. Red flags which were found in both the Industrial Workers of the World and Socialist offices were burned, literature was scattered over the streets or destroyed, furniture was smashed into kindling, and the American flag, triumphant, was placed above every nest of anarchists before the work was considered complete.

CIVILIANS CARRY ON WORK.

Even after the uniformed men had considered their work finished and left for the docks, the swarms of civilians carried it on. Some of the onlookers declared that the attack on the Nestor Building contained but a handful of military men and was engineered by residents of this city. Policemen, fire carts, and a provost guard from the warships in the harbor, followed the throng, but were unable to do more than take charge of the remains left by the wreckers.

Although the first signal for the attack had been given at 7.30 o'clock, some time before the evening pageant was due to appear the streets of the business section were jammed with a carnival crowd, which quickly took up the battle cry of the soldiers and sailors and left their places to join in. So huge was the crowd that the 9 o'clock interurban train from Tacoma, on the Puget Sound Electric Railway tracks, was forced to discharge its passengers at First Avenue and Jackson Street, several blocks below the station.

Various estimates placed the crowd actually participating from 5,000 to 20,000, while still another count placed the throngs on the street curbs and along the business thoroughfares at 200,000.

An indication of the sentiment of the crowds, outside of the cheering along the line of march, was manifested at the Potlatch grandstand, where spectators rose en masse with waving flags and shouts to greet the army as it went by.

RIOT CALL TURNED IN.

Industrial Workers of the World adherents were busy with a meeting on Washington Street west of Occidental, when the originators of the enterprise gave the signal at First Avenue and Yesler Way and started toward the headquarters on Washington Street. Quietly, but swiftly, the party rushed to the point of attack and were in front of the building before the onlookers realized what was going on.

A riot call was turned in and a squad of policemen appeared on the scene, but in the meantime the invaders had gained entrance to the headquarters and were carrying out their scheme of destruction. Desks, the property of local organizers and officers of the State organization, were smashed, chairs were hurled against the wall and broken into bits, and literature was thrown out of the windows to the crowd beneath.

Some one had informed the Industrial Workers of the World meeting of what was going on, and just as the last of the literature was going up in flames in the alley, the mob poured in to give battle to the sailors and soldiers. The struggle was brief, but spirited, and the sailors, all of them picked men, had no trouble in downing the "wage slaves." With their heads down and their arms shot back like battering rams, the jacks charged the crowd and pushed them back to such an extent that exit was easy.

By this time approximately 5,000 spectators had jammed about the scene. A caucus was held, and collection taken by passing the hat to buy a bugle and a flag. Cries of "Fourth and Pike" sounded, and the little vanguard, backed by a small number of excited civilians, shot up First Avenue, crossed over to Second at the double quick, east on Pike, and drew up at Millard Price's news stand.

While the crowds on the corner, unfamiliar with the earlier events, were wondering what was going on, half a dozen pairs of hands seized the Socialist news stand up against the curb and in a second papers and pamphlets filled the air.

SMASH EVERYTHING RED.

The stand emptied, the soldiers and sailors of the vanguard, numbering no more than a dozen, overturned the stand and began to demolish it. Willing feet made quick work.

The avengers had noted that the stand was painted red. "Smash everything that's red," shouted one of the party, as he laid the last whole board against the curb and descended on it with his No. 10's. In less than a minute the contents of the cart had been scattered broadcast and the cart was smashed to kindling.

From somewhere about the stand one of the soldiers plucked a red flag before the demolition was complete. This was torn to tatters. Matches were quickly applied and the odor of burning rags presently told of the destruction of the I. W. W. emblem.

A half dozen paces from the Socialist news stand stood a stand where daily newspapers are sold. While some of the party were smashing the Socialist stand a soldier ran over to the other cart and stuck an American flag among the papers in the top rack. When the willing workers made for that stand too, thinking it of the same breed as the one just smashed, they spied the flag and promptly moved back. Heads were bared and cheers for the flag drowned the roar of Pike Street traffic.

Throughout the scene Patrolman J. L. Crawford remained one of the interested spectators. So quickly had the little band descended on the news stand that a thoroughly efficient "Finis" had been written before the policeman could stem the tide. Every time he thrust back a participant the crash of a board or the flying of a handful of papers told of effective work by others. And all the while a crowd that grew larger every second cheered the workers lustily. Taking no part themselves in the demonstration, the witnesses, by shouts and cheers and exclamations of glee, clearly showed that they thought so, too.

ON TO RICHMOND.

The party at Fourth Avenue and Pike Street having been successfully concluded with the burning of the fragments of the red flag the little band broke into a run down Pike Street to Third Avenue, thence north toward the Socialist headquarters at 1909 Fourth Avenue. By this time a crowd of more than 1,000 civilians trooped along to see the fun.

The headquarters escaped with a broken window. When a soldier, loudly applauded by the crowd that choked Fourth Avenue in front of the building climbed with an American flag to the sill to place it over the window, he kicked loose the bottom of the heavy glass. It fell inside with a crash. There were cheers. With more room to work, the soldier fastened the flag above the window amid more cheers.

The little band now headed south to Olive Street, and at Olive Street broke into a run eastward. The crowd that followed now was blocks long and included men, women, and children. Automobiles brought up the rear.

The parade terminated at 711 Olive Street. At that place stands a dilapidated old church, said to be used as branch headquarters of the "direct-action" Socialists. The soldiers and sailors were sure of it. The nature of the material found within and destroyed supports their belief.

HEADLINER AT OLIVE STREET.

At the Olive Street place occurred the principal event of the demonstration in the north end of town. Rushing up the shaky steps of the building, three or four of the leaders leaned against the old door, and it crumbled like a rotten shingle. A moment later the remains crashed over the banister into an excavation on the lot adjoining.

Things began to happen quickly. The door smashed in, there was presently heard the crashing of glass in a half dozen places simultaneously, and the crowd in Olive Street saw showers of it descend into the excavated lot. Much of the work was done with chairs or whatever came to hand, but when one of the more completely smashed windows burst out a protruding foot told how the deed was done. Everybody cheered for the foot. A second later another pane crashed, and at the open window appeared a soldier with an American flag.

CARRIED UNANIMOUSLY.

Waving the flag wildly, he shouted, "Hurrah for the American flag; down with the I. W. W.'s." There was not a dissenting vote.

The windows in the main floor smashed, the progress of the band downstairs could be easily followed by the crowd outside by the smashing of the basement windows. It was a hard day for glass. Not a window escaped.

Apparently the windows were the only inviting objects in the basement, for the little knot was soon upstairs again. Two or three presently rushed out, to return a moment later with an 8-foot section of pipe. Then followed such a chorus as Olive Street probably has never heard before. The smashing of chairs and tables, the rending

of yielding timbers, the creaking and groaning of sundered walls, and, above the rest, the crash of glass of the windows on the east side all blended together in one grand Wagnerian cacophony. And all the while the crowd outside just howled and cheered. It was almost more joy than they could stand.

The chorus of crashing and smashing was presently interrupted by a movement that resulted in a deluge of pamphlets and leaflets from the front door. Persons occupying ringside seats were almost covered. The storm lasted until the last of the offending literature had been pitched out.

TORCH FOR RED FLAG.

Then came the finale. Dragged by two of the enthusiastic dramatic personae, a red flag presently came through the yawning doorway. Hisses for the red flag and more cries of "Down with the I. W. W.'s." Straight to the middle of the street they carried the rag. There was no dearth of matches. It seemed as if everybody wanted to lend the match that would destroy the emblem of the malcontents. Making a circle, the crowd stood around and cheered the soldiers and sailors heartily while the rotten cloth smoldered and smoked.

Bent on further vengeance, the party now turned into Seventh Avenue and headed south. At University Street the crowd turned west and marched past the Labor Temple, straight to Second Avenue. There they appeared for a moment to have been swallowed in the throngs that lined the pavement waiting for the parade. The crowd quickly regained its coherence, however, and in a few seconds was running past wondering crowds on its way to Washington Street. This was at 8.45 o'clock, just 35 minutes after the beginning of the demonstration at Fourth Avenue and Pike Street.

By the time the crowd—now swelled into a veritable legion—had reached the I. W. W. headquarters a second time several reds had gathered to defend their nest. Although the sailors and soldiers expressed themselves as perfectly competent to handle these anarchists, the police held back the mob until the red-flag adherents had clambered away.

Sailors climbed the fire escape into the hall, but there was little left to demolish; and other avengers scouting about discovered the little gospel mission near Occidental and Washington Streets. Not realizing its character, they rushed into it, but the religious appointments convinced them of their error, and they retreated with bowed heads.

One of them said, "Boys, we're in wrong," and the banners which had been torn from the walls were replaced carefully before they left the mission.

Still determined to stamp out the last vestige of anarchy, the leaders turned again for a march toward Pike Street; and the mob poured down Third Avenue, cheering and waving flags. Near Pike Street the provost guard, which had been hustled from the warships on urgent appeal from Chief Claude G. Bannick, met the on-coming crowd. The bluejackets disappeared silently in the crowd behind them, and the night's work was pronounced complete.

A smaller crowd of sailors and civilians had remained near the Socialist headquarters on Fourth Avenue, and toward these the provost guard hurried. One sailor, named Kemp, of the U. S. S. *Oregon*, was captured before he could make his get-away. He was the only one arrested during the evening.

While the planners of the affair had contemplated attacking the I. W. W. headquarters only, the presence of red flags in both Socialist halls led them to include those places as well. The Socialist headquarters on Seventh Avenue near Union Street, which has not affiliated with the direct-action element, was unharmed, although the mob at one time halted before it. One of the leaders, a sailor, discovered its character and told the others to go on.

"Pipe down, boys," he ordered. "This is a Socialist hall. The people of Seattle are with us as long as we stick to the I. W. W.'s, so leave this place alone."

At the headquarters on Fourth Avenue several guests who were stopping in the hotel adjoining were roused by the attack, but were quieted. One woman, a visitor from Hastings, Nebr., fainted, but was quickly revived.

[From the Sunday Seattle Times, Sunday, July 20, 1913.]

MAYOR COTTERILL ATTEMPTS THE RÔLE OF CZAR—PUTS 20 MEN AROUND TIMES BUILDING TO PREVENT ANY PUBLICATION UNLESS EDITOR WOULD SUBMIT ALL COPY TO MAYOR—HIS PROFFER REJECTED, SPURNED, AND REPUDIATED AND THE POWER OF THE COURTS INVOKED—THE JUDGE TELLS COTTERILL THAT HE HAS COMMITTED A HIGH-HANDED OUTRAGE—WILL BE SUED FOR \$25,000 DAMAGES BECAUSE OF HIS OUTRAGEOUS, ILLEGAL, AND UNPRECEDENTED USURPATION OF AUTHORITY.

George F. Cotterill has again demonstrated his unfitness to be mayor of Seattle.

The denunciation of the "red flag" and the men who stand for it by the Secretary of the Navy was too much for Cotterill's disposition.

He therefore seeks revenge on the Times because this was the only paper that printed what the Secretary said.

Without a shadow of justification in law this despised man—the advocate of anarchy and the leader of the red-flag gang—undertook to suppress the publication of the Seattle Daily and Sunday Times.

There is not a precedent for such an attempt in the United States anywhere except in times of war.

This chagrined and discredited "red-flag" sympathizer—unfortunately the mayor of the city—tried to suppress the Times because he claimed it had produced the "riots" of Friday night.

And yet this despoiler of the English language knew that the attack of the dynamic leaders and the Industrial Workers of the World on the soldiers and sailors on Thursday night produced the riots.

If the Times had not published the scathing denunciation of the red flag and every public official who stands for the flag by permitting it to be carried through the streets of any city this man Cotterill would never have dreamed of doing the dastardly thing he attempted to do and successfully did do for a few hours.

As soon as he had served his autocratic notice on the editor of the Times the powers of the courts were invoked and this man enjoined, together with his chief of police and every man on the force, from carrying out his attempted suppression of this publication.

For more than one hour after the court had issued the order for Cotterill and his chief of police and the force in general to quit their interference with the operation of the regular affairs of this publication this discredited, dishonest, and loathed mayor of Seattle dodged and kept away, until a complaint was made for his arrest for contempt of court, when he went before Judge Humphries, who issued the injunction, and demanded a modification of the order.

But instead Cotterill met at the hands of Judge Humphries the most scathing denunciation for his unwarranted and contemptible conduct that was ever before administered to a public officer in the State of Washington.

Judge Humphries told him that instead of the Times inducing riot by publishing the truth as spoken by the Secretary of the Navy, it was such men as Cotterill, who stood for the things he does and who attempts to commit the wrongs he did, that caused riots.

Moreover, Judge Humphries told Cotterill that unless he called his police off at once the court would not only enforce his order by arresting every man connected with it, but that he would see to it that the punishment for such conduct would be ample.

Sheriff Cudibee was requested by the editor of the Times and a county commissioner to swear in 500 deputies, if necessary, to protect the Times in the publication of its various issues, both Saturday and Sunday—the period in which this would-be czar attempted to interdict the publication.

While undoubtedly the city of Seattle is responsible for the loss of the first edition of the Times on Saturday, nevertheless no action will be brought against the city for damages.

Instead, the moment that Judge Humphries be through with this injunction the Times Printing Co. will bring a damage suit against this loathsome whelp, who sits in the office of the mayor and attempts to destroy property, in the sum of \$25,000.

And the Times will do this in spite of the fact that it will probably be illustrating the old adage, "Sue a beggar and catch a louse."

The time has come when this would-be autocrat and czar should be deposed from the office of mayor.

While the Times has been opposed to the recall law, it believes in it now and will help enforce it to the limit.

The Times calls on the business men of this city to join with it immediately to establish headquarters, to formulate charges, and inaugurate a canvass that will secure not only the legal number of names for recall of this wretch, but the Times will subscribe \$1,000 to help put the campaign through.

The time has come when this city should be freed from "Cotterillism" and all that that odorous word implies, and do it forthwith.

Let the law-abiding citizens of Seattle, who have been handicapped for more than two years by a most wretched condition of affairs, get rid of this obstacle of progress, and get rid of him forthwith.

[From the Seattle Times, July 20, 1913.]

SECRETARY DANIELS DENOUNCES THE RED FLAG.

Hon. Josephus Daniels, Secretary of the United States Navy in the Cabinet of President Wilson, spent four days of last week in Seattle under most agreeable circumstances and made a deep impression upon those whom he met.

When the Potlatch was fully organized President Foster appointed a special committee to look after Naval and Army exploitation during the week of the Potlatch.

The chairman of that committee solicited the help of the editor of the Times and the editor of the Post-Intelligencer in securing from the Secretary of the Navy and the Secretary of War the desired exploitations.

Secretary Daniels, being a publisher and an editor of the leading newspaper in North Carolina, gave careful attention to the request of the editors from Seattle, and not only granted all that was asked, but accepted an invitation to be the guest of the Potlatch during its session.

Secretary Daniels kept his word in every particular, not only granting all that was asked, but came with Mrs. Daniels to the Potlatch and stayed four days.

The Rainier Club decided to invite Secretary Daniels to a banquet to be prepared especially for him, and the invitation was accepted and the banquet occurred on Thursday night.

There were able speakers like Judge Donworth, former Secretary of the Interior Ballinger, Hon. Thomas Vance, of Olympia, with Judge Albertson, of the superior court of King County, as toastmaster. There were other speakers, including the mayor of the city.

One hundred and seventy-one covers were turned, and the banquet lasted until midnight.

When Secretary Daniels rose to speak he must have been impressed with the great national flag that covered the ceiling above his head, for he promptly launched out into a most patriotic speech, one that would have done honor to the veterans of the Civil War, although spoken by a man who was born in the South and who of necessity is imbued with every southern idea.

He suddenly reverted to the red flag of anarchy, and for fully five minutes not only denounced the flag as an emblem of the traitors to this country—to civil government and to law and order everywhere—but he denounced every public official who sympathized with that flag.

In eloquent words he pictured the scene in Boston the other day where an anarchist carrying the red flag was seized by an officer of the law and taken to jail.

Growing eloquent over his subject, the Secretary denounced the head of every city that would permit the red flag to be carried or its soap-box orators to be tolerated.

One would have thought from the speech of the Secretary that he had been familiar with conditions prevailing in Seattle since Cotterill has been mayor, but as a matter of fact no human being had uttered a word to him about the matter.

The speech, the occasion, the incident of the red flag, seemed to be as spontaneous as the Secretary's overwhelming patriotism, but never before in such a place or upon any rostrum have the followers of the red flag, and especially public officials who will protect them, been so scathingly rebuked.

[From the Seattle Times, July 20, 1913.]

"I BELIEVE IN FREE SPEECH AND A FREE PRESS AS THE BULWARKS OF OUR LIBERTY"—JOSEPHUS DANIELS, SECRETARY OF THE NAVY.

(By C. B. Blethen, managing editor of the Times.)

Here is a brief account of the futile attempt made by a foreign-born American mayor to suppress an American newspaper for its defense and championship of the American flag.

Shortly after George F. Cotterill became mayor in 1912 his attention was called to the anarchistic street meetings held on many corners of the city—notably by the Times Building—where disloyalty, treason, and destruction was nightly preached to whoever cared to stop and listen. The mayor gave no heed. His attention was called to the situation again—and more forcefully. He was reminded that Mayor William Hickman Moore had prevented attacks on the American flag during his

term of office and had kept the red emblem from display in Seattle's thoroughfares.

This time the mayor answered. In a burst of Thomas Rot and worse he told us tax-paying citizens of Seattle that all men were free and equal and that the anarchists and I. W. W. could go as far as they liked. If we didn't like what they said and did, we could go hold soap-box meetings of our own.

Naturally the Reds got hold of this fine piece of information. We all remember what followed—the parade of the red flag up Second Avenue under the protection and sanction of Mayor Cotterill, the mayor's treasonable utterances about the rights of the red flag and its followers, the fight in upper Second Avenue, and the destruction of the anarchistic rag.

From that day to this the struggle between the Times on one side and the mayor and his Reds on the other has gone on night and day. The Times has waged a single-handed fight for Old Glory, gladly standing on the firing line for the honor of the flag and our country.

What this fight against the enemies of America has meant to the Times and the Blethen family all those who remember the fire of the morning of Thursday, February 13, know well. Our building was destroyed, but our flag flew through the fire unscorched. We don't know that the enemies of the flag and the country did this thing, but so fiendishly was the fire kindled that it has never seemed within the bounds of reason that it could have been commenced in any other way than at the hands of the Reds.

But our flag stayed up. They could destroy our building—they even might destroy the paper's heads—but the Times is an institution greater than all the men contained in it, a living thing that shall go on forever laboring in the cause of right and justice, no matter what comes to individuals connected with it.

The battle continued. The red flag was flaunted again in the streets of Seattle, and again the Reds received, directly or indirectly, the assurances of the mayor that they would not be molested. The speeches became worse and the attitude of the enemies of society more brazen.

The Potlatch began and the Secretary of the Navy came into our midst. Standing under the great flag of the Rainier Club and before his own standard of office, Mr. Daniels made the resounding speech of Thursday night—made it in the pallid presence of the man he did not know he was denouncing, but who nevertheless felt at last and properly the lash of American opinion.

Almost at the very instant the mayor sat green and sweaty under the Secretary's terrible blast the Reds of Washington Street—permitted and encouraged to exist by Mayor George F. Cotterill—were stabbing and beating sailors of the Secretary's own ships; stabbing and beating them because they wore the uniform of the United States.

Friday night the sailors came ashore for revenge and got it. Never was a more dramatic nor poetic revenge. It was not right. Two wrongs can never make a right. But the sailors administered punishment where they felt punishment was due.

Saturday morning Mayor Cotterill awoke to find his folly beside him. The city had been disgraced by riots, reported throughout the press of the United States. His and his only was the blame for the flaunting of red flags, the stabbing of sailors, and the destruction of property that followed.

Then, apparently, the man went insane. His order making himself a dictator and king followed. He would prevent the Times from publishing its editions, close the saloons, stop the parades, prove to the world that he, George F. Cotterill, was master of the little puddle in which he squatted.

Digress here to note the proof of an unbalanced mind. The Reds had beaten and stabbed sailors, he reasoned. The Times was the enemy of the Reds and the defender of the American flag. The sailors had come back and destroyed whatever they could of Red property and everything they believed dangerous to their country. Therefore the Times was responsible for the riots because it had published what Secretary Daniels had said about the red flag and printed an account of the brutal attack on the sailors.

So, squatting in his little puddle of self-esteem, this foglike thing struck at the fundamental principal of American liberty—the freedom of the press.

But a strange thing happened—that is, strange to George F. Cotterill. His puddle ceased to be all his own. It became Seattle's, and turned from puddle to lake of popular disapproval and then to ocean of law's might and outraged dignity of the people.

For Mayor Cotterill was compelled by the courts to doff his self-adjusted crown. He was ordered to withdraw his police from the Times Building or go to jail. The police were withdrawn. Cotterill stayed out of jail.

And while the American flag still flies over the Times Building the waters of popular disapproval and disgust close over his head.

[From the Seattle Times, Thursday, July 24, 1913.]

TIMES' ACCOUNT OF OUTRAGE CONFIRMED BY VICTIM OF REDS—SERGT. ALFRED BOEHMKE, STABBED FIVE TIMES BY INDUSTRIAL WORKERS OF THE WORLD, GIVES SWORN STATEMENT OF SANGUINARY AFFAIR—ABUSED BY WOMAN AND THEN ATTACKED BY MEN.

In a sworn statement made to Col. C. J. Bailey, Coast Artillery Corps, commanding defenses of Puget Sound, Sergt. Alfred Boehmke, one of the soldiers set upon and stabbed by the Industrial Workers of the World in Washington Street last Thursday night, verifies the Times' account of the cause and the manner of the reds' vicious attack. Sergt. Boehmke declares under oath that as he and Sergt. Frank Santerre and Pvt. Patrick Coyle, Ninety-second Company Coast Artillery Corps, stood listening to the abuse heaped upon the Stars and Stripes and the Army and Navy by a woman orator, an Industrial Worker of the World, pointing out the three men to his companions, struck him a brutal blow in the face with his fist. Then, he says, the fight became general, with the red-flag followers outnumbering the soldiers 100 to 1.

During the struggle, Sergt. Boehmke asserts, he was cut under the eye, stabbed once in the back of the neck, twice between the shoulders, and slashed above the ear. The extent of his wounds is borne out by the report of the physician who attended him at the city hospital. Santerre and Coyle also were wounded and had great difficulty in making their escape.

MERELY INTENDED TO WARN.

A statement to the Times to-day by a private in the Fourteenth Infantry who was a participant in the raid on and sacking of the Industrial Workers of the World and Red Socialists' headquarters by the soldiers and sailors Friday night, declares at the outset that the Army and Navy men had rankled for a year under the insults Mayor George F. Cotterill has permitted the reds to direct at Old Glory; but that,

while their actions were more or less premeditated, it had been intended merely to warn the Industrial Workers of the World and their sympathizers that further abuse would not be tolerated.

The soldier asserts, further, that destruction of the Industrial Workers of the World headquarters probably never would have taken place but for the fact that the first sight to greet the soldiers and sailors upon their entrance to the Washington Street rooms was a picture of Abraham Lincoln draped with the red flag.

This, the man points out, was the last straw, the final aggravation, and the men no longer could be restrained.

The soldier also vouchsafes the information that while in the excitement of the raid they damaged property belonging to the "true Socialists," with whom they have no quarrel. Funds are now being raised to make restitution to this wing of the party.

"I was down at the boat and reported my departure on leave of absence, and with Sergt. Frank Santerre and Pvt. Patrick Coyle, Ninety-second Company Coast Artillery Corps, spent the evening at various places of amusement until approximately 11 o'clock p. m., when we started down for Chauncey Wright's restaurant to get something to eat.

"On our way to the restaurant there was a woman orator on the stand running the Army and Navy and national flag down by such remarks as:

"Do not enlist in the Army."

"They are no good, and none of them are worth anything."

"All of their mothers are washerwomen, and instead of being home working and helping them they join the Army just to lay around."

"I made the remark to Sergt. Santerre that after parading all afternoon that is all the credit we get. As I said that one of them turned around and said: 'Here are three of the ——— now.'"

"When I heard that I turned around, and without even a chance to say a word one of them struck me a blow in the face with his fist. After I was hit I struck back, and the fight started."

"They got us in the center, taking punches at us whenever they had the opportunity. The sailors were probably 5 or 10 feet back of us. They also took part in the fight. When I was in the center I saw the fight was hopeless on our part, being outnumbered one hundred to one, and Sergt. Santerre being unable to defend himself in any way and I was afflicted with knife wounds also and Pvt. Coyle almost put out, got out of it the best way we could from there on."

The statement of the Infantry private follows:

STATEMENT BY PRIVATE.

"The riot of last Friday evening, when soldiers and sailors sacked and burned Industrial Workers of the World and Socialist headquarters, was the culmination of more than a year's abuse of the American flag and the men who fought for it. That articles appearing in the Times were responsible in any way is ridiculous. Since May 1, 1912, soldiers and sailors who have been assigned here have been warned by their predecessors that they would be maltreated."

"This year the enlisted men decided to find out for themselves the conditions that existed here, and to that end two soldiers, two sailors, and two artillerymen held a conference a week ago last Wednesday and planned a trip through the Washington Street district to hear what was going on. It was arranged that the six should make the trip the next evening, Thursday, July 17."

"Accordingly they met Thursday evening, and three of the soldiers parted from their companions to walk leisurely up Washington Street. As they passed the Industrial Workers of the World headquarters, in front of which place a street meeting was in progress, a woman was addressing the throng and a man was standing beside the stand leading the cheering."

"As the soldiers passed they say the man shouted: 'There goes some of those ———. All they do is to lay around in bunks.'"

ARMED MAN LEADS MOB.

"Without waiting to see if the soldiers would respond in any way, a man brandishing a stiletto jumped out from the crowd and started for the men. Instantly the crowd closed in and all attacked the soldiers. One of the other three men had left the party and started up First Avenue, but the two remaining sailors dashed to the assistance of their comrades. The crowd sat upon them also. It was then the police arrived and dispersed the crowd."

"That was the climax. Friday morning word was passed around through underground channels that all enlisted men obtaining leaves of absence that evening would assemble at Pioneer Square at 8 o'clock. At this time no violence had been contemplated; but the sense of the meeting was that the reds should be warned that such outrages against the flag and the uniform of Uncle Sam must stop."

"The assembled men were divided into three brigades, one going down First Avenue to Washington Street and turning up Washington, the second down Occidental and down Washington, and the third going through the alley between First and Occidental Avenues."

"When they reached I. W. W. headquarters entrance was soon gained by means of the fire escape. Upon their entrance the first thing they saw was a picture of Abraham Lincoln, around which was draped a red flag. That was more than they could stand, and their peaceable intentions vanished into thin air. The work of demolition began and was completed in a short time in a masterful and thorough manner."

ASKED TO DISPLAY FLAG.

"From then on it was a question of visiting the other places, requesting them to show an American flag by the time they returned or suffer the consequences. In the other headquarters they found people assembled, but none heeded the warning, and on the next visit the furniture and literature was demolished. Had they displayed an American flag nothing would have been touched."

"As an example, after one Socialist nest had been seized and a flag hoisted, some civilian threw a stone through one of the windows. Instantly the men turned on him and made him kiss the flag on bended knee. It is true that in the excitement some property was destroyed that should not have been, and the boys are now taking up a collection to make restitution."

"We want it distinctly understood that the men who planned and executed the affair of Friday night were entirely sober. Most of the men take a drink when they want it, but to carry through an expedition of the magnitude of that one with only one man slightly hurt requires sober men, and they were plentiful."

"The trip to the city Saturday night was for the express purpose of 'seeing' Mayor G. F. Cotterill. Saturday morning he telephoned to the commanding officer of every post and by messenger to the ships asked that they have guards downtown that night, as he was afraid of another riot. According to rumor, the officers offered to keep every one on the reservation and if necessary to place them under arrest to avoid further trouble. 'Bring them down if you care to risk them,' the

mayor is reported to have said. The result was as could be expected. Every man who could get away was on the street in uniform, and all along the streets they were continually asking where the mayor was. Needless to say, he was not to be found.

"I want to say in conclusion that the men are more than delighted with the stand the Times has taken in this matter and they are all for it first, last, and all the time. Too vigorous methods can not be adopted to stamp out this red evil, and the next insult offered to the flag or the uniform in any public place will be speedily and effectually answered."

[From the Seattle Sunday Times, Sunday, July 27, 1913.]

WHILE DEFENDING HIMSELF AGAINST CHARGES OF MALFEASANCE COTTERILL MAKES MANY FALSE ASSERTIONS.

In a four-column statement published in Cotterill's "organ," in an effort to defend himself against charges of gross misconduct in office, many absolute falsehoods are made. Note the following:

Cotterill claims that the Times is the advocate of a vice syndicate and a defender of crime.

Every letter, syllable, and word contained in that statement is the blackest kind of a falsehood, and Cotterill knew that they were false when he uttered them.

Cotterill declared that the Times is in favor of "a wide-open policy," instead of the kind of administration that he is running.

The Times was never in favor of a wide-open town, and Cotterill knows that fact. If the Times had been in favor of a wide-open town, how did the following happen?

Why did the Times fight for years for "midnight and Sunday closing"? It did so fight, and at last succeeded, with but very little help from Cotterill.

If the Times is in favor of a vicious element indulging in liquor, why did it fight for high license and local option? The Times made that fight very nearly alone, but it won, and won without the help of Cotterill.

The "wide-open policy," inaugurated 20 years ago by Baldy Rogers and continued under the Humes administration, was fought day and night by the Times from August, 1896, when the present editor took charge, down to the close of that administration.

The Times is not in favor of "State-wide prohibition," has never been, and never expects to be, because it believes that that is a theory and not a practical problem.

Nothing short of Nation-wide prohibition will ever succeed in America.

The Times is opposed to the hypocritical administration which Cotterill runs, because he has substituted the bawdyhouse scattered throughout the city for a segregated district, and the Times believes that if vice can not be segregated it should not be tolerated.

It can not be eliminated by scattering, as Cotterill has continually done.

In his vicious attacks against the Times and its editor, Cotterill forgets that until the 10th day of May, 1912, he always sought to reach the public through the columns of this paper.

Indeed, his last visit occurred under circumstances that led the editor of the Times to believe that Cotterill was just as friendly as he had ever been, and within six weeks of that date Cotterill had expressed the strongest approval of all the Times had done for him through the primary canvass and the ultimate election which put Cotterill into the mayoralty chair.

It was only when Cotterill was compelled to choose between the flag of his country and the support of the Times on the one hand or his friendship for the dynamic Socialists and the followers of the red flag on the other that he began to imagine that "the Times was a vicious publication."

However, the Times is entirely satisfied as matters now stand, because it would rather have the honest and sincere support of the great body of business men and taxpayers than to have the sympathy and aid of any man who is ready to substitute some false and vicious emblem—one that has been known only as a signal of danger—for that of his country.

The single mistake that the editor of the Times made was trusting Cotterill at that last visit in May, 1912.

During the conversation the old indictments found by the Corliss grand jury and thrown out of court by Judge Ronald were discussed.

To show Cotterill, who was then believed to be friendly, how desperate Corliss and his sleuth, William J. Burns, had become, he was informed of a proposed piece of testimony to be introduced by the prosecution of a most damnable character.

The effort was to connect the editor of the Times with the vicious element of the tenderloin, with which the editor had never had the slightest relation—never having even stepped within its boundaries during its existence.

The testimony was an alleged photograph faked for the purpose, but representing the editor with a lewd woman under extraordinary circumstances.

When this information was brought to the editor he determined to be prepared to demonstrate to the court and jury how easily photography could be faked, and chose representative men to illustrate the fact.

Cotterill was informed of the circumstances under which this occurred—the name of the photographer who did the work, one of the most reputable in Seattle, and who would have testified to the methods employed to show how easily photography can be faked—and was also shown the pictures themselves.

The sole purpose, as Cotterill knows, was to demonstrate the viciousness of the Corliss-Burns gang, and to what ends they would go to convict an innocent man of crime.

No opportunity was presented for the use of the photographs for the simple reason that the State could not use the one reported to be had because the court dismissed the whole affair by directing a verdict for the defendant without his taking the stand.

These were the facts, and Cotterill knew them when he wrote his vicious story for his "organ" and afterwards delivered it to the Post-Intelligencer.

"Faked photographs" have been used to convict more than one innocent person—and on one occasion one was used to drive a leading minister of their city from its limits.

If any such photograph was in existence and the defendant had been compelled to take the stand in that infamous Corliss-Burns indictment without the ability to instantly annihilate it by showing how other prominent men could be put in the same attitude, no escape from its effects would have been possible.

And yet this man, who day after day misappropriates the city property to his personal use—this man who day after day violates his oath of office by permitting anarchy to be preached in the streets of the city—this man who does not hesitate to violate the Constitution of the

United States by declaring martial law—would try to make the people of Seattle believe that what the editor did in that case was a high crime and misdemeanor.

On the other hand, what the editor did was simply to prepare to defend himself against an outrage.

Cotterill's statement that the Times was "the organ of the vice syndicate and contributed money to recall him last summer" is on a par with all the rest of his statements. There isn't an iota of truth contained therein.

The Times not only refused to contribute one penny, but refused to give publicity until after those who were seeking Cotterill's recall should have taken some public step that made the act news.

Cotterill could have ascertained those facts from the men who conducted the campaign against him last year, provided he had desired to tell only the truth.

The Times had always been a consistent opponent of the "recall law" until it was made a constitutional provision and adopted by a majority of the people—when it took its place among the fundamental laws of the State, and should be enforced the same as any other fundamental law.

As soon, however, as attention was called to the fact that charter provisions made it possible for the council to remove the mayor under proofs of malfeasance in office, the latter plan was much preferred.

The foregoing is told in reply to Cotterill's tirade merely for informational purposes and to demonstrate how Cotterill by telling a "half truth" can tell a double lie.

[From the Seattle Times, Tuesday, August 5, 1913.]

RIOTS OF POTLATCH WEEK LAID AT DOOR OF MAYOR COTTERILL—COUNCILMAN GRIFFITHS, SPEAKING IN SUPPORT OF RESOLUTION CENSURING EXECUTIVE, MAKES PLAIN STATEMENTS—INACTIVITY AT START ALLOWED MOB TO RULE—OFFICIAL THEN WENT BEYOND HIS POWERS UNDER LAW IN ATTEMPT TO DECLARE MARTIAL LAW IN CITY OF SEATTLE.

Holding Mayor George F. Cotterill responsible for the rioting of Potlatch week and condemning that official for his arbitrary acts hours after the trouble was at an end, Councilman Austin E. Griffiths yesterday addressed the council in support of his resolution censuring the chief executive and voicing the disapproval of the council in the performance. Although the resolution was indefinitely postponed, the councilmen heard the mayor given full credit for the disturbance, Griffiths holding that executive inactivity at the time the trouble started alone was responsible for its spread.

Griffiths was supported in his contention by Councilmen John G. Peirce and Thomas A. Parish, while Councilmen A. J. Goddard, Charles Marble, A. F. Haas, Oliver T. Erickson, and Robert B. Hesketh voted to indefinitely postpone action, and thus ignore the mayor and his uncalculated usurpation of the powers of a czar.

Griffiths insisted that unless the council in some manner expressed dissent the action of the mayor will be taken by future inquirers or historians as having received the sanction of the council. In such way, he insisted, harmful and unlawful practices harden into binding precedents.

Councilman Griffiths at some length reviewed the incidents leading up to the destruction of property and the unlawful action of the mayor, declaring that anyone in authority who flinches through fear or sympathy before the gathering of a mob in a great city should be relieved from such place of responsibility. He declared that it is an error for any mayor after taking charge of the peace forces of the city to assume arbitrary powers or to suspend fundamental rights; that unlawful speaking on the streets or other places should be punished and that there is ample authority to arrest and punish unlawful street speaking now vested in the mayor and the other officials.

GRIFFITHS'S STATEMENT.

"The action of Mayor Cotterill so far as he attempted to set aside lawful private rights," said Griffiths, "should not be regarded as a useful or lawful precedent.

"It may be said the matter should be forgotten, but in fact a matter like this is not forgotten. It might be if a city were not making its own history and character. Unless the council in some manner expresses dissent the late action of the mayor will be taken by future inquirers or historians as having received the sanction of the council. In such way harmful, unlawful practices harden into binding precedents.

"Before coming directly to the act of the mayor which subverted fundamental liberties, let me advert to the preceding circumstances.

"Our Potlatch was a holiday making. We invited people from far and near. We invited one of the chief officers of the Nation. We earnestly desired detachments of the Army and Navy to add to the pleasure of the occasion.

"It was not assumed that anything out of the ordinary would occur. Yet our police was much strengthened. Also the mayor at any time may appoint any number of emergency police.

"On Thursday night the first disorder took place. The man or men who insulted the woman speaker and the men who injured the soldiers and sailors should have been promptly arrested. That is what police are for—to enforce the law, maintain order without fear or favor. If this had been done the sailors would have felt their comrades had received protection.

"The same night the Secretary of the Navy spoke. A Secretary who does not feel and express glowing, generous pride in the flag of his country is not fit for that high place. His remarks were reported in the press.

"The street disorder was also reported. This was right, but in my opinion the disorder was needlessly enlarged and probably exaggerated. We must realize that in large seaports the world over soldiers' and sailors' troubles and fights are liable to arise. For most of them civilians are to blame. Our men in uniform while on leave must be respected and protected, but if they are guilty of an offense they should be punished like anyone else, for the law makes no distinction between persons. Yet for the good of the service, if for no other reason, such occurrences should be temperately considered.

"Friday night came. Various warnings or intimations were given that reprisals and disorders might be expected. To anyone who knows the alacrity of sailors and soldiers, especially sailors and even students, to avenge an injury to one of their number no warning is needed. No police preparation was made. The rioting began in a small way and grew worse as immunity from the police became manifest. The rioters, a majority of whom were civilians, I am told, went from place to place sacking and burning the particular property they sought. In this they were watched by our police as interested spectators and followed by our fire department to put out the fires. Was ever a spectacle more humiliating? That more damage was not done was due wholly to the will of the mob.

PEACEFUL ON SATURDAY.

"The excuse for such supineness is that interference might have ended seriously. The most serious, the most dangerous menace to life and property is the mob spirit. That should be quelled instantly and, if necessary, by stern measures. A big city is a tinder box, the mob a spark. No one in authority dare risk his city in the hands of rioters. Anyone in authority who flinches through fear or sympathy before the gathering mob in a great city should be relieved from such place of responsibility.

"Assuming for the moment but not admitting that these two disorders were political or social in character, and that similar disorders may follow in this and other cities, it becomes all the more imperative that order be preserved. Order is the basis of everything we all seek. No greater task rests upon our cities than to maintain at all hazards law and order while our political or social changes are slowly worked out at the ballot box.

"Saturday morning found the city peaceful—occupations going on as usual and the multitude bent on their holiday. The tumult was over; order everywhere restored.

"One great power vested by charter in the mayor is to maintain peace in the city. To do so he may, in an emergency to be decided by himself, take personal command of the police force. Saturday morning he did so, after two disorders had been neither prevented nor stopped. In this he was within his clear, legal right, and also justified by the previous events.

"By this act, however, the mayor obtained the following authority: The personal obedience of the chief, of each member of the force, and the right to call upon every male person over 18 years of age to aid in the enforcement of the law of the State, and the ordinances of the city. He thus became active head of the physical police forces.

"If, with these forces at command, any mayor should find himself unable to prevent or suppress riots which threaten overthrow of law and order he should call upon the sheriff and governor. Riot is felony. Although a city possessing limited powers, we are as to law enforcement especially an integral part of the State. The governor alone has power to proclaim martial law. This is only proclaimed when the local and civil authorities are deemed powerless to preserve order. In this State I understand the law to be that the governor may quell disorder without the usual proclamation.

"Martial law may close the courts and suspend civil authority until order is restored. All the powers and functions of the city itself may be suspended during the supremacy of this law. Even our greatest protective right, that of habeas corpus, is unavailable.

"It must be apparent then, that under the charter and laws of the State, no mayor possesses such power nor any authority analogous to it. His authority to maintain peace extends to the enforcement of existing laws and ordinances and of such emergency legislation as the city council may then enact. Assuming personal command of the police gives no mayor military in place of civil authority, nor the power of a dictator. On the contrary, the purposes of the charter is to enable the mayor to enforce civil authority and thus enable the people to pursue their usual ways in peace. In doing this he may read the riot act, command the crowd to disperse—if they do not, the consequences are upon their own heads.

LAWS ARE AMPLE.

"It is error, then, for any mayor after taking charge of the peace forces of the city, to assume arbitrary power to suspend fundamental rights. This is true regardless of the motives or character of any mayor. Different mayors have different opinions, different friends, different prejudices. It is scarcely necessary to say that the right peaceably to assemble on the streets for lawful speaking thereon without obstructing travel or becoming a nuisance to property owners thereby, the right to publish and sell newspapers, even the right to conduct an orderly, lawfully licensed saloon are, in the absence of prohibitory legislation, legal or constitutional rights. However, saloons being regarded as trouble breeders, are often arbitrarily closed.

"But street speakers or editors who speak or publish sedition, criminal anarchy, or incite to violence, and saloon keepers who violate the law may be arrested and punished under existing laws.

"There is a distinction to be drawn between peaceably assembling on the streets for lawful speaking and unlawful speaking thereon. The former should be allowed, the other punished. The advocacy of sedition or criminal anarchy, especially upon public streets and places, should be sternly dealt with; but to do so should not interfere with or abridge the rights of others who keep within the law in the advocacy of their views. In this country, where manhood and, in some States, universal suffrage prevail, and in this State the initiative, referendum, and recall, all political, industrial, or social contentions may and must be settled at the ballot box. Therefore there can not be the remotest excuse for sedition or criminal anarchy.

"With this distinction in mind, there is, I maintain, ample authority to arrest and punish unlawful street speaking.

"Because this is a Government of laws and not men, because government by proclamation does not exist, because government rests upon fact, not fiction, the late action of the executive, so far as it attempted to set aside lawful private right, should not be regarded as a useful or lawful precedent.

"It may be said the council should not adopt the resolution because the council was not responsible for the action referred to. That is true, and for that reason such a declaration is the more desirable—particularly since it is the council which may be called upon to allow or disallow bills against the city claimed to be based upon wise or unwise, lawful or unlawful, executive action.

"In closing may I add that as to the disposal and conduct of the police and their allies, the firemen, soldiers, and marines, so far as I observed it during Saturday night, I have only good words.

"To me the lesson of this whole matter is that in dealing with local troubles, all alike, officials, newspapers, and people, should avoid undue alarm and not give to them undue importance."

[From the story as told by the sailors themselves—Pacific Naval Monthly, August, 1913.]

CAUSE AND EFFECT.

The attempt of the leaders of the I. W. W. and Red Socialists of Seattle to lay the blame for the recent patriotic uprising in Seattle during the Potlatch to an address of the honorable Secretary of the Navy or to officers of the fleet, and who have made more or less vague accusations, supported by their ready affidavits, to the effect that the swiftly occurring events of the night of July 18 were unofficially ordered and sanctioned by such officers, is most laughable and in strict accord with all emanations from their disordered intellects.

Here is the cause, admitted freely and without any desire to conceal, the real reason as told by the men themselves who took part and whom we are glad to call shipmates:

For over a year our men in uniform when passing Pioneer Square and vicinity, either alone or with but one or two companions, have been made the target for vile abuse by the I. W. W. soap-box orators, who have been permitted to overexceed the right of free speech in order to draw their hearers' attention to our marked men in uniform. They have called them vile names in front of crowds in order to gain the applause and derisive laughter of their grimy listeners. They have humiliated our decent-acting men in a hundred dirty ways, and not only in their speeches, but in their literature, have they abused and vilified the men who feel honored in wearing the Navy uniform. Their rotten literature has been sent to the yard and introduced aboard our ships, and there is not an issue of the foul stuff but what contains slanderous and scandalous attacks on our men and our service. For over a year the resentment of our men has been smoldering, and only their dislike of ungentlemanly conduct and the notoriety attending have prevented a thorough chastising of the scabby haranguers before.

They can blame no one for their punishment but their own vile-tongued orators, who brought a justly proper resentment of a year's standing to a white heat and quick action by their cowardly attacks on three soldiers and two sailors peaceably enjoying the carnival and wearing the uniform of Uncle Sam during their stroll past Anarchy Corner.

The above is the true cause and only reason for the happenings of July 18. Our men have sensitive feelings which the I. W. W.'s hurt. We can stand for a lot of vile abuse, insults regarding our social position ricochet harmlessly off when the source is considered, but when the red flag is hoisted to the accompaniment of vile epithets applied personally above the glorious banner we are sworn to support there is no man worthy of the name in our Navy but what will act and act promptly.

As to the I. W. W. statement that they had received warnings of the action of the Navy men on July 18 from members of their organization aboard vessels of the fleet, the lie is so apparent that it needs no refutation on our part. There are no I. W. W. members in the fleet, to anyone's knowledge. If so, they are keeping such fact mighty quiet, and also that they committed perjury when they took the oath and signed shipping articles.

[From the Seattle Post-Intelligencer, Sunday, July 20, 1913.]

THE CAUSE OF THE TROUBLE.

To try to put the responsibility for Friday night's disturbance on Secretary Daniels or any other agency is foolish. The blame lies squarely with the Industrial Workers of the World and such of the Socialists as maintain relations with them. The Industrial Workers of the World cheerfully assaulted a little batch of soldiers and sailors and sent them to the hospital. When the soldiers and sailors retaliated in kind it was simply the consequence of the first assault.

The Post-Intelligencer does not approve of the Friday night affair. Rioting and destruction of property is wrong at all times, as wrong for one person or set of persons as it is for another. This newspaper has denounced the Industrial Workers of the World when that organization indulged in lawlessness, and it is no more backward about voicing its disapproval of lawlessness even when it is done under the American flag.

But, at the same time, this newspaper has no hesitancy in saying that the Industrial Workers of the World brought this attack upon themselves. Under the plea of free speech they nightly denounce our Government, our flag, our police, our soldiers, and our sailors. They preach syndicalism and sabotage. They urge upon their followers just those tactics which the crowd indulged in Friday night. That is their own particular theory of government—government by mob, club, and torch.

Their conduct has been tolerated for long. Secure in their privilege of "free speech," with some real or fancied encouragement from the mayor, they have heaped insults and unreasoning abuse upon law-abiding citizens and men of the Army and Navy. When in a cowardly fashion they assaulted five men in uniform they brought retribution upon themselves.

Now, with a shameless inconsistency, they beg for protection from the very forces which they scorn, malign, and insult. They seek the rights of their despised citizenship; blame the police and call on Congress. They are fair-weather rebels, only to play the baby act when paid in their own coin.

And as for the Socialists' complaint that they had no part in the events which led up to Friday night's outburst, it is partly true and partly false. It is the misfortune of socialism that it is not clearly defined; that there are self-styled Socialists at least who are not a whit better than the most rabid of the Industrial Workers of the World syndicalists. There are always Socialists to rush to the rescue of the Industrial Workers of the World. The Socialists, in part, keep bad company. Other Socialists abhor the Industrial Workers of the World, as does every sane person. These law-abiding Socialists have reason to feel hurt, but they must recognize in all fairness that a crowd never makes fine distinctions.

However this may be, the entire incident is to be deplored from its inception to its conclusion. But by no possible twisting of syndicalist logic can the Industrial Workers of the World put the responsibility on anyone but themselves. They started the trouble with an unlawful assault, and that is all there is to it.

[From the Seattle Post-Intelligencer, Monday, July 21, 1913.]

MAYOR COTTERILL'S MISTAKE.

In the calmness and sobriety that comes with the lapse of time we may now discuss the part played by Mayor Cotterill in the much-exaggerated incidents of last week. The mayor made a mountain out of a molehill, and that is the most irritating and inexcusable blunder a man may make. In proclaiming a sort of martial law when there was absolutely no occasion for it, he demonstrated his incapacity to handle emergencies even when they are past and done with.

The conduct of the people in Seattle Saturday night proved conclusively how little occasion there was for hysterical executive action Saturday morning. The mayor and his advisers may save their faces by pretending to think that they had some repressive part in the general public conduct. If such gives them any consolation, we shall not take it from them.

Not for a moment does the Post-Intelligencer question the motives of Mayor Cotterill. He did what he did under the belief that it was the right thing to do; he did what he thought was his duty. But he did the wrong thing; he committed an egregious error of judgment. It is his hasty judgment that we deplore, not his purpose.

But this newspaper does object with all fervor and all seriousness to the damage foolishly done by the mayor. What was bad enough Friday night, told on every telegraph wire the country over and perhaps cabled across the ocean, was made many times worse Saturday morning by the mayor's proclamation. This proclamation and the regrettable orders that followed it, gave a serious importance to Friday night's trouble that even the mayor himself must now admit was grievously overrated.

To the outside world Saturday Seattle was under martial law. We know how ridiculous that was, with thousands upon thousands strolling the streets watching peaceful parades and otherwise enjoying themselves. Seattle's reputation has, however, suffered with the world at large and it will be difficult to repair it.

Then there is the matter of the many visitors from near and far. Their sniffs and sneers were hard to bear Saturday. Everywhere there were strangers commenting about the city sarcastically or scornfully, and even contemptuously. That is another damage that Seattle has suffered. Many left the city Saturday afternoon. Some credulous ones feared bloodshed, others suspected that the Potlatch fun was done for.

And who could blame them? Closing the saloons and suppressing newspapers are precautions ordinarily taken only when officials are confronted with a crisis—when there is danger to life and property; but he who could see a crisis Saturday morning was afflicted with a bogymen hallucination as pitiable as it was regrettable. Closing the saloons was a pious thought, especially as the saloons had not the faintest possible responsibility for Friday night's disturbance.

Friday night it was bad enough. There is no need to minimize it, but it was a definite demonstration for a definite purpose; and this purpose accomplished, the incident was closed. Had the mayor exercised ordinary common sense he and his chief of police would have looked to their preventive measures for Saturday night calmly and with circumspection. With the police force and the provost guards furnished by the ships, unheralded by proclamations, the peace of the city would have been safeguarded. If there was anything calculated to breed trouble, it was that miserable proclamation. That there was no trouble only brings into stronger relief the blundering fright of the mayor.

All this being admitted, or even if it be questioned or denied, there is now but one thing for us to do. Forget it. The incident is over, the blunder made, the damage done. Harping on it further will only make matters worse. In spite of it all, the Potlatch was a success. The people enjoyed themselves, with the spectacles, parades, and the noise. There will probably never be a repetition of this foolishness. Future executives will view this proclamatory fiasco and keep their senses. Future chiefs of police will see to it that there is no provocation for retaliatory riots.

So now let us all get down to our business, since our holiday is over. Seattle has many serious things to do and can not afford to waste time, energy, or patience holding post-mortems on what might have been. To those who are yet indignant we bespeak forgiveness and forgetfulness. The severest rebuke and the most effective is to consider the incident unworthy of further notice. So let us end the matter now once and for all.

[From the Seattle Post-Intelligencer, Tuesday, July 22, 1913.]

SOCIALISTS AND THE FLAG.

Without the least desire to excuse the assault made on the Socialists and the destruction of their property, the Post-Intelligencer respectfully calls their attention to the subjoined communication. It was printed in the Post-Intelligencer of March 25, 1912, and is signed by Bruce Rogers. The same Bruce Rogers wrote the statement to President Wilson which appeared in this newspaper Monday morning. Even the Socialists must see that there is a conflict of principles in the two statements.

In one Mr. Rogers frankly voices the Socialistic opposition to the American Government and to the American flag. In the other he takes an entirely opposite view of the Government and the flag. Here is what Mr. Rogers wrote a little more than a year ago.

TO THE EDITOR:

When a State committeeman of the Socialist Party in the Seattle convention of that party suggested adjournment until the United States flag be added to the decorations, he started a near riot, and his motion was overwhelmingly voted down.

The most rudimentary regard for the bourgeois intelligence of the community makes pertinent and unequivocal statements from the Socialist in the premises, and really there seems no need to beat about the bush or beg the question in any manner.

"We do not regard the American flag in any greater degree than we do the Russian, German, or English flags, or that of any other capitalist or feudal nation whose people depend in the main for their food, clothing, and shelter upon the capitalistic mode of production involving the essential exploitation of labor through a system of wage slavery. We propose to abolish all such systems and governments and to substitute therefor a manner of human society by cooperation and mutual aid."

"Pretty much like the present-day trusts, and based directly upon the industries. To be absolutely direct, we propose the entire overthrow of the Government of the United States and to establish an industrial Republic wherein all present-day political functions will become extinct."

In this view I am quite free to say that we may not be accurately regarded by whoever may be concerned as other than revolutionists. Such, indeed, is the case.

The Socialists are an international party, and as such we think infinitely more of our fellow workers in foreign countries than we do of the capitalists in our own country, say, for example, the workingmen of Canada, Mexico, or Timbuctoo, for that matter, than we do of the mine, mill, and factory owners of the United States who so readily send troops against us under the Stars and Stripes to jab their bayonets into the pregnant loins of our women, and whose police beat our wives across pulsing nursing bosoms.

"As an international we have chosen a flag—a blood-red banner, symbolic of the common ichor of the aspiring human heart."

It was the first flag raised in all the world and when the world was young. It was woven of the spangled rays of the first clear dawn of civilization. It was the daylight signal of our fathers who by night built their beacon fires on a thousand hills. It was the ensign of Spartacus and the rebelling gladiators. It inspired the early Christian communists, and in later days became the first standard raised in the American Revolution at Breda Hill, by Gen. Warren. The Moravian sisters of Bethlehem, Pa., wore a red silk flag and presented it to Count Putaski, and it was carried at the head of the continental cavalry, and the daring Pole was buried in its folds. We have chosen

it. To it alone are we loyal, and we will follow it until we have made a place fit to live of the wolf-den world when we have restored the earth and the machinery to labor.

BRUCE ROGERS,
State Committeeman Socialist Party.

MARCH 25, 1912.

Again, most emphatically denouncing all riots, assaults, and destruction of property, no matter by whom committed, or under whatever flag, there is still the matter of veracity, which must be maintained. Our Socialist friends have seen fit to weight down an otherwise just complaint with propaganda, which invites a harsher scrutiny than natural sympathy would otherwise accord it.

[From The Argus.]

MAYOR COTTERILL HAS DISGRACED SEATTLE.

As a rule there is nothing to be made by crying over spilled milk. Seattle has been disgraced and humiliated. It may be that it would be proper to forget all about it and start over again, and see if we can not do better next time. Unfortunately, however, it is necessary first to learn where to start, and this involves a free discussion of the humiliating incidents of last week. And in order to intelligently discuss them we must go some distance into the past.

Under Mayor H. Gill Seattle was run wide open. The people who objected to this course refused to take their medicine and Gill was recalled—and this recall was the first act in the drama which lead up to the exciting scenes of last week. At the next election Gill was a candidate. Had he been allowed to serve out his term he would not have been. And his candidacy made the election of George F. Cotterill, a man who is not fitted for the office he holds, possible.

So bitter was the feeling against Gill that even some saloon keepers who did not believe in a wide-open town voted and worked for Cotterill.

George F. Cotterill is a crank and fanatic. He does not possess a well-balanced mind. It is impossible for him to form an unbiased opinion on some subjects, and such a man is not to be trusted. It had been the policy of former administrations to discourage the followers of the red flag of anarchy. Mayor Cotterill was the recipient of the anarchistic and socialistic votes. Even card socialists voted for him—and a card socialist takes an oath to vote for none but a socialist.

In other words, we have a socialist for mayor of this city, and as humiliating as it is we may as well admit it.

Mayor Cotterill has allowed the red flag to be carried through the streets. He has allowed ignorant foreigners, who have been kicked out of their native countries, to hold forth nightly and curse the Government and all of our institutions in the public streets. There was but one way that his policy could terminate, and it was no occasion for surprise that a number of Industrial Workers of the World stabbed and beat United States soldiers and sailors simply because they wore Uncle Sam's uniform.

Mayor Cotterill attended the banquet tendered Secretary of the Navy Daniels. At that banquet Secretary Daniels made his speech berating the enemies of the American flag. And those present, knowing the situation and realizing the attitude Mayor Cotterill had assumed, applauded vociferously. Secretary Daniels, seeing that he was making a hit, went stronger, and the stronger he went the heartier the applause. Secretary Daniels, not understanding the situation, evidently made up his mind that he was in the most intensely patriotic crowd he had ever met and went the limit.

The feelings of Mayor Cotterill must be left to the imagination.

At the very time this speech was being made some of the Secretary's men were being manhandled by the very men he was giving their deserts. The man who was so badly injured went aboard his ship and told the story. An hour after he had arrived on board the plan of action which was later carried out was formulated, and the men on every ship in the harbor had been notified by "underground messages." In other words, 12 hours before the Times appeared on the street with its report of Secretary Daniels's speech, which was not one iota overdrawn, the retaliation had been planned.

The attempt to suppress the Times was the most highhanded outrage ever attempted in this community. It has made Seattle a laughing stock for the entire country. But it did not succeed, and therefore why not forget it?

Mayor Cotterill has encouraged, at least passively, the socialist, the anarchist, and the Industrial Workers of the World. When the situation got beyond his control he attempted to handle it by suppressing a daily paper and by closing the saloons which had paid big license fees besides thousands of dollars toward the celebration which was then in progress.

This, then, is the situation. And now, what are we going to do about it? A recall started the situation. A recall will not end it. The chances are that the mayor has learned a lesson. He has killed himself politically. It is much better to allow him to serve the remaining few months of his term and then forget him. After all little harm has been done individuals. It is the entire community which must bear the humiliation and disgrace. We have a council capable of passing laws to suppress street speakers. Leave the matter to it.

And after all Mayor Cotterill is not wholly to blame. He has done the best he could with the equipment that God has given him. In attempting to suppress the Times he was doubtless actuated by malice, although probably he did not recognize the motive. In attempting to close the saloons he doubtless thought he was doing his duty. At present the sentiment in this community is strongly anti-Cotterill, but just as sure as this silly recall agitation continues it will reelect him if he is a candidate to succeed himself.

[From the Town Crier, Seattle, Wash., Saturday, August 2, 1913.]

RESPONSIBILITY.

A characteristic four flush for the benefit of his disorderly friends is the best that can be said of Mayor Cotterill's attempt to make the city of Seattle settle with the Socialists for the damage done their property by the soldier-sailor-civilian mob. There is no doubt that the property was destroyed; the extent of the damage seems to have been moderately estimated, the total amount which the city was asked to pay being only about \$3,000—not much for taxpayers to worry about had it been a just claim.

The city of Seattle was host to the soldiers and sailors only by courtesy; they were really here in response to the invitation of the Potlatch management; here more directly as the result of orders from the War and Navy Departments, so it is difficult to fix any of that sort of responsibility, moral or financial, that a host is supposed to assume for the behavior of a guest. Street-corner anarchists, grown arrogant under the patronage of the mayor, started the ruction, but

the I. W. W., who seem to have no claim for damages, blame Secretary of the Navy Daniels for inciting the subsequent riot, and the mayor, in his frantic proclamation, blamed the Seattle Times and the saloons. Still we can not discover why the city should have been asked to foot the damage bills.

Mayor Cotterill, of course, attributed responsibility to the city for the reason, as he said, that the city's police failed to do its duty and prevent the destruction of the Socialists' property. Will the mayor O. K. claims for personal damages if they are presented by the soldiers and sailors who were beaten and stabbed in the first row, and who were given no police protection? Probably not. The fault really goes back to Mayor Cotterill's toleration and encouragement of the social disturbers of the city; he alone is responsible for the conditions that made the first mean assault and the retaliatory riots possible. If the Socialists or any others have any damages coming to them, why shouldn't they be paid by Mr. Cotterill out of the privy purse?

[From the Argus, Seattle, August 9, 1913.]

COTTERILL WANTS TO PAY.

Mayor Cotterill is of the opinion that the city should pay the Socialists and Industrial Workers of the World for the property which was destroyed by the sailors during the Potlatch, and has forwarded their claims, aggregating some \$3,000, to the city council. That body promptly rejected them.

The disciples of the red flag brought this trouble upon themselves. Not only are they morally bound to stand the consequences, but they are legally bound as well, which is about the only thing that counts with them.

These tramps and thugs have for months congregated nightly on the street corners and abused and vilified the constituted authorities. Some of the more zealous attempted to follow verbal abuse by manhandling the men of the Army and Navy. Those men retaliated in a manner which brought joy to the heart of every loyal citizen. And then when the police, whom they have abused so roundly, were unable to protect them, and they were unable to protect themselves from a mere handful of Uncle Sam's sailors who used nothing more deadly than their fists, they cry like a pack of whipped curs and want the Government which they have vilified to pay about three times what their property was worth.

A mayor who had a drop of red blood in his veins or a speck of patriotism in his constitution would have torn up the bill and thrown it in the faces of the creatures who presented it. It might not have been dignified, but one can not be dignified while cleaning out a sewer.

[From the Seattle Post-Intelligencer, Tuesday, August 12, 1913.]

FREE SPEECH A FALSE ISSUE.

The complaint of a coterie of citizens obsessed with the notion that they have a message to deliver, because the regents of the university decline to allow the campus to be used as a meeting place, is a false and a tricky one. If these "free speech" advocates can not see the falsity of their position they are in a condition wherein thought and not speech is desirable. But the probabilities are that they well realize the speciousness of their argument and are deliberately up to the old propagandist trick of raising false issues.

Barring speakers from the university grounds is no bar to free speech. Speak they can to their hearts' content in all the unoccupied places of the world and there is nothing to stop them. The regents merely say that the university grounds can not be used for speeches, picnics, or any other purpose than that for which they are intended.

The issue of free speech is in no manner involved in this. The question is one of occupancy. If the Post-Intelligencer, weary of paying rent, should install itself on the campus and assert a right to publish there under the guaranty of a free press, its claim would be greeted with derision and prompt eviction. Nor would any kindly ear hearken to the wall about curtailing the "liberty of the press."

The point at issue between the "free speech" advocates and the public is that the public regards these speakers as a nuisance, while the speakers, with an excess of vanity, deceive themselves into the belief that the public looks upon them as a "menace." There is a subtle flattery in the belief that one is a dangerous person; it inflates the feeling of importance and, above all, it gives vent to that human weakness to hear oneself talk. One can form "leagues," pass resolutions, and cherish a "cause," all of which is very dear to a certain type of mind.

That is all beside the point, however, which is that "free speech" within common-sense limitations is denied no one. If these leagues, socialists, single taxers, and what not are really desirous of free speech, let them turn their attention to securing a park, a lot, or a municipal hall, where speech will be as free as the air we breathe. The Post-Intelligencer will strive with them to get it, and can assure them of success. We fancy, however, that this suggestion will not meet with approval for the very obvious reason that "free speech" is not the issue. They want, more than anything else, opposition, which can best be secured by being a nuisance. And no one has a constitutional right to be a nuisance.

[From the Seattle Times, August 17, 1913.]

THE "RIGHT" TO FREE SPEECH.

Seattle could read with liveliest interest, because of its local application, an editorial appearing in the current issue of the Pathfinder, published at Washington, D. C., under the caption, "Right of free speech is limited."

Seattle has heard a great deal about the "right" of free speech during the past few months. Anarchy's friends have invoked it to incite and then to excuse riot-producing conditions.

The Pathfinder, speaking as though acquainted with the local misuse of the term "free speech," declares:

"Some people, hearing that freedom of speech is guaranteed by the Constitution, jump to the conclusion that they have a right to go to any extreme in that connection. But the use of a right is one thing and the abuse of it another.

"Liberty is not license, but license is anarchy, and anarchy is the enemy of all order and progress. The word 'anarchy' means simply 'without rule' or 'without law.' Anarchism makes the individual a law unto himself and allows him to do anything he pleases.

"Such an idea is diametrically opposed to the whole doctrine of free government; the two systems are wholly repugnant.

"As a matter of fact there is no constitutional guaranty of free speech. The Constitution simply says 'Congress shall make no law
* * * abridging the freedom of speech or of the press.'"

"The Federal Government, in other words, leaves these matters to State regulation.

"The orators and agitators who go about telling their audiences that free speech gives them the right to preach violence and revolution are barking up the wrong tree entirely.

This editorial enunciates the truth without malice and without favoritism. It will be distasteful to the apologists for anarchy, but not half so unpleasant as the Pathfinder's further pointed comment:

"Most of these anarchists and mischief-makers are foreigners, who have come to this country because conditions here are infinitely better than in their own country. And then they show their appreciation of the liberty we extend to them by abusing it.

"While damning the Constitution, the laws, and the flag, they at the same time appeal to these very things to protect them in their lawlessness. If any violence is used against them they are very prompt to cry out, thus proving that they are not willing to abide by the doctrines they themselves announce.

"No community can afford to tolerate anarchy in any form. Every government has a right to protect itself and every community is justified in using sufficient force to repress the enemies of law and order."

For saying only one-half as much as this eastern publication the Times came under the ban of a mayor who delights to apologize for anarchy.

An effort was and has been made to show that the Times enunciates a revolutionary doctrine in vigorously opposing anarchy and stands alone among the press of the country in fighting to uphold the flag, the laws, and the principles of patriotism.

Yet the publication quoted above, issued in conservative Washington, under the shadow of the Capitol and the White House, unhesitatingly and explicitly declares that a nation or a community menaced by social outlaws possesses a primary right to protect itself and its institutions.

[From the Seattle Post-Intelligencer, August 24, 1913.]

FREE SPEECH NOT ON TRIAL.

In the so-called "soap-box" cases recently heard in the superior court the issue was not "free speech," as has been widely stated. On the contrary, the issue was the ascertainment of just how far the individual may have the right to constitute himself a nuisance to his fellow citizens.

Certain business men protested against the blockading of their stores and consequent injury to business by crowds gathered to hear the arguments of street or "soap-box" orators. It was contended by business men that traffic-laden street intersections are not proper places for these impromptu discussions. When the permanent restraining order was granted it referred only to one city block and triangle on Fourth Avenue between Pike and Pine Streets.

It would seem that so elementary a question as the right of one individual to deprive another of the fruits of his industry, without compensation, could be settled with less judicial passementerie. The law, however, has thrown so many safeguards about the liberty of the citizen that his activities may not be permanently limited without full and fair presentation of all the facts surrounding the issue.

So impatient were the defendants in the "soap-box" cases to procure an immediate adjudication of their rights that the hearing for a temporary injunction, though only the second stage of the proceedings, was made the full and final hearing. The decision, it is stated, will be accepted without appeal and used for propaganda work among the masses to indicate the autocracy of the law and courts.

A permanent injunction is granted ordinarily after the deliberations of three court hearings. The "soap-box" cases ended with the second stage of the litigation by the agreement of the parties to the action.

Initial and emergency orders in proceedings of this kind may be obtained without notice to the defendants on an ex parte hearing. Then may follow the hearing for a temporary injunction and finally the hearing for a permanent injunction. The effect of the restraining order and the injunction is the same, except as to the limitation of time. The final order is granted only after exhaustive digestion of all the facts.

The issue is not one of free speech, but nuisance.

[From the Seattle Post-Intelligencer, July 21, 1913.]

A LESSON IN MOB RULE.

If the people who subscribe to the outlandish theories of the Industrial Workers of the World had the simple apparatus necessary for the generation of common sense, they would see in last week's little affair a complete refutation of all their logic. It was not the capitalistic class, directly or indirectly, that assailed them, burned their literature, and wrecked their furniture. It was, to use their own terms, the proletariat; it was the mob; it was the majority. Looking back at the incident calmly, it was for the most part an irresponsible mischief-making crowd. The soldiers and sailors, no doubt, were animated by a spirit of revenge, deplorable, but quite natural. The big number of the crowd, however, was looking for easy trouble and a release from the restrictions imposed by the laws of society. What it did to the Industrial Workers of the World it would have done to street cars if there was a street-car strike and what it would have done to mills or factories if there was some other form of industrial trouble. The mob is out for mischief mostly, without any preconceived notion of doing serious harm. But serious harm often comes from what is merely exuberance. And yet these now complaining Industrial Workers of the World members feel themselves aggrieved. They should not delude themselves with the hope that the law is near when mobs can be organized to do logical things and do justice. The mob that destroyed them reacted to exactly the same stimulus as they strive to utilize against the "capitalistic class." It was a beautiful example of class feeling, on patriotic rather than economic grounds. Mob rousing is a game that any number of people can play. The mob is not consistent, and it is just as likely to swoop down on the Industrial Workers of the World as on some millionaire. It is dangerous business always and a failure for governmental purposes. That is something for the brooding Industrial Worker of the World who hopes to lead an avenging army to think over. Human passion in the mass is to be stirred with extreme caution. To achieve anything abiding it must be done by reason, not by emotion. If the Industrial Workers of the World is half as intelligent as it pretends to be, it will see the point.

[From the Bremerton News, Saturday, August 23, 1913.]

FINDINGS OF THE BOARD—ABUSE OF ARMY AND NAVY AND GOVERNMENT AND LAXITY OF POLICE BLAMED FOR RECENT TROUBLE IN SEATTLE.

The board of inquiry appointed by Rear Admiral Reynolds, commander in chief of the Pacific reserve fleet, to investigate and report its findings regarding the destruction of I. W. W. and Socialist prop-

erty in Seattle on the night of July 18 has completed its work and filed its report. The board was composed of Commander Thomas Washington, of the cruiser *Charleston*; Lieut. Commander Henry N. Jensen, of the cruiser *Milwaukee*; Lieut. W. E. Whitehead, of the cruiser *St. Louis*, with Lieut. H. W. McCormack, aid to Admiral Reynolds, acting as recorder.

It is the evident opinion of naval authorities that the attitude of Mayor George F. Cotterill and the police force in allowing extreme license to soap-box orators who had nightly attacked the American flag, the Government of the United States, and men of all branches of service, is primarily responsible both for the assaults on the soldiers and sailors and the retaliatory movement of enlisted men on the following night.

The full report of the board and letters of Admiral Reynolds and Secretary of the Navy Daniels are here given, as follows:

FINDINGS OF BOARD.

"The board, after maturely deliberating upon the declarations above recorded, finds the following facts to be established:

"1. It appears that for some time it has been a practice of the police authorities of Seattle to permit Socialist and Industrial Workers of the World public speaking on the streets and elsewhere in the city of Seattle, and the attacks made upon the Navy in general and the enlisted men in particular by these public speakers have been continuous and apparently unchecked by the civil authorities, and the most objectionable and false charges and abuses have been freely made against and heaped upon those in the Army and Navy, and to a considerable extent also against the Government of the United States as well. No attempt apparently has been made to check this general abuse, and the enlisted men of the Army and Navy have been continually subjected to it, and particularly has it been applied to them when present and seen by any of the public speakers of their audiences.

"2. Apparently no overt action was taken by any of the enlisted men of the Army, Navy, or Marine Corps, notwithstanding the persistence of the abusive attacks upon them, until the night of Thursday, the 17th instant, when a party of five, consisting of three soldiers and two sailors, who were innocently and quietly listening to one of the Industrial Workers of the World street speakers, were set upon by a number of the people in the audience supposed to be members or adherents of the Industrial Workers of the World. This occurred on Washington Street, Seattle, Wash., about 9.30 p. m., and the men were severely handled. This attack upon the enlisted men was, so far as the board has been able to learn, entirely without provocation and was made solely because of their being in the uniform of the Army and Navy. Whether or not the police force afforded or attempted to afford protection to these enlisted men the board has been unable to determine. Certainly the police knowingly permitted and made no attempt to check the efforts of the speakers in using language which tended to raise the feeling of their adherents against our men. These enlisted men, it appears, when attacked by an overpowering number of the Industrial Workers of the World adherents, took refuge in a nearby drug store, where the wounds of some were attended to and from which place they were taken by the police to the police station and later in the evening discharged, no charge of any kind apparently being made by the police against them and apparently none, also, against the members of the Industrial Workers of the World people who had made this unwarranted attack upon them.

POLICE INDIFFERENT.

"3. At some time after 8 o'clock on the evening of the 18th instant, a number of enlisted men of the Navy and Marine Corps, variously estimated at from 20 to 30, with a number of civilians apparently residents of Seattle, many times as great, started from the water front, near the corner of First Avenue and Yesler Way, then proceeded toward the Industrial Workers of the World headquarters on Second Avenue south. These men were joined as they passed up the street by many others, some of whom were men from the ships and forts on liberty, but the vast majority being civilians, many of whom, from their dress and appearance, clearly belonged to the better class of citizens. The police of the city were in with and among this crowd of people and seemed to be as thoroughly aware of what may have been intended as were the civilians and enlisted men. No effort, or at least no determined effort, was made by the police to check or divert any action which might have been intended by the members of the crowd. It appears that the crowd was entirely orderly in all respects and behaved, so far as the board has been able to learn, orderly throughout the evening, except in so far as the destruction of the Industrial Workers of the World and Socialist headquarters and meeting places were concerned. It does not appear that any of the enlisted men of the Navy or Marine Corps who had come on liberty from the ships had, at the time of going ashore, any object of destruction of property of the Industrial Workers of the World or other people in view, nor is there anything to show that they, when landing from their ships, knew where the offices or rooms of the Industrial Workers of the World or Socialists were. Of the large number of men composing the crowd during the evening, approximately only 20 were enlisted men who were on the docks when the crowd began to gather in the streets for the movement against the Industrial Workers of the World. The movement appears to have been led, or at least guided, by citizens of Seattle, who constantly gave notice and passed information among the crowd as to where the various Industrial Workers of the World and Socialist offices and rooms were and to which place the crowd would, after visiting one place, proceed to the next. It appears that after arriving at each of these Industrial Workers of the World and Socialist places the citizens in the crowd took the lead in showing the men engaged either in wrecking these places or in taking out the furnishings and burning them in the street, where the entrances were and how the contents might be removed. Throughout this the police of the city were present and took no active part in stopping and may be said to have taken more than a passive part in assisting.

"4. As the crowd moved up Washington Street it was constantly increased by citizens of the city, who came from their places of business, hotels, etc., so that at its height it was possibly composed of as many as 200 enlisted men and many times that number of civilians. No resistance appears to have been offered by the enlisted men of the Navy or Marine Corps to the police nor does it appear that they had any intention whatever of taking part or joining in anything unlawful except so far as the property of the Industrial Workers of the World and Socialists was concerned. This small number of enlisted men could have easily been handled and checked by the police had the police so desired, but it was evident from their conduct that the police and citizens were in sympathy with the attacks by the crowd upon the Industrial Workers of the World and Socialist property. About 8 o'clock of the evening of the 18th instant, the chief of police of Seattle notified the commander in chief of the Pacific reserve fleet that it was possible

there might be trouble between the enlisted men and the Industrial Workers of the World, but that he did not wish to interfere with the liberty of the enlisted men. The commander in chief took immediate steps and sent a detail of about 35 men, with a commissioned officer in charge, to act as a patrol, and immediately upon the arrival of this patrol at the place where this large crowd was gathered the enlisted men of the Navy and Marine Corps left, and so far as the evidence shows took no further part in whatever action may have been taken later by the crowd of civilians. No resistance, however, was offered to the bluejacket patrol which leads the board to infer that none would have been offered to the police of the city had they desired to check or prevent the action of the men composing the crowd at its beginning or even later. There was no drunkenness, apparently no boisterous conduct, nor weapons carried by any of the men of the Navy or Marine Corps who may have been engaged with the work of the crowd, so far as the board has been able to learn.

"5. On July 17 the only unlawful and riotous action taken in which any of the enlisted men of the Navy and Marine Corps figured, was an unwarranted attack made upon two liberty men by members of the Industrial Workers of the World upon the public streets of Seattle. On the 18th instant occurred the attack made upon the Industrial Workers of the World and Socialist quarters by the large crowd, in which it is alleged that perhaps as many as 200 enlisted men of the Navy and Marine Corps formed a part. On the 19th instant no objectionable conduct on the part of the enlisted men had been reported, and the patrol landed from the ships reported no disturbance whatsoever.

"6. So far as the board has been able to learn no complaints against the enlisted men of the Navy and Marine Corps have been made by the police authorities of Seattle.

CONCLUSIONS.

"The board finds as follows: That for some time past the attacks upon the flag, the General Government, and particularly upon the Army and Navy, have been customary and general in the seaport cities of this coast by people calling themselves members of the Industrial Workers of the World society, and to a more or less extent by persons calling themselves Socialists. These attacks have been notorious among speakers who were allowed by the civil authorities to gather crowds and to make public speeches on the streets, thereby inciting and engendering ill feeling and hatred among certain classes of people against the members of the Army and Navy, and it was due to these public speakers that the attack upon three soldiers and two sailors in uniform was made on the night of the 17th instant.

"The board believes that this attack upon these men was an incident to the burning and destruction of the Industrial Workers of the World and Socialist property the following night. The board believes that the direct responsibility for the destruction of the Industrial Workers of the World and Socialist belongings upon the evening of the 18th instant was due in part only to certain enlisted men of the Navy and Marine Corps, but to a much larger extent to the civilians who seemed to lead and direct the crowd, which contained a small proportion of enlisted men, to the various places which were visited by the crowd. The board also believes the direct responsibility for the action of the crowd, which contained a small portion of enlisted men, was due to the fact that the police force of Seattle took no effective steps to prevent the destruction of property which they were present at and witnessed, and also to their sympathy with the movement and purpose of the crowd. The board has no reason for believing that the idea of the destruction of the Industrial Workers of the World and Socialist property originated with the enlisted men of the Navy and Marine Corps, and is inclined to the opinion that the movement is more properly attributable to the general sentiment of an important element against the Industrial Workers of the World society and to the general publicity and criticism given by the public press of Seattle to the doings and sayings of the Industrial Workers of the World and Socialists, and is furthermore inclined to the belief that the presence of the enlisted men ashore on the 18th instant and of the night attack made on the 17th instant on the enlisted men by the Industrial Workers of the World people, gave an opportunity to use the enlisted men simply as a means to assist in accomplishing a purpose which the public press had been leading up to and which the larger element of the people apparently encouraged and desired.

"Owing to the fact that no person who actually participated in the destruction of the property willingly would come forward and acknowledge the part taken by him, and of the general disinclination of one person to inform on another who may have been present, it has not been practicable for the board to have obtained but a limited number of witnesses; but from those who did appear and from the attached letters of reputable citizens of Seattle it is clear that the enlisted men of the Navy did participate in the destruction of I. W. W. property on the night of the 18th instant, but that such action was so shared in and conducted by citizens of Seattle as not to meet general public condemnation."

The letter of Admiral Reynolds conveying to commanders of all ships in the fleet the recommendations and orders of Secretary of the Navy Daniels reads:

LETTER OF REYNOLDS.

1. The following letter from the Secretary of the Navy on the above subject is forwarded for your information. This letter, together with the commander in chief's remarks, will be read to the officers and crews at muster:

DEPARTMENT OF THE NAVY.

Washington, August 13, 1913.

From the Secretary of the Navy to the Commander in Chief, Pacific Reserve Fleet, Seattle, Wash.:

Subject: Punishment of sailors connected with Seattle riot.

1. The report made by Rear Admiral Alfred Reynolds, United States Navy, commander in chief of the Pacific Reserve Fleet, of date July 24, 1913, as a result of the trouble in Seattle, Wash., on the nights of July 17 and 18, 1913, shows that some enlisted men and marines, in company with some soldiers and a large company of civilians of Seattle, who led the way, did cooperate in the destruction of property belonging to certain organizations having places of meeting in that city. The conduct of the parties who denounced the soldiers, abused the Army and Navy, reflected upon the flag, and made assault upon soldiers in the American uniform, is most reprehensible and deserving of condemnation. But their violence of language, unprovoked assault upon soldiers, and lawlessness does not justify retaliation in kind.

2. On the day after the disturbances in Seattle I gave out the following statement to the press:

"I believe in free speech and a free press as the bulwarks of liberty. Every evil that exists or that threatens our country can be righted by appeal to the judgment of the American people. The weapon is the

ballot. The man who resorts to violence to redress evil is bringing more evil into existence than he can hope to cure by violence.

"Obedience to lawful authority and respect for the flag must precede any reforms. The man who takes the law into his own hands imperils American institutions and jeopardizes the hope of securing relief from conditions against which he complains."

3. The splendid patriotism and courage of the men in the Navy is one of the most valuable national assets. It is because of the high standing and valor of the enlisted men that I regret they permitted any provocation to cause a number of them to forget, as they did on July 18, that they were specially charged with upholding the law. They are sworn to uphold the law and to use force only when ordered to do so by those in authority. They must stand for the majesty of the law that forbids any resort to lawlessness even under the most trying circumstances. The conduct of those sailors who took part in the destruction of property in Seattle is against the law of their country as well as against naval regulations. Their conduct can not be condoned or go without punishment.

ORDER FOR PUNISHMENT.

4. It is hereby ordered that the commander in chief of the Pacific Reserve Fleet send a copy of this letter to the commanding officers of the ships upon which the enlisted men and marines are serving who engaged in the unlawful action in Seattle, with instructions to have this letter read; and it is further ordered that the men engaged in this affair be punished for their conduct as the admiral may adjudge is adequate for the offense.

JOSEPHUS DANIELS.

2. The commander in chief, while agreeing with the Secretary that the conduct of the men who took part in the occurrence of July 18 was reprehensible and deserving of punishment, he, unfortunately, finds it impossible in this case to adjudge adequate punishment, as the names of but two men who were present are known, and there is not sufficient evidence to convict these two of direct connection with the lawlessness complained of.

3. The commander in chief hopes that the public reading of the Secretary's letter of condemnation will be a warning to all that they may not take the law into their own hands no matter what the provocation.

ALFRED REYNOLDS.

[From the Washington Post, Wednesday, August 13, 1913.]

TREASON OF THE INDUSTRIAL WORKERS OF THE WORLD.

The experience which the people of Minot, N. Dak., are undergoing with reference to the lawlessness of the Industrial Workers of the World is the same as other cities have had to endure within the past two years. The leaders of the Industrial Workers of the World are not the friends of labor. They are the enemies of the workingman, just as they are the enemies of the Government.

No one city, even with the determination that is in evidence at Minot, can crush the Industrial Workers of the World. This organization, which is preaching treason and sedition and trying to bring about a condition of anarchy, has become a menace to the United States Government itself, and the Government should deal with the situation.

The laws against treason and sedition should be invoked against the malcontents of the Industrial Workers of the World. They are implanting the seeds of hatred in the hearts of foreigners who came here with every intention of obeying our laws and who were well satisfied with conditions as they found them.

American workmen are rarely fooled by the agitators of the Industrial Workers of the World. In every city where these pests have appeared the American laboring man has shown his resentment and has aided in expelling them.

It is now to the ignorant immigrants that the agitators make their appeal. They carry with them Italian agitators to arouse the Italians, Swedish agitators to arouse the Swedes, and so on down the line. They are deliberately misrepresenting the aims and purposes of the United States Government. They are teaching that the laws are unjust to the workingman, that officials elected by the people have no right to enforce the laws, that unionism is a failure, and that the way to bring about an increase in wages is by threatening the lines and property of employers, terrorizing the community, and defying the authorities.

If the leaders of the Industrial Workers of the World are to continue on their lawless pilgrimage, leaving behind them a host of foreigners, unable to speak English, but converted to the cause of treason and preaching it to others, the laws against sedition should be enforced to send leaders of such a movement to the Federal jails for long terms.

The CHAIRMAN. The gentleman from Washington has used 12 minutes of his time.

Mr. HINEBAUGH. Mr. Chairman, how much time is there left on this side?

The CHAIRMAN. Does the gentleman from Washington [Mr. HUMPHREY] desire to give back the balance of his time?

Mr. HUMPHREY of Washington. Yes; I yield back the balance of my time.

The CHAIRMAN. There remain 33 minutes on that side.

Mr. BORLAND. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. Fifty-one minutes.

Mr. BORLAND. Mr. Chairman, I am authorized to yield to myself the 51 minutes.

The CHAIRMAN. The gentleman from Missouri [Mr. BORLAND] is recognized for 51 minutes.

NATIONAL OLD TRAILS HIGHWAY FROM OCEAN TO OCEAN.

Mr. BORLAND. Mr. Chairman, during the next session of Congress I trust that some substantial progress will be made toward a branch of Federal activity which has long engaged the individual attention of Members of the House, but which as yet has reached no concrete form. I refer to the question of Federal aid to rural highways.

The House at last has recognized the importance of that subject by creating a Committee on Roads. At the request of the Daughters of the American Revolution I have introduced into

the House a bill for the purpose of marking, designating, and improving what are known as the national historic old trails highways from ocean to ocean.

The trails thus designated consist of the Braddock trail, from the seaboard to Cumberland, Md.; the Washington Road, from New York to Washington, D. C.; the Cumberland Road, or National Pike, from Cumberland, Md., to the Mississippi River; the Boones Lick Road, from thence to Franklin, in the central part of Missouri; the celebrated Santa Fe trail, from Franklin through Independence, Mo., to Santa Fe, N. Mex.; and the route of Gen. Kearny's march from Santa Fe westward to the Pacific coast. Added to this is the Oregon trail, which diverged from the Santa Fe trail near Gardner, Kans., and ran from there northwest to the Pacific Ocean at the Valley of the Columbia. To make the historic routes complete, the later cut-off of this trail has been added from Council Bluffs, Iowa, and also the Gold*Seekers trail, from Fort Hall on the Oregon trail to the gold fields of California. These roads form a continuous chain of historic highways crossing the continent by the easiest natural grades and through the most central portion of our country. They mark the progress of the American Nation in its conquest of the continent for civilization.

The Braddock Road really began at Portsmouth, Va., and extended into the Valley of the Ohio. It was the first pathway across the Allegheny Mountains and into the Valley of the Ohio at the time when the entire western slope of the mountains was in the actual possession of the French. It was the beginning of the national expansion westward, the first step of which was to dislodge the foreign power from the Ohio Valley. In October, 1753, Washington was commissioned by the governor of Virginia, in company with Gist, to make his way over the Allegheny Mountains into the Valley of the Monongahela to warn the French commander not to trespass upon English soil. He made this trip through an unknown country overrun with hostile savages who had been inflamed against the English and into the very heart of a wild region dominated by the French forts. After performing his duty with his usual quiet courage he returned to Virginia and made his report. His report indicated that England would have to fight for the possession of the Ohio Valley. The next year, 1754, he led a company over the same route and fought the French at Great Meadows. By the following year, 1755, the British Government had been aroused to the gravity of the situation and dispatched Gen. Braddock to the Colonies. Washington accompanied Braddock on his ill-fated and mismanaged expedition and suffered in the general defeat.

One of the earliest friends of good roads among our public men was that keen-witted Swiss immigrant, Albert Gallatin. Gallatin was a man of education and accomplishments, and the society of the gay capital of Richmond had great attractions for him. Nevertheless, in 1784, he crossed the Alleghenies to Monongahela County, Pa., to establish a home in the wilderness. It was supposed by his friends that he had buried himself and ruined a brilliant career, but out of that wilderness he created the mighty Commonwealth which, recognizing his genius as a constructive statesman, made him successively a member of the Pennsylvania Legislature, a leader in Congress, a Senator of the United States, a member of the Cabinet, and the greatest figure in American financial history. It was in the wilderness that he first met George Washington. Washington was seeking, with the aid of Indian guides, the most practicable route for a main highway across the mountains. After a day's exploring he had come to a hut in which Gallatin and other men were living, and was using Gallatin's rude bunk for a table while he made those elaborate notes of his doings which were so characteristic of Washington. Gallatin in the meantime was lying on the floor, having been evicted from his bunk. As Washington laboriously went over the reports of the different routes Gallatin, then a young man of about 18, and with a mind that worked with the speed of lightning, jumped up and exclaimed, "That is the only route." He says that Washington slowly took off his horned spectacles and gave him a look of severe disapproval in utter silence. After Washington had gone over the reports for over another hour, he finally turned to Gallatin, took off his spectacles again, and said, "Young man, you are right."

Gallatin was the real father of the Cumberland Road, although in later years Henry Clay managed to identify himself very thoroughly with its construction. The Cumberland Road was begun in 1806 by an act of Congress signed by Thomas Jefferson.

Mr. AUSTIN. If the gentleman will pardon me, what was the first appropriation?

Mr. BORLAND. The first appropriation was the 2 per cent fund. The country west of the Ohio River had no seaports;

therefore the proceeds of the public lands in those States were divided and 5 per cent was set apart for internal improvements in lieu of the Federal appropriations which the older States enjoyed for the improvement of rivers and harbors. That 5 per cent fund was devoted to the construction of common roads, and the first of that fund was 2 per cent out of the 5 per cent obtained from public lands in Ohio. Between 1806 and 1834 it was constructed under national authority, and by successive appropriations of Congress to a certain point in Indiana, and was surveyed by way of Vandalia, Ill., to Jefferson City, the capital of Missouri. About \$7,000,000 of public money was spent upon its construction, a part of which sum was the proceeds of a fund reserved for that purpose from the sale of public lands in Ohio, Indiana, Illinois, and Missouri. This national road during its existence of nearly 30 years played an important part in the expansion and development of the young Nation. It was worth many times its cost both commercially and politically. It was the great highway of commerce and travel between the States of the Atlantic seaboard and the growing communities in the Mississippi Valley. It furnished the necessary link between the two parts of the Nation which prevented sectional hostility and disintegration. Its decline in importance and its final abandonment was due to the rise of the steam-railway systems. As the railways began to extend the importance of the national highway diminished. The reliance of the people upon it became less complete and the hostility to it gradually forced its entire abandonment. About 1834 it was turned over to the States through which it ran, and it has been preserved, after a fashion, as State highways.

Mr. MADDEN. If it will not interrupt the gentleman, I would like to ask him a question.

Mr. BORLAND. I will yield to the gentleman.

Mr. MADDEN. Does the gentleman favor the construction of this coast-to-coast road in preference to the cooperation of the Federal Government in the development of roads in the States, without reference to whether it runs from coast to coast or not?

Mr. BORLAND. I am sorry that I can not go into that as fully as I should like. I favor the construction of national roads. I think this national road is one of the most comprehensive that can be pointed out; but I do not advocate it to the exclusion of other forms of Federal aid or cooperation.

That \$7,000,000 put into the old national roads, I am free to say, was the best investment of national money ever made. It paid the finest income commercially, increasing the taxing power of the Nation. It paid the finest dividend politically and socially that has even been paid by a similar expenditure of Federal money.

At that time, recollect, gentlemen, the country in the Ohio Valley and in the Mississippi Valley was in commercial relations with the port of deposit at New Orleans, which was under the control of a foreign nation. It was with great difficulty that the States west of the Alleghenies could be held in touch with the Union east of the Alleghenies. There was a constant disintegrating force which drew the two parts of the country apart.

The people west of the Allegheny felt that they had nothing in common with the tidewater settlements in the eastern part of the country. They felt that they were taxed without representation; that they had no share in the Federal protection; that their frontier was unprotected, except by the rifle, that silent sentinel of the fireside of every settler in that territory. They felt that there was but one link connecting them with the settlements, and that was the national road.

Henry Clay said after the national road was completed he could reach Washington seven days sooner than it took him before. How long it took him before I do not know. If gentlemen will go to that beautiful Hermitage, near Nashville, they can see the old coach in which Andrew Jackson used to ride, it is said, between his home and Washington. It is said that Jackson could make the round trip in 28 days between Nashville and Washington over the old national pike road, and Jackson was considered a strenuous driver.

At the Mississippi River the Cumberland Road would have met the celebrated Boone's Lick Road, the first highway to penetrate the wilderness west of the great stream. In 1797, while Louisiana was still Spanish territory, Daniel Boone, under a concession from the Spanish governor, settled a small colony of Americans about 40 miles west of the Mississippi River in what is now Warren County, Mo. This was the first invasion of American settlers into the great trans-Mississippi territory. In 1804, the same year that the American Government took possession of upper Louisiana, Daniel Boone's two sons established themselves at a salt lick more than 100 miles to the westward. They were engaged in the manufacture of salt, which was floated down the Missouri River in rawhide canoes. The rich-

ness of the territory in which they were located attracted a large number of enterprising pioneers, mainly Kentuckians. The country became known as Boone's Lick country. It was in the heart of the great Louisiana territory, and the birthplace of many of the famous pioneers and explorers of the West.

In 1815 a roadway was surveyed and built from St. Charles, Mo., to Old Franklin, in the Boone's Lick country. This road was known as the Boone's Lick Road, and was the highway over which the advancing army of pioneers entered the territory beyond the Mississippi. As Boone's Lick was the farthest outpost of American civilization, it was often referred to in derision by Henry Clay. He was very fond of calling Thomas H. Benton "the statesman from Boone's Lick," although Benton was a man of education and culture and really lived in St. Louis. It was from the vigorous and enterprising community of Boone's Lick that the start was made to open up the commerce of the great Southwest. Capt. William Becknell started from that point in 1821 on what is now believed to be the first successful trip on a trading expedition to Santa Fe, N. Mex. As long as Mexico was under the rule of old Spain the policy of the rulers jealously excluded American traders and, in fact, looked upon all Americans as intruders and spies. A few Americans who found their way into Spanish territory prior to 1821 suffered imprisonment, oppression, and robbery. In 1821, however, Mexico successfully established her independence from Spain. This made possible the beginning of commercial intercourse between the two countries. The policy of Mexico was the reverse of that of Spain. She welcomed and encouraged the American traders and even furnished them, as did our Government, with military aid as a protection against the Indians. Soon after the headquarters of the Santa Fe trade were moved westward to Independence, Mo., and from thence onward for more than a quarter of a century, until New Mexico became American territory, this great historic highway, known as the Santa Fe trail, led from the last outlying trading point in the Missouri Valley to the first great center of Spanish civilization in the Southwest. In 1824 Senator Benton had passed an act of Congress by which a survey was made of the Santa Fe trail from Fort Osage, in Jackson County, Mo., to Santa Fe, N. Mex. I can not pause to give even briefly the history of that wonderful highway and its tremendous influence upon the destiny of the American Nation. It was the safety valve of those turbulent forces which are as common to the youth of nations as they are to the youth of man. It is one of the great historic highways of the world marking the progress of civilization.

It was down this celebrated highway that Gen. Kearny and Col. Doniphan led their celebrated expedition in 1846, at the outbreak of the War with Mexico. This expedition resulted in the annexation to the United States not only of the New Mexican Valley but of all the vast golden land of California. As soon as American supremacy was established at Santa Fe, Gen. Kearny started westward for the Pacific coast, and the last great link in the chain of historic highways which takes the American people across the continent is the route over which Gen. Kearny marched from Santa Fe to Monterey, Cal. In 1841-42, after the Santa Fe trail had been well established, the Oregon trail came into prominence. The Oregon trail branched off from the Santa Fe trail at a point less than 100 miles west of Independence, Mo. It ran thence northwest up the valley of the Blue River into the valley of the Platte, and thence westward until it crossed the mountains at South Pass and led down into the valley of the Columbia River upon the Pacific slope. Over this highway the great prairie schooners pursued their laborious way, carrying American settlers into the Oregon Territory and reclaiming and holding for American occupation that wonderfully rich section of our land. This same great trail was used soon after by the gold seekers of 1849. The earliest route of travel for those destined to California was over the Oregon trail as far as Fort Hall, and thence diverging southwest to Sutters Mill, in California. By 1850 the continent had been crossed, and Benton, in his speech at St. Louis at the inauguration of the Pacific Railroad, pointed to the west and uttered his famous words, "There is the East. There lies the road to India."

Thus these great historic highways connect with one another in a complete chain across the continent. They furnish the most remarkable example in history of the victories of peace and the steady progress of civilization. Only in rare instances did they resound to the tread of martial hosts; but day after day, year after year, was heard the music of the creaking wagon and the lowing ox. All of the mighty host who crossed these highways were armed not alone with the rifle but with the ax and spade. They took with them not the ammunition wagon and artillery but herds of live stock and bales of household goods, implements of husbandry, and the women and chil-

dren—the evidences and guaranties of a future State, the earnest of permanent settlement and the basis of an American home.

Each of these great highways marks a crisis in the career of our country—an epoch in the history of the world. They show a virile young nation gathering with eager hands the fruits of the great Revolution—the conquest of a continent. Their purpose was homes—homes for the millions, homes for the humble, homes for the toilers—American homes that meant opportunity and a higher and purer civilization. Some day a genius will arise able to give to the world the epic of America, the poem of a nation whose whole history is a mighty symphony of civilization, touching strange chords and swelling with a power but vaguely understood. It will show a race which has subjugated nature, commanded fate, marshaled the forces of science, solved the problem of self-government, and written its autograph across a continent in the historic trails that marked the mighty movements of a people. [Applause.]

All honor to the Daughters of the American Revolution for the work their hands have found to do in preserving and perpetuating these great historic highways. [Applause.]

Mr. HINEBAUGH. Mr. Chairman, I yield 10 minutes to the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. Mr. Chairman, this urgent deficiency bill is the first regular appropriation bill which the new Congress has regularly considered. Previously it has handled two other bills which had come over from a previous Congress because they had received the presidential veto. The most important provision in this bill unquestionably is that which abolishes the Court of Commerce. The creation of that court was originally designed by the special privilege seeking interests, and it was saddled upon the country largely through the circumstance that five new circuit judgeships were dangled above the heads of office-seeking politicians. Now, while the court is to be wiped out, we have in the present bill a very clear illustration of how the native hue of legislative resolution is sometimes sicklied o'er with the pale cast of thought.

This bill, which does the very commendable thing of abolishing the Court of Commerce, stops short of doing that which it ought also to do when it abolishes the Court of Commerce—that is, to abolish the five judgeships which Congress created for that court.

Mr. BARTLETT. May I interrupt the gentleman just a moment? If I take his time, I will give it to him from mine.

Mr. MURDOCK. Certainly; I will be glad to be interrupted.

Mr. BARTLETT. I want to say to the gentleman that there are some of us on this committee, and some of us in the House on this side and that side, who will very gladly vote for a proposition to repeal sections 1 and 2 of the act of 1910 that established this court. And I believe, as a lawyer, if we do that, we not only get rid of the court, but that everything in common that pertains to the office of judge will follow such repeal.

Mr. MURDOCK. I will say to the gentleman from Georgia that I rejoice in that expression from him, and it confirms me, not only in the belief I have long had in his deep legal learning, but in his position relative to the regulation of railroad rates in the interest of the people.

Mr. BARTLETT. One word more. I have some time, and I will yield to the gentleman all that I consume of his.

This Commerce Court bill came into this House and into the Senate originally, as a bill supposed to be drafted by the Attorney General in the interests of the great railroad corporations of this country, and but for the fact that the great Interstate and Foreign Commerce Committee of the House, and but for the fact that some of the Republican members of that committee joined with the Democratic members of the committee and with Mr. MANN, we would not have had the very fair bill that we had finally, and that we had to pass through the House with amendments, aided by the gentlemen on that side at the time.

Mr. MURDOCK. I fully concur with the gentleman that the bill was vastly improved in the House, and I think every Member of the House realized that at the time, but the gentleman also will say that in a way the Commerce Court was saddled on this body.

Mr. BARTLETT. And was passed by this body twice by tie vote. The gentleman from Georgia [Mr. ADAMSON] and myself opposed it, but we were defeated by a ball game, or something of that kind.

Mr. ADAMSON. Two or three times the tie was made by the chairman not voting, I think.

Mr. BARTLETT. And I want to say right now that if the gentleman will offer an amendment to repeal this, that I and my associates on the committee and on the subcommittee have reserved the right to vote to repeal the law that established the court, and do away with the officers as well as the court.

Mr. MURDOCK. I congratulate the gentleman on that statement, and I hope our view can prevail in the House.

I rose primarily for the purpose of showing how the House or Congress itself, in the course of legislation, often weakens from its original strong resolution and convictions—convictions usually in the beginning correct. I want to give, in illustration, a brief history of the attempt of the Congress to remove these judges from the roster of circuit judges in the United States. In June, 1912, the Appropriations Committee reported the legislative, executive, and judicial appropriation bill. In that bill was this proviso:

No circuit judge shall hereafter be appointed until the whole number of circuit judges shall be reduced to 29, and thereafter there shall not be more than 29 circuit judges.

Now, the gentleman from Georgia [Mr. BARTLETT] will remember that on the floor of the House that was stricken out and a much more definite provision inserted to take its place, accomplishing the same thing.

Mr. BARTLETT. In the Senate, you mean?

Mr. MURDOCK. In the House. Here is the amendment:

The five additional circuit judgeships provided for by the act of Congress approved June 18, 1910, and by chapter 9 of the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, are hereby abolished, and the authority in said acts of Congress for the President, by and with the advice and consent of the Senate, to appoint five additional circuit judges is hereby repealed, and the number of circuit judges is hereby reduced to 29. So much of the act of June 18, 1910, and of March 3, 1911, as authorizes or directs the said five judges to preside in the circuit or district courts of the United States or in the circuit courts of appeals or to exercise any of the powers, duties, or authority of circuit or district judges or of said circuit or district courts or of said circuit courts of appeals is hereby repealed.

Mr. BARTLETT. May I interrupt the gentleman?

Mr. MURDOCK. Certainly.

Mr. BARTLETT. I think the gentleman is reading the Senate amendment.

Mr. MURDOCK. The gentleman is correct about that.

Mr. BARTLETT. The gentleman is reading the Senate amendment that was offered by Senator SMITH of Georgia. It came back to the House and the House disagreed en bloc to all the amendments. It was sent back and that part of it went out.

Mr. MURDOCK. That is true. That more definite amendment was a Senate amendment. Now, that part of the amendment went out; that is, the House and the Senate were agreeable to the abolition of the Commerce Court, but they left in the law the five judges who had been created to serve that court and who were not needed.

Now, after the passage in Congress of the law providing for the abolition of the court it was vetoed by the President of the United States, Mr. Taft. He said, in the course of his veto message:

I have read the arguments upon which this proposed legislation is urged and I can not find in them a single reason why the court should be abolished except that those who propose to abolish it object to certain of its decisions. Some of those decisions have been sustained and others have been disapproved or modified by the Supreme Court. I am utterly opposed to the abolition of a court because its decisions may not always meet the approval of a majority of the Legislature. It is introducing a recall of the judiciary, which, in its way, is quite as objectionable as the ordinary popular method proposed.

Now, Mr. Chairman, it seems to me that the Congress of the United States, which has the power to create five judges for a specific purpose, ought also to have the power to abolish those judges. These five judgeships are not needed in the courts of the United States.

Mr. BARTLETT. Mr. Chairman, will the gentleman permit me to say a word? I do not want to agree with the gentleman when he is talking about abolishing the judges, because that is not exactly accurate, in my opinion. The gentleman means to abolish the office that creates the judge?

Mr. MURDOCK. Yes; that is what I mean.

Mr. BARTLETT. Because there is a provision in the Constitution which declares that a judge when appointed shall hold during good behavior.

Mr. MURDOCK. But it would accomplish this: It would reduce the number of circuit judgeships in the United States to 29.

Mr. BARTLETT. When you abolish the office, everything that hangs to it is also abolished.

Mr. MURDOCK. I know; and I intended so to convey. The judiciary as one branch of this Government, in my opinion, is to-day under closer public scrutiny and criticism than it has ever been, and it will not add any to the mollification of that public criticism if the Congress of the United States, having created judgeships, shall not exercise also the power to abolish those offices when their use shall have passed. So, while I congratulate here this afternoon the Democratic Committee on

Appropriations for bringing in again this measure for the abolition of the court, I think the committee should have gone further and abolished these judgeships. I hope this amendment, when it is offered in the House, as it will be, will be adopted by the House, following out the line of complete and thorough action that the House had originally in mind in its proposal to do away with the Court of Commerce.

The CHAIRMAN (Mr. FLOOD of Virginia). The time of the gentleman from Kansas has expired.

Mr. BARTLETT. Mr. Chairman, does the gentleman desire any more time? Inasmuch as I took time from him, I will give him some time out of my own if he desires it.

Mr. MURDOCK. I thank the gentleman.

Mr. HINEBAUGH. Mr. Chairman, I will yield 10 minutes to the gentleman from Minnesota [Mr. STEENERSON].

The CHAIRMAN. The gentleman from Minnesota [Mr. STEENERSON] is recognized for 10 minutes.

Mr. STEENERSON. Mr. Chairman, the gentleman from Massachusetts [Mr. GILLET], the ranking Republican member of the Committee on Appropriations, made an able argument this afternoon to show that the Democratic Party had been inconsistent in carrying out their promises of economy. He showed that they had violated the spirit of those promises not only in expenditures but also in appropriations.

But the most important part of his speech, to my mind, was his arraignment of the Democratic Party in regard to the civil service. The gentleman who for so many years was chairman of the Committee on Reform of the Civil Service has always been an ardent advocate of the doctrine of civil service, and I realize how things appeared to his mind. His remarks on that subject created a good deal of interest on the other side, and brought to their feet many of the ardent members of the Democratic Party, especially his reference to fourth-class postmasters; and many of those gentlemen very frankly—and it is to their credit that they are frank—acknowledged that they do not believe in civil service as applied to fourth-class postmasters, and declared that "to the victors belong the spoils."

Mr. BARTLETT. I did not say that.

Mr. STEENERSON. No; the gentleman did not say that, but he might convince a listener that he believed in that doctrine. Perhaps he did not intend to carry it that far.

Mr. BARTLETT. If the gentleman will permit me to interrupt him, I do not belong to that school that pretends to believe we can not find within the ranks of the party in power men who are competent and efficient to discharge the duties of the offices while that party is in power.

Mr. STEENERSON. The gentleman defends the recent order of the Postmaster General in regard to the removal of fourth-class postmasters?

Mr. BARTLETT. You mean the order modifying the rule?

Mr. STEENERSON. Yes.

Mr. BARTLETT. I believe in that, and I would have approved it if the President had revoked it entirely.

Mr. STEENERSON. I thought so.

Mr. BARTLETT. There is no question about where I stand on it. I have reiterated it for the fourth time on the floor of this House and in the public prints.

Mr. STEENERSON. I understand that is the gentleman's consistent position. But the gentleman from Massachusetts [Mr. GILLET], in referring to this subject of fourth-class postmasters and other postmasters and their tenure and the manner of filling vacancies in the past, did not make it as clear, nor did he elaborate it as much as I should have liked to have him do, and therefore I have risen on this occasion to make these remarks, or at least to try to explain that practice.

During the administrations of Presidents Taft and Roosevelt there was a uniform practice, so far as I came in contact with the Post Office Department, to continue fourth-class postmasters in office indefinitely and until they were removed for sufficient cause. I have not a copy of the rule, but I believe there was a rule to that effect. I know when I was first elected to Congress, where there was a desire to remove a fourth-class postmaster, and I communicated that desire on the part of the people of that locality to the department, I received numerous letters from the Postmaster General stating that the practice of the Post Office Department was to permit fourth-class postmasters to serve until there was cause for their removal. And, as a matter of fact, there are fourth-class postmasters in my district to-day who are serving under appointments that they received during Cleveland's administration. We have never been able to remove a single postmaster in that district except for cause. I state that from personal knowledge.

It is true that during the Roosevelt administration an order was issued to include fourth-class postmasters in certain States in what is called the classified civil service, and I made it a

point to consult the Members of Congress from the State of Wisconsin, which adjoins my State, as to how that operated. I was advised—and I believe it is correct—that the only difference under the former practice and under the new practice was that where a vacancy occurred the Congressman would not, under the new rule, be consulted about filling that vacancy. Before that time, whenever there was a vacancy, caused either by death, resignation, or removal, upon the report of an inspector the Congressman was notified of the vacancy and requested to make a recommendation to fill the vacancy. But under the new rule no such notice was given, and the inspector, as a usual thing, recommended the successor, and he was appointed without regard to the wishes or recommendations of the Congressman. But the Congressman could not cause removal of a competent and faithful official.

Mr. PETERSON. Will the gentleman yield there for a moment? Were not the men who were appointed then under that order all Republicans?

Mr. STEENERSON. During the Roosevelt and Taft administrations?

Mr. PETERSON. Yes; and under McKinley.

Mr. STEENERSON. I do not think all of them were, but I think most of them were.

Mr. PETERSON. Is it not a fact that at the time the present administration went into power 95 per cent of all the fourth-class postmasters were Republicans?

Mr. STEENERSON. I can not say about that. I never made any investigation of it.

Mr. PETERSON. If that was the case, how would you account—

Mr. STEENERSON. I will not yield to the gentleman further now. I wish to finish my explanation.

The CHAIRMAN. The gentleman declines to yield.

Mr. STEENERSON. In Minnesota and those States that were not included in that order the practice has been up to the present administration that no fourth-class postmaster has been removed at the request or recommendation of a Member of Congress. The only removals were made upon the report of inspectors, resulting from complaints of misconduct against the postmaster. The vacancies resulting from death or resignation were filled upon the recommendation of the Member of Congress.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HINEBAUGH. Mr. Chairman, I will yield five minutes more to the gentleman from Minnesota.

Mr. STEENERSON. In regard to the presidential offices the practice and the rule was, as stated by the gentleman from Massachusetts, that where the term of an incumbent expired the department notified the Member of Congress of the approaching expiration of the term of the incumbent, and further stated, if the fact was true, that the record of this postmaster, as far as known to the department good, that he had rendered acceptable service, and unless the Member of Congress could show cause for not doing so a reappointment of that incumbent would follow, or words to that effect.

That applied to presidential offices, and it was adhered to, to my certain knowledge, in my district, because I know of one instance where I received such a notice and I did not recommend a reappointment. I recommended another candidate, but the postmaster already in office continued and served, and I believe he is serving to this very day unless a change has been made within the last 10 days. That was nearly three years ago.

Now, the effect of the order that has recently been issued by the Postmaster General, which says that no person occupying the position of postmaster of the fourth-class shall be given a classified status under the provisions of the order heretofore issued unless he is appointed as the result of a competitive examination under previous regulations, will be that men who have served as fourth-class postmasters for years and years will be put out of office by means of this forced examination under the civil service.

The civil-service examination will be imposed upon incumbents who have been satisfactory for many years for the purpose, not of improving the service, but creating vacancies for Democratic Congressmen to fill. That is undoubtedly the object and purpose of gentlemen in favor of that order.

Now, I will say to the Democratic Members that, so far as a Republican State is concerned, like Minnesota, I think the effect of putting that order in operation will be disastrous to the Democratic Party. I am not objecting to it for that reason. I can understand why in the State of Georgia, or any Southern State strongly Democratic, where the postmaster now filling the position is out of tune politically with the patrons of his office, it may be satisfactory; but yet it is a device whereby you can create vacancies in the offices that have been satisfactorily

filled heretofore and fill them regardless of the civil service. It is a reversion to the old spoils system.

Mr. BARTLETT. May I ask the gentleman a question?

Mr. STEENERSON. Just a minute. That is the necessary result of the carrying out of the order, that it creates a vacancy which can be filled, and that is the only difference that it makes in the rules governing the subject. Now I will yield to the gentleman from Georgia.

Mr. BARTLETT. The gentleman speaks about the order of President Wilson of April, 1913, as being a device to permit Democratic Congressmen to select fourth-class postmasters. What does the gentleman say about President Taft's order of October 15, 1912, keeping people in office who had been appointed by a Republican administration without taking any examination at all?

Mr. STEENERSON. That order was superfluous, so far as my district was concerned. Fourth-class postmasters had been holding during good behavior up to that time. The innovation shows the hostility of the Democratic Party to civil service and their devotion to the spoils system. [Applause.]

Mr. BARTLETT. Mr. Chairman, how much time has the other side?

The CHAIRMAN. The gentleman from Illinois has eight minutes remaining.

Mr. HINEBAUGH. Mr. Chairman, I think we do not care to use any more time on this side, and I yield to the other side.

Mr. BARTLETT. Mr. Chairman, I am very much obliged to the gentleman. I now yield to my colleague from Georgia [Mr. ADAMSON].

The CHAIRMAN. How much time?

Mr. BARTLETT. As much time as he may desire.

Mr. ADAMSON. Mr. Chairman, I do not expect to consume much time. My attention was called by the gentleman from Kansas [Mr. MURDOCK], the distinguished leader of the half-way party in this House, to the language used by ex-President Taft in vetoing an appropriation bill in a former Congress because it incorporated within it the abolition of the Commerce Court. The distinguished ex-President said that he had read the arguments in favor of the abolition, but could not find a single reason urged against the court except that some people objected to its decisions.

I have no right to quarrel with the ex-President about his inability to find reasons. I am not responsible for the degree or quality of judgment which he brings to bear in trying to determine whether a reason is good or not. There is no quarrel about that; but I do wish most emphatically to dissent from any statement from any source, high or low, that the only argument urged against this court is that some of the decisions of the judges were wrong. I was in the fore front of the fight against the creation of that court at the time it was created and prior thereto, and I have opposed it consistently ever since. When the mistake was made by the dereliction of some Members in not being here, and a tie vote saved it two or three times, and it was passed, I set my face steadily to the front to help undo the wrong, and I have been at it ever since. I certainly never advanced any such argument myself, and I have never heard anyone else advance such an argument. The judgments of men, of course, are fallible, no matter where they are. Some of the few decisions rendered have been correct, but could have been correctly rendered in the regular courts. The objections to that court were based upon fundamental reasons, many and strong and valid. I ask permission right here, for I know gentlemen would prefer that I spare them the task of sitting here and listening to me read it, that I may incorporate in my remarks now a portion of a speech that I made upon that subject when the bill was up for consideration once before.

Mr. MURDOCK. Mr. Chairman, before the gentleman does that will he yield for an interruption?

Mr. ADAMSON. Certainly.

Mr. MURDOCK. Does not the gentleman think after his long and consistent record in opposing this court that now, having arrived at a point where the court is to be abolished he also ought to advocate the abolition of those five judgeships and relieve the country of that incubus also?

Mr. ADAMSON. Mr. Chairman, there are a great many good things that I would like to accomplish. We are all familiar with the dog which had a good morsel of beef in his mouth and saw the shadow in the water. He turned loose the morsel he had in his own mouth to obtain the shadow in the brook, but was disappointed in securing the shadow and lost the real.

Mr. MURDOCK. Why not make a full bite of this?

Mr. ADAMSON. I do not believe there is any danger of losing the beef this time. I believe that there is patriotism

enough in this House and in the Senate to abolish the court at this time and patriotism enough at the other end of the Avenue in the White House to approve the bill.

As to repealing the law itself and getting rid of the judges I have no quarrel with the gentleman. If I thought it could be as easily done as merely to abolish the court I would go right with him and vote to undo the whole mischief, because I have never seen any necessity for the additional judges or the additional court. I have never seen any Federal judges who worked half as hard as other mortals. I have never seen any pressure of business upon those who occupied those exalted positions that by diligence they could not handle. I have never seen the necessity for the creation of these five extra judgeships, and if the power lay with me alone I would not hesitate to vote to repeal the law creating those judgeships, but I merely rose to advise any who may have been misled by the statement of the ex-President to the effect that there were no reasons except that the decisions were wrong, that the distinguished ex-President was laboring under a very great hallucination, and that there are numerous valid reasons against the existence of the court; and that I had never heard used the one which he mentioned, for it, indeed, would be frivolous, simple, and silly. We have objected to the court for other reasons, some of which will be found feebly expressed by me in the quotation which I desire to append to these remarks, so that if any Member of Congress should inadvertently read the RECORD to-morrow morning he will find what I said at that time expresses my objection a great deal more clearly than I could do it now offhand.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the manner indicated. Is there objection?

There was no objection.

The remarks referred to are as follows:

"The argument for the Commerce Court has no foundation in any party authority.

"As we all know, the gentleman from Michigan [Mr. TOWNSEND] is the inventor of that, and entitled to whatever credit or discredit attaches to it.

"The Republican platform makes no mention of it, so no Republican nor near Republican of whatever degree or quality need halt and fear and tremble about that as the deliverance of cardinal Republican doctrine. If you insurge against anybody on that, it will be against the ipse dixit of the President alone on a bill appropriating Mr. TOWNSEND's court, prepared by the Attorney General at the request of the President and sent simultaneously to both Houses of Congress with orders to enact it into law.

"Congress considered that court six years ago and refused to adopt it. As now presented the proposition is much worse.

"It will be observed that the argument in behalf of the Commerce Court is not as enthusiastic and convincing as the usual arguments made by my distinguished chairman, the gentleman from Illinois [Mr. MANN]. In fact, it is so conspicuous from the evident weakness and scarcity of argument, that, knowing the gentleman's resources, we may conclude there are no arguments in its favor.

"His friends know that he was not originally in favor of the court, and believe that if he finally votes for that court it will be out of official deference to the President, substituting for his own conscience and judgment the imputed conscience and judgment of the President. If the gentleman from Illinois does make such a substitution, I do not believe he will substitute any better conscience and judgment than his own, and his real friends hope he will not do so.

"The argument for the Commerce Court fails to sustain it. The evidence on the hearings failed to sustain it. The use by the President of analogy to the Customs Court is very unhappy. The suggestion that it is like a patent court is not at all pertinent. The first question generally discussed here and elsewhere as bearing on the court has been that the court would entail great expense. On that point the question with me is, Is it a proper expenditure? If the court be necessary and proper, it ought to be created, regardless of the expense. If it is neither necessary nor proper, it ought not to be created at all, though it costs nothing or came accompanied by a large bounty. The evidence satisfies me that the court is entirely unnecessary. Decisions of the Supreme Court rendered since the President's message have clarified the situation and shown, according to the opinion of the commissioners, that the questions will be so much simplified by those decisions that business of that character will be much less in the future than in the past. There have been so few cases in the past as to create no necessity for the court. The circuit judges throughout the country are not dying from overwork nor resigning, so far as I can

learn. They are able to take care of all of that kind of business that may arise. It is not insisted by anybody that circuit judges will know any more while sitting in Commerce Court than when presiding on circuit.

"The demand for uniformity in decisions is little short of ridiculous. As long as God makes many men of many minds, as long as different environment, heredity, education, kinship, and financial interest produce different modes of thinking and different predilections, as long as this great country, stretching from ocean to ocean and from the frozen north to the tropic seas, teems with the thrifty sons of all nations of the world, with the body of the text and practice of the laws of all civilized nations, the idea of uniformity in anything is absolutely impossible, and our Supreme Court has so declared. The only possible tribunal that can be relied upon to harmonize and unify different theories, practices, and ideas, and declare what shall prevail is the Supreme Court of the United States, and though you create this court and a dozen other special courts there will still be, although fugitive cases, instances and forms of litigation in which all those questions may reach the Supreme Court from courts other than the Commerce Court, and the final unifier, if one can be found, will be the Supreme Court. A great objection to the court is that it specializes litigation touching particular lines of business. This is abhorrent to the American sense. The Customs Court referred to by the President in his message is a misnomer. It ought not to be called a court at all. It passes on cases arising under the collection of revenue, and it ought to be called a commission or a board of appeals.

"The judicial nomenclature ought not to be confused nor corrupted by calling such a board a court. When you seek a perfect analogy, it is safer to examine the substance rather than to sound the name. I object to the proposition to specialize all the commerce litigation so as to withdraw from lawyers over the country generally all the inducement afforded by hope of fees to become expert and accomplished in a branch of the law in which all of our people are interested. It smacks too much of the Dark Ages and the woes of a priesthood-ridden people to say that the leading subject of interest to the people, if not the greatest field of litigation, should be committed to a particular guild of lawyers, a class specially trained and devoted to that court, who shall take the emoluments to the exclusion of all others. Furthermore, those who insist that there will be business enough to engage that court unwittingly suggest the alternative idea that if you take away business from the circuit courts enough to engage that court, it will to that extent leave the circuit courts idle and congest the business in the Commerce Court. In this connection it is noted that the carriers have not raised any rough house against the creation of this court. They are utterly amiable about it and ready to submit gracefully to its establishment. Its establishment, with most of the business transacted at Washington, would enable them to make common agreements about employing lawyers, as well as transportation.

"Fewer lawyers with better fees and yet smaller contributions from each carrier would enable the same lawyers to represent all the carriers. It would be very economical to the railroads. Then, all business having to go through that court, due decorum being maintained as to taking testimony and everything else, the business would become clogged and stagnated and the carriers would secure that dearest boon to corporations, 'the law's delay.' The carriers can afford to submit, and they evidently think so themselves.

"Another peculiarity about that court is the way its personnel is to be constituted. The advocates of the court started out with the proposition that ordinary judges throughout the country do not know enough about the technical subject of commerce to make competent Commerce Court judges, therefore they desire to select the wisest and best and dedicate them entirely to that line of law. Mirabile dictu! The scene changes! And they propose not only to limit the time of service of the judges on the Commerce Court, but to appoint five new judges, assign them to initiate the court, and start it off as the first occupants of that peculiar bench. What goes with the idea of experience and training and expert judges? That is exceedingly plain to the man who wants to see. They are to receive their training in corporation law as corporation lawyers before being appointed circuit judges; and no man need doubt that when those five new judges are appointed they—or at least three of them—will be men who know more about commerce instrumentalities, commerce transportation, manipulation of stocks and bonds, consolidation of railroads, destruction of competition, and disregard of public right, through long training as corporation lawyers, than any other five circuit judges or all

circuit judges in the United States combined. If anybody doubts this, let him wait and see. Why, corporation lawyers are now regarded as best qualified for the Cabinet.

"On the hearings it was argued that the Chief Justice might not enjoy the task of assigning judges to fill the vacancies occurring annually on the Commerce Court. While the friends of the bill were 'scratching in the bark' instead of 'cutting to the heart of the tree,' 'straining at gnats and swallowing camels,' making a fuss about little things to divert attention from great big bad things, I felt sorry for them. Being naturally good-natured and kind-hearted, I wanted to help them; so in perfect innocence I suggested to the distinguished gentleman who drew the bill and sent it to us to pass that he could relieve both the Chief Justice and the President of the embarrassment and responsibility of assigning a judge each year by writing into the law that whenever a vacancy occurred the circuit judge holding either the oldest or youngest commission should fill the vacancy. Either way the law fixed it it would work automatically. Whether the law said the oldest or youngest commission, the eligible judge would know it and everybody would know who the next judge would be, because the eligible would stand, like the crown prince, waiting to take the vacancy when it occurred, and could devote his leisure to studying commerce law and the interests of investors. The gentleman did not seem to admire my proffered assistance, but said he was not looking for automatic things. I then told him what a good old Republican friend had suggested to me, that the President, having named five new judges to start the court, might just appoint another new one every time a vacancy occurred. He smiled at that and I quit trying to help him.

"I am too good-natured to suggest anything mean; I hate to tell it, even as bad as I believe it is going to happen; but I will tell you what could happen. Five new judges could be appointed and start off the Commerce Court with terms, respectively, one, two, three, four, and five years. Under the provisions of this substitute bill each man can be reassigned up to 1914. The court being organized in 1910, the one-year man can be reassigned in 1911 for a term ending in 1916, and so on up to the fourth man, whose term would expire in 1914, he can be reassigned up to 1919. That would hold a majority of the original appointees in office until 1917, or seven years, long enough to start a line of decisions, establish a line of precedents, and do lots of mischief to the cause of justice in the United States if everything worked out that way. But the hardest class of folks on the face of this earth to rely on for systematic wrong and corruption is the lawyers. They get in the habit of respecting the law and the courts and the civilization protected by those bulwarks, and though you find one occasionally inclined to go wrong or temporarily crooked from bad company or environment, it will not do to count on holding three corrupt lawyers together for seven years. In the nature of things it is utterly impossible. You do not find a Jeffries more than once in a century, and there never have been three of a kind at one time since the dawn of jurisprudence. If that scheme were possible and any of the plans which the reactionaries hope for under this bill were to receive the sanction of that court, the Supreme Court would reverse it with all the stinging and burning indignation compatible with the dignity of that august tribunal.

"The President is much more reliable and less likely to do wrong from his training and practice as a lawyer than from his accomplishments as a Republican politician. Whatever good he may develop or whatever evil he may refrain from will be due to his legal training and restraint and not to his efforts to meet the exigencies of Republican politics, but rather in spite of them. Furthermore, as a lawyer, I object to the name "Commerce Court," and so do the American people. They love justice and revere law; they like a law court, a court of justice; they know what that means and respect it; it has never been their idea that commerce should become the dominating principle and passion of the American people. This is intended to be a land of liberty and sentiment, and education, and religion, and morality, and refinement, and law, and order. We cultivate commerce as necessary to provide means of support. We do not intend to make it the dominating factor. Instead of securing unity and uniformity and simplicity, creating this court would further diversify our jurisdiction and practice, confound and confuse matters, and make our judicial system more unsatisfactory than at present, besides administering a rude shock to the sensibilities of our people. For these reasons, being a lawyer, I refuse to subscribe to the creation of that court. I love the law and honor the administration of justice as the sheet anchor of our social, industrial, and political fabric. I can not, as a lawyer, consent to reflect upon myself, my associates at

the American bar, and the exalted cause and science of jurisprudence by indorsing any such anomaly."

Mr. STEENERSON. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BARTLETT. Mr. Chairman, I yield two minutes to the gentleman from Ohio [Mr. ASHBROOK].

Mr. ASHBROOK. Mr. Chairman, I was very much interested in the remarks of the gentleman from Minnesota [Mr. STEENERSON], who is just now leaving the Chamber, and I want to say that I have always entertained a very high opinion of the gentleman. I had the honor to serve upon a committee in the Sixtieth Congress of which he was chairman, and I do not question any statement that he made on the floor, but I do want to say that the conditions that prevail in Minnesota and the Northwest are very, very different from the conditions in the State of Ohio. I happened to be a postmaster under the Cleveland administration, and I had a little knowledge of what was going on at that time. I know that there was not a fourth-class postmaster in my county who held his job three months after the change of administration. I further know that in my district—the seventeenth—there is just one Democrat who is filling the office of postmaster at a fourth-class office, and that is in a small town where there are just five Republicans in the town and none of them would accept the office. Therefore so far as my district is concerned every post office is filled by a Republican, and I believe I am safe in making the assertion that there is not one fourth-class postmaster out of a hundred in the State of Ohio who is not a Republican. While I am on my feet I want to say that if this examination is ordered, as I believe it should be, that personally I would not feel disposed to disturb any old soldier or a woman if their services were satisfactory, but these fourth-class postmasters who have been given a life job, covered into these places by an Executive order without a competitive examination, ought to stand on all fours with others who may aspire for the office. In other words, I believe the most capable and most deserving men in the community should fill the office. It is a fraud and a snare to make life jobs out of these fourth-class offices, as it was by the Executive orders of President Taft and President Roosevelt, and I welcome the prospect of a clean-up. [Applause.]

Mr. BARTLETT. Mr. Chairman, I do not desire to use any more time, and therefore move that the committee do now rise. Is there any time remaining to the other side, Mr. Chairman?

The CHAIRMAN. Does the gentleman withdraw his motion that the committee do now rise?

Mr. BARTLETT. Yes.

The CHAIRMAN. Then the Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That the following sums be, and are hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes.

Mr. BARTLETT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to; accordingly the committee rose, and the Speaker having resumed the chair, Mr. Flood of Virginia, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7898—the urgent deficiency bill—and had come to no resolution thereon.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 2319. An act authorizing the appointment of an ambassador to Spain.

ADJOURNMENT.

Mr. BARTLETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 27 minutes p. m.) the House adjourned to meet to-morrow, Thursday, September 4, 1913, at 12 o'clock noon.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 1328) granting an increase of pension to John F. Thomas; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 1329) granting an increase of pension to William J. Doyle; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 2730) granting an increase of pension to Emil G. Herman; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 7285) granting a pension to Sarah B. H. Sawyer; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. LAFFERTY: A bill (H. R. 7904) to amend section 4884 of the Revised Statutes of the United States, relating to patents; to the Committee on Patents.

By Mr. HARRISON: A bill (H. R. 7905) to acquire and diffuse among the people of the United States useful information on the subjects connected with the marketing and distribution of perishable fruits and vegetables; to the Committee on Agriculture.

By Mr. RUBEY: A bill (H. R. 7906) amending the act of May 11, 1912, granting a service pension to certain defined veterans of the Civil War; to the Committee on Invalid Pensions.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURKE of Wisconsin: A bill (H. R. 7907) granting a pension to Anna Windmeister; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7908) granting a pension to Samantha H. Farr; to the Committee on Invalid Pensions.

By Mr. CLANCY: A bill (H. R. 7909) granting a pension to Edward F. Zufelt; to the Committee on Pensions.

Also, a bill (H. R. 7910) to correct the military record of George Le Clear; to the Committee on Military Affairs.

By Mr. EDMONDS: A bill (H. R. 7911) granting an increase of pension to Benjamin Bortz; to the Committee on Invalid Pensions.

By Mr. FERRIS: A bill (H. R. 7912) to remove the charge of desertion from John H. McAtee; to the Committee on Military Affairs.

By Mr. HENSLEY: A bill (H. R. 7913) granting an increase of pension to Reuben J. Hamilton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7914) for the relief of the heirs of Sarah B. Matthews and Elijah B. Matthews, deceased; to the Committee on War Claims.

By Mr. PETERSON: A bill (H. R. 7915) granting a pension to Emma M. Heimlich; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7916) granting an increase of pension to Luman A. Fowler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7917) to remove the charge of desertion from the military record of Francis M. Helm; to the Committee on Military Affairs.

Also, a bill (H. R. 7918) providing for the retirement of certain officers of the Philippine Scouts; to the Committee on Military Affairs.

By Mr. SPARKMAN: A bill (H. R. 7919) granting a pension to William Russell; to the Committee on Pensions.

Also, a bill (H. R. 7920) for the relief of C. C. Peck; to the Committee on Claims.

Also, a bill (H. R. 7921) for the relief of W. W. Carey; to the Committee on Claims.

Also, a bill (H. R. 7922) for the relief of the estate of Cyprian T. Jenkins, deceased; to the Committee on Claims.

Also, a bill (H. R. 7923) to remove the charge of desertion from the military record of William D. Jenner; to the Committee on Military Affairs.

By Mr. UNDERWOOD: A bill (H. R. 7924) for the relief of Levi Adcock; to the Committee on War Claims.

By Mr. WILLIS: A bill (H. R. 7925) granting a pension to William H. Dixon; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. BURKE of Wisconsin: Papers to accompany bill (H. R. 877) granting an increase of pension to Elizabeth Verhalen; to the Committee on Invalid Pensions.

By Mr. CURLEY: Petitions of the Federated Irish Societies of Massachusetts, Boston, Mass., protesting against any legislation to refer the question of free tolls to American shipping through the Panama Canal to an international arbitration tribunal for settlement; to the Committee on Interstate and Foreign Commerce.

By Mr. HOWELL: Petition of the Commercial Club of Salt Lake City, Utah, favoring the passage of legislation to prohibit the importation of the plumage of wild birds for commercial use; to the Committee on Ways and Means.

By Mr. STEPHENS of California: Petition of the Chamber of Commerce, Long Beach, Cal., and the Chamber of Commerce of San Diego County, Cal., favoring the passage of legislation making an appropriation for the construction of four new battleships and necessary auxiliary boats; to the Committee on Naval Affairs.

Also, petition of the Chamber of Commerce of San Diego County, Cal., favoring the passage of legislation for the formation of a naval reserve force; to the Committee on Naval Affairs.

SENATE.

THURSDAY, September 4, 1913.

The Senate met at 11 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Journal of yesterday's proceedings was read and approved.

HOUSE BILL REFERRED.

H. R. 7207. An act granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes, was read twice by its title and referred to the Committee on Public Lands.

PETITIONS AND MEMORIALS.

Mr. WEEKS presented a memorial of the Federated Irish Societies of Massachusetts, remonstrating against the reference of the question of free tolls to American shipping through the Panama Canal to an international arbitration tribunal for settlement, which was referred to the Committee on Inter-oceanic Canals.

Mr. POINDEXTER presented a petition of the board of trustees of the Chamber of Commerce of Spokane, Wash., praying for the construction of four new battleships and for the formation of a naval reserve; which was referred to the Committee on Naval Affairs.

Mr. WARREN presented resolutions adopted by the Wyoming Bankers' Association, at Sheridan, Wyo., August 13, 1913, favoring the enactment of legislation looking toward the regulation of the currency system of the country, which were referred to the Committee on Banking and Currency.

REPORTS OF COMMITTEE ON THE LIBRARY.

Mr. LEA, from the Committee on the Library, to which was referred the bill (S. 2659) providing for a monument to commemorate the women of the Civil War, reported it without amendment.

He also, from the same committee, to which was referred the amendment submitted by Mr. WARREN on July 21, 1913, proposing to appropriate \$400,000 to make payment of a part contribution to the acquisition of a site and the erection thereon of a memorial in the District of Columbia to commemorate the service and the sacrifices of the women of the United States, etc., intended to be proposed to the general deficiency appropriation bill, reported favorably thereon and moved that it be referred to the Committee on Appropriations and printed, which was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHEPPARD:

A bill (S. 3077) providing for an exhibit by the Department of Agriculture at a Sixth National Corn Exposition at Dallas, Tex., in February, 1914; to the Committee on Agriculture and Forestry.

By Mr. McCUMBER:

A bill (S. 3078) granting a pension to Catharine Holbrook (with accompanying papers); and

A bill (S. 3079) granting an increase of pension to Frank J. King (with accompanying papers); to the Committee on Pensions.

By Mr. POINDEXTER:

A bill (S. 3080) providing for second homestead and desert-land entries; to the Committee on Public Lands.

A bill (S. 3081) to waive the age limit for admission to the Pay Corps of the United States Navy for one year in the case of Chief Commissary Steward Stamford Grey Chapman; to the Committee on Naval Affairs.

A bill (S. 3082) granting a pension to Samuel Rook; and

A bill (S. 3083) granting a pension to Emanuel Johns; to the Committee on Pensions.

By Mr. McLEAN:

A bill (S. 3084) granting an increase of pension to Mary Luce (with accompanying papers); to the Committee on Pensions.

THE CURRENCY.

Mr. WEEKS submitted the following resolution (S. Res. 179), which was read:

Resolved, That the report and recommendations of the Committee on Banking and Currency on the bill H. R. 7837, entitled "A bill to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes," be made to the Senate Tuesday, December 2, 1913.

Resolved further, That it is the sense of the Senate that immediately upon the making of the report and recommendations the chairman of the Committee on Banking and Currency of the Senate, or some member of that committee acting in his behalf, shall at once move that the Senate proceed to the consideration of the said report and recommendations, thereby making the report and recommendations the unfinished business of the Senate.

THE VICE PRESIDENT. Shall the resolution be referred to the Committee on Banking and Currency?

Mr. WEEKS. Mr. President, I assume that under the rules it would have to lie on the table and be taken up for consideration to-morrow. One member of the Committee on Banking and Currency, who wishes to be present when it is discussed, can not be here to-day. So far as I am concerned, I am willing that the rule should be followed, and that it should lie on the table and be taken up to-morrow for discussion.

THE VICE PRESIDENT. The resolution will go over, under the rule.

WOMAN SUFFRAGE.

Mr. TILLMAN. I present a letter, which I ask may be read and referred to the Committee on Immigration.

THE VICE PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

HOUSTON, TEX., August 28, 1913.

Hon. BENJAMIN R. TILLMAN,

United States Senate, Washington, D. C.

MY DEAR SENATOR: I have just been reading your speech in the Senate, in which you mention woman suffrage. I quite agree with you; yet you are all wrong. It is not woman suffrage at all, but the cause of it. What is the reason for woman suffrage? There are nine million reasons, and there are about that many who are forced to make a scant living in shops and mills and stores. Last year, 1,500,000 people—undesirables—were dumped on our American shores. Where will they go? The West is full; the South is full; the North is full; and the East is full. However, were they not full, we should keep out the almost millions of undesirables.

The great issue—the only live issue—is, What will we do with a million and a half undesirable foreigners a year on our hands?

The second issue is, What will a million and a half undesirables a year do with us?

Cordially, yours,

ARTHUR SIMMONS.

THE VICE PRESIDENT. The communication will be referred to the Committee on Immigration.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the Speaker of the House had signed the bill (S. 2319) authorizing the appointment of an ambassador to Spain, and it was thereupon signed by the Vice President.

CALLING OF THE ROLL.

THE VICE PRESIDENT. The morning business is closed.

Mr. GALLINGER. Mr. President, I suggest the absence of a quorum.

THE VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Chilton	Gallinger	La Follette
Bacon	Clapp	Gore	Lane
Bankhead	Clark, Wyo.	Hitchcock	Lea
Bradley	Clarke, Ark.	Hollis	Lippitt
Brady	Colt	Hughes	Lodge
Brandegge	Crawford	James	McCumber
Bristow	Cummins	Johnson	Martine, N. J.
Bryan	Dillingham	Jones	Norris
Cañon	Fall	Kenyon	O'Gorman
Chamberlain	Fletcher	Kern	Overman

Mr. JONES. I desire to announce that the junior Senator from Michigan [Mr. TOWNSEND] is absent for the day. He is paired with the Senator from Florida [Mr. BRYAN]. I make this announcement to stand for the remainder of the day.

Mr. HOLLIS. The Senator from Ohio [Mr. POMERENE] requested me to state that he is attending a meeting of the Committee on Banking and Currency.

Mr. McCUMBER. My colleague [Mr. GRONNA] is necessarily absent.

Mr. HOLLIS. The Senator from Delaware [Mr. SAULSBURY] requested me to state that he is detained by important public business.

The VICE PRESIDENT. Seventy-one Senators have answered to the roll call. There is a quorum present.

THE TARIFF.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. SHEPPARD obtained the floor.

Mr. PENROSE. With the permission of the chairman of the committee, I should like, if it does not interfere with his plans, to submit a very few remarks this morning on the chemical schedule.

The VICE PRESIDENT. The Chair had already recognized the Senator from Texas.

Mr. PENROSE. Oh, I did not understand that. I beg pardon.

The VICE PRESIDENT. The Senator from Texas will proceed.

Mr. SHEPPARD. Mr. President, the Republican Party may thank the doctrine of protection for its dissolution. No party, no nation, no man or group of men may permanently defy the truth. The Republican Party has been repudiated because protection is an infamy, a curse, a crime. The party that indorses such a doctrine must die; the government that practices it must fall. There is as much justice in taxing one man to feed and clothe another as in taxing one man to support the business of another. I believe that protection has been the source of more corruption and more woe in this Republic than any other agency outside of alcohol. Cherishing such a belief, I am against protection, both direct and incidental. I am against it wherever its envenomed head is lifted, whether in my own State of Texas or in some other State. I shall never subscribe to the proposition that as long as protection exists in Massachusetts or in Pennsylvania it must be preserved in Texas, or that as long as protection is kept on one article it shall be retained on another. I can never consent to the idea that as long as another man is permitted to steal I propose to steal also. If I could not destroy protection in Massachusetts or in Pennsylvania now, that fact would not deter me from making every effort to destroy it in Texas now or wherever else I could strike it. In the name of the people of Texas I denounce protection as one of the giant evils of the time, and in their name I would do what I could to wrest unholy tariff privileges from the favored few in Texas without regard to whether I could immediately reach the pampered class elsewhere, and I would never arrest my efforts to eradicate this evil from every foot of American soil. Happily, sir, this bill represents a general assault on protection from one ocean to the other, and when enacted into law will so impair the foundations of this vicious system that its doom may be easily foretold.

The Democratic Party has survived the defeats of 50 years because its sympathies are with the people. It has shown a vitality almost miraculous because it would translate human brotherhood into human laws. It has evidenced its loyalty to the American people, its love of justice, and its capacity for united and intelligent action in the tariff bill it now presents. What the Republican Party failed to do in 1909 the Democratic Party has done in 1913. The popular command for a substantial revision of the tariff taxes which the Republican Party disregarded in 1909 has been literally and courageously obeyed by the Democracy in 1913. The Underwood-Simmons bill carries more relief from excessive taxation for the American people than any other tariff measure in the 56 years since 1857. It does not attempt an entire overthrow of the protective system

at this time, the disease being so deeply seated that conservative treatment is required. It represents a reduction of present tariff burdens to an average extent of nearly 30 per cent, while many of the basic necessities of life and industry are entirely relieved of taxation. It is a measure in the interest of the hundred millions of people who compose the American Nation. It means lower taxes for every man, woman, and child beneath the American flag. The strength of the bill lies in the fact that it promotes the universal good. The taxes on chemical articles of general consumption, including almost all medicinal preparations, have been materially reduced.

The materials that enter into the construction of the American home have either been freed from taxation altogether, as in the case of lumber and cement, or have been given large reductions, as in the case of brick, tile, window glass, and the like. Iron ore, the basic product of perhaps our greatest industry, has been transferred to the free list, while notable decreases have been made in the finished articles of iron and steel. Indeed, such items in this class as cut nails, horseshoe nails, wire nails, spikes, horse and mule shoes, tacks and brads, barbed wire, other fence wire, baling wire, agricultural drills and planters, beet-sugar machinery, sugar-cane machinery, cotton gins, cultivators, harvesters, headers, horse rakes, mowers, plows, reapers, thrashing machines, tooth and disk harrows, wagons and carts, all other agricultural implements, steel rails, cash registers, linotypes and typesetting machines, sewing machines, and typewriters have been emancipated from all tariff rates whatever. Sugar, that universal necessity of the American table, has been delivered from crushing tariff duties because its domestic manufacture under present conditions has become such an expense to the American people that it must be compelled to stand on its own merits. The duties on the great bulk of agricultural products with which the Republican Party has so long deluded the American farmer are either removed or lowered. When once the American farmer sees by actual demonstration the emptiness of most of these duties he will no longer permit himself to be made the plundered partner of protection. The taxes on cotton cloths have been reduced from 42 to 26 per cent; on cotton handkerchiefs, from 59 to 25 per cent; on cotton underwear, from 60 to 30 per cent; on woolen blankets, from 72 to 25 per cent, the cheaper grades being free; on flannels, from 93 to 25 and 35 per cent; on ready-made clothing, from 50 to 30 per cent; on oilcloths for floors, from 44 to 20 per cent.

Print paper of the more common grades has been placed on the free list, while the rates on the more expensive grades have been substantially reduced. Copying paper, writing paper, photographic paper, common wrapping paper, paper bags, and envelopes have all experienced a distinct reduction. Bibles and other religious publications, all textbooks used in schools and other educational institutions, books for the blind, are put upon the free list, while on all other books there is a large decrease. Let me say here that the item of books for the blind was adopted partly in the interest of the Republicans, having in view the politically as well as the physically blind. Boots and shoes, harness and saddlery, hides, leather, tanned skins, binding twine, and cotton bagging are all on the free list. An income tax is provided which compels the wealth of the country to share the burdens of taxation. Such is only a partial description of the reductions in the new tariff law, but it will be sufficient to indicate the blessings it bestows on the American people.

Mr. President, bitter as have been the criticisms of this bill they have not been directed against its principal achievement. No opponent of the Democracy has dared to criticize the fact that this bill tremendously reduces the tariff burdens of the American people. Individual features have been denounced; the rates or absence of rates on particular articles have been condemned. And indeed, sir, the Democrats would have been more than human if they had been able to have adjusted the duty on every item among the 4,000 carried in this bill in such manner as to be proof against all objection. When it is remembered that the Democrats are not building a tariff system anew, but are compelled to begin the demolition of a high protective tariff that has been in operation for almost 50 years, and has become interlinked with the vital parts of many industries, it is almost a miracle that they are able to present a bill making such progress in the right direction.

When it is realized that the owner of no particular product has the right to insist that it be benefited by a tariff tax, but that the American people have the right to say where tariff taxes shall be placed from the standpoint of the general good, it will be seen that whatever inequalities may remain in the distribution of the incidental protective benefits of this bill are not the result of favoritism in any sense, but have been mini-

mized as far as possible and indeed outweighed by the deliverance brought to all the people from exorbitant taxation.

One of the items in this bill that has been subjected to especial denunciation is the removal of the duty on sugar after an interval of three years, during which there is to be a reduction of 25 per cent. It has been demonstrated that the maintenance of the sugar industry is costing the American people about \$125,000,000 every year, only \$50,000,000 of this going to the Government in the shape of revenue. The consumption in the United States in 1912 was in round numbers 3,500,000 tons, and the duty is 1.9 cents per pound, the conditions in this industry being such that the full duty is added to the price. The sugar consumed in the United States has the following sources of production:

TABLE A.		Tons.
Louisiana (raw)	-----	160,000
Texas (raw)	-----	10,000
Domestic beet (refined)	-----	604,045
Maple and molasses sugar (raw)	-----	15,155
Total continental United States	-----	789,200
From Hawaii, Porto Rico, and the Philippines (raw)	-----	943,789
From Cuba (raw)	-----	1,684,863
From other foreign sugar paying full duties (mostly raw)	-----	106,350

I now wish to submit a table giving a comparison of export prices of raw and granulated sugar at Hamburg and wholesale prices of the same at New York from 1900 to 1911, inclusive, a table taken from the able speech on this subject by Representative HARDWICK, of Georgia, chairman of the special committee of the House that investigated the entire sugar industry.

TABLE B.—Comparison of export prices of sugar at Hamburg and wholesale price of same at New York, 1900 to 1911.

Year.	Raw sugar.			Granulated sugar.		
	Export price, Hamburg.	Wholesale price, New York.	Difference between export price at Hamburg and wholesale price at New York.	Export price, Hamburg.	Wholesale price, New York.	Difference between export price at Hamburg and wholesale price at New York.
1900.....	2.24	4.56	2.32	2.64	5.32	2.68
1901.....	1.88	4.04	2.16	2.29	5.05	2.76
1902.....	1.43	3.54	2.11	1.79	4.45	2.66
1903.....	1.81	3.72	1.91	2.11	4.63	2.52
1904.....	2.14	3.97	1.83	2.55	4.77	2.22
1905.....	2.55	4.27	1.72	3.00	5.25	2.25
1906.....	1.87	3.68	1.81	2.31	4.51	2.20
1907.....	2.05	3.75	1.70	2.40	4.65	2.25
1908.....	2.29	4.07	1.78	2.63	4.95	2.32
1909.....	2.35	4.00	1.65	2.78	4.76	1.98
1910.....	2.74	4.18	1.44	3.22	4.97	1.75
1911.....	2.82	4.45	1.63	3.20	5.34	2.14
Average....	2.18	4.02	1.84	2.58	4.89	2.32

I take the liberty to quote from Mr. HARDWICK's analysis of these prices, as follows:

They show that during the 12 years for which the figures are given the average difference between the export price of raw sugar at Hamburg and the New York wholesale price of raw sugar averaged 1.84 cents per pound, whereas the tariff on raw sugar was 1.685 cents per pound, and the insurance and freight from Hamburg to New York 0.12 cent per pound, a total of 1.805 cents per pound. They also show that during this same period of years the average difference between the export price of granulated sugar at Hamburg and the wholesale price of granulated sugar at New York was 2.32 cents per pound, whereas the tariff during three-fourths of this period was 1.95 cents per pound and during the last three years 1.90 cents per pound, and the cost of insurance and freight from Hamburg to New York 0.12 cent per pound, to which should be added 0.18 cent per pound for difference in grade, making a total of 2.25 cents per pound. In other words, the table demonstrates conclusively that during the 12 years that it covers the American consumer paid every penny of the duty on sugar and could have bought his sugar almost 2 cents per pound cheaper but for the existence of the tariff tax.

Mr. HARDWICK then proceeded to show that from 1897 to 1912, inclusive, the people of the United States had consumed 43,274,605 long tons of refined sugar; that during 12 years of this period the Dingley rate of 1.95 cents per pound on refined sugar had been in force and during the last 4 years the Payne rate of 1.90 cents per pound; that the Dingley rate was equivalent to \$43.68 per long ton, while the Payne rate was equivalent to \$42.56 per long ton; that this sugar duty had consequently cost the American people during the above period two thousand millions of dollars, only eight hundred millions of which had gone to the Government as revenue, one thousand two hundred millions being pure tariff booty.

The exhaustive investigation by the Hardwick committee developed the fact that the cost of producing raw cane sugar in Louisiana is 3.75 cents per pound; in Java, 1.5 cents per pound; in the Philippines, 1.75 cents per pound; and in Porto Rico, Cuba, and Hawaii, about 2 cents per pound. It showed that the annual gross value of the Louisiana crop is about \$25,000,000. It showed that the 76 beet-sugar factories in the United States have a total capitalization of over \$141,000,000, representing from two to two and one-half times their actual value, and that on this excessive capitalization handsome dividends are regularly paid. It showed that without the tariff beet sugar could be produced here in competition with the world, partly on account of the interior location of the factories and the freight rates from the seaboard. Clearly it would be asking too much of the American people to submit to a further forced contribution of \$125,000,000 every year for the sake of a domestic industry three-fourths of which, beet sugar, can beyond question exist without any tariff, the other fourth, cane sugar, being produced to-day under such conditions that its advocates confess it must be maintained at public expense.

The other principal criticism of this bill is that there has been discrimination in favor of manufactured articles as against agricultural products. It is contended that the bill discriminates against the farmer in the interest of the manufacturer, that it discriminates against the South and West in favor of the North and East.

Mr. President, it is true that the principal farm products of the United States have been placed on the free list. It is true that the bulk of our manufactured products remains on the taxed list, although at a greatly reduced figure, and that, measured by percentages, the tariff reductions and removals are much greater as to farm articles than as to manufactured articles. But, sir, any bill that proposes, as does this Underwood-Simmons bill, to raise \$200,000,000 in revenue must necessarily put the larger portion of tariff taxation on manufactured products, and conditions are such that whatever duties are placed on the principal agricultural products can have practically no protective effect as to most of them and but little as to the others. Let me direct attention to 16 great farm articles, constituting in value over nine-tenths of all American farm products, and in the cultivation of which the overwhelming majority of American farmers still engages. These 16 articles are cattle, corn, cotton, cotton seed, cream, eggs, hay, horses, milk, mules, oats, poultry, potatoes, sheep, swine, and wheat. The total importations of similar articles amounted to less than one-fourth of 1 per cent of the total home value in the fiscal year of 1909-10, less than one-third of 1 per cent of the total home value in the fiscal year 1910-11, less than one-half of 1 per cent of the total home value in the fiscal year of 1911-12, less than one-third of 1 per cent of the total home value in the fiscal year of 1912-13. Fourteen of these articles—that is, all except cotton and cotton seed—are taxed under the Payne-Aldrich law at an average rate of about 27 per cent, and the entire 14 produced an average annual revenue during the last four fiscal years of less than \$4,500,000 as against a revenue of over \$234,000,000 produced each year during the last four fiscal years from manufactured goods, the Payne-Aldrich rates on which averaged over 40 per cent.

The small volume of importations competing with these 16 articles will occasion no surprise when it is stated that the surplus of said articles exported exceeded \$90,000,000 during the fiscal year of 1909-10, \$83,000,000 during 1910-11, \$80,000,000 during 1911-12, and \$145,000,000 during 1912-13, outside of cotton and cottonseed exports. Including the last two items, the exports of these articles have had an average during the last four fiscal years exceeding \$636,000,000. (For substantiation of these figures, see appendix.) The fact that so many of our agricultural products are sold abroad, and indeed must be sold abroad in competition with foreigners and the labor of foreigners on their own ground, is an added evidence of the superfluous and nominal character of tariffs on importations competing with most of our principal agricultural products when such tariffs are considered from the viewpoint of protection.

Mr. President, I reside in the foremost agricultural State of the Union, the State of Texas. Last year Texas took the lead among the States in the value of its agricultural output, although it had in cultivation only 27,000,000 of its 168,000,000 acres. The people of Texas know that on account of the smallness of competing importations, the complete supply of the home market, and the exportation of a surplus, conditions characterizing the principal agricultural products, the tariff on these products is insignificant from the standpoint of protection or of revenue when compared with the tariff on manufactured goods; that the price of the surplus of agricultural products that must be disposed of abroad generally regulates the price of the prod-

uct at home; that the effect of foreign competition is practically nullified when home production completely supplies the home market; and that the lower we make our American tariffs on foreign goods of all kinds the greater will become the value of our agricultural products which have a surplus, because such value depends in the final analysis on their exchangeability for foreign articles.

I am aware that on the remaining farm products not included in the 16 heretofore enumerated, without counting tobacco and wool, the Payne-Aldrich law raised a revenue of about \$32,000,000 in 1910. I am aware that on the remaining farm products not included in the 16 heretofore enumerated, without counting tobacco, wool being on the free list, and 12 of the 16 articles above mentioned being also on the free list—that is, all of the 16 except horses, mules, oats, and hay—the Underwood-Simmons bill is able to raise over \$21,000,000 in revenue, with an average tariff rate on its dutiable agricultural products of about 15 per cent. I am aware that wool and tobacco produce some \$36,000,000 in revenue under the Payne-Aldrich law, and that tobacco under the Democratic bill will produce about \$22,000,000. Adding the revenues from wool and tobacco, which articles represent in value less than 2 per cent of the total agricultural production, it will be seen at once that by far the larger portion of tariff revenue must of necessity come from manufactured goods, and that the duties on almost the entire mass of farm products represented by the 16 I have mentioned are of little significance. Since three-fourths of our manufactured products are made east of the Mississippi and north of the Ohio, the bulk of tariff taxation must of necessity be imposed on imports competing with the commodities of that section.

The Republican Party has secured the support of the farmer for the protective system by the maintenance of these agricultural duties, and has made him the instrument of his own spoliation. The high duties placed by Republicans on manufactured goods not only compel the farmer to buy his supplies in a domestic market dominated by combination and monopoly, while he must sell his own product in competition with the world, in spite of the meaningless duties on the insignificant volume of competing imports, but also impedes the sale of his surplus abroad, by reason of the high rates levied by other countries against all American products in retaliation against our own exorbitant tariff charges. Thus the farmer is fundamentally outraged by the Republican protective tariff. In view of these conditions, what could be more amusing than the spectacle of Republican Senators weeping for the farmer, whom Republican tariffs have robbed for 50 years? What really grieves them is not the removal of these deceptive duties from the farmer's goods, but the fact that the Democratic tariff bill will enable the farmer to see that his pretended friends are his enemies and his exploiters. If this bill does no more than demonstrate the true character of most agricultural tariffs, with which protection for manufacturers has been so cunningly buttressed, if it does no more than reveal to the farmer the protective conspiracy against him, it will have justified its enactment a thousand times over.

The reductions and removals of the tariff rates on hundreds of manufactured articles used by the farmer will far outweigh any loss that may result from the disappearance of certain agricultural duties. These reductions and removals will bring such prosperity to the people in general, such a saving on what they must expend for manufactured goods, that they will be in better position to purchase farm products, will be enabled to purchase more of them, and a relative but no less beneficent decrease in the cost of living will ensue.

The wisdom of placing wool and keeping hides on the free list is demonstrated by the fact that the tariff rates on woolen goods are enormously lowered and leather goods made free of tariff charge. The dissolution or circumvention of the Beef Trust, a menace alike to the cattle producer and the meat consumer, is as much a part of the Democratic program for a lower living cost as the revision of the tariff and will lead to lower prices of meat in the centers of population without reducing the price at the farm. A recent investigation by the Department of Agriculture developed the fact that the farmer receives on an average only 50 or 60 per cent of the prices paid for his product by consumers in the towns and cities. Already the new Democratic Secretary of Agriculture has begun a comprehensive study of marketing conditions, to the end that the farmer may obtain a larger share of the price paid for his product by the final consumer and that through the elimination of unnecessary expense and unfair handling charges the consumer may obtain a better article at a lower price. The profits absorbed by trusts and by combinations of middlemen and carriers from the farmer on the one hand and the consumer on the

other have been so enormous that it is entirely probable that the restoration of normal conditions will mean higher prices for the farmer, cheaper prices for the consumer, still leaving a decent profit to legitimate merchants, legitimate manufacturers, legitimate transporters, legitimate brokers.

Mr. President, agriculture flourished thousands of years before tariffs were devised to serve the power and the greed of man. It began with the first family of the human race, for it is said in Genesis of the sons of Adam: "And Abel was a keeper of sheep, but Cain was a tiller of the ground." To-day agriculture is the chief occupation of mankind. It would indeed be a blasphemous commentary on the wisdom of the Creator, whose own lips ordered humanity to the soil, if such a vocation depended on so vicious a human invention as that of taxing the many for the few.

The very fact that the multitudes of the earth are engaged in agriculture makes them the victims of special privilege, not its beneficiaries. The determining feature of special favors arising from tariff taxes is the impoverishment of the many for the enrichment of the few. The moment a benefit is divided among the great majority of men it loses the character of a special privilege. Agriculture had been in permanent and successful operation in America more than a hundred years, and surpluses were being sent abroad when the United States began in 1789, and the tariff of that year was designed particularly to inaugurate and encourage manufacture. If any man had proposed a division of duties between manufacture and agriculture at that time he would have been ridiculed from Savannah to Cape Cod. As agriculture was the principal source of wealth when this Republic began it necessarily sustained the burden of tariff taxation in order that manufactures might be established here. When manufacture became permanently rooted within our borders the protective rates were continued and agriculture was still exploited. From the beginning of the Republic to the present day there has never been an hour when agriculture could not have prospered without a tariff, as indeed it had prospered before our Government was organized, as it had prospered through all the prior ages of the world. Millionaire manufacturers have become so common as to excite no comment, while the agricultural masses have hardly a bare subsistence, the net earnings of the average farmer being about \$318 per year. And yet the Democrats are denounced as the enemies of the farmer because they have dared to take these treacherous duties from the principal products of the farm, have dared to show the farmer how he has been betrayed. The Democratic deliverance of the farmer from the grasp of protection might well have been in the contemplation of Ezekiel when he said:

And the tree of the field shall yield her fruit, and the earth shall yield her increase, and they shall be safe in their land, and shall know that I am the Lord when I have broken the bands of their yoke and delivered them out of the hands of those that serve themselves of them.

And they shall no more be a prey to the heathen, neither shall the beasts of the land devour them; but they shall dwell safely and none shall make them afraid.

Sir, there is nothing nobler in the range of human enterprise than the promotion of agriculture, the advancement of the farm.

"Ah! the city may lure and attract us,
But the country is God's. It is life
With the peace and the sanctified service,
Which mark what His angels call life."

And I can conceive of nothing more outrageous than this Republican tariff system which despoils the farmer while claiming to protect him.

I now desire to examine the principles that should govern the construction of a tariff act from the Democratic viewpoint. It has not been possible to make an unqualified application of these principles in the pending bill because we are confronted by abnormal conditions resulting from 50 years of Republican misrule and calling for gradual processes. In certain instances, however, where abuses have become so flagrant as to demand radical action, or where existing duties are without the semblance of excuse, we have not refrained from an immediate transfer to the free list. I shall now undertake to give my conception of the rules that should be followed in the enactment of a Democratic tariff law were we in position to wipe out all existing rates and put these rules into instant operation.

Before discussing these rules, however, let us examine briefly the nature of tariff taxes. Among the principal abuses arising from a protective-tariff system are privileges for the few, an unjust distribution of tax burdens among the many, extravagance and corruption in Government expenditure. It is possible to arrange tariff rates in many instances so as to modify the first evil until it reaches insignificant proportions. It is not possible to arrange tariff rates in so far as they affect prices in such manner as not to discriminate against the masses. A tariff tax is a tax on consumption, and the rich man need consume no more than the poor man in order to sustain life and

acquire its comforts. Rich and poor will, as a rule, contribute equally to the support of the Government under a system of tariff taxes. The discrimination is as inevitable as it is vicious. Moreover, the very fact that tariff taxes are levied indirectly lessens the legislator's sense of responsibility, breeds extravagance, and invites corruption. Even the benefits of the tariff from the standpoint of protection for producers are not capable of equal apportionment.

The benefits of a tariff tax depend on the amount and value of the importation on which the tax is levied and can not be apportioned like a property tax or according to the generally understood principles of taxation. For the same ad valorem tariff tax to confer equal benefits on two articles the corresponding importations must be practically identical with the articles with which they are respectively expected to compete, and each importation must be of sufficient volume to affect prices of the parallel home article to the same extent. For instance, raw wool from Australia may shrink only 52 per cent, while the raw wool with which it is supposed to compete here may shrink fully 80 per cent and may vary in weight, fineness, elasticity, strength of fiber, working quality, and so forth, to such an extent from the Australian article as to be adapted to a different use in cloth manufacturing and may not be affected in price by the advent of its supposed competitor, at least not to the extent of the duty.

On the contrary, the same tax may be levied on dress goods resembling the domestic article so clearly as to be an exact substitute and raise the price by the entire amount of the duty. That the volume of importation should be sufficient in both cases to affect the price and must continue so requires no explanation. For specific tariff taxes on two articles to give equal benefit the articles must be equal in value to begin with and must continue so. The articles on which ad valorem taxes are levied need not be equal in value to begin with to give the same proportionate benefits, but the initial proportion must continue. If a house goes down in value, the proper authorities will lower the property tax on proper proof. If an article on which a tariff is laid goes down in value, the machinery of government will not be stopped to adjust the tariff tax in reference to that article alone. Again the same conditions as to value must exist as to difference in cost of production at home and abroad. When we remember that there are 4,000 articles in the various tariff schedules, with varying volumes of competing importations, volumes varying from year to year, with varying differences in cost of production at home and abroad, that these articles are of varying value and of varying character and of varying susceptibility to the price-raising influences of the tariff, the impossibility of spreading tariff taxes over the class of protectable commodities in such manner that tariff benefits will be equally distributed becomes so evident as to require no further argument. Furthermore, the tariff tax, being levied on articles imported from foreign countries, not only raises the price paid by the actual buyer of the imported articles, but the price of every similar article used in this country, if it represents more than the difference in cost of production at home and abroad. The importer pays the excess occasioned by the tariff charge to the Government for revenue, while the owner of similar articles in this country puts the excess he is thus licensed to charge in his own pocket.

A direct property tax possesses no such characteristic. Let it be kept in mind that only a limited number of people in this country produce articles that are subject to the protective operation of a tariff tax. Consequently a tariff tax is a double evil, in that it tends to burden the poor equally with the rich, while in the very nature of things it can benefit only the class owning the articles that may be benefited by it, and, as we have seen, even these benefits are incapable of equal distribution among the privileged class. How empty, Mr. President, is the declaration we sometimes hear, "If the tariff is a blessing, let it be equally shared; if a burden, let it be equally borne." Neither the blessings nor the burdens of tariff taxation are capable of equal distribution. For this reason I would welcome the abolition of the tariff as a permanent system of taxation as soon as practicable. For these reasons I say that the true Democratic tariff act is the act that confines tariff evils within the smallest possible limit.

How, then, shall we levy tariff taxes so as to make them least burdensome to the people, least beneficial to the favored class, and at the same time productive of the needed revenue? Democrats believe that a tariff should be levied for revenue only, because the Government has not the right to take one penny of the people's earnings except for the expense of government economically administered. To achieve these ends I believe that the tariff taxes needed to produce a given amount of revenue should be distributed over all products capable of furnishing

revenue, except products which for particular reasons should be subjected to no tax whatever. The larger the number of articles we tax, the smaller becomes the tax that may be placed on each and the smaller becomes the element of protection. That celebrated Democrat, Robert J. Walker, in his first annual report as Secretary of the Treasury, in December, 1845, laid down the following rules for the preparation of tariff laws:

First. That no more revenue should be collected than is necessary for the wants of the Government economically administered.

Second. That no duty be imposed on any article above the lowest rate which will yield the largest amount of revenue.

Third. That below such rate discriminations may be made descending in the scale of duties; or, for imperative reasons, the article may be placed in the list of those free from all duty.

Fourth. That the maximum revenue duty should be imposed on luxuries.

Fifth. That all minimum and all specific duties should be abolished and ad valorem duties substituted in their place, care being taken to guard against fraudulent invoices and undervaluation, and to assess the duty upon the actual market value.

Sixth. That the duty should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

It will be observed that in rule 3 Walker holds in effect that discriminations may be made in the imposition of duties on various articles, even to the extent of placing some on the free list, while others remain on the taxed list, no duty, however, to be above the lowest rate that will yield the largest revenue. In rule 6 he asserts in effect that the duty on any particular article shall be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section. In another part of this report he gives instances of duties in the Whig tariff of 1842 that were so laid as to operate unequally and with discrimination, and he evidently had such instances in mind when he announced rule 6. It will be best to use his own language:

Thus, by the tariff of 1842 a duty of 30 per cent ad valorem is levied on all manufactures of cotton; but the law further provides that cotton goods "not dyed, colored, printed, or stained, not exceeding in value 20 cents per square yard, shall be valued at 20 cents per square yard."

If, then, the real value of the cheapest cotton goods is but 4 cents a square yard, it is placed by the law at the false value of 20 cents a square yard and the duty levied on the fictitious value, raising it five times higher on the cheap article consumed by the poor than upon the fine article purchased by the more wealthy. Indeed, by House Document No. 306 of the first session of the Twenty-eighth Congress this difference by actual importation was 65 per cent between the cheaper and the finer article of the 20 per cent minimum, 131 per cent on the 30 per cent minimum, 48½ per cent on the 35 per cent minimum, 84 per cent on the 60 per cent minimum, and 84 per cent on the 75 per cent minimum. This difference is founded on actual importation and shows an average discrimination against the poor on cotton imports of 82 per cent beyond what the tax would be if assessed upon the actual value. The operation of the specific duty presents a similar discrimination against the poor and in favor of the rich. Thus, upon salt, the duty is not upon the value, but it is 8 cents a bushel, whether the article be coarse or fine, showing by the same document, from actual importation, a discrimination of 64 per cent against the cheap and in favor of the finer article; and this, to a greater or less extent, is the effect of all specific duties.

Rule 3 applies to the distribution of duties from the standpoint of benefits to producers, recognizing that lower rates may be placed on some articles than on others and that there may be a complete removal of the tariff on some articles, while others are still taxed. It is equally evident that rule 6 applies to the operation of a duty on consumers after it has been laid, holding that it shall not be imposed so as to discriminate against classes or sections. In the quotation I have used Mr. Walker shows how minimums and specific duties discriminate against the poor and against those sections where cheaper grades of the articles he describes may be most largely used. Considered in connection with rule 5, rule 6 is evidently intended to justify ad valorem duties as a substitute for minimums and specific rates.

Indeed, after discussing minimums and specific duties in the excerpt I have given from his report, he proceeds to show how a tax upon the actual value would be the most equal and could only be accomplished by ad valorem duties. It is astounding that the advocates of taxed raw materials within the Democratic Party should cite the Walker rules as a basis for the assertion that as long as a tax is placed on the manufactured article it should also be placed on the raw material. As we have seen, rule 6 has no application to the distribution of duties on various articles from the standpoint of protective benefits, but applies only to the operation of a duty among consumers on a particular article. Rule 3 applies to the apportionment of duties, and plainly recognizes that certain articles may be singled out for the free list while others bear a tax; that lower taxes may be placed on some articles than on others; discriminations among commodities being thus declared permissible, no duty, however, to be above the lowest point at which it will yield the largest amount of revenue.

Mr. President, there is a broad and just philosophy underlying the Democratic position that tariffs should be adjusted from the standpoint of the people as a whole. The welfare of the whole is superior to the welfare of the one or the few. All the people of the United States do not produce articles subject to protective benefit. Only a small part, comparatively speaking, produces such articles, whether raw materials or finished products. Not an individual in the class subject to protection has a right to ask the Government to place a tariff on the import competing with his own product, because to the extent that such a tariff is protective it is a license to plunder. The American people, however, have a right to place the tariff where it will be least burdensome to them.

It is now proper to discuss the reasons for placing certain articles on the free list. It is my conviction that the basic necessities of life and the basic necessities of industry should not be subjected to tariff taxation. Bread, meat, the more common grades of clothing, of headwear and footwear, fertilizers, agricultural implements, the principal seeds, medicines in general use, lumber, coal, iron ore, wool, hides, and the like should, in my judgment, go to the free list. A tax on such articles is a burden on the Nation's inhabitants and the Nation's industries at the very source of their existence. It is a handicap on the daily lives of the masses and on the development of our resources. We have been able to place most of these articles on the free list in the present Democratic bill; the rest will follow in due time.

The raw materials of manufacture should be placed on the free list because a lower duty may then be placed on the finished product than would be the case with taxed raw material and the protective element minimized as far as possible. That tax is lightest which is levied on an article in the finished shape because it is then in the stage of manufacture nearest the people. If the tax is levied on an article in its earliest stage of production interests and profits are added to the amount of the tax every time the article passes through different hands on its way to the people. And so the tax grows at a compound ratio as to interest and profit until the people are reached. Let us suppose that a tax is placed on iron ore and coal. The iron ore is converted into pig iron, pig iron is converted into steel, steel into cutlery, and the cutlery passes from manufacturer to jobber, from jobber to retailer, from the retailer to the people. Even if no intermediate taxes were levied, the original tax would probably have doubled through the compounding of interest and profit every time the original article changed hands in passing through the various processes on its way to the people. Suppose a tax is placed on hides. The hides go to the packer or the tanner, then to the various leather manufacturers, and then in finished form to the jobber, the retailer, the people, and the same process occurs. Clearly the tax should be placed on an article in the stage of development nearest the people in order to bear least heavily upon them.

There are additional reasons for putting raw materials of manufacture on the free list where foreign countries admit similar articles free of duty. For instance, England, France, Germany, Austria, Italy, and perhaps other countries whose woolen mills are the chief rivals of our own admit raw wool without a tax. The woolen mills of these countries could undersell American factories in America as well as in foreign markets with their raw material untaxed and ours taxed. Whatever advantage the American producer of raw material might derive from the tax would be more than overbalanced by the loss of his home market and the necessity of sending his goods abroad. In fact, the disappearance of factories here would stop importations of raw wool, and the tax would amount practically to nothing from the standpoint of revenue. It is to the immediate interest of the American woolgrower that nothing be done to impede the conversion of his raw material into the finished product in his own country. A tax on raw wool alone would amount to the completest kind of protection for the foreign manufacturer. With taxed raw material and no compensating duty on the finished product the manufacturer would not only be helpless here against foreign competition, but still more helpless abroad. Raw material is useless unless it can be converted into the finished product; both finished product and raw material are valueless unless the finished product can be advantageously sold at home and abroad. The proper compensation of the manufacturer for the tax on raw materials involves a larger tax on the finished product on account of interest, profits, and charges connected with carrying the raw-material duty. To place the manufacturer in the same position as if he had free wool in order to put him on the same basis in this regard with foreign competitors he must be reimbursed for interest on the amount expended for and the loss connected with

carrying the duty on the raw material, and so the initial tax begins to grow. Furthermore, if the duties are divided equally between the finished product and the raw material, nothing has been gained, so far as the foreign market is concerned, because the duty on the finished product is without effect abroad.

The handicap of the tax on raw materials fetters American industry in every market where competitors are freed from such restrictions. Observe the experience of the Democratic caucus of the House of Representatives in the last Congress. The Democratic majority of the Ways and Means Committee finally decided to put a tax of 20 per cent on raw wool. After a close examination of the effect of this duty on the woolen industry they found the compensating element could not be avoided, and the result was a recommendation by a Democratic committee of a tax of 44 per cent on woolen goods. The La Follette measure of last year and of this year recognizes the same condition and puts a much higher duty on woolen goods than on raw wool.

If the tax on raw material leads to such conditions when a revenue basis is the object in view, to what possible extremities will an avowedly protective arrangement lead? A brief history of the present Republican duties on raw wool and on woolen goods will show the accumulative results of a tax on wool, the relation of raw wool to the finished product, and the relation of a tax on wool to the whole system of protection. On December 13, 1865, the woolgrowers and the wool manufacturers of the United States held a convention at Syracuse, N. Y. After discussing conditions this convention addressed a memorial to the Federal Revenue Commission, which was then gathering tariff data throughout the country for the information of Congress. The memorial requested equal encouragement and protection for both woolgrower and wool manufacturer. It recited the fact that the tariff of 1846 had placed a duty of 30 per cent on both wool and woolens and stated that this was unfair to the manufacturers in that it left them without protection against foreign rivals who had free wool. The tariff of 1857, which practically placed wool on the free list and a duty of 24 per cent on the finished product, was referred to, but it was stated that this tariff did not remain in force long enough to secure permanent results.

It was then stated that the tariff of 1864 had been framed with a view to placing grower and manufacturer on an absolute equality. Regarding this and other Republican measures, the memorial said:

The object sought in these bills was to give a sufficient protection to the woolgrower and to place the manufacturer in the same position as if he had his wool free of duty. A duty supposed to be sufficient to protect the woolgrower against wools competing with his own was placed on such wools and such a specific duty was placed on woolen clothes as was supposed to be sufficient to reimburse the manufacturer for the amount of the duty placed on the wools. The ad valorem duty on woolen goods was added to reimburse to the manufacturer the expense of carrying the duty on wools, the internal taxes, the duties on drugs and other materials used in manufacture, and to furnish the required protection.

The memorial then asked for a duty of not less than 10 cents per pound and 10 per cent ad valorem on raw wool and a duty on woolens equal to 25 per cent net; that is to say—and I quote the exact language:

Twenty-five per cent after reimbursing the amount paid on account of duties on wool, dyestuffs, and other imported materials used in such manufacture, and also the amount paid for the internal-revenue tax imposed on manufactures and upon the supplies and materials used therefor.

So we find the woolgrower joining with the manufacturer in asking that the manufacturer be placed in the same position as if he had free wool on account of the untaxed wool of foreign rivals and consenting to enormous compensatory and protective duties on woolen goods in order that the woolgrower himself might have what he considered protection. The woolgrower recognized the necessity of placing the manufacturer on an equal basis as to raw material with foreign competitors, in order that the industry might be preserved here as well as abroad and a market maintained here for raw material, but in order to secure protection for himself he consented to the higher tariffs on the finished product which his own duty necessitated, thus placing the expense of maintaining that equal basis on the American people. The same object of an equal basis could be obtained at far less expense to the American people by admitting raw wool free in the first place, and by placing the lowest possible revenue charge on woolen goods.

The tax on woolen goods could then be levied, if levied at all, solely from the standpoint of revenue as soon as practicable, and would have in it no element of compensation or of interest on a prior tax. The appeal of the Syracuse convention of woolgrowers and wool manufacturers resulted in the tariff of 1867, and the growers and manufacturers have stood together ever

since in fostering a system of inordinate and cumulative taxation on the American people.

In the tariff of 1867 the scheme of wool and woolen duties was adopted which has obtained in Republican tariff legislation ever since. Wool was divided into three classes—carpets, clothing, and combing wool. Carpet wools are not produced here, because the same labor and expense will make finer grades, but a tax was levied on them nevertheless. The duty on carpet wools was fixed at 3 cents per pound if costing 12 cents or less, 6 cents if costing more. Clothing wool has a comparatively short fiber; it is carded for spinning, and is used in making cloths, cassimeres, and other common woolen fabrics. Combing wool has a longer fiber. It is combed and machined for spinning, and is used in making worsted goods and other fabrics of soft and fine texture. Clothing and combing wools valued at 32 cents a pound or less were taxed 10 cents per pound and 11 per cent ad valorem in the act of 1867; valued at over 32 cents, 12 cents a pound and 10 per cent ad valorem. These duties amounted to about 11 cents a pound on an average and equaled a duty of about 50 per cent on imported wools. Now, observe what happened. In arranging the duty on woolen goods it was calculated that 4 pounds of unwashed wool were needed to make a pound of cloth, and the manufacturer was compensated on this basis in figuring the duty on the finished product, when in reality it takes only 3 pounds to make a pound of cloth. He was also compensated on the same basis for the interest on the duty on raw wool. He was also given a compensation of 10 per cent for the internal-revenue taxes he was paying at that time. The internal-revenue tax was soon repealed, but the woolen manufacturer has been getting a compensation for the tax ever since. He was also compensated for duties on drugs, dyestuffs, and oils.

The final result was a specific tax on woolen goods of 50 cents a pound to compensate for raw materials on the fictitious basis described, an ad valorem duty of 10 per cent to offset the internal-revenue tax, although this internal-revenue tax was soon repealed, and a further ad valorem duty of 25 per cent for net protection. Indeed it was a net of protection in which the consumer was to be hopelessly entangled. These ad valorem duties on woolen goods were actually increased in the Republican tariff acts of 1883, of 1890, and of 1897, reaching 55 per cent in the act of 1897 in addition to the specific duties, at which point they remain on an average in the Payne-Aldrich law of to-day, some kinds of woolen goods, such as blankets and flannels, running as high as 90 per cent and even higher. The rates on raw wool have remained practically stationary. The woolen schedule, with its terrible injustices, has remained practically intact in Republican tariff legislation because of the deceptive bid the tax on raw wool makes for the support of the farmers who grow wool throughout the United States. It is largely through this raw-wool tax that the support of the agricultural masses in large sections of the country has been gained for the whole system of protection in connection with the empty taxes on most of the other agricultural products. It is for this reason that the wool tax is so justly called the keystone of the protective arch. Support for other schedules is given in return for support of the woolen schedule, and thus the whole system is preserved. To keep its hold, protection must be passed around. Take off this treacherous tax on raw wool and the backbone of protection will be broken. Take off the tax on wool and you can take down the entire pyramid of compensatory duties that has been built on it, and the way will be cleared for the lowest possible revenue duty on woolen goods and for free woolen goods at the earliest practicable moment. Keep the tax on wool and you must add its equivalent with interest on woolen goods, and whether you desire a revenue or protective duty the result is protection with its untold evils for the country.

It is said by some that if woolen goods should decrease in price they will displace cotton goods and thus depress the value of cotton goods and of raw cotton. In my judgment this contention can not be sustained. If a pound of wool and a pound of cotton made an equal amount of cloth of equal adaptability to human needs, there might be some foundation for the argument. As a matter of fact a pound of cotton will make as much cloth as 2 or 3 pounds of wool. Before wool could begin to displace cotton it would have to decline in value below the cost of production, and this would stop production. Figuring cotton at 12 cents a pound, for an example, 2 pounds of wool, in order to compete with a pound of cotton, would have to drop to 6 cents each, 3 pounds to 4 cents each. It should be stated that cotton is so much more adaptable to varying climates and conditions than wool and is developing so many more uses that it would be safe from displacement by wool even if it brought in the neighborhood of the same price per pound. Cotton goods

are much more easily printed than woolen goods and may be dyed as successfully. Cotton is being made into good substitutes for linen and silk. Many thousands of bales are now annually used to furnish material for the tires of automobiles. It is the principal clothing material for the many millions who reside in latitudes where wool can not be worn. In fact, cotton has been displacing wool as an article of wear for a century. As early as 1837 it began to be mixed with wool in the making of woolen goods, when the cotton warp revolutionized the worsted-woolen industry. In the last 40 years the use of cotton in the making of woolen goods has grown more rapidly than the use of raw wool itself. The cotton thus used increased from 40,000,000 pounds in 1840 to 309,000,000 pounds in 1905. In making hosiery and knit goods 4 or 5 pounds of cotton are used to 1 pound of wool.

The use of cotton has become so intimately interlinked with the use of wool that a demand for wool is to a substantial extent a demand for cotton. The lower the price of wool becomes the more will it be mixed with cotton to make "mixed goods," and thus the demand for cotton will be increased. The same is true as to silk and flax, which are also used to a large extent in combination with cotton. In every decade of the nineteenth century, excepting that from 1860 to 1870, the consumption of cotton exceeded the consumption of wool, although from 1890 to 1900 raw wool reached its lowest price. The consumption of raw wool increased from 85,000,000 pounds in 1860 to 378,000,000 in 1890, to 412,000,000 in 1899, and to 559,000,000 in 1909, while that of cotton increased from 42,000,000 pounds in 1860 to 1,302,000,000 in 1890, to 1,923,531,948 in 1899, and to 2,464,932,280 pounds in 1909. Cotton is rapidly supplanting wool not only here but in England and throughout the world. Wool has everything to fear from cotton, cotton nothing to fear from wool. I wish to call attention here to a remarkable inconsistency on the part of our Democratic friends who oppose free raw material. They tell us that free raw material is a mere gift to the manufacturer to the amount of the tax removed; that he will keep the price of the finished article as high as ever. They then tell us that free wool means cheaper cotton; that it will cause woolen goods to sell at cheaper prices and cause the displacement of cotton goods by woolen goods. Another error is involved in the argument that the lower prices resulting from the Democratic tariff bill, which places many important raw materials on the free list, will mean lower profits and cheaper wages, and in the utterly unjust assertion that the Democratic Party is remitting the taxes on raw materials of manufacture and agricultural products in order to reimburse the manufacturer for the lower profits and the factory operatives for lower wages. As a matter of fact, cheaper prices do not necessarily mean either lower profits or cheaper wages. The success and growth of great business enterprises depend on the volume of sales rather than on high prices in particular sales. Relatively speaking, the lower the price the larger will become the number of sales and more money will be made by lower prices and more numerous sales than by larger prices and fewer sales. The lower prices of woolen goods resulting from free wool may easily increase the volume of sales to such an extent that neither wages nor general profits will suffer.

As an illustration of what I have said regarding the volume of business, I wish to refer to the fact that railroad freight rates are much lower than they were 30 or 40 years ago, but profits are greater on account of the increased amount of goods to be transported.

In this connection let me say that it is as much a part of the free raw material program of the Democratic Party to reduce duties on the finished product to the lowest competitive revenue basis as it is to take the tax from the raw material. In fact the very object of taking the tax from the raw material is to be placed in position to take the purely protective element out of the duty on the finished product as far as possible, and to reduce the latter to the lowest competitive revenue point. Consequently the plan suggested by Alexander Hamilton in his famous report on manufactures, which contemplated free raw material in connection with essentially protective duties is not a plan with which free raw material Democrats sympathize in any sense whatever. Consequently, when we were given an opportunity to vote only for free hides during the consideration of the Payne-Aldrich bill in the House of Representatives without a chance to reduce the Republican duty on the finished product, I voted to retain a 10 per cent tax on hides in the place of the existing tax of 15 per cent. Later, on a motion to recommit the bill in order that both hides and the finished product of hides might be placed on the free list, those of us who favored free raw material voted in the affirmative. It would be useless to remove a purely revenue duty from a raw material if an essentially protective duty is to be retained on

the finished product and no corresponding reduction is to be made in the latter. The object of the Democratic doctrine of free raw material is the removal of protection from the finished product or its reduction to the smallest possible limit.

Let me allude here to a most significant fact in connection with the three great industries of woolen manufacture, of iron and steel manufacture, and of leather manufacture. The industry with the highest protection of the three and with the smallest export trade has the highest tax on its raw material. The tax on raw wool in the Payne-Aldrich law is nearly 50 per cent, the tax on iron ore about 6 per cent, while hides are on the free list. The high tax on raw wool is one of the main causes of the exorbitant tax on woolen goods and prevents the woolen manufacturer from selling abroad to any great extent in competition with foreign manufacturers who have free wool. The exceedingly low tax on iron ore and the absence of a tax on hides made possible the lower duties on the finished product of the metal and leather industries even in a Republican tariff law and the final remission of all duties on the finished products of the latter in the bill now under consideration. I would continue this process until all finished American products were on the free list or under a purely revenue duty. If revenue considerations should make it necessary permanently to retain a duty on the finished product and it should be demonstrated that this duty carried substantial protection, I would levy an internal-revenue tax on the finished product exactly equal to that protection, after giving the owner a fair chance to adjust himself to new conditions. In this bill we have placed iron ore on the free list and made still lower reductions in the rates on articles of iron and steel. The fact is frequently mentioned that after hides were put on the free list leather goods went up in price. Leather goods went up because of an increased demand throughout the world and the development of new uses for leather; but hides also went up, and there can be no doubt that leather goods would be still higher to-day were hides not on the free list.

The great commoner, John H. Reagan, a former Senator from Texas, stated the Democratic position on this subject perfectly in this Chamber on August 14, 1890. He was asked this question by Senator Mitchell:

Would the Senator permit raw material to come in free of custom rates—any raw material at all?

Mr. Reagan replied:

I would permit raw materials to come in, and perhaps I ought to qualify what I have said by remarking that I would do so on condition that the duty on the manufactured product should be lowered in proportion to the advantage obtained from the receipt of raw material free of duty.

There is absolutely nothing in the Texas Democratic platform of 1896 to contradict this position. That platform denounced the free admission of raw materials and the retention of heavy duties on the finished product, and this is in exact accord with my position. On April 12, 1888, Senator Coke, of Texas, said in this Chamber:

Give us free, untaxed machinery and free raw materials, such as coal, ore, wool, jute, and other textile products, these being the bases of manufacture, a tariff devoted solely to raising revenue for the support of the Government [and we] will doubly protect the American workman's wages and send our cheapened goods without handicap to the foreign markets to meet and defy the competition of the world.

It has been said by the advocates of taxed raw materials within the Democratic Party that the idea of free raw material originated in the Whig tariff of 1842. As a matter of fact, the Whig tariff of 1842 put comparatively few materials of importance on the free list and put practically all the principal raw materials on the taxed list, as follows: Wool, mohair, cotton, raw silk, hemp, jute, flax, coal, raw hides of all kinds dried or salted, raw sugar, salt, lumber, lead ore, and iron ore. This Whig tariff actually put a duty of 3 cents a pound on raw cotton. So the contention that the Whig tariff of 1842 put raw materials on the free list and that the only difference between the Whig and the Democratic Parties at that time was the one question of taxing raw materials, the Democrats taking the affirmative, the Whigs the negative, vanishes utterly.

Again it is urged by the opponents of free raw materials within the Democratic Party that the motion of the Whig leader in the Senate to recommit the Democratic tariff law of 1846 raised the direct issue of free raw material, the Whigs favoring it, the Democrats opposing it. It is only necessary to quote the language of the motion to recommit. It was made on July 27, 1846, by Senator J. M. Clayton, of Delaware, and was as follows:

That the bill be committed to the Committee on Finance with instructions to remove the new duties imposed by said bill in all cases where any foreign raw material is taxed to the prejudice of any

mechanic or manufacturer, so that no other or higher duty shall be collected on any such raw material than is provided by the act of August 31, 1842.

It will be seen at once that this motion was merely to substitute the raw material duties of the act of 1842 for the raw material duties of 1846. It did not remotely raise the issue of free raw material, because practically all the principal raw materials were taxed by the act of 1842. It can not properly be said therefore that in voting against this motion to recommit Benton, Houston, Rusk, and others voted against free raw materials. In mentioning famous Texans who have ably supported the Democratic doctrine of free raw materials, I would not omit the great names, the stainless names, of Senators Roger Q. Mills and Horace Chilton, former Members of this body. I challenge the assertion that the advocacy by these gentlemen of free raw materials was the principal issue in their last campaigns. Both of them withdrew from their respective contests at so early a stage that no single question could fairly be said to have been a determining one, and it is certain that other issues than the tariff had at least an equal prominence while the contests were in progress, notably the money question in the case of Mr. Mills, the oversea expansion question in the case of Mr. Chilton.

I repeat that the reduction or removal of high protective duties on finished products is as fundamental a part of the Democratic program as free raw materials. The accomplishment of this program will provide a tariff system involving the least possible burden for the American people. It will restore competition and remove one of the chief sources of combination and monopoly. We say that the proper way to destroy protective duties is not to create other duties but to lower or to remove the protective ones. We say that the proper way to remove discrimination is to narrow it as much as possible and not to enlarge or emphasize it.

Wherever we do not make enough of a material to supply home manufacturers, where importations must be had from abroad to such an extent as to affect home prices, where the manufacturer's cost of production is enhanced by the tariff on raw material, and where foreign manufacturers competing with us at home and abroad get their raw materials free of duty and are thus enabled to paralyze the home industry and the home market for the raw material, thereby injuring both home producer and home manufacturer, unless compensating duties are given the home manufacturer, the duties should be taken from the raw material in order to make it possible to take protection from the finished product or to neutralize it to the greatest possible extent.

Let me call attention here to the belief entertained in some quarters that raw materials of manufacture are produced solely on the farm.

Let us enumerate some of the raw materials of manufacture that are not produced on the American farm. They are antimony ore, asbestos, bones, raw chemicals including raw sulphur, copper, asphaltum, coal, cork, minerals for fertilizer, raw furs, grease and oils, rubber, iron ore, ivory, manganese, nickel ore, platinum, plumbago, tanning materials, unmanufactured shells, raw silk, lead ore and lead bullion, and mica. And yet the advocates of taxed raw materials want the farmer to vote to add a tax on all these articles, the finished products of many of which are used by him so largely in the conduct of his business and in the support of his family, to subject himself and the rest of the people to the burdens of additional tariff taxation on the theory that he is preventing discrimination against himself.

There are still other reasons for putting raw materials, such as iron ore, coal, lumber, and the like, on the free list. Our stock of these is either limited or being rapidly depleted, and all the reasons for the conservation of natural resources clamor for the removal of all restrictions on the importations of such articles. We should be able to draw upon the world for such commodities as easily as possible, and in order to conserve our own supply as well as to strengthen our industries.

It might be well to say here that every Democratic tariff law and every Democratic tariff bill bearing the party's official stamp in the history of the United States has, with the sole exception of the woolen bill in the last Democratic House, has put important raw materials of manufacture on the free list. That woolen bill was accompanied by a resolution stating that it was not to be considered a reversal of the traditional Democratic policy on this subject, but was framed under pressure of revenue necessities.

The first general Democratic tariff law, the Madison tariff of 1816, placed on the free list clay, raw copper, brass and tin in pigs and bars, hides and skins, sulphur, zinc ore, and unmanufactured woods of all kinds.

The tariff of 1824 did not disturb this free list.

The tariff of 1832, enacted under Jackson, put on the free list coarse, unmanufactured wool, raw flax, raw rubber, raw ivory, many raw chemicals, as well as the articles already placed on the free list by the tariff of 1816.

The tariff of 1846 put on the free list raw copper, raw platinum, and other articles. This tariff law placed such a low tax on the other principal raw materials and so large a tax in comparison on their finished products that McDuffie, a prominent Democratic Senator, said in the debate on this law that its raw material taxes were insignificant; that he was almost as willing to have left them out as to have left them in.

The tariff of 1857 put wool valued at not more than 20 cents a pound on the free list, and this virtually meant free wool. The imports of raw wool free of duty under this tariff law averaged nearly 29,000,000 pounds during the life of the law, while the remaining imports of raw wool averaged less than 1,000,000 pounds annually. This great Democratic tariff law also put on the free list crude tartar, bismuth, raw dyeing and tanning materials, brass bars and pigs, copper bars and pigs, and other forms of raw copper, flax, glass for remanufacturing, raw ivory, raw platinum, raw silk, and tin bars and pigs.

The Morrison tariff bill of 1884 put on the free list coal, lumber, salt, and wood unmanufactured.

The Morrison tariff bill of 1886 put on the free list lumber, salt, wool, flax, hemp, jute, and other raw materials.

The Mills bill of 1888 put on the free list wool, hemp, flax, and lumber.

In 1892 Mr. Springer, chairman of the Democratic Ways and Means Committee of the House of Representatives, reported a wool tariff bill placing wool on the free list and lowering duties on woolen goods. The Wilson tariff law of 1894, as it passed the House, put on the free list wool, iron ore, and coal; and as it finally became a law provided for free wool.

The farmers' free list bill of the last Democratic House put lumber on the free list, and the iron and steel bill of that House provided for free iron ore.

Mr. President, the Democracy presents in the Underwood-Simmons tariff bill a definite, substantial, and beneficent revision downward of the Payne-Aldrich tariff rates. It substitutes the best tariff law since 1837 for the worst since God created the heavens and the earth. It is a blow against monopoly and greed, a blow that finds a mournful echo in the lamentations on the other side of this Chamber. It brings the Nation nearer to its original ideals. It makes a remarkable stride toward equity in tariff legislation. It brings wider opportunity and larger hope to the multitudes bowed down. It sends a message of encouragement to factory and farm, to shop and mine. It strengthens the foundations of our institutions. It puts new confidence in the souls of men.

And as this bill pursues its march of triumph through the American Congress the attention of the American people turns to that unassuming figure at the Nation's head, that exemplar of justice and of love, that marvel of patience and of power, Woodrow Wilson. To his genius and his courage must be attributed the elements in this measure that do most to break the sway of privilege. And what a glory of all glories arises from the fact that by his side there stands the man who for more than 20 years has proclaimed as fundamental features of true tariff legislation the fundamental features of this bill, who has been the chief defender of the doctrine that freedom of life's necessities and of the basic materials of industry from taxation is essential to the least oppression in a tariff law, whose character and whose eloquence illustrate the purest purposes that ever animated a human heart, Democracy's rock of ages, William Jennings Bryan.

APPENDIX.

Table showing values, importation, and exportation of and revenue derived from 16 principal agricultural products during the last 4 fiscal years.

	Values.	Importation.	Revenue.	Exportation.
1909-10.				
Cotton (growth year of 1909)	\$688,350,000	\$15,816,000	(¹)	\$450,447,000
Cotton seed (growth year of 1909)	123,740,000	5,000	(¹)	406,000
Cattle (Apr. 15, 1910)	1,697,761,000	3,000,000	\$727,000	12,200,000
Corn (Dec. 1, 1909)	1,477,223,000	72,000	18,000	25,428,000
Cream (calendar year 1909)	119,967,000	578,000	37,000	(²)
Eggs (calendar year 1909)	306,689,000	111,000	41,000	1,260,000
Milk, fresh (calendar year 1909)	252,437,000	18,000	3,000	1,023,633

¹ Free.

² No returns; included in milk exports.

³ Includes cream and all forms of exported milk.

Table showing values, importation, and exportation of and revenue derived from 16 principal agricultural products during the last 4 fiscal years—Continued.

	Values.	Importation.	Revenue.	Exportation.
1909-10.				
Poultry, live and dead (calendar year 1909)	\$202,506,000	\$149,000	\$38,000	¹ \$597,000
Horses and mules (Apr. 15, 1910)	2,770,458,000	3,270,000	167,000	4,695,000
Oats (Dec. 1, 1909)	405,120,000	401,000	138,000	794,000
Hay (Dec. 1, 1909)	722,401,000	776,000	387,000	1,071,000
Sheep (Apr. 15, 1910)	233,664,000	697,000	98,000	209,000
Swine (Apr. 15, 1910)	436,603,000	21,000	3,000	47,000
Wheat (Dec. 1, 1909)	673,559,000	151,090	9,000	47,807,000

Poultry, live and dead	223,148,000	111,688	14,980	1,755,000
Horses and mules	2,823,467,000	1,605,254	79,330	3,960,000
Oats	452,469,000	289,760	108,916	13,206,000
Hay	856,695,000	1,504,319	621,527	964,000
Sheep	202,779,000	85,000	13,910	606,000
Swine	603,109,000	15,488	2,313	152,000
Wheat	555,280,000	419,781	135,523	89,036,000
Potatoes	212,550,000	807,600	85,055	1,646,000
Total	11,165,375,000	36,103,294	3,118,419	693,855,000

¹ Including dead game, in exports.

² Free.

³ No returns; included in milk exports.

⁴ Including dead game; also possibly \$100,000 to \$200,000 of "Other animals," in exports.

⁵ Included in "milk."

⁶ Including cream.

⁷ Mules, 734,000.

EXPLANATION.

The figures in the above statement as to values of cotton and cotton seed refer to production values for the growth years of 1909, 1910, 1911, and 1912, respectively; as to values of cream, eggs, milk, and poultry, the production values for the calendar years of 1909, 1910, 1911, and 1912, respectively; as to values of cattle, horses and mules, sheep and swine, the total value of all such animals in the United States on April 15 of the years 1910, 1911, 1912, and 1913, respectively; as to values of corn, oats, hay, wheat, and potatoes, the production estimated on December 1, 1909, 1910, 1911, and 1912, for the growth years of 1909, 1910, 1911, and 1912, respectively.

The total values of agricultural products for the years mentioned are larger than the total values given for agricultural products by the Secretary of Agriculture in his annual reports, because the estimates of the Secretary include only the yearly increase of cattle, horses and mules, sheep, swine, and wheat, while the above figures give the value of all such animals in the United States during the years indicated.

The figures for eggs do not include dried eggs or eggs in yolk, but the latter items are comparatively small.

Mr. PENROSE. Mr. President, I was necessarily absent from the Senate when the chemical schedule was under consid-

eration by this body, and, owing to some unexpected delays in the progress of the bill, it may be that I shall not be in the Senate when the bill is reported from the Committee of the Whole to the Senate. Therefore I desire to submit at this time a few observations upon the chemical schedule.

The chemical industry of the United States is of such overwhelming importance and its general success and welfare are so essential in the operation of manufacturing enterprises and in the prosecution of many industrial undertakings that it is impossible to let this bill pass without evoking from me some measure of protest. There may have been a time when chemicals and chemical compounds and mixtures were of interest only to druggists and physicians, but that time is past, and the enormous development of modern industry has brought about a situation where the production and manufacture of chemicals has become a sort of basic industry without which many manufacturing activities entirely unconnected with the chemical industry could not be carried on. Without resorting to detailed explanations or descriptions, and speaking for the moment in the terms of the tariff act, I may say that every schedule is dependent in some measure upon Schedule A, for in the production of innumerable articles covered by those various schedules some of the materials or products of Schedule A are used. This remark applies to the agricultural schedule with great force for our farmers must depend upon the chemists to discover or invent for them and to supply to them the various fertilizers upon which more and more the successful cultivation of our fields and farms must depend. The point of all this is that it is of the highest possible importance that we should have in this country a successful and well-established chemical industry, widely distributed over the land and distinguished by the variety of its productivity. That is to say, this country should be able to manufacture within its borders all kinds of chemicals and chemical products, and this country was in a fair way to attain this distinction if the policy of the tariff acts of 1897 and 1909 had been permitted to continue.

The chemical industry is in many respects a peculiar one, and it is owing in some measure to the peculiar conditions that exist in it that we have what might seem to some the phenomenon of steadily decreasing selling prices under the influence of protective duties. It is a well-established fact, the verification of which requires only a reference to the official figures, that following the imposition of protective duties upon chemical products and the establishment of competition from American manufacturers who were thus encouraged to start, the prices of a great many commodities have shrunk to a fraction of what they were when the European producers controlled our market because of the low rates of duty or the absence of any duty. Before leaving this particular topic and in order to call attention to the danger involved to the domestic industry by this wholesale reduction of duties, I wish to call attention to the fact that the chemical industry in the greatest chemical manufacturing country in the world, Germany, is very largely in the hands of huge combinations or syndicates or, as they would be called in this country, trusts. They absolutely dominate that industry, and, far from being frowned on by the governmental authorities, they are actually encouraged and favored. In fact the Prussian Government is a partner in the great potash syndicate which has its hands in the pockets of every farmer in this country. For these statements I have authority which will hardly be questioned on the other side, and I would refer to the report on Schedule A prepared by the Committee on Ways and Means of the Sixty-second Congress and presented to the House of Representatives in connection with the chemicals bill of 1912, H. R. 20182, Report No. 326. This is a very interesting report, and the facts concerning the German syndicate will be found beginning on page 378. Among the statements made, Mr. President, in that report, which I have in my hand, is the following. I quote from the report:

The causes which have brought about the phenomenal development of the German chemical industries are many and highly complex. They have formed the thesis of any number of more or less relevant investigations and economic studies though the results reached are far from being unanimous. This development of the chemical industry in Germany, though the most pronounced, is but part and parcel of the rapid development of German industries generally, and these have naturally extensively stimulated the growth of chemical manufactures.

Concerning the fact that these chemicals and manufactures of chemicals are absolutely under the control of trusts, cartels, and syndicates with the cordial cooperation of the German Government, I will, taking the facts from the report, call the attention of the Senate to the declaration in that report that—

The German chemical industry knows practically no competition between individual establishments engaged in the manufacture of the same products, and the elimination of competition and general tendency toward combination observable in all industrial countries, but especially pronounced in Germany, has in that country gone further in the

chemical and allied industries than in any other manufacture. This has been accomplished by the formation of "syndicates," "cartels," "selling associations," and to a lesser degree by the absorption of or amalgamation with rival concerns, formed secretly or openly for the purpose of controlling output and prices. The law puts no obstacle in the way of such consolidation, and in several instances governmental agencies operating large chemical establishments form a party to the agreements. The potash syndicate—

Upon which articles, as I have said, our farmers are so dependent—

In which several States of the Empire participate, amounts to a virtual monopoly. In 1896 Liefmann found among all of the German industries 345 "cartels," of which the highest number, viz, 82, belonged to the chemical industry, and for 1907 the number in that industry was estimated at 100. Practically all of the important manufactures of the chemical industries and many products of lesser importance are under some form of syndicate control, more or less strict, and more or less extensive as to production, prices, supply of raw materials, or division of territory. Chemical manufacturers lend themselves more readily to consolidation than any other, because within a given line the products from one source are not visibly different from those of other sources, and, on the same basis of purity, do not differ at all. The products therefore carry little, if any, individuality, which is the principal basis of competition. Quite a number of these organizations are bound by agreements of some kind to international "cartels," the object of which is to control the international markets.

Mr. President, it is obvious to me that the only protection which the American consumer has is the maintenance of the American industry against the tyranny of the German syndicate. Curtail or destroy the American industry and the American consumer, the men engaged in the arts and sciences and manufactures and the agriculturist will be, in many lines of chemical production vital and essential to his activity, at the mercy of the foreign syndicate international in character, aimed to control international trade, and be without the protection of American competition.

In the bill H. R. 20182, which was the bill of the last session, the majority party proposed a revision of the chemical schedule. The chemical schedule in the bill now before the Senate presents some striking departures from the provisions of H. R. 20182, but the same evil policy which underlaid the first attempt of the majority to tinker with this schedule vitiates the present bill. Analyses of both of these bills were made by an organization called the Manufacturing Chemists' Association, which comprises, I understand, a vast majority of American producers of chemicals, and as the criticisms of that association appear to me to be very well founded I shall quote them here:

Of the 97 different raw materials made dutiable under the proposed bill (H. R. 20182)—

That is the bill of the last session of Congress, coming over from the Democratic majority in the House of Representatives—

80 were entered free under the Payne Act of 1909. Of the remaining 17 articles the duty in almost every instance was increased from the rates under the existing law.

The census print further shows that the total revenue derived from Schedule A under the Payne Act for 1911 amounted to \$12,968,545, while the estimated revenue for a 12 months' period under H. R. 20182 amounts to \$16,170,157, or an increase in revenue of nearly \$3,500,000. This increased revenue, however, results entirely from the increase of rates on raw materials, the revenue from the above-mentioned raw materials under the act of 1909 amounting to \$1,826,955, while the estimate for a 12 months' period for the same raw materials under H. R. 20182 amounts to \$6,081,000, or an increase of approximately \$4,000,000. At the same time, under the proposed bill, the rates of duty on finished products are very materially decreased, with the estimated result that the revenue for a 12 months' period on finished products would amount to \$10,089,097, as against \$11,139,590 revenue under the act of 1909, or an estimated decrease in revenue by virtue of the decrease in rates on finished products of more than \$1,000,000.

Thus it is apparent that the estimated increase in revenue under H. R. 20182 comes entirely from a most radical increase in rates on raw materials, an increase so great that loss in revenue on finished products of approximately \$1,000,000, owing to a drastic decrease in the average rate from about 25 per cent ad valorem to about 16 per cent ad valorem, is not only offset, but a net increase in revenue is estimated of nearly \$3,500,000.

Regarding the present bill now under consideration, the association makes the following analysis:

The bill which recently passed the House (known as H. R. 3321) has made nearly 100 changes in the rates contained in H. R. 20182, not to mention changes in classification, etc.

Approximately 17 different raw materials, or groups of raw materials, which were free under the Payne Act and which were made dutiable under H. R. 20182, with a total estimated revenue of nearly \$1,000,000, have been restored to the free list by H. R. 3321. Approximately 13 different raw materials, or groups of raw materials, which were made dutiable under H. R. 20182, with a total estimated revenue in excess of \$1,250,000, have received considerable reduction in the present bill, H. R. 3321. Thus the present bill is much less radical than the bill of 1912 on the question of taxing raw materials. Had the Ways and Means Committee stopped at this point the effect of these changes would have been to modify in some degree the bill of 1912.

The association calls attention, however, to the fact that in over 50 cases the rates on finished products, as established by H. R. 20182, have been very materially reduced by the provisions of the new bill, while an increase in rates has been made in less than 10 cases. These 50 cases of decreased rates involve articles which, according to H. R. 20182, already show an estimated revenue of approximately \$1,500,000. Furthermore, this decrease will again materially reduce the average

ad valorem rate of the chemical schedule which, by H. R. 20182, had already been reduced from 25 per cent ad valorem to 16 per cent ad valorem.

The other changes in the bill relate largely to classifications, phraseology, etc., many of which are beneficial; but in this connection the association points out that in 18 different cases the new bill has omitted the provision for a minimum specific duty in the alternative for the ad valorem rate. This takes away a certain safeguard against undervaluation which the minimum specific rate provided.

The net result of the changes effected by the present bill (H. R. 3321) is that the benefits which might have resulted from the reduction in the rates on raw materials is offset, or more than offset, by the further reductions in the rates on finished products.

Mr. President, in this statement of the National Association of Chemical Manufacturers we come across a new phrase in the terminology of American parliamentary procedure. There is reference here to the "caucus print." I believe it will be generally admitted that for the first time in the history of American legislation manufacturers have come to Washington and have been obliged to use the strange and heretofore unknown designation of a "caucus print."

Among the high moral principles and declarations of political purity which those will discover who choose to read the volume entitled "The New Freedom" we read:

Legislation as we nowadays conduct it is not conducted in the open. It is not thrashed out in open debate upon the floors of our assemblies. It is, on the contrary, framed, digested, and concluded in committee rooms. It is in committee rooms that legislation not desired by the interests dies.

Then, in another place:

I am striving to indicate my belief that our legislative methods may well be reformed in the direction of giving more open publicity to every act, in the direction of setting up some form of responsible leadership on the floor of our legislative halls, so that the people may know who is back of every bill and back of the opposition to it. * * * The light must be let in on all processes of lawmaking.

Another sentiment follows:

This discovery on their part of what ought to have been obvious all along points out the way of reform, for undoubtedly publicity comes very near being the cure-all for political and economic maladies of this sort. But publicity will continue to be very difficult so long as our methods of legislation are so obscure and devious and private.

Such, Mr. President, appear to have been the views of the Democracy regarding publicity in legislation prior to the last presidential election; but now we have this new phrase of a "caucus print" of a measure, and we witness the spectacle of this bill having been nearly as long a time in a secret caucus of Democratic Senators as it has been under discussion on the open floor of this body.

Not only is this measure being taken up under this new and unprecedented procedure, but we witness on the other side of the Capitol the currency bill receiving similar treatment. The American people must judge at the proper time, Mr. President, whether the antelection statements of the standard bearer of the Democracy can be reconciled with the practices of the Democratic Party after the actual meeting of the present Congress.

I have no intention of discussing this schedule exhaustively, for that would take too much time, and I shall content myself with pointing out some of the more glaring errors. In paragraph 1, which deals with acids, the duty on citric acid has been reduced from 7 cents per pound to 5 cents per pound. Citric acid is produced from citrate of lime, all of which is imported, and which at the present time is on the free list. Not content with reducing the rate on citric acid, a duty of 1 cent a pound has been placed on citrate of lime, which is equivalent to three-quarters of a cent per pound on the citric acid contained in it. This action is characteristic of Schedule A in the pending bill, for in many instances we find that a severe reduction of duty on the finished product is accompanied with an imposition of duty on the raw materials.

Salicylic acid has received a 50 per cent reduction, from 5 cents a pound to 2½ cents a pound. The Dingley Act placed a duty of 10 cents a pound on this article. This is an article which comes into direct competition with the European trust, and America is the dumping ground for surplus European production. Ten years ago there were five manufacturers of this product in this country, of which three have since failed on account of the foreign competition.

Sulphuric acid under the Payne-Aldrich Act carries a duty of one-fourth cent a pound except when used for agricultural purposes, when it is entered free, but with the provision that if any country imposes a duty on the importation of our product a duty of one-fourth cent a pound shall be levied on the sulphuric acid imported from the country imposing such duty. It is well known that, on account of its bulk, sulphuric acid must necessarily be consumed within a limited zone from its source of production. Any duty imposed has therefore little effect upon the industry. *The sulphuric-acid manufacturers, however, who have plants located near the Canadian border line come*

into direct competition with Canadian producers. It is therefore but fair that our Government should place our manufacturers on a fair competitive basis with those located in Canada. To do this, the provisions of the present law should be reenacted and, above all, an adequate "dumping clause" adopted to prevent the dumping of surplus Canadian products into this country.

Paragraph 5 is the general residuary clause for all alkalies, alkaloids, and chemical and medicinal compounds, preparations, mixtures, and salts that do not contain alcohol and are not specially provided for. The duty proposed is 15 per cent ad valorem, a cut from 25 per cent ad valorem. There seems to be no logical reason for this cut. These articles are already on a competitive basis with the foreign market, the imports for 1911 amounting to \$1,647,963.74 and for 1912 \$2,852,070.75, with a revenue for the latter year of \$713,017.69. Furthermore, the question of price of medicinal compounds to the ultimate consumer has little connection with the original cost to manufacture, as it is always the pharmacist who takes the lion's share of the profit. The result of this reduction in duty is therefore simply a loss of revenue to the Government with no benefit to the consuming public.

Had this paragraph been unaltered except for the reduction in duty it would have had the merit of consistency. That, however, has not been done, for a large number of substances which are in this paragraph of the present law have been made the subject of specific enumerations under new paragraphs at widely different rates of duty. This seems to be indefensible. With the exception of a few substances that may for obvious reasons be distinguished, such as the salts of gold, platinum, etc., all of these chemicals and medicinal compounds and salts are made under generally similar conditions and no economic reasons are apparent why there should be disparities in the rates of duty levied upon them.

Now, Mr. President, I desire to call the attention of the Senate to a rather remarkable paragraph—paragraph 14. Here is a new provision for caffeine at \$1 a pound. According to the figures given in the Ways and Means handbook, the ad valorem equivalent of this rate is 50 per cent. It is on the free list now, is it not? I will ask the Senator from Utah [Mr. Smoot].

Mr. SMOOT. No; it falls under the basket clause, at 25 per cent.

Mr. PENROSE. Yes; 25 per cent. Therefore the duty on caffeine has been raised from 25 per cent to 50 per cent.

The chief and almost exclusive use of caffeine is for medicinal purposes, either by itself or in combination with other substances. If it were not especially enumerated it would fall under paragraph 5 of the present House bill, at the rate of 15 per cent, where fall the bulk of the chemical and medicinal compounds and preparations. Yet caffeine, Mr. President, has been taken out and distinguished with the remarkable recognition of being removed from the basket clause and having a duty of 50 per cent imposed upon it—twice the amount of the duty under the present law.

Mr. JOHNSON. Mr. President—

The PRESIDING OFFICER (Mr. WALSH in the chair). Does the Senator from Pennsylvania yield to the Senator from Maine?

Mr. PENROSE. Yes.

Mr. JOHNSON. I understood the Senator to say that the principal use of caffeine was in medicine, as a medicinal compound.

Mr. PENROSE. I understand so. I never used it nor saw it, but I am informed in the glossary that it is used as a headache medicine.

Mr. JOHNSON. Is not its principal use in making Coca Cola and similar drinks?

Mr. PENROSE. It may be. It is chiefly used in medicine, I think, directly.

Mr. SMOOT. It is used in Coca Cola, and Coca Cola takes a great quantity of caffeine; but it is a medicinal compound and is used as medicine all through the world.

Mr. PENROSE. Is there anyone at present in this Chamber, on the other side of the political aisle, who can tell me why caffeine has been thus singled out? Certainly the consumer, if he has a headache, wants immediate relief and wants to get the relief as cheaply as possible. It is understood that this increase of duty will redound very largely to the advantage of certain manufacturers of chemicals.

This paragraph also imposes a duty of 1 cent per pound upon tea sweepings, which are now free, and which are the material from which caffeine is made.

Mr. GALLINGER. Mr. President, if the Senator will yield to me, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Fall	McCumber	Smith, Ariz.
Bacon	Fletcher	Martine, N. J.	Smoot
Borah	Gallinger	Myers	Stephenson
Bradley	Hollis	Norris	Sutherland
Brady	Hughes	Overman	Thomas
Brandeggee	James	Page	Thompson
Bristow	Johnson	Penrose	Thornton
Bryan	Jones	Perkins	Tillman
Cañon	Kenyon	Pittman	Vardaman
Chamberlain	Kern	Polindexter	Walsh
Chilton	La Follette	Root	Warren
Clapp	Lane	Saulsbury	Weeks
Clark, Wyo.	Lea	Shafroth	Williams
Clarke, Ark.	Lewis	Sheppard	
Crawford	Lippitt	Shields	
Dillingham	Lodge	Simmons	

Mr. THORNTON. I wish to announce that my colleague [Mr. RANSDELL] is at this time necessarily absent from the Chamber.

The PRESIDING OFFICER. Sixty-one Senators having answered to their names, it appears that a quorum is present. The Senator from Pennsylvania will proceed.

Mr. PENROSE. Mr. President, in the presence of those Members of the Senate who have done me the honor to have the appearance of listening, I was endeavoring to show a number of the inconsistencies in the chemical schedule. I am glad that the chairman of the Committee on Finance is now within the sound of my voice and also within the scope of my vision, because I come to an interesting paragraph concerning which he may enlighten us.

I had reached paragraph No. 14, where there is an entirely new provision in this chemical schedule. This is a bill supposed to lighten the burdens of the consumer and to reduce taxes. The Senator from Texas [Mr. SHEPPARD] closed his defense of the measure with a peroration reciting how privilege was to disappear and how the burdens of the masses were to be relieved.

But, Mr. President, deeply impressed as I was, I confess I was shocked and surprised when I came across the duty on caffeine, an essential to the consuming public, to the person who has a headache, man or woman, from whatever cause, and to the consumer of Coca Cola, largely manufactured in Atlanta, Ga.

This caffeine is taken from the beneficent provision of the Payne bill, the framers of which always had in mind the suffering and the needy—it is taken from the basket clause, at 25 per cent, and a duty is imposed upon it of \$1 a pound. This, according to the figures given in the Ways and Means Committee handbook, means an ad valorem equivalent at the rate of 50 per cent.

As I have said, the almost exclusive use of caffeine is for medicinal purposes, either by itself or in combination with other substances. If it were specially enumerated, it would fall under paragraph 5 of the pending bill at the rate of 15 per cent, where fall the bulk of the chemical and medicinal compounds and preparations.

Why, I ask the chairman of the committee, has this article, so essential to the ailing, been singled out for this great distinction of an increase of duty of more than 100 per cent?

Mr. SIMMONS. Mr. President, I will state to the Senator—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from North Carolina?

Mr. PENROSE. I am glad to yield to the Senator.

Mr. SIMMONS. I will state to the Senator that that paragraph was very much discussed at a time when the Senator was probably in Pennsylvania or elsewhere. It was discussed by the Senator from Maine [Mr. JOHNSON], who is entirely familiar with it. I have not myself given personal consideration to that particular paragraph. If the Senator wants to have the matter gone over again I have no doubt the Senator from Maine will be very glad to give him the reasons for it. The reasons are in the Record. They were given at the time when they were asked for.

Mr. PENROSE. I was not in the Senate.

Mr. SIMMONS. It is not the Senator's fault. I understood that they were good reasons.

Mr. PENROSE. But I am assured by Senators on the other side of the Chamber that this paragraph was not discussed when the chemical schedule was under consideration. Whether it was discussed or not, I put the question point-blank to the chairman of the committee, Why has this enormous raise been made upon this medicinal article?

Mr. SIMMONS. The Senator has no right to call on me. I was merely stating that we had taken up this paragraph, as I remember, and discussed it heretofore.

Mr. JOHNSON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Maine?

Mr. PENROSE. I do.

Mr. JOHNSON. If there is any one article in the chemical schedule that could bear a rate of duty it is a product which enters most largely into the manufacture of Coca Cola and similar drinks, which are not perhaps as beneficial as many other drinks. Therefore, the committee felt that caffeine could bear this increased rate of duty, an increase, as the Senator has stated, from 25 per cent in the present law to 50 per cent. We have placed a duty for revenue purposes on tea waste of 1 cent a pound. We imposed that duty upon the raw material and we increased the duty on caffeine.

Mr. PENROSE. Does the Senator happen to know what increased revenue will be produced by this remarkable increase?

Mr. JOHNSON. The figures appear in the handbook.

Mr. PENROSE. The Senator had better get a microscope to find them.

Mr. JOHNSON. Of course, I can not tell just what the importations may be, but certainly if there is any one thing in the chemical schedule that can bear a high rate of duty it is caffeine, just as the duty on opium has been increased and for a similar purpose.

It is not true, as the Senator states, and investigation will show it is not true, that its particular use is as a medicinal compound. Its particular use is in making Coca Cola and similar drinks.

Mr. PENROSE. I ask the Senator from Maine what will be the amount of estimated increase of revenue from this duty?

Mr. JOHNSON. That will be entirely conjectural, of course.

Mr. PENROSE. The bill is full of such estimates.

Mr. JOHNSON. Certainly; and every tariff bill that is constructed is made up simply on estimates.

Mr. PENROSE. Is there any conjecture on the part of the committee?

Mr. JOHNSON. I have not any to make as to it, of course. I will simply say that from tea waste, which is now upon the free list, the committee has estimated that there will be a revenue of \$60,000, where there has been nothing collected before.

Mr. SMOOT. Mr. President—

The PRESIDING OFFICER. Will the Senator from Pennsylvania yield to the Senator from Utah?

Mr. PENROSE. Yes.

Mr. SMOOT. I should like to say to the Senator that the rate upon caffeine of a dollar a pound, an increase of 100 per cent from the present duty, is not the only item in this paragraph that needs explaining. If the Senator will notice, impure tea, tea waste, and tea siftings or sweepings have been put in this paragraph at a rate of duty of a cent a pound.

The Senator remembers very well that but a few years ago the Senator from Missouri [Mr. SPOONER] was very much interested in having tea waste and tea siftings and sweepings put upon the free list, and they are under the present law on the free list and should remain there.

Mr. PENROSE. Paragraph 14 also imposes a duty of 1 cent per pound upon tea sweepings. They are now free. They are the material from which caffeine is made.

Is there any member of the committee or any Member of the Democratic majority in this Chamber who can inform me why this duty of 1 cent per pound has been placed upon tea sweepings?

Mr. JOHNSON. Mr. President, I understood the Senator to inquire in regard to the duty upon tea waste. As has been stated, it was for revenue purposes, and from the duty placed on tea waste it is estimated there will be revenue to the amount of \$60,000 collected. We imported in 1912, 5,994,907 pounds of tea waste, and if we import the same amount next year at a cent a pound the revenue collected will be about \$60,000.

Mr. SMOOT. The Senator does not think we will import that amount next year?

Mr. JOHNSON. I see no reason why we should not. That is the product from which caffeine is largely made.

Mr. SMOOT. I understand that, but I also understand that the importations of tea waste are coming in now just as fast as ships can make deliveries of purchases made.

Mr. PENROSE. I have the importations here. Mr. President, this is a remarkable schedule in a bill which announces in flaming oratory the program to the American people that duties are to be reduced, and without rhyme or reason caffeine, the peculiar manufacture of a certain concern in the central part of the United States, is selected for a radical advance in duty. These sweepings, hitherto on the free list, are singled out for

a duty on the ground of revenue production. The Government will indeed be hard put if it has to rely on such revenue producers.

The handbook of the Senate Finance Committee reports importations of tea sweepings for manufacturing purposes during the year 1910 as amounting in quantity to 3,442,074 pounds and in value to \$100,450; in 1912—that is, the fiscal year ending June 30, 1912—the importations were 5,994,907 pounds, valued at \$161,540. A telephone message from Mr. Austin, of the Division of Statistics, states that for the year ending June 30, 1913, the importations were 7,053,550 pounds, valued at \$211,541. These figures affirm the correctness of the statement in respect to the quantity of tea sweepings stored in this country.

Mr. GALLINGER. In six months.

Mr. PENROSE. In six months. They say, Mr. President, 7,053,550 pounds, valued at \$211,541.

There is no reason for these increased importations except the imposition of this duty. I am informed that some one or two concerns in the country will benefit by it and are already storing up one or two millions of pounds of tea sweepings in order to take advantage of the absolutely unjustifiable and unwarranted imposition of 1 cent a pound on tea sweepings.

But, Mr. President, I have had no definite answer to my inquiry on this paragraph. The chairman of the Finance Committee expresses his ignorance of it, and the Senator from Maine, who has it in charge, only defends it on the ground of the very inconsiderable revenue which is likely to come from it. I leave it to stand before the American people on its merits when the facts become known. I will let it stand until this bill comes to be considered in the political campaigns of the future as a striking illustration of the fallacies of the lofty platitudes which marked the declarations of the last campaign.

Paragraph 19 arouses much curiosity and interest. The articles treated therein are all medicinal preparations that exhibit no obvious reason for differentiating them from the other medicinal preparations which are covered by the general terms of paragraph 5 of H. R. 3321 and which are dutiable thereunder at only 15 per cent. This paragraph levies a duty of 25 per cent on certain selected medicinal preparations. It can not fall to be of interest to learn why these particular products are thus favored. No explanation was given by the Ways and Means Committee, and there is no known economic reason that requires a higher rate of duty on these particular preparations than there is on the others. It may be only a coincidence, but it is a fact that one or more of the concerns referred to in connection with the caffeine paragraph are among the largest producers of these preparations in this country. If not singled out this way they would be dutiable at only 15 per cent.

Mr. JOHNSON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Maine?

Mr. PENROSE. Yes.

Mr. JOHNSON. As long as the Senator has alluded to that paragraph, I will say that the committee has had more or less trouble. Complaint was made the other day, and it was attacked because the duties were too low on several articles, and it was claimed by the Members upon the other side of the Chamber that the duty was too low.

Mr. PENROSE. I am not criticizing that.

Mr. JOHNSON. I wish to complete my answer to the Senator's inquiry why these medicinal compounds or preparations, made from other materials which are taxed under this bill, bear a rate of duty of 15 per cent. Complaint has been made and the committee severely criticized and importuned to increase the rate very largely. Chloral hydrate, salol, phenolphthalein, and some of the other articles named in that paragraph, it is claimed, can not be manufactured under a rate of duty of 25 per cent. The present rate on chloral hydrate is something like 265 per cent, and upon many of these other articles under the present law the duty is very high. I do not remember the rates, but I remember in regard to chloral hydrate the duty is now somewhere about 265 per cent. It can not be argued seriously by anybody upon that side of the Chamber that the rate of duty now proposed upon those articles is too high.

Mr. PENROSE. Of course I am not arguing that the rates are too high. There is hardly a rate in this bill that is high enough, unless it be the rate on caffeine; but I do complain of the inconsistency of the bill. I do complain about the vicious policy of taking a large number of articles from the nondutiable list which are the raw material, the chemical manufacture, and putting them on the dutiable list, and at the same time reducing the duty upon the finished chemical product. I do complain of the attempt, almost surreptitiously, it seems to me, to infuse here and there a spotted protection into the chemical schedule.

I have asked for a candid answer to my inquiries, and I have failed to receive it.

Mr. JOHNSON. I hardly think the Senator wishes to characterize in that way what I said. I think I did make him a candid answer and I am surprised that the Senator should, after I have made the statement, so characterize the answer. I am willing to make such an answer as I may be able to make from the information that I am able to give. I am ready now, if there is any answer that I can make to any part of that paragraph, to make it more certain, but I do not think the Senator means to characterize it as lacking in candor upon my part. It may be lacking in information, but so far as candor is concerned, I am certainly surprised that the Senator should make that statement.

Mr. PENROSE. Perhaps I used the wrong term. If the Senator was candid his explanation was not to me at least enlightening and informing.

Mr. JOHNSON. I should very much doubt about my ability to give the Senator any statement which would be enlightening and informing in regard to a tariff bill which he had not himself made according to his own peculiar ideas.

Mr. PENROSE. I simply stated that paragraph 19 arouses much curiosity and interest by reason of the way in which certain preparations have been segregated and jumbled up with different rates of duty, and I threw out the necessary—

Mr. HUGHES. Mr. President—

The PRESIDING OFFICER. Will the Senator from Pennsylvania yield to the Senator from New Jersey?

Mr. PENROSE. In one minute. I threw out the inevitable conclusion that perhaps favorites were being considered and played.

Mr. HUGHES. I simply want to call the Senator's attention to the fact that all those items of the paragraph which he is discussing bear the same rate of duty. One of them reduced was a little under 300 per cent.

Mr. SMOOT. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from Utah?

Mr. PENROSE. Yes.

Mr. SMOOT. The Senator from Pennsylvania, as I understand him, is complaining that the chemical compound paragraph under this bill provides a rate of 15 per cent, but the chemical compounds mentioned in paragraph 19, made in a certain city of the United States, are taken from the 15 per cent paragraph and put in paragraph 19 with a rate of duty of 25 per cent.

Mr. PENROSE. At 25 per cent.

Mr. HUGHES. I do not want to trench upon the Senator's time, but the Senator from Utah certainly knows that these items are composed of materials that in themselves bear a tax, and under any theory of the tariff bill he must admit—

Mr. SMOOT. That is true as to chloral hydrate, but it is not true as to others. It is not true as to acetylsalicylic acid and a number of the other items in that paragraph. They should fall in paragraph 14 if the bill is to be consistent. I do not want the Senator to misunderstand me, because I do not believe that the rate in paragraph 19 is too high or on some of the items high enough.

Mr. HUGHES. That is what I thought.

Mr. SMOOT. Nor does the Senator from Pennsylvania.

Mr. PENROSE. No.

Mr. SMOOT. But he is complaining of the inconsistency found in the two paragraphs.

Mr. HUGHES. I understood the Senator to say that surreptitiously, by some sort of hugger-muggery, certain individuals in the United States engaged in the manufacture of these articles were given a higher rate than they were entitled to.

Mr. PENROSE. I still think so.

Mr. HUGHES. If the Senator did not say that, I do not care to trench upon his time any further.

Mr. PENROSE. I think there are very strong reasons for placing it there. I have a brief here of John F. Queeny, president of the Monsanto Chemical Works, of St. Louis, Mo. This gentleman, I am informed, has stored up over a million pounds of tea sweepings since this increased duty was contemplated. I do not know whether it is true or not. It is a well-founded report.

Mr. HUGHES. I will say to the Senator, if he will permit me, though I will not interrupt him if he does not care to have me do so, that the gentleman he refers to has given it as his opinion that he will be absolutely unable to manufacture the product referred to under the present rates of duty. We did not agree with him. We believe that we have placed him upon the same basis and on no other basis than that occupied by

every other chemical manufacturer in the United States. I will say to the Senator again I think he is mistaken when he says that all these commodities are not composed of other articles which bear a tax.

Mr. SMOOT. My information I obtained from the appraiser of New York. I do not want to take the time of the Senator from Pennsylvania, but I will show the Senator, if he desires, the letter I have received from the examiner at the port of New York. I asked him specifically about each one of the items, and the rate of duty under the present law, and he tells me that there are certain items in the paragraph that now carry a duty of 25 per cent and there are other items that carry a duty of 55 cents a pound. I do not believe that your expert will deny it.

Mr. PENROSE. Mr. President, the Senator from New Jersey has exhibited a strange sympathy for the pleas of Mr. Queeny and his associates, because they expressed the thought that they could not get along under a reduction of duty. He exhibited a great callousness of feeling, however, when hundreds of other gentlemen from other sections of the country appeared before his committee and stated that their industry would be ruined unless they were aided by an adequate protective duty.

I am not criticizing these rates. I am glad to see this gentleman protected. I notice in his brief which I have here that he asks for the increase of duty in the articles named in paragraph 19, and I am glad that he has got it; but I do protest against favoritism to St. Louis and slaughter for Philadelphia and Boston.

Mr. HUGHES. Mr. President—

The PRESIDING OFFICER. Does the Senator from Pennsylvania yield to the Senator from New Jersey?

Mr. PENROSE. Yes.

Mr. HUGHES. I will say to the Senator there is not a single rate in that paragraph that Mr. Queeny asked for.

Mr. PENROSE. There may not be what he asked for.

Mr. HUGHES. I will say further, if the Senator will permit me, that the main proposition Mr. Queeny made was that he could not possibly manufacture chloral hydrate at less than 100 per cent equivalent ad valorem, and the view of the committee was that if that was true he was not engaged in a legitimate industry.

Mr. PENROSE. Mr. President, that is simply beating around the bush, in my opinion. Mr. Queeny, it is true, did not get the rate he asked for, but he got a rate extraordinarily larger than that of anybody else manufacturing kindred products. He was able to get segregated—

Mr. JOHNSON. Will the Senator allow me?

Mr. PENROSE. I will yield in a minute. He was able to get from the committee a segregation in a separate paragraph, with a duty raised from 15 per cent ad valorem to 25 per cent ad valorem on certain of the articles in which he was interested, while when people from Philadelphia and from Boston came with their tale of woe they were received with neglect and they addressed their pleas to deaf ears. I yield to the Senator from Maine.

Mr. JOHNSON. The Senator does not wish to make any statement that will not be borne out entirely by the schedule, I am sure. He says that this is a higher rate of duty than we imposed upon the other articles in the schedule.

Mr. PENROSE. Oh, no.

Mr. JOHNSON. That is what I understood the Senator to say.

Mr. PENROSE. No.

Mr. JOHNSON. On any similar compound. There are in this schedule higher rates of duty than 15 per cent and some higher than 25 per cent. We put on oxalic acid a rate of duty of 1½ cents a pound, reducing it from 2 cents a pound, and the equivalent ad valorem is 30 per cent.

With respect to salicylic acid and compounds of barium the rate is much larger than 25 per cent. If the Senator will look through the schedule, he will find that to be true. Take celluloid. The duty is higher than 25 per cent.

Mr. PENROSE. I know it is.

Mr. JOHNSON. If the Senator makes the statement that here we have made a paragraph and given a higher rate of duty than in other paragraphs and sections, it is not borne out by an examination of the schedule.

Mr. SMOOT. I understood the Senator from Pennsylvania to say not that there was not a higher rate of duty in the schedule, but that it was a higher rate of duty than chemical compounds provided for in paragraph 5.

Mr. JOHNSON. Barium dioxide is a chemical compound and has a rate of duty of 25 per cent.

Mr. SMOOT. If the Senator will just wait a moment, I will conclude what I have to say. Celluloid has always been

in a paragraph by itself specifically provided for and never fell in the basket clause, nor has it ever fallen in the chemical-compound paragraph.

All that the Senator from Pennsylvania has said is that instead of all the items in paragraph 19, which are all chemical compounds, carrying a rate of duty of 15 per cent, they have been specifically mentioned and a rate of 25 per cent is given them.

Mr. JOHNSON. In reply to that, because the Senator would have it understood that this is the only instance where they are taken out and given a higher rate of duty, I refer to the barium paragraph, No. 11, where chlorate of barium is given a rate of 25 per cent.

Mr. SMOOT. That is true as to those same items specifically.

Mr. JOHNSON. That is a medicinal compound as well as the other.

Mr. SMOOT. Those specific items under the present law are specifically provided for.

Mr. JOHNSON. The Senator's contention that of the chemical compounds in the chemical schedule some fall under the basket clause and some have been segregated and given rates of duty is not true of paragraph 19 alone. Other paragraphs bear a higher rate of duty than 15 per cent, as will appear from an inspection of the schedule.

Mr. PENROSE. Mr. President, the Senator from Maine, for whom I entertain a very high personal esteem, can not, however, represent me as making a statement which I have not made. I have made a statement clear and logical, and it can not be controverted. I did not say that this duty was the highest in the bill. I said that certain articles had been segregated into a separate paragraph from a paragraph where they had been and to which they properly belong with cognate products, and that the result was to favor certain manufacturers and certain importers. The Senator from New Jersey practically admitted this, because he said that representations were made by Queeny and others that they could not compete without the increased duty, and they appealed to the committee.

Mr. JOHNSON. Mr. President, I do not think the Senator from Pennsylvania wishes to misrepresent the Senator from New Jersey [Mr. HUGHES], who is not present in the Chamber at this time. I did not understand that Senator to say *et* to intimate that there had been any increase in favor of this manufacturer more than any other or that we had yielded to any statements or declarations he had made. Most certainly we did not do so in regard to chloral hydrate. As to all these compounds the Senator has his brief and knows he claimed a much higher rate of duty. As the Senator from New Jersey stated, he wanted a rate of duty of 100 per cent upon chloral hydrate. We gave him 25 per cent. Certainly the Senator can not regard that as any manifestation of favoritism.

While I am on my feet I will say in regard to the segregation of medicinal compounds it appears all through the schedule, even in the magnesia paragraph. Carbonated magnesia bears an equivalent ad valorem duty of 25½ per cent under this bill. That is a medicinal compound. Calcined magnesia bears an equivalent ad valorem duty of 22.7 per cent; and even sulphate of magnesia or Epsom salts 25 per cent, the same rate of duty that is given in this paragraph.

Mr. PENROSE. They have always been provided for in that paragraph.

Mr. JOHNSON. They are medicinal compounds.

Mr. PENROSE. Mr. President, I shall not continue this fruitless discussion any longer; it is unprofitable. When the historian comes to write the story of this tariff bill in the cold light of reason and through the perspective of the years to come, he will declare—because there can be no denial of it—that these articles were taken from the paragraph without any logical reason. There are in the United States only one or two concerns who make these chemical products.

Paragraph 19 arouses much curiosity and interest. The articles treated therein are all medicinal preparations that exhibit no obvious reason for differentiating them from the other medicinal preparations which are covered by the general terms of paragraph 5 of H. R. 3321 and which are dutiable thereunder at only 15 per cent. This paragraph levies a duty of 25 per cent on certain selected medicinal preparations. It can not fail to be of interest to learn why these particular products are thus favored. No explanation was given by the Ways and Means Committee and there is no known economic reason that requires a higher rate of duty on these particular preparations than there is on the others. It may be only a coincidence, but it is a fact that one or more of the concerns referred to in connection with the caffeine paragraph are among the largest producers of these preparations in this country. If not singled out this way they would be dutiable at only 15 per cent. They do

not as imported contain alcohol. The extent of the favor shown by this paragraph is not limited merely to the difference between 15 per cent and 25 per cent duty, because it is a matter of fact that some of the substances from which these preparations are made—the raw materials, so to speak—are granted a much lower rate of duty by H. R. 3321 than they have under the present law. For example, the duty on salicylic acid, the bulk of which is used in the manufacture of salol (p. 163, Report on Schedule A, 62d Cong., 2d sess.), is reduced from the present rate of 5 cents per pound to 2½ cents per pound. No separate figures of imports of the substances have been kept, and so there is no opportunity to learn from that source why these discriminations are made. If 25 per cent is the correct duty for these products, it is the correct duty for all other chemical and medicinal preparations, whether specially provided for or not.

Crude camphor, which has always been free, is made dutiable in paragraph 37 at 1 cent per pound, while the refined camphor, which is made therefrom, is reduced from 6 cents per pound to 5 cents per pound.

This is but another example of the indefensible economic theory of placing duty on the raw material and reducing the rate of the finished product.

The duty of 1 cent per pound on crude camphor is equivalent to 1½ cents per pound in the cost of the refined, leaving a net duty on the refined of only 3½ cents per pound, or equivalent to about 11½ per centum ad valorem.

Now, let us see where we come out under this extraordinary method of economic policy and fiscal legislation.

The Tokyo Economist reports that the total quantity of crude camphor delivered during the present fiscal year to the camphor refiners in Japan by the monopoly bureau and by the Formosan authorities, in equal quantities, amounts to 2,400,000 kin. Compared with the previous year, the quantity to be delivered by the Formosan authorities shows an increase of 100,000 kin and the quantity to be delivered by the monopoly bureau an increase of 140,000 kin. The quantity delivered to each refinery is as follows:

I shall ask to have the list of the refineries inserted as a part of my remarks. There are only five or six of them.

The PRESIDING OFFICER. In the absence of objection, that will be done.

The matter referred to is as follows:

Refiner.	Quantity.	Increase.
	Kin.	Kin.
Suzuki.....	1,200,000	100,000
Osaka Camphor Co.....	470,000	400
Kobe Camphor Co.....	300,000	34,300
Fujisawa.....	260,000	15,000
Messrs. Lucas & Co.....	170,000	90,300
Total.....	2,400,000	240,000

Mr. PENROSE. The Tokyo Economist continues:

The quantity delivered to each refiner having increased this year, they have to seek a new field for sales, and are keen in competition for taking contracts, with the result that slab camphor, which has been ruling at over 70 sen per pound, has declined to 67 sen. When the proposed amendment of the United States customs is passed by Congress the duty on refined camphor will be reduced from 6 to 5 cents per pound and crude camphor (now admitted duty free) will be subjected to a duty of 1 cent per pound. Thus the proposed amendment of the tariff will seriously affect the camphor-refining industry in America and benefit Japanese refiners accordingly. In these circumstances the latter are contemplating opening up new fields for business in America. It is therefore believed that in view of the good market for camphor abroad last year the increased quantity to be delivered this year will not affect the market, but that, on the contrary, a further development of the Japanese camphor market abroad will be seen.

Mr. President, upon what argument the raw material of this product receives a duty and is taken from the free list and the duty upon the finished product is so reduced as to possibly, and most likely, place the American manufacturer at the mercy of the Japanese manufacturer is to me one of those mysteries which the dark secrecy of the Democratic caucus has failed to give an explanation of.

Now, let us take paragraph 44. Menthol is made dutiable at 50 cents per pound. This is another instance where a specific rate of duty has been fixed seemingly without a proper consideration of the market value of the article or of the propriety of preserving some symmetry between the rates of duty on productions of the same kind. Menthol is the name given to peppermint crystals made by distilling the peppermint plant, collecting the oil from the distillate, and then chilling or freezing the oil. Under the present law menthol is not specially provided for, and it is classified for duty as a medicinal preparation, at 25 per cent. The ad valorem equivalent of the new rate

is given in the Ways and Means Handbook as 16.67 per cent, based upon the unit value of \$3 per pound. It is not believed, however, that this figure can be accepted as correct for the reason that the price of menthol fluctuates greatly in consequence of the supply failing to keep pace with the demand, which is increasing greatly under the new uses being found for these crystals. Some weeks ago menthol was quoted in New York at \$10.25 per pound. Why should this article be singled out for a specific duty, especially in view of its fluctuating value?

Mr. JOHNSON. Mr. President, the Senator has already given the reason. It is because of its fluctuating value that the specific duty is placed upon it.

Mr. PENROSE. Well, Mr. President, that would be a reason from a Republican point of view, but it is not a consistent argument from the Democratic point of view. The report of the majority of the House Ways and Means Committee on this bill contains a most labored defense of ad valorem duties. What I complain of, Mr. President, in this bill is not that the bill is right occasionally, but that it is inconsistent. I did not make a condemnation of imposing specific duties on this article, but I addressed to the majority in this Chamber the query, Why has this article been singled out for a specific duty when other articles equally fluctuating have received ad valorem duties? I do not complain in the same way or criticize 25 per cent ad valorem on the medicinal compounds already referred to, but I do criticize this favoritism in taking some of them out from the paragraph where they were at only 15 per cent ad valorem. My inquiry was, Why did the Democracy abandon their favorite doctrine of ad valorem duties and go to a specific proposition?

Paragraph 47 transfers to the dutiable list a large number of essential oils which have hitherto been free. This has been done apparently upon the presumption that they are all articles of luxury and should be taxed. As a matter of fact, however, a great many of these oils are used in cheap soaps for the purpose of neutralizing the disagreeable odor of such soaps. What is the necessity for enumerating all these oils by their individual names since all are dutiable at the same rate, 20 per cent? There seems to be no more reason for mentioning these particular oils than there is for mentioning the many other distilled and essential oils that are covered by the "not specially provided for" phrase in this paragraph.

Paragraph 64 furnishes another example of the error so common in H. R. 3321 of placing a lower rate of duty on a finished article than is imposed upon the materials which go to make up the finished article. How such a policy as this can be justified from any standpoint it is impossible to say. In this paragraph, 64, for example, enamel paints are made dutiable at 15 per cent, while paragraph 59 imposes upon certain spirit varnishes a duty which is equivalent to over 54 per cent, yet enamel paints are enamel paints because they are made with varnish, although it is true cheaper substitutes are now being used. Again, paints, colors, and pigments generally are made dutiable at 15 per cent, yet many of these dry colors are made from coal-tar colors or dyes, upon which paragraph 21 levies a duty of 30 per cent. I call attention to the testimony of Arthur S. Somers, a Woodrow Wilson presidential elector from New York State, Tariff Hearings, Volume I, page 330.

Paragraph 66 seems open to severe criticism, for it selects the salts and other compounds and mixtures of certain metals and admits them to duty at a rate of 10 per cent as against the general rate of 15 per cent in paragraph 5, and the rate in paragraph 146 of 25 per cent on salts of antimony. It is possible that the great value of the material as compared with the labor cost in the case of the salts of gold, platinum, rhodium, silver, and even tin may justify levying a low rate on them, but there certainly seems no reason for singling bismuth salts out for such exceptional treatment. The most important bismuth salts are bismuth subnitrate and bismuth subgallate. Their chemical constitution and their overwhelming use bring them properly within the scope of paragraph 5 of H. R. 3321. The subnitrate is used chiefly internally in gastric affections and to a limited extent externally for dressing wounds and in lotions and in face powders. The subgallate is chiefly used externally for dressing wounds and for diarrhea. There is no valid reason why these salts should be placed in paragraphs with other entirely unrelated products. There is no association in quality, value, production, or use between the salts of bismuth on the one hand and the salts of gold, platinum, rhodium, and silver on the other. The salts of these precious metals range at a value of from 50 to 1,000 times the value of bismuth; and all the substances mentioned in the paragraph, with the exception of bismuth, are overwhelmingly used in industry and in the arts. The so-called "gold cures" have

nothing to do with gold. Silver nitrate is used as a caustic, but its principal use is technical.

Now, let us take sulphide of soda, which is covered by paragraph 68. While these articles to a person not familiar with the question do not mean very much, it must be borne in mind that every one of them is of most general use, and in the great majority of cases essential to the arts, to agriculture, to medicine, and to industry in general. Sulphide of soda is a very important article of commerce and imported in large quantities, comes in two grades, the crude and the concentrated, the latter containing twice as much sulphide of soda content as the former. Recognizing this fact, the present law imposes upon the concentrated sulphide of soda a duty of three-fourths of a cent per pound, while upon the crude sulphide of soda the duty is only three-eighths of a cent per pound. In view of the passion for ad valorem duties which seems to have swept the members of the majority, we should naturally expect to find an ad valorem rate imposed upon this product, for from their viewpoint it must seem an ideal subject for an ad valorem rate. We find, however, on examination of the bill, no such thing. We find merely a provision for sulphide of soda at a rate of one-fourth of a cent per pound. This contradicts all their theories, and there must be a bad effect on the revenue, for it is obvious that with the same rate of duty on crude sulphide of soda and concentrated sulphide of soda only the latter will be imported.

The cyanide situation created by the bill reported by the Finance Committee of the Senate is similar to that existing in 1897, when the Dingley tariff was under discussion.

At that time only cyanide of potassium was known, and the duty of 25 per cent was reduced by the Dingley tariff to 12½ per cent.

The Hon. Nelson Dingley, jr., in his speech introducing the conference report, stated:

The duty on cyanide of potassium, which was placed by the Senate at 12½ per cent, has been unwillingly left at that point by the House conferees. The House conferees believed that this article should have been left as it was in the House bill, with a duty which we regarded as protective; but the insistence of the Senate on this amendment has finally obliged the House conferees to surrender on that point and to accept simply the 12½ per cent provided by the Senate amendment.

Mr. President, this incident, which might seem unimportant to the average person listening to my statement, is full of the deepest significance. I was in the Senate when the Dingley bill became a law, and I recall the reduction of that duty from 25 per cent, which was carried in the bill when it came over to the Senate in 1897, to 12½ per cent, given it by the Senate Finance Committee. The reduction was made at the urgent solicitation of the then Senator Jones, of Nevada, and other western Senators representing States having gold and silver mines. What was the result? In consequence of the reduction of the duty rate from 25 per cent to 12½ per cent, the manufacture of cyanide of potassium was discontinued in this country. Under the protection of 25 per cent duty, however, the manufacture of cyanide of sodium, then not known commercially, was taken up in this country and has flourished and developed to quite a large industry, over 10,000,000 pounds of cyanide of sodium being now manufactured in the United States yearly.

If cyanide of sodium should be put on the free list, in all probability its manufacture would also be abandoned in this country, and the country be deprived of a large consumption of charcoal, caustic soda, and ammonia, these articles being the raw materials used in the manufacture of cyanide of sodium.

The direct effect of the manufacture of cyanide of sodium in this country, and on the other side the abandonment of the manufacture of cyanide of potassium, is that to-day cyanide of potassium is sold at 1 cent higher than cyanide of sodium, although cyanide of potassium pays at present only 12½ per cent duty, while cyanide of sodium pays 25 per cent.

The cyanide of potassium is all imported, and the cyanide of sodium is all manufactured here, the price of the former being 1 cent higher than the cyanide of sodium.

Mr. President, this incident of cyanide of potassium has often been referred to by the historian of tariff debates to show how little the American consumer has benefited by the reduction of a duty which results in the destruction of an industry. The American industry of cyanide of potassium having been destroyed by the reduction made in the Dingley law, the American consumer, as I have said, had to import all of this article from Germany, with the consequent result that he was compelled to pay 1 cent higher for cyanide of potassium than he was for cyanide of sodium, all of which was made in the United States, and which was paying a duty of 25 per cent ad valorem. Had the duty been kept, as Mr. Dingley wanted it, upon cyanide of potassium, and had not the Senate committee been compelled to yield to the demands of a small group of western Senators, most of them at that time on the Republican side of this Cham-

ber, the American industry would doubtless be flourishing to-day and the American consumer would not be at the mercy of the German syndicate and the German trust.

Now, I am going to close this very inadequate analysis of some of the inconsistencies of Schedule A by calling attention to the cyanide of potassium situation in the present Congress, because it offers an illustration of what has happened and what will happen. No better illustration is furnished than by the situation involved in the cyanide of potassium and the cyanide of sodium duties.

On the subject of cyanide I have some copies of a correspondence which illustrates how history repeats itself. The situation to-day regarding cyanide of sodium in this body is very much the same as it was 16 years ago in connection with cyanide of potassium. The correspondence consists of letters written by and to certain Senators of the majority. The first in order is a copy of a letter (A) addressed to Hon. Charles F. Johnson, chairman of Subcommittee No. 3 of the Finance Committee, in which certain statements appear to the effect that the principal concern in this country which manufactures cyanide of sodium is merely the selling agent of a large German house, and that the manufacturing plant at Perth Amboy, N. J., is maintained only as an excuse for a protective tariff. This letter was signed by the junior Senator from Nevada [Mr. PITTMAN], the two Senators from Montana [Mr. WALSH and Mr. MYERS], the senior Senator from Oregon [Mr. CHAMBERLAIN], and the junior Senator from Arizona [Mr. ASHURST]. Even the presence of these distinguished names did not inspire implicit confidence in the junior Senator from Oregon [Mr. LANE], for he attached to the communication the following:

If the statements above are true, I cheerfully indorse the proposition.

HARRY LANE,
New Democratic Senator from Oregon.

The junior Senator from Oregon may now just as cheerfully withdraw his indorsement, for the "statements above" are not true and their incorrectness is clearly demonstrated in the next letter (B) of the series, which I shall read in a few moments. This letter was apparently provoked by the communication I just referred to, and it was sent to the junior Senator from Nevada by the Roessler & Hasslacher Chemical Co., of New York, who are American manufacturers of sodium cyanide. The next item in the correspondence is a copy of a letter (C) from the junior Senator from Nevada acknowledging the receipt of the letter just referred to and promising that he would give the matter careful consideration. What he did I do not know. The correspondence closes with a copy of a letter (D) to the junior Senator from Nevada from the Roessler & Hasslacher Chemical Co., of New York, in which they repeat much of what they said before, and to my mind make a very effective argument for the retention of the duty on cyanide of sodium.

Now, without presuming to criticize my Democratic colleagues from the West in using their influence as Senators to obtain this favor for those of their constituents who own gold and silver mines, I can not refrain from saying that it is indeed a hardship to crush out a domestic manufacturing industry so as to save perchance a little money to the millionaire magnates owning gold and silver properties. It has not hitherto been a matter of public knowledge that these fortunate owners of gold and silver mines have felt the burden of the duty on cyanide of sodium. It is preposterous to put a duty on bananas, for example, and relieve cyanide of sodium from all duty. Bananas are a food product used by millions of people—cyanide of sodium is used by only the millionaire owners of gold and silver mines.

I shall not detain the Senate much longer. The more I examine this bill the more inconsistencies and unjustifiable discriminations I find in it, and the more impressed I am with the hypocritical pretense that it is an honest, well-considered measure for a reduction of the tariff duties without fear or favor. Why, Mr. President, it fairly bristles with inequalities and discriminations, some of which are obviously due to lack of knowledge and proper consideration, but others of which must be due to other influences.

I do not for one moment mean to say or to intimate that any Senator has been actuated by other than the best of motives. My theory is that the subcommittee men were imposed on by interested parties who acted through people who had the confidence of the committeemen. Otherwise how do you explain the discriminations on chemical and medicinal salts, compounds, and preparations? Bismuth salts are in paragraph 66 at only 10 per cent, while antimony salts and compounds are in paragraph 146 at 25 per cent, lead compounds in paragraph 58 at 20 per cent, and the rate in the basket clause for salts and compounds not specially provided for is 15 per cent. Why is

this? Chloral hydrate, salol, acetanilid, antipyrine, aspirin, etc., are in paragraph 19 at 25 per cent; menthol is in paragraph 44 at a specific rate of 50 cents per pound, the equivalent ad valorem has ranged within the past few years from 5 per cent to 26 per cent, while the rate in the basket clause for medicinal preparations is 15 per cent. Why is this?

The chemical industry is one that is peculiarly liable to be made the victim of dumping. The reason for this is that the enormous development of the chemical industry in Germany results in a production which is vastly greater than is necessary to supply the demands of the German consumption. As a necessary consequence an outlet for the surplus product must be found in foreign countries, and it is needless to say that this country of ours is the very best country on the face of the earth for that purpose. German manufacturers are permitted, indeed encouraged, to sell in foreign countries at lower prices than those which they obtain in the home market.

This sacrifice, the Germans believe, is justified by the enormous benefits they receive through the expansion of their foreign trade. They figure that the increased volume of business and the increased number of men employed more than balances the tax which they impose upon themselves by paying more for their chemicals at home than the chemicals are sold for abroad. Therefore, the American chemical industry is not only threatened with the ordinary and usual incidents of a heavy reduction in tariff duties, but it is also threatened with absolute destruction in many lines because of the dumping practice.

Mr. President, I had intended to read the correspondence to which I have referred, but I have detained the Senate longer than I had expected. I will therefore ask to have it inserted as a part of my remarks.

THE PRESIDING OFFICER. In the absence of objection, that will be done.

The matter referred to is as follows:

A.

[From Tariff Schedules.]

Briefs and statements filed with the Committee on Finance, United States Senate—Schedule A—Hon. Key Pittman, United States Senate, and others.

UNITED STATES SENATE,
Washington, D. C., May 23, 1913.

HON. CHARLES F. JOHNSON,
Chairman of Subcommittee No. 3 of the Finance Committee,
United States Senate.

DEAR SIR: We desire to call your attention to the fact that in the chemical schedule (A) a duty of 1½ cents per pound is imposed upon potassium cyanide, sodium cyanide, and other combinations of cyanide. Cyanide and other combinations of cyanide are universally used throughout the mining States in the reduction of ores; in fact, it is almost an essential to economical milling of nearly all the gold and silver ores of the West, and no satisfactory substitute is known. Practically all combinations of cyanide consumed in this country are manufactured in Germany, and the sale of same in the United States is controlled absolutely by Roessler & Hasslacher Chemical Co., of New York City. This firm maintains a small plant for the manufacture of cyanide at Perth Amboy, N. J., but this plant is capable of supplying only a small percentage of the cyanide used, and is only maintained as an excuse for a protective tariff. This protective tariff enables the selling agent in the United States to obtain 3 cents a pound more for the product in this country than they obtain for the same product in Mexico. In other words, the same sales agents sell the chemical compounds of cyanide in Mexico for 14 cents a pound and in the United States for 17 cents a pound.

The manufacture and sale of cyanide, at the present time, is an absolute monopoly, and we believe that under our platform it should be put upon the free list.

As this is a matter of great importance to the mining interest throughout the Western States, we respectfully urge upon you that you give this matter early attention, and, if possible, grant this small concession to the Western States.

Respectfully submitted,

KEY PITTMAN,
Democratic Senator from Nevada.
T. J. WALSH,
Democratic Senator from Montana.
H. L. MYERS,
Democratic Senator from Montana.
G. E. CHAMBERLAIN,
Democratic Senator from Oregon.
HENRY F. ASHURST,
Democratic Senator from Arizona.

If the statements above are true, I cheerfully indorse the proposition.

HARRY LANE,
New Democratic Senator from Oregon.

B.

NEW YORK, June 25, 1913.

HON. KEY PITTMAN,
United States Senate, Washington, D. C.

DEAR SIR: Your letter of May 23 addressed to Hon. Charles F. Johnson has only now come to our knowledge, and as our company is mentioned in this letter and materially affected by its contents, we respectfully beg to submit the following:

The statements contained in your letter were evidently based on a misapprehension, without knowledge of the true facts.

You erred in the statement that "all combinations of cyanide consumed in this country are manufactured in Germany." By far the largest quantity of cyanide consumed in the United States is manufactured in the United States and is not imported.

It is true that the cyanide of potassium, with the exception of comparatively small quantities which are manufactured in New Bedford, Mass., St. Louis, Mo., and Philadelphia, Pa., has been imported from Germany and England since the enactment of the Dingley Tariff Act in 1897, which reduced the duty on cyanide of potassium from 25 to 12½ per cent. However, cyanide of potassium is now used only to a limited extent; the large consumption of cyanide is in the form of cyanide of sodium.

The cyanide of sodium consumed in this country is almost all manufactured in the United States in our factory in Perth Amboy, N. J. Our sales of the different grades manufactured amounted during 1912 to 12,000,000 pounds, the different grades being calculated on the basis of the equivalent of 100 per cent. Therefore, your statement that we maintain only "a small plant for the manufacture of cyanide at Perth Amboy, N. J." is also erroneous.

Permit us further to take exception to your statement that our manufacture of cyanide "is maintained as an excuse for a protective tariff." The protective tariff has enabled us to take up the manufacture in this country in competition to European manufacturers; without such protection we never would have been able to establish such an industry in this country, which, in the meantime, from a small beginning has developed to the present large extent. You can form an idea of what this industry means when we tell you that in the last 10 years we have used:

Caustic soda	-----pounds	54,750,357
Charcoal	-----do	29,838,617
Ammonia	-----do	83,003,696
Coal	-----do	187,196,184
K. W. horsepower	-----kilowatt	196,825,125

and have paid in wages \$1,285,846, thereby considerably adding the development of power stations, the electrolytic manufacture of caustic, the large industry of wood distillation producing the charcoal; furthermore, assisting materially the utilization of the by-products of gas works and coke ovens which furnish the ammonia.

Add to the above amount of wages the great amount of wages paid for the manufacture of the consumed caustic, charcoal, ammonia, coal, and power; and you can form an idea how much the country at large is benefited by the domestic manufacture of cyanide.

Permit us to say a few words about your statement that "the manufacture and sale of cyanide at the present time is an absolute monopoly."

We have nothing to do with the sale of the English cyanide of potassium, nor with the small production in New Bedford, St. Louis, and Philadelphia. If we hold a paramount position in the cyanide of sodium business in the United States, we do this not by artificial and unlawful means, but by the superiority of our patented processes. We have acquired these processes and developed them in order to adapt them to the conditions prevailing in this country.

With regard to what you say about Mexico we call attention to the fact that the cyanide sold in Mexico is of European make and not of United States make.

While the present duty of 25 per cent for cyanide of sodium was at first necessary to establish the industry in this country, we admit and have so expressed in our briefs that the duty can now be reduced, but please do not kill our industry by putting cyanide on the free list.

The amount paid for labor and similar manufacturing conditions would be:

In Europe only about	-----	\$430,000
As against ours of	-----	1,285,846

Machinery, etc., is here also more costly than in Europe. If the cyanide industry is to be retained in this country Congress should to some extent compensate for such differences by a duty.

Do not think either that your constituents, our western customers and friends, are altogether benefited if the manufacture of cyanide is wiped out in this country. It is an inconvenient and dangerous thing to be dependent on importation only for such a necessary commodity.

For all the above considerations we pray use your influence that cyanide, which in consequence of your letter, was placed on the free list, is again restored to the dutiable list, thereby benefiting your constituents as well as the country at large.

Respectfully, yours,

THE ROESSLER & HASSLACHER CHEMICAL CO.,
JACOB HASSLACHER, President.

P. S.—We have addressed in similar manner all the honorable Senators who with you have signed the letter in question, and have also sent copy of such letter to some other Members of Congress.

C.

UNITED STATES SENATE,
Committee on Territories, July 2, 1913.

ROESSLER & HASSLACHER CHEMICAL CO.,
100 William Street, New York City.

GENTLEMEN: I acknowledge receipt of your letter of June 25 relative to cyanide compounds. I certainly had no intention of making any misstatement in regard to the production or sale of cyanide. I had in mind of course cyanide of potassium while testifying, as this is a product that is largely used by the milling companies in my section of the country. I still contend that you have shown no reasonable excuse why cyanide of potassium should be sold at 14 cents in Mexico and 17 cents in the United States. The facts that I stated to the committee were based upon statements made to me by the users of cyanide in the State of Nevada. I will give this matter, however, careful consideration.

Very truly, yours,

D.

KEY PITTMAN.

JULY 7, 1913.

HON. KEY PITTMAN,
Chairman Committee on Territories,
United States Senate, Washington, D. C.

DEAR SIR: Your favor of July 2 reached us, on account of the holiday, only to-day, and in reply we beg to state that the large consumption in your State is not for cyanide of potassium but for cyanide of sodium. We have sold to the mines in Nevada during the last three years 8,257,394 pounds of cyanide of sodium, manufactured in this country, while, during the same period, only 190,000 pounds of imported cyanide of potassium were sold in Nevada.

In Mexico there is at present no consumption of cyanide of potassium, the mines in Mexico using only cyanide of sodium.

The lowest price for cyanide of sodium in Mexico is not 14 cents per pound, but 15 cents per pound.

Practically all the cyanide consumed in Mexico is manufactured in Europe, where they have almost everything much cheaper than we have at our disposal here in the United States, particularly labor, being in Europe only one-third of the amount we have to pay here, as stated in our letter of June 25.

We may further add that in 1901, the year before we took up the manufacture of cyanide of sodium, the price for cyanide was 24 cents per pound.

In 1902, when we took up the manufacture of cyanide, the price for cyanide, in competition with European manufacture, was reduced to 22 cents per pound, and from that time on, in consequence of our gradually improving our process and increasing our production, the price went down to 17 cents per pound.

During the same period the amount of our production increased from 526,463 pounds in 1902 to 12,221,569 pounds in 1912, and we can promise already to-day a reduction in the price to at least 16 cents per pound for next year if we can continue to manufacture under moderate protection on a large scale.

It is certainly in the interest of your constituents to have the American manufacturers of cyanide supported by a moderate duty, setting aside that the country at large is benefited immensely by the large use of raw materials and the large amount of money paid for wages. We have given these figures in our letter of June 25, and we repeat them here as follows:

We have used in the manufacture of cyanide in the last 10 years—

Caustic soda	-----pounds-----	54,750,357
Charcoal	-----do-----	29,838,517
Ammonia	-----do-----	83,003,696
Coal	-----do-----	187,196,184
Horsepower	-----kilowatt-----	198,825,125

all of the above being of American manufacture, requiring large amounts of American wages.

We inclose herewith six copies of the present letter, with the respectful request to kindly hand one copy to Hon. Senator F. M. SIMMONS, chairman of the Committee on Finance, and to distribute the other copies at your discretion.

Again appealing to you and your honorable colleagues to be content with a reduction in the duty on the cyanides and not to entirely abolish the same, thereby acting in the best interest of your constituents as well as for the country at large, we remain,

Very truly, yours,

THE ROESSLER & HASSLACHER CHEMICAL CO.

Mr. BRISTOW. Mr. President, for some days I have felt that it was due to myself to make a statement in regard to the Mexican situation, and I desire to do so at this time.

On August 21, when the resolution relating to Mexico was before the Senate, among other things, I said:

So far as sustaining the Government of our country in its effort to remedy the chaos that exists there, I think we are all agreed. We may hold different opinions as to the proper method that ought to be adopted, but that is only natural. While efforts are being made by the President to solve these problems and to protect our people in their rights I think we ought to stand together.

I believed it the duty of Congress to indicate to Mr. Huerta and the Mexican people that it would stand by the President in the exercise of his constitutional rights, and I felt further that such a declaration was necessary in order to strengthen the hands of Mr. Lind in his efforts to carry out the instructions given him by the President.

However, I do not want the position which I took at that time to be regarded as a complete concurrence in the policy which the administration has subsequently announced.

Felix Diaz organized a revolt against the Mexican Government under Madero. President Madero sent the Federal army, commanded by Gen. Huerta, to suppress the rebellion; but Huerta, instead of fighting Diaz's army, was in league with him, and at an opportune time Madero was seized, imprisoned, and afterwards murdered, and Huerta was declared Provisional President.

The partisan followers of Madero immediately after his assassination, under the leadership of Gen. Carranza, of the State of Coahuila, organized an army to take from Huerta the authority he had seized; and since that time they have maintained a military force in the field which, up to this date, Huerta has been unable to defeat.

President Wilson has declined to recognize Huerta as the rightful President of the Mexican people, presumably upon the ground that he acquired the position he now holds as the result of assassination and treachery, and that our Government can not recognize him without in a measure concurring in the methods of his usurpation. From the beginning I have believed that this position taken by the President was right.

From the time Huerta seized the Government he has been permitted to purchase in the United States arms and munitions of war as though he were rightfully the President of Mexico, while Carranza, at the head of the followers of Madero, who term themselves Constitutionalists, has not been permitted to purchase arms with which to carry on his war against the usurper.

The situation, therefore, is that our country, by virtue of its attitude toward Huerta, has denounced him as a usurper unworthy of recognition and not the rightful President; yet it has permitted him to purchase arms in the United States, and

by so doing has thereby recognized him as the President of Mexico; because if he were not, under the proclamation of President Taft of March, 1912, which is still in force, he would have no right to import such arms. If Huerta is not the lawful President—and Mr. Wilson declines to recognize him as such—then Carranza, who represents the Madero régime, is fighting for the triumph of rightful authority; and, as the head of an army and in actual control of the government of several of the most powerful Mexican States, it seems to me that he is entitled to recognition as a belligerent. Yet such recognition has been refused him. If Huerta was wrong, then the constitutionalists are fighting for what is right; yet we have refused to permit them to have an equal opportunity to maintain their rights as against the usurper.

After months of waiting and negotiation, the President has at last determined to withhold further supplies of arms from Huerta. But in the meantime he has already equipped his army, and the press reports advise us that he proposes in person to attack the constitutionalists, who, from our point of view, are fighting for the restoration of rightful authority; yet we have not permitted them to equip themselves with arms and munitions to do so successfully. In other words, we have extended aid to those whom we hold to be in the wrong and denied it to those who appear to be in the right.

This, in brief, is the inconsistent position in which we find ourselves, and every day seems to add to our embarrassment and humiliation.

I am not now in favor of intervention, and hope the time will never come when I shall be. I believe the Mexican people should be permitted to fight out their own domestic troubles the same as we did from 1861 to 1865. However, it appears to me that every sense of fairness on our part demands that Carranza and his followers should be given the right to purchase arms and munitions of war so as to place them, so far as we are concerned, upon an equal footing with Huerta. Having refused to recognize Huerta, any other course on our part, it seems to me, is indefensible.

The press of the country has carried the statement that the entire Congress is behind Mr. Wilson in his Mexican policy. This I believe to be true so far as it relates to his efforts to restore order in Mexico without armed intervention on our part. I can not, however, let the impression prevail unchallenged that I approve that part of the President's policy in withholding from Carranza the full rights that heretofore have been extended to Huerta. If both elements in Mexico from the beginning had been given equal consideration, in my opinion intervention could far more easily have been avoided.

Nor do I concur in the President's warning to Americans to leave Mexico. That seems to me to be unfortunate. From the tone of the foreign press it is doubtless understood abroad to mean ultimate intervention on the part of the United States. Apparently they regard it as an indication that, the two countries being about to engage in war, the President has notified Americans of the peril which may await them in such an event. From the President's declarations, however, that manifestly is not his purpose. He seems to have concluded that there is anarchy in Mexico, and that our people residing there are in danger and that our Government either can not or is not disposed to protect them in the exercise of the rights which they have under our treaties with the Mexican Republic. I can not but feel that Americans who are there know their peril fully as well as does the President.

A warning to both of the Mexican factions that all law-abiding American citizens must be protected in their treaty rights it seems to me would have been much more comforting and useful to our people than the course that has been followed.

Mr. SHEPPARD. Mr. President, I noted the statement of the Senator, if I understood him correctly, that the administration had permitted the exportation of arms to Huerta.

Mr. BRISTOW. The Huerta government has been permitted to purchase arms until the last week.

Mr. SHEPPARD. As I understand, only a very small amount of arms was allowed to be exported to the Huerta government; but since the rejection of Mr. Lind's proffer of mediation the rule against the exportation of arms to either side has been rigidly enforced.

Mr. BRISTOW. Since last week, as I stated in the statement I read. Prior to that Huerta was at liberty, of course, as the head of the Mexican Government, to import arms, and he did.

Mr. BACON. Mr. President, there is no distinct proposition now before the Senate, and therefore I do not think it profitable that we should at this time engage in the discussion of this subject. Possibly at some time there will be some distinct

propositions to be acted upon; and then, of course, we will discuss it.

I do not see, however, that anything will be profited by discussing now the questions which have been raised by the Senator from Kansas. I think, however, I can say with the utmost confidence that the statement made by the Senator from Texas [Mr. SHEPPARD] and recognized by the Senator from Kansas [Mr. BRISTOW] is absolutely true, that the embargo on arms and munitions of war is now being rigidly and impartially enforced as to each of the contending factions in Mexico, and will continue to be so enforced.

As to the past, there is now no advantage in criticizing what has been done. That is the present status; and I feel that I can say with the utmost confidence that that provision of law is being administered by the Executive with the utmost impartiality and rigidity.

Mr. BRISTOW. I do not doubt it, and I so stated distinctly.

Mr. BACON. Yes; I know that.

Mr. BRISTOW. I will state, further, that I did not introduce any resolution because I did not wish to precipitate at this time a discussion of the Mexican situation.

Mr. BACON. I recognize that.

Mr. BRISTOW. But the universal statement of the press that the President had the united Congress behind him was such that I felt that I wanted to make a statement as I have, because so far as efforts are being made to settle the controversies in Mexico without intervention I am in thorough accord with them, but there are certain methods that I did not want to be quoted as standing for. So I have felt it due to myself to outline my views in this statement at this time.

Mr. BACON. I understood the Senator to state substantially what he has just repeated; and I am saying what I do simply in order that the failure to respond may not be misconstrued.

I believe it is true that both branches of the Congress of the United States and the people of the United States generally are in hearty accord with the desire of the President to work out this distressing and difficult problem without involving us in the great disaster of war, and, recognizing that fact, that the Congress and the public are in accord in the purpose to give the President full latitude and opportunity for the working out of such devices as he may see proper to use in that effort.

As to details, of course it would be an impossibility that people should all agree upon them. We differ among ourselves on details. I have no doubt it is true, as stated by the Senator from Kansas, that there are differences between many of the public and many in Congress as to the details of the methods now being used; but as a matter of necessity, in the use of effective means, there must be a subordination of those differences to the general purpose which is had in view, about which we are not divided on either side of this Chamber, so far as I understand. That is all that I deem it proper or advisable to say at this time.

Mr. SIMMONS. Mr. President, I ask that we may proceed with the bill.

The SECRETARY. The pending amendment is, on page 124, paragraph 403½, line 20, where it is proposed to strike out the comma after the word "alizarin."

Mr. SIMMONS. Mr. President, the Senator from Maine [Mr. JOHNSON] is not in the Chamber. He has been making some investigations as to that matter. I do not know what conclusion he has reached. I will ask that the paragraph may be put over until he returns to the Chamber.

Mr. SMOOT. That is perfectly satisfactory. I should very much prefer to have the Senator in the Chamber when I make the statement I have to make in relation to the paragraph.

The PRESIDING OFFICER. Without objection, the paragraph will be passed over.

The SECRETARY. The next paragraph passed over is on page 127, paragraph 412, which was passed over on the request of the senior Senator from Utah [Mr. SMOOT].

Mr. SMOOT. Mr. President, since the amendment was adopted by the Senate on the paragraph relating to the return of boxes, and so forth, I have no objection to this. I was going to call attention to this paragraph in connection with the other. The amendment that I suggested was adopted, and therefore I have no objection to this.

The SECRETARY. The next paragraph passed over is on page 129, paragraph 416, relating to bagging for cotton, gunny cloth, and so forth. The paragraph was passed over upon the request of the senior Senator from Massachusetts [Mr. LODGE].

Mr. WILLIAMS. Mr. President, before we go into that I wish to recur for a moment to paragraph 279 for the purpose of adopting the Senate amendments. I move, in line 7, page 84,

following the comma which succeeds the word "hemp," to insert the word "jute" and a comma.

The PRESIDING OFFICER. The amendment will be stated. The SECRETARY. On page 84, line 7, after the word "hemp" and the comma, it is proposed to insert the word "jute" and a comma.

The amendment was agreed to.

Mr. WILLIAMS. In connection with paragraph 416, I believe the Senate has already adopted an amendment to strike out the words "nor in any manner loaded so as to increase the weight per yard." Has that been already adopted?

The PRESIDING OFFICER. The Chair is advised that it has been already adopted. The Chair is advised, however, that the other amendments proposed by the committee have not yet been disposed of.

Mr. WILLIAMS. Very well; then I move the adoption of the Senate committee amendments.

The SECRETARY. On page 129, line 6, after the word "butts" and the comma, it is proposed to strike out "seg, Russian seg, New Zealand tow, Norwegian tow."

The amendment was agreed to.

The SECRETARY. On page 129, line 11, after the word "yard," it is proposed to insert a semicolon and the words:

Plain woven fabrics of single jute yarns by whatever name known, not bleached, dyed, colored, stained, printed, or rendered noninflammable by any process, waste of any of the above articles suitable for the manufacture of paper.

Mr. WILLIAMS. I move to substitute the word "and" for the comma after the word "process," on line 13.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. THOMAS. I ask leave to recur to paragraph 301, to which the committee offers an amendment, which I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 89, paragraph 301, after the word "bandings," in line 8, it is proposed to insert the word "belts."

Mr. SMOOT. That has already been inserted. It was agreed to on August 23.

The PRESIDING OFFICER. It appears that the amendment has already been agreed to.

Mr. THOMAS. I am informed by the Senator from Utah that that insertion has already been made.

The PRESIDING OFFICER. The Chair is so advised.

Mr. THOMAS. Let me inquire if the other amendment to that paragraph has also been made?

The PRESIDING OFFICER. Another amendment tendered to the same paragraph has been agreed to. The Chair is advised, however, that the language of the amendment as it was adopted does not entirely conform to the language of the amendment now offered by the Senator from Colorado. The Secretary will read the amendment which has been adopted.

The SECRETARY. On August 23, the following amendment was adopted: On page 89, line 11, after the word "value" and the comma, the following words were inserted: "and not specially provided for in this section." That amendment was agreed to.

Mr. THOMAS. That is satisfactory.

Mr. SMOOT. It is the same thing.

Mr. THOMAS. Yes; that is satisfactory.

Mr. SMOOT. Before finally leaving paragraph 416 I wish to ask that it may be passed over until the senior Senator from Massachusetts [Mr. LODGE] returns to the Chamber. He has been called from the Chamber. I should like to have it understood that he may refer back to this paragraph, and not have to wait until it gets into the Senate, but that he may take it up as soon as he comes in.

Mr. WILLIAMS. That is satisfactory to us.

The SECRETARY. On page 130, the next paragraph passed over is paragraph 423, relating to binding twine. The paragraph was passed over at the request of the senior Senator from Utah [Mr. SMOOT].

Mr. WILLIAMS. In that paragraph, in line 6, the committee moves to strike out the word "six" and substitute "seven," and, after the word "hundred," to insert "and fifty."

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 130, line 6, after the word "exceeding," it is proposed to strike out "six" and insert "seven," and after the word "hundred" it is proposed to insert the words "and fifty."

The amendment was agreed to.

Mr. SMOOT. That was the only reason I had for asking that the paragraph go over. I have no further objection to it.

Mr. WILLIAMS. It was suggested by the Senator from Minnesota [Mr. NELSON] that that would be enough.

Mr. SIMMONS. The Senator from Maine [Mr. JOHNSON] is in the Chamber now, and I suggest that the Senator from Utah might take up his amendment to paragraph 403½.

Mr. SMOOT. I will gladly refer back to paragraph 403½, which is found on page 124 of the bill.

I approve of taking alizarin from the dutiable list and placing it upon the free list, as provided in this paragraph, if it applies only to alizarin, natural or synthetic, and colors obtained from alizarin and anthracene. I will say to the Senator having this paragraph in charge that the present law does not include carbazol; and adding the words "carbazol" to this paragraph will take an unknown number of coal-tar dyes out of paragraph 21.

This question was brought to the attention of the Customs Court in the case of the Cassella Color Co. against The United States General Appraisers on May 20, 1912. The company undertook to import colors derived from carbazol under the free list, claiming that they also contained anthracene. The United States general appraisers decided that question, and stated that the product could not come in under the free paragraph, and that if it did it would affect such colors as hydron blue G, hydron blue F, and many of the other colors that are derived from carbazol.

As I understood from information that I have received, the committee simply wanted to restore the present law. If that is all, I would simply suggest to strike out the words "and carbazol" and insert the word "and" between "alizarin" and "anthracene," and to strike out the two commas, so that it would read:

Alizarin, natural or synthetic, and colors obtained from alizarin and anthracene.

That, Mr. President, would leave the law as it is to-day.

Mr. JOHNSON. Mr. President, the dyes which appear in this paragraph upon the free list were placed upon the free list because they are largely used in textile manufactures. Alizarin and dyes derived from anthracene are on the free list under the present law, and we have placed them upon the free list here. We have also placed upon the free list dyes derived from indigo, which appear in a later paragraph of the free list.

The bill as it came to the Senate from the House placed indigo on the free list and we also placed dyes derived from indigo there, because of the fact that they are largely used in textile manufactures. Having done that, we were then asked to place dyes that compete with the dyes derived from indigo, hydron blue, on the free list. Hydron blue is one of the dyes derived from carbazol, and it was impressed on the committee that having placed dyes derived from indigo on the free list, dyes derived from carbazol—that is, hydron blue—should also be placed on the free list. That is why we have added here carbazol.

Mr. SMOOT. If that is the reason why the Senator has inserted dyes derived from carbazol it seems to me that we ought to take all the items of paragraph 21 and put them on the free list, because that is exactly where the dyes derived from carbazol fall to-day.

Mr. JOHNSON. We did not do that because the dyes which are principally used in cotton and woolen manufacture are the dyes derived from indigo and from alizarins and anthracenes.

The manufacturers considered it a hardship to have their dyes at this time placed upon the dutiable list when such heavy cuts have been made in the duties upon their products. It seemed to the committee that these dyes which were so largely used by them should be kept upon the free list, and we were willing to add dyes derived or obtained from indigo and from carbazol. Nothing was said at that time about any of the other dyes. Since then the manufacturers of the other dyes and the importers who are interested in the other dyes have been busy, and I think through their influence and their instrumentality the manufacturers have been led to ask that all these other dyes should come in free.

There is of course an argument to be used in favor of having them all treated the same, but these were the principal dyes used by the cotton and woolen manufacturers as they understood it and the only ones they talked about. They wanted the dyes obtained from indigo, the dyes obtained from alizarin and from anthracene placed on the free list, and then it was suggested to them that they used hydron blue. Some of them did not know that they used it until it was suggested to them by an importer. That far we were willing to go.

Mr. SMOOT. Let me state to the Senator the facts in the case as I understand them. I have no doubt the Senator has stated the case exactly as it was told him. But under the present law indigos and colors obtained from indigos are on the free list, where they should be. Alizarin and anthracene to-day are upon the free list and the colors derived from them.

Now, all of the other coal-tar dyes or colors are provided for in paragraph 21 of this bill and they are in paragraph 29, I think, of the present law. Whoever told the Senator that alizarin and the colors derived from alizarin are the great bulk of coal-tar dyes used by the cotton and the woolen manufacturers of this country told him something that was not true.

Mr. JOHNSON. I did not make that statement. I said dyes derived from indigo, the dyes derived from alizarin, and the dyes derived from anthracene, those three.

Mr. SMOOT. I will take the Senator's own statement then, and say that whoever told the Senator that that was the truth said something that is not true. The bulk of the coal-tar dyes that are manufactured by the great concerns in Germany are not alizarin. All the fine colors and delicate shades and also the blacks and the common browns are classed as coal-tar dyes. Alizarin was discovered not many years ago and it takes the place of indigo. It is a cheaper process of dyeing with alizarin than it is with indigo. The armies of the world, I believe, who years ago specifically required indigo dyes, now accept the alizarin dyes, and I believe myself that they are a great deal better than and as fast as the indigo dyes.

Mr. JOHNSON. Will the Senator permit me?

Mr. SMOOT. Yes.

Mr. JOHNSON. Is it not true that under the present law the dyes derived from alizarin and from anthracene are upon the free list?

Mr. SMOOT. That is what I said at the beginning.

Mr. JOHNSON. And they have been carried there for some years.

Mr. SMOOT. And I should like to have them stay there now. I want to say to the Senator that the words "and carbazol" used in this paragraph will affect only one importing concern in this country—the Cassella Color Co. That company brought the suit before the customs court and they are the ones who first imported hydron blue G and hydron blue R; and they tried to enter them as colors derived from anthracene. The general appraisers at the port of New York said they were not colors derived from anthracene. We now find that company has influence enough to have the words "and carbazol" added to the paragraph.

Of course, there are colors derived from carbazol. The Cassella Co. is the one concern that will be benefited with those words added.

I am only asking for the woolen industry and for the cotton industry that they be treated just the same as the present law treats them. I have not had a single one of them ask me or even request in any way that the colors derived from carbazol be put upon the free list. They should not be unless all the colors in paragraph 21 are put upon the free list. That is the consistent position.

By the way, I want to say that one of the parties, if I am to take his word for it, who was responsible for having carbazol added to the free list called me out of the Chamber a day or two ago and asked me what objection I had to the paragraph. I told him that I had an objection which applied to the colors derived from carbazol. He said, "Is that all the objection you have?" I answered him, "Yes." He then said, "We do not particularly care; we would just as leave let it go out as stay in."

Mr. President, all I want is to leave the paragraph just as it is to-day, and not extend it to the colors derived from carbazol, because I do not know what effect it is going to have upon paragraph 21, where the coal-tar dyes are provided for. I know the Senator from Maine must say, to be consistent, that the colors derived from carbazol have no more right to be on the free list than the general line of coal-tar dyes as provided in paragraph 21.

Mr. JOHNSON. Mr. President, I will say in answer to the suggestion made by the Senator from Utah, that to be entirely consistent all the colors described in paragraph 21 should be treated exactly alike, alizarin and anthracene and the dyes derived from indigo should all be treated alike, but particularly the colors derived from alizarin and from anthracene. They never have been so treated in the present law; they have been on the free list.

Mr. SMOOT. Where they ought to be.

Mr. JOHNSON. There is no more reason why dyes derived from alizarin and anthracene should be on the free list than those derived from carbazol or some other color should be on the free list.

Mr. SMOOT. There are a good many reasons, in my opinion.

Mr. JOHNSON. No reason occurred to me. When it was suggested, we had, I remember, before our subcommittee cotton manufacturers and the men interested in the dyes, and we were urged to leave the duty upon them as the House had left the

duty upon them. The cotton manufacturers knew very little about any other colors except the dyes derived from indigo, alizarin, and anthracene. When they were there one man interested in importing dyes suggested that they used hydron blue and indanthrene, a dye derived from anthracene, and suggested that they were using that. They did not know they were using it. When it was suggested to us we said, "Of course we will treat it the same as the others," and we went that far in taking in these staple dyes in general use in the textile mills of the country, and some of which have been used for a long time.

It seemed to us a hardship at this particular time when the duties were being largely decreased upon their products to take the dyes which they use and put a duty upon them. We desired to be consistent. There has not been consistency in treating these dyes until the present time. Not even under the present bill is there consistency. Otherwise alizarin and anthracene and dyes derived from indigo would all be dutiable instead of being on the free list. But we followed the custom as we found it of putting these dyes upon the free list, and we added carbazol for the reason suggested, particularly to reach the one color known as hydron blue.

Mr. SMOOT. Of course, it will reach hydron blue. That is imported by the Cassella Color Co.

Mr. JOHNSON. That is the first intimation I have had as to who imports it, and I do not care who imports it; it makes no particular difference to me. Here were the manufacturers before us contending that the dyes which were now upon the free list should be left free. A dye was suggested which they did not know they were using, and when they were convinced it was largely used by them we added that. We had no knowledge of the Cassella Co., and I think nobody connected with that company was there. I never knew until this moment who was interested in that dye.

Mr. SMOOT. Then certainly the Senator has not looked up the question of the case of the Cassella Co. brought against the appraisers at New York.

Mr. JOHNSON. I have not looked at that. It is the first time I have heard suggested the ownership of it or who was interested in it.

Mr. SMOOT. There is not a user of hydron blue R in the United States who does not know that it has been dutiable under the coal-tar paragraph. The Senator knows that the rate of duty on coal-tar dyes is maintained at 30 per cent, the same as the present law. There is no change in those colors at all. If they were looking out for the manufacturers' interest they certainly would have changed that paragraph.

Mr. JOHNSON. They never asked anything further. When the case was first taken up the manufacturers alluded only to alizarin and anthracene and the dyes derived from indigo. There was never any mention of any other dyes.

Mr. SMOOT. Certainly, because—

Mr. JOHNSON. I had many letters from them.

Mr. SMOOT. It was because those items were on the free list under the present law.

Mr. JOHNSON. They asked us to keep them there, and when it was suggested that there was one other dye, indanthrene, derived from anthracene, we put that on the free list.

Mr. SMOOT. I understand, then, the Senator will not accept the suggestion to strike out carbazol.

Mr. JOHNSON. I see no reason to do it.

Mr. SMOOT. Then I move, in line 20, on page 124, that the words "and carbazol" be stricken out.

Mr. HUGHES. Mr. President, I find this to be one of the most confusing subjects I have been called upon to deal with in any way in connection with the bill, and I think something should be stated with reference to the apparent inconsistency in this legislation. It is an inconsistency, it is true, but it is based upon a former inconsistency, and it shows how difficult it is to get rid of a bad legislative practice when it has once been entered upon.

We hear about alizarin, anthracene, and indanthrene, and the dyes derived therefrom being placed on the free list. They are upon the free list now. But do not let anyone think that they were put on the free list at the behest or for the benefit of American manufacturers. They were put upon the free list for the exclusive benefit of a German chemical house. They were patented processes when they were put on the free list, and they escaped the payment of duties into the Treasury of the United States. They are coming into competition with dyes paying duties at the rate of 30 per cent, and they used that 30 per cent which they escaped as a means of beating their competitors in this country and corrupting the employees of the houses to which they sold dyes. There are two suits pending now against this very concern, brought by manufacturers, charg-

ing them with being in a conspiracy in restraint of trade and with being guilty of a common-law conspiracy in going to their employees and using the opportunity they were given by the free entry they had in this market, escaping the payment of these duties into the Treasury, to make special inducements to the employees of the men with whom they were competitors and to whom they were selling in order to get them to supply the goods.

I come from a textile city where great quantities of these dyes are purchased every year, and it is common knowledge that the buyers are granted perquisites if they buy this or that particular dye. The thing is a mess. It is hard to say to the manufacturer whose dyes have been on the free list, "We are cutting down the duties upon the cloth you manufacture, and we propose to put your dye, which heretofore was free, upon the dutiable list." These gentlemen were cunning enough to go from one end of the country to the other and stir up the manufacturers until a flood of communications and numbers of individuals descended upon the subcommittee to get us to leave at least upon the free list that which is found there.

My idea, and what the House practically did, was to put the same rate of duty upon all of them, and we taxed the articles that entered into their composition. In that way we would compel the gentlemen coming in here with proprietary articles the price of which was fixed, and which they had the means and machinery of disposing of at a fixed price regardless of its merits, to pay for the privilege of getting into this market. We have done the very best we could under the circumstances. We have left coal-tar dyes and colors at 30 per cent, where we found them. Some of the coal-tar dyes and derivatives of the various drugs we have been talking about were upon the free list, and we were compelled to leave them there.

Mr. SMOOT. I wish to say to the Senator that it was unfair on his part to try to saddle the question of paying commissions to the dyers in this country upon the manufacture of alizarin, because if the Senator knows anything about the facts he knows that the same practice is indulged in by many of the dyers demanding commissions not only of America but of every country, if reports are true.

Mr. HUGHES. I know the foreign manufacturer would escape the duty of 30 per cent while the domestic competitor would be compelled to pay it.

Mr. SMOOT. All the Senator is trying to do is to add one more item with its derivatives. They want to add carbazol and colors derived therefrom.

Mr. WILLIAMS. That gives the rival—

Mr. SMOOT. Not in the least. It is entirely a different product.

Mr. HUGHES. It is a different product and not a patented article.

Mr. SMOOT. It is a different product used entirely for a different color. It comes from an entirely different source. It only competes with the foreign manufacturer who has a patent upon all the derivatives of carbazol. If it can come in free of duty it is extending the very thing that the Senator is complaining of. Mr. President, I move to strike out the words "and carbazol," on page 124.

The VICE PRESIDENT. Does the Senator from Utah withdraw his former amendment?

Mr. SMOOT. I will first have the former amendment acted upon, and if it is defeated then I will offer the other amendment.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 124, line 20, after the word "alizarin," insert "and"; and in the same line, after the word "anthracene," strike out the comma and the words "and carbazol."

Mr. SMOOT. That will cover the whole question.

The VICE PRESIDENT. Does the Senator desire to have it put as one amendment?

Mr. SMOOT. Yes; as one amendment.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Utah to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the committee.

Mr. JOHNSON. I wish to suggest an amendment to the committee amendment. In line 19 I move to strike out the word "colors" and to substitute in lieu thereof the word "dyes."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. WILLIAMS. During the temporary absence from the Chamber of the Senator from Massachusetts [Mr. WEEKS] we were asked to pass over paragraph 416 until his return, or,

rather, unanimous consent was given to recur to it when he did return.

Mr. WEEKS. I offer an amendment to that paragraph applying to cotton bagging.

The VICE PRESIDENT. The Senator from Massachusetts offers an amendment, which will be stated.

The SECRETARY. On page 129—

The VICE PRESIDENT. Will the Senator from Massachusetts state the paragraph in the dutiable list to which the amendment applies?

Mr. WEEKS. It will go in the paragraph from which it was taken when it was put on the free list.

Mr. SMOOT. That is paragraph 276.

Mr. WEEKS. The amendment will be paragraph 276½.

Mr. HUGHES. The Senator means to offer it as paragraph 276½?

Mr. WILLIAMS. The Senator from Massachusetts wishes to offer it as a separate paragraph.

The SECRETARY. The Senator from Massachusetts offers a new paragraph, to be numbered 276½, on page 83, to read as follows:

276½. Bagging for cotton gunny cloth and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, or hemp, not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch counting the warp and filling, and weighing not less than 15 ounces per square yard, ½ of 1 cent per square yard.

Mr. WEEKS. Mr. President, this article has been on the dutiable list since 1896, and it is the one product of this character which has been put on the free list in the pending bill. I do not say that that was done because it is used entirely in connection with the cotton industry, but it certainly lends color to the statement that it has for that reason been selected for such drastic treatment. While I can not anticipate that the majority will be willing to accept the amendment which I have offered, I want to submit a statement which I think justifies the offering of the amendment.

Jute yarns are left on the dutiable list, notwithstanding the fact that the product is put on the free list. Cotton bagging is used exclusively for covering the American cotton crop. The duty under the pending law is six-tenths of 1 cent per square yard, which is equivalent to about three-fourths of 1 cent per running yard. The amendment which I offer of one-half of 1 cent shows about the same reduction in cotton bagging as is made in jute yarns.

There is active competition with American manufacturers in this industry, coming largely from Dundee and Calcutta. The owners and operators of the Dundee factories to a large extent, at least, control the Calcutta industry, but in any case the importations show that there is active competition, and I give a table showing importations since 1903 under the present rate of duty which substantiates this statement.

This table includes the value of the imports, the duty cost, the average value per square yard, and the equivalent ad valorem duty:

Year.	Quantity in square yards.	Value.	Duty collected.	Average value per square yard.	Equivalent ad valorem duty.
					Per cent.
1903.....	5,417,039	\$213,068	\$32,502.24	\$0.039	15.26
1904.....	7,801,672	261,235	46,810.02	.033	17.92
1905.....	9,603,487	391,730	57,620.91	.041	14.71
1906.....	12,309,136	663,843	73,854.80	.054	11.13
1907.....	19,817,860	1,215,446	118,907.12	.061	9.87
1908.....	16,349,696	1,076,353	98,098.16	.066	9.11
1909.....	8,012,434	413,208	48,079.63	.052	11.63
1910.....	16,505,542	699,940	99,033.28	.042	14.15
1911.....	13,365,349	623,099	80,192.11	.047	12.87
1912.....	5,778,731	363,751	34,672.38	.063	9.53
Average....	11,496,094	592,170	68,977.06	.0515	11.65

The equivalent ad valorem duty average for this term of years (10 years) is 11.65 per cent, certainly not a high rate of duty on a product of that character.

The competition from Dundee is active; the wages paid there are only about one-half the average wage paid in this country, while the competition from Calcutta is becoming even more active than that from Dundee. For instance, the wages paid during the past 10 years average \$7.16 per week for all classes of labor employed in this country in this industry. This year the average wage paid is \$9.21 per week for all labor employed, an increase in the 10 years of nearly 30 per cent. In Calcutta the rate of wages average 8½ per cent of that paid in Massachusetts, which would be an average of about 76 cents per

week. The manufacturer's comparative cost of a yard of 2-pound bagging in Massachusetts and Calcutta is as follows:

	Massachusetts.	Calcutta.
	Cents.	Cents.
Labor cost.....	1.118	0.191
Supplies and machinery renewal.....	.366	.297
Administration.....	.218	.209
Plant charges.....	.640	.538
Total cost.....	2.342	1.235
A difference in favor of Calcutta of.....		1.107
Total.....		2.242

showing a handicap against the local manufacturers of nine-tenths of a cent per square yard.

The present duty is but six-tenths of a cent per square yard, and that was the duty designed to protect American manufacturers when the rates of wages were at least 30 per cent less than now and when the hours of labor were materially longer than now. This is an industry where the question of oriental labor is of paramount importance. It is not necessary to point out the difference between European competition and oriental competition to show the whole standard of living, as well as the rates of pay, which shows such a marked difference in favor of this country that it seems reasonable to continue some moderate rate of duty to protect the employees engaged in this industry.

In 1909 the jute mills of India were capitalized for more than \$50,000,000, which shows that it is not a small but a very important industry in Calcutta. They employed 250,000 people, and as the output is very largely used in cotton bagging it indicates the desirability of protecting our people against this kind of foreign competition.

To show the development of the Calcutta mills in recent years, I submit a list which demonstrates the increase in the number of looms employed. In other words, the competition is developing all the time at the expense of our industry. The list is as follows:

	Looms.
Jan. 1, 1890.....	7,964
Jan. 1, 1901.....	15,336
Jan. 1, 1902.....	16,640
Jan. 1, 1903.....	17,597
Jan. 1, 1904.....	19,901
Jan. 1, 1905.....	21,318
Jan. 1, 1906.....	23,884
Jan. 1, 1907.....	26,790
Jan. 1, 1908.....	29,074
Jan. 1, 1909.....	30,824
Jan. 1, 1910.....	31,755
Jan. 1, 1911.....	32,711
Jan. 1, 1912.....	32,632
Jan. 1, 1913.....	34,831

As will be seen from this table, in 1890 the number of looms employed in Calcutta was 7,964, while last year the number was 34,831. They have doubled in the last 10 years.

Calcutta is now the largest bagging manufacturing center in the world. There was recently introduced and adopted by the Senate a resolution directing the Secretary of Commerce to investigate the recent advance in the price of bagging. I have made some investigation of this question and am convinced that the present increase in price of bagging is due almost entirely to the increase in the cost of raw jute, which has advanced as follows:

	Cents per pound.
Aug. 1, 1909.....	3
Aug. 1, 1910.....	3½
Aug. 1, 1911.....	4½
Aug. 1, 1912.....	5
Aug. 1, 1913.....	6½

This can not be due in any great degree to the operation of a trust or combination. The material comes entirely from India, and we are, as far as this industry is concerned, in the grip of that country, because they not only supply the raw material, but at the same time the larger part of the finished product, and they may be able to manipulate the price of raw material, so that they will absolutely destroy the local industries unless there is maintained some reasonable duty, and if the local industries were destroyed, then we would be in the hands of an industry from which the foreigner was getting all the benefit and on which he could make his own price.

There has been a considerable increase in the price of yarns and threads made from jute in recent years: In 1910 they sold on the basis of 6½ cents; in 1911 at 7½ cents; in 1912 at 8 cents; and in 1913 at 8½ to 9½ cents, which means that there

has been an increase of 100 per cent in the price of long jute in the last four years and an increase of 50 per cent in the price of threads. During that period bagging averaging 2 pounds per yard has advanced from 6½ to 10½ cents.

The price of bagging is not only dependable somewhat on the price of raw material and the cost of labor, but is dependent somewhat on the amount of goods which may be carried over by the manufacturing concerns. For instance, if the raw material was very cheap the manufacturer might buy and manufacture much more than was required for the market that year, and it is the policy of the company, as I understand it is of American companies, to give the purchaser the benefit of the increase. The result is, less the cost of carrying over, including interest charges, the price might not for every year advance as rapidly as would otherwise be the case.

The price of jute cuttings has been since 1908 as follows:

	Cents per pound.
1908	2.30
1910	3.65
1911	3.15
1912	4
1913 (about the same as 1912).	

This is the raw material of the American manufacturer.

The Ludlow Manufacturing Co. produces about 20,000,000 yards of bagging a year, but its sales vary from 16,000,000 to 26,000,000 of yards, depending on the size of the cotton crop, which explains the statement I have just made that it is frequently desirable to carry over a surplus which is based on a lower price for the raw material. I give herewith the average prices for bagging during the period of 1900-1913, which show conclusively that the increase in cost has not been commensurate with either the cost of raw material or the advance in the cost of manufacture:

Bagging prices.	Cents.
1900	7½ to 8½
1901	6½ to 6¾
1902	5½ to 6½
1903	5½ to 6½
1904	6½ to 7½
1905	7½ to 8½
1906	8½ to 9½
1907	9½ to 10½
1908	6½ to 8½
1909	6 to 6½
1910	7½ to 7½
1911	8 to 8½
1912	8½ to 8½
1913	10½ to 10½

It seems to me all of this indicates that the competition which the manufacturers in this country are getting is sufficient, so that there should be maintained a reasonable duty on this product. Certainly the competition which we are likely to have in the future, developing rapidly as is the Calcutta industry, suggests that, unless a reasonable duty is maintained, we are going to destroy the industry in this country, when we shall be at the mercy of oriental labor and the price placed by foreign manufacturers on this important product.

Mr. WILLIAMS. Mr. President, it took quite a time to make that statement, but it is the same old story. Here is an amendment, the object of which is to levy a tax upon the producers of from ten to fifteen million bales of cotton, using from ninety to one hundred and five millions of yards of cotton bagging, for the benefit of a baker's dozen of cotton manufacturers somewhere in the United States.

Mr. WEEKS. Will the Senator yield at that point in his statement? I have been unable to understand why this amendment will place a tax on the producer of cotton who buys his cotton bagging and turns around and sells it with his cotton to the manufacturer.

Mr. WILLIAMS. Simply because he does nothing of the sort. Every bale of cotton that reaches the market at Liverpool has deducted from it a tare, so many pounds out of the price of the cotton, a tare for the bagging and ties, and the American price is based upon the Liverpool price with a discount of that tare. That tare is 6 pounds to the bale.

Mr. WEEKS. It is 6 per cent.

Mr. LIPPITT. Six per cent.

Mr. BACON. It is 30 pounds.

Mr. WILLIAMS. Six per cent; 30 pounds on the bagging and ties.

One other thing the Senator from Massachusetts said. He said we singled out this wrapping and put it upon the free list because it was the cotton producers' wrapping. We put upon the free list also burlaps, a very much more expensive thing, so that the wheat raiser might have free material for his wheat sacks and so that the wool producer might have free cloth for his wool.

Mr. BACON. In order to be absolutely accurate—

Mr. WILLIAMS. One moment. The audacity of claiming that when we put an article on the free list for the producers of 15,000,000 bales of cotton we are favoring a special industry, when the amendment is to give a special privilege to a baker's dozen of American manufacturers, where all the employers and all the employees put together probably would not reach a thousand in the entire United States! We are taking a special privilege for the cotton planters in the South because, forsooth, we leave things where God left them, but it is not a privilege for a baker's dozen of New England and other manufacturers to propose to put a tax on an article for the express purpose of bolstering up the price, so that the manufacturer may sell at a higher price an article which it is confessed, or which it is argued, at any rate, he could not produce upon a fair basis untrampled by law.

Mr. LODGE. May I ask the Senator a question? Is not the Senator mistaken in saying that burlaps are on the free list?

Mr. WILLIAMS. I am not. The sort of burlaps of which I speak here are in the same paragraph:

Plain woven fabrics of single jute yarns by whatever name known, not bleached, dyed, colored, stained, printed, or rendered nonflammable by any process.

That is the definition of burlaps. Bleached, printed, and painted burlaps are upon the dutiable list.

Mr. BACON. Mr. President, what I wished to say, in order to be absolutely accurate in regard to the tare was that it is 6 per cent, so that on a standard bale of cotton of 500 pounds it would be 30 pounds.

Mr. WILLIAMS. I inadvertently said "6 pounds," when I ought to have said "6 per cent." That is the Liverpool tare.

Mr. LODGE. Then what does paragraph 290 mean? It reads:

Bags or sacks made from plain woven fabrics, of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, 10 per cent ad valorem.

Mr. WILLIAMS. Those are the bags or sacks; that is the differential between the cloth, which is put upon the free list, and the material after it is sewed up into bags or sacks.

Mr. LODGE. That is the bag after it is made?

Mr. WILLIAMS. It is the bag after it is made.

Mr. LODGE. That is left on the dutiable list?

Mr. WILLIAMS. After the bag is made it is on the dutiable list.

Mr. LODGE. But the wheat is not put in the burlap in the cloth, in the running yard?

Mr. WILLIAMS. The only difference is that the cotton is sacked after it is pressed and that the sack for the wheat is made before the wheat is put into it.

Mr. LODGE. Certainly.

Mr. WILLIAMS. In other words, the sack is spread around the cotton; it is made after the cotton is pressed, by being put around it and the cotton ties put on it. We treat them both exactly in the same way; we give them both the cloth free, but we do not furnish the southern planter with somebody to sew his bagging around his cotton, nor do we furnish the southern and western farmer with somebody to sew up his sacks.

Mr. LODGE. Exactly. The western farmer does not use the plain cloth; he uses a bag.

Mr. WILLIAMS. He uses plain cloth after it is made into sacks.

Mr. LODGE. Yes; after it is made into a sack; exactly.

Mr. WILLIAMS. We do not use plain cloth, either, but we put the ties around the cotton bale and fasten it.

Mr. LODGE. But the net result is that the article that the farmer uses bears a duty of 10 per cent.

Mr. WILLIAMS. It does not.

Mr. LODGE. It certainly does, because he uses the bag.

Mr. WILLIAMS. The western farmer can do just what we do.

Mr. LODGE. He does not put wheat in the running yard of cloth; he puts it into a bag.

Mr. WILLIAMS. He can do just what we do; he can sew his own bags and sacks, in my opinion, if he wants to. We have treated both exactly alike, but that has nothing to do with the question now before the Senate. The proposition is brazenly, undisguisedly, audaciously to tax the producers of from ten to fifteen million bales of cotton for the benefit of a little bit of a handful of people who are engaged in a propped-up industry that never could have existed except for law.

Mr. LODGE. On the matter of bags made of burlap I wish to say that under the present law the bag makers get 5 per cent additional, as I understand.

Mr. WILLIAMS. The bag makers get a differential of 5 per cent. Is that what the Senator means?

Mr. LODGE. They did get a differential of 5 per cent, and now they get 10 per cent.

Mr. WILLIAMS. They get, under the present law, a differential of 5 per cent, and under this proposed law a differential of 10 per cent.

Mr. LODGE. Precisely; that is, the man who makes the bags for the wheat gets a differential of 10 per cent?

Mr. WILLIAMS. Yes; and that was a concession to a much-mouthing Republican allegation, which is, that whenever labor is required there ought to be a little differential in favor of labor. "American labor, don't you understand, should be protected against the pauper labor of the world everywhere." The Senator is familiar with that argument. If there is any weakness about this at all it is in having yielded to that Republican argument.

Mr. LODGE. I am as familiar with that argument as I am with the Senator's argument. I am familiar with both of those arguments.

Mr. WEEKS. Mr. President, the statement I made was that the southern planter bought his cotton bagging and resold it with his cotton to the mills at the same price for which the cotton was sold. That is the statement I made which the Senator from Mississippi [Mr. WILLIAMS] disputed. Now, I want to substantiate that statement, and I will do so, not only by the rules of the Cotton Buying Association of New England, but from letters which have been written me referring to the same subject. For instance, here is a letter from Albert H. Chamberlain, treasurer of the Arlington Mills, in which he says:

In purchasing domestic cotton, except sea-island cotton, we pay for ties and bagging on the same basis as for cotton, unless the weight of the ties and bagging exceeds 24 pounds.

In the case of sea-island cotton, we pay for the cotton and bagging at the same price, unless the bagging exceeds 12 pounds in weight.

The difference between the 24 pounds and the 12 pounds is due to the fact that sea-island cotton is wrapped only in bagging, whereas other domestic cotton is not only wrapped in bagging but bound with iron hoops or ties.

We customarily pay for cotton on sight draft against bill of lading, and necessarily have to pay on the basis of invoice weights, subject to our right to make later claim for repayment for tare in excess of the above amounts.

Egyptian cotton is purchased on a net-weight basis, so that we pay only for the actual weight of cotton.

I find in the Revised New England Terms for Buying and Selling American Cotton, which I understand applies to all manufacturers, this statement:

48. The allowance for tare shall be an average of 24 pounds per bale. The purchaser shall be reimbursed for all tare in excess of this average at the invoice value, less one-half cent per pound.

Then, it goes on to state—

Mr. WILLIAMS. Is the Senator reading the New England tare upon Egyptian cotton?

Mr. WEEKS. I am reading, now, not the rules governing tare on Egyptian cotton but on domestic cotton. In other words, the cotton mill pays for 24 pounds of bagging in every bale of cotton it buys, at the same price it pays for the cotton itself.

Mr. WILLIAMS. Now, Mr. President, I want to make this perfectly plain. Cotton has its ultimate value fixed in Liverpool, because the great majority of it is exported. There is no ostensible tare in Memphis or New Orleans or in the mills in New York or in New England at all; but the price of the American cotton is fixed by the price for which that cotton is sold at Liverpool. When that cotton gets to Liverpool 6 per cent of the weight is deducted after each bale is weighed. That 6 per cent amounts to 30 pounds in a bale of 500 pounds. That 30 pounds is not paid for, but is deducted from the weight. That 30 pounds in a bale being deducted from the weight, at the present price of cotton, which is 12 cents a pound in Liverpool, would be \$3.60 per bale. That is a plain calculation. That \$3.60 per bale is thus deducted from the price of every bale of cotton that the South ships to Liverpool, and as the competition for the cotton fixes the price of the cotton, and as the main bulk of the cotton is shipped abroad, and as the Liverpool tare prevails in all the other European ports, of course the American purchaser of cotton is not going to pay a price any higher than that at which it is sold in Liverpool. Therefore the tare comes off here, although it is not ostensibly given. When I sell a bale of cotton in Liverpool the tare is deducted in so many words, but when I sell it in Fall River it is allowed for, because I sell it there in competition with Liverpool.

Mr. LIPPITT. Mr. President, if the Senator will yield to me for a moment, he says that when he sells a bale of cotton in Liverpool the tare is taken off that bale of cotton. I want to ask him if what happens is not that, in the first place, the planter has been paid at the price of his cotton for every pound of bagging and for every pound of hoop iron that is on that bale,

provided the combined weight of those two is not in excess of 24 pounds, and when that cotton is sold to a New England mill that the bagging is weighed the same as the cotton is weighed, and that the hoop iron is weighed the same as the cotton is weighed, and it is paid for at the same price as is the cotton? Whether the entire purchase is not based upon the combined weight of the cotton and the bagging and tie? So that when a 500-pound bale of cotton and bagging is delivered to a New England mill or to a southern mill, what that mill receives is approximately 475 pounds of cotton and 25 pounds of other material. The cotton is put through the mill in the process of manufacturing cloth, and the refuse matter of bagging is sold for in the neighborhood of a cent a pound, with a loss to the mill of anywhere from 12 to 20 cents a pound over what they paid for it, and the iron on that cotton is sold for about half a cent a pound, with also a loss of anywhere from 12 to 20 cents a pound. That is what happens when that cotton is delivered and sold to the New England mill.

Now, what happens when it is sold abroad? The foreign manufacturer will not submit to this oppression of paying for bagging and hoop iron at the same price as he pays for cotton. Therefore, when the factor, who buys the cotton from the planter and has paid the planter for the hoop iron and for the bagging, is obliged to sell that cotton to Liverpool, knowing the custom there, he adds to the price he would sell to a New England mill about 6 per cent. When the cotton goes over to Liverpool it goes at that increased value of about 6 per cent, and in consideration of that the Liverpool manufacturer is allowed a claim that compensates him. That is what happens.

Mr. WILLIAMS. Did the Senator rise to ask me a question or to make a speech? He has made a number of speeches upon this subject.

Mr. LIPPITT. I beg the Senator's pardon. I never have made a speech on this subject before.

Mr. WILLIAMS. Cotton is the Senator's specialty clear through.

Mr. LIPPITT. I will take the liberty of completing my remarks when the Senator has finished.

Mr. WILLIAMS. Very well. Mr. President, the truth is that although there is not ostensibly any tare in New York or Fall River or New Orleans or Memphis, when I sell my cotton there is in the market a buyer representing Liverpool and another buyer representing the Fall River mills. The buyer representing the Fall River mills knows as well as the Senator from Rhode Island knows that when that cotton gets to Liverpool there is going to be a deduction of 30 pounds on the 500-pound bale for tare, which, at 12 cents a pound, would amount to \$3.60. He therefore regulates his bid in competition with the Liverpool buyer by his knowledge of that fact. As a consequence, the American buyer, without putting ostensibly any tare upon the cotton, pays a price for the cotton just that much less than he otherwise would pay—in the case I have supposed, \$3.60 a bale less. He would be a monumental idiot if he did otherwise. Would they establish an agreement between them that the New Orleans and Memphis and Savannah cotton buyers representing Liverpool would always pay \$3.60 a bale less for cotton than the buyer representing Fall River would pay? They both pay the same price in both cases; and one of the factors that enters into the calculation of what the price shall be is the fact that \$3.60 is deducted at Liverpool.

It seems rather curious that there is an awful effort being made here to try to make it appear that there is something sectional in this bill. I hear none of you complain that when a man sells his wheat in these burlaps, which are heavier, or sells his wool in burlaps, which are still heavier, he gets paid for his sack in the one case and for his wool bag in the other; and yet in that case, if I am correctly informed, there is no tare at all allowed anywhere. He gets paid at the rate of 90 cents a bushel or \$1 a bushel for his wheat; the wheat weighs 60 pounds; and he gets paid at that same rate for his sack and he gets paid at the same rate for the burlap around his wool, and you do not hear the slightest complaint about that; but when there is a tax which grinds down upon the producer of southern cotton, which grinds down ultimately, of course, more upon the wards of the Nation and the special pets of the Republican Party, the southern darky, who makes nearly half of all the cotton made in this country, nobody is heard to make a complaint.

The truth is there ought never to have been a tax upon cotton bagging; there ought never to have been a tax upon grain sacking; there ought never to have been a tax upon wool bagging. You have gone to work and you have tried to prop up here, as you confess, an industry which, as you allege, can not exist except for this tax; and I suppose, as I said a moment ago,

that not a thousand men in the United States are interested in it, counting employers and employees, both put together.

If the other side wants to vote against giving the southern planter, the southern farmer, and the southern farm laborer free cloth out of which to make the bagging around his product, and then turn right around and put burlap bags for wool and sacks for wheat upon the free list at the same time, then let those of you who have been growling for about three weeks about our discriminating against the farmer go west and explain it.

Mr. LODGE. Mr. President, I know, of course, it is entirely useless to expect to make any change in this provision, for there is none in the bill so hopeless of alteration as this one. It is done on the theory that it will lower the price of cotton bagging to the southern cotton planter. I myself believe the abolition of American competition will lead to their paying more than they do now, because I do not believe that the Dundee and the Calcutta bagging factories, which are all substantially in one control, are philanthropic institutions. I think they will take from their purchasers "all that the traffic will bear." I shall not argue the question any further, but I ask to have printed in the RECORD a letter giving some facts in regard to the matter.

The VICE PRESIDENT. In the absence of objection, permission is granted.

The letter referred to is as follows:

LUDLOW MANUFACTURING ASSOCIATES,
Boston, Mass., April 10, 1913.

Hon. HENRY CABOT LODGE,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In the address of the President to the Congress on April 8 occurs the following which may be regarded as the key to the situation as he perceives it:

"DUTIES MERELY FOR REVENUE.

"The object of the tariff duties henceforth laid must be effective competition, the whetting of American wits by contest with the wits of the rest of the world.

"It would be unwise to move toward this end headlong, with reckless haste, or with strokes that cut at the very roots of what has grown up amongst us by long process and at our own invitation. It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it.

"WE MUST BUILD UP TRADE, ESPECIALLY FOREIGN TRADE.

"In dealing with the tariff the method by which this may be done will be a matter of judgment exercised item by item."

In connection with this your attention is respectfully called to the following:

JUTE BAGGING FOR COVERING COTTON.

This bagging is used exclusively for covering the American cotton crop. It is made from free raw material, and is dutiable under Schedule J, paragraph 355, of the present tariff law, as follows:

"Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, or hemp, not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch, counting the warp and filling, and weighing not less than 15 ounces per square yard, six-tenths of 1 cent per square yard."

As nearly all bagging used for covering cotton is made 45 inches in width, the above duty is equivalent to three-quarters of 1 cent per running yard.

We give below a table compiled from the United States Treasury statistics showing for the years 1903-1912 the amount of bagging imported, the value, duties paid, price per running yard, and the equivalent ad valorem rate of duty assessed:

Imports of bagging under duty of 0.6 cent per square yard, 1903-1912.

Year.	Quantity in square yards.	Value.	Duty collected.	Average value per square yard.	Equivalent ad valorem duty.
					Per cent.
1903.....	5,417,039	\$213,098.00	\$32,502.24	\$0.039	15.26
1904.....	7,801,672	261,235.00	46,810.02	.033	17.92
1905.....	9,603,487	391,730.00	57,620.91	.041	14.71
1906.....	12,309,136	663,843.00	73,854.80	.054	11.13
1907.....	19,817,860	1,215,446.00	118,907.12	.061	9.87
1908.....	16,349,686	1,076,353.00	98,088.16	.066	9.11
1909.....	8,012,434	413,208.00	48,079.63	.052	11.63
1910.....	16,505,542	699,940.00	99,033.28	.042	14.15
1911.....	13,365,349	623,099.00	80,192.11	.047	12.87
1912.....	5,778,731	363,751.00	34,672.38	.063	9.53
Average....	11,496,004	592,170.00	68,977.06	.0515	11.65

This industry has been gradually developed at an enormous expense, has paid the Government a duty of 45 per cent on its machinery (reduced to 30 per cent by the present tariff, enacted since the mills were filled with machinery imported at the higher rate), and is prepared to protect the planter by furnishing him quickly his entire wants during the limited season of his requirements.

The destruction of this industry by putting the foreign product on the free list, as is done by the Underwood bill, would remove all "effective competition."

It would not promote commerce, as there is no foreign demand for this product, and the machinery would not be available for other manufacturing purposes.

The foreign control of the American market, without any return of revenue to the Federal Government, would be the result, and as burlaps, or light jute cloth, has been increased about 70 per cent in price during 1912 by the foreign mills, having no American competition, the same result may reasonably be anticipated in bagging, which in the same period advanced less than 9 per cent.

We do not believe it is the duty of our Congress to put a premium on inefficiency and incompetency or that the rate of duty should be high enough to protect the same, but that only such a measure of duty as will enable a mill equipped with the latest and best machinery, and managed with the greatest skill, to continue as an American industry.

The United States receives Europeans of all nations, but Asiatics and Indians, such as are here pictured, it bars out.

If the competition of the Asiatic laborer is so feared that he is forbidden entrance to the United States, is it unreasonable for the manufacturers of the United States to ask for protection against the importation of goods manufactured by him?

Very respectfully,

LUDLOW MANUF. ASSOCIATES,
CRAMMOND N. WALLACE, President.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Massachusetts.

Mr. LIPPITT. Mr. President, I merely want to add a word to what I was saying when the Senator from Mississippi [Mr. WILLIAMS] very properly interrupted me with the remark that I was speaking in his time.

There can be no dispute about what happens in connection with this cotton-bagging matter. The facts are undeniable that for every bale of cotton that is grown the planter receives a sum equivalent to the combined weight of the cotton, the bagging, and the hoop iron. Nobody has ever denied that, and the Senator from Mississippi will not deny that.

Mr. WILLIAMS. I do deny it absolutely. The Senator says that the planter receives it. If the planter receives it, then he receives it without a deduction from the price to account for it; and I say there is a deduction from the price to account for it.

Mr. LIPPITT. I will say to the Senator from Mississippi that, if he will understand my statement, I do not believe he will deny it. I say to the Senator from Mississippi, when the planter—the grower of cotton—takes that cotton into his local market to sell it to a factor, that that bale of cotton is put upon the scales, including the bagging, including the hoop iron, and including the cotton, and the weight for which he is paid is the combined weight of those three articles.

Mr. WILLIAMS. There is no doubt about that; the weight of the bale is the weight of the three combined.

Mr. LIPPITT. That is what I said, and I knew the Senator from Mississippi would not deny it.

The whole of the Senator's argument is that, although the planter is paid for all those three articles, by some hocus-pocus in the markets of the world he only receives for those three articles what he would receive for the cotton alone if only the cotton were weighed. Mr. President, whether that is true or not I do not know; but what I do know is that there is a great disinclination on the part of purchasers generally to pay for the package in which an article is contained the same price that they pay for the article itself. I know that when one enters a grocery store to buy a pound of sugar, if the sugar is put up in a box and the grocer attempts to weigh the box and the sugar together and make the customer pay for a proportion of a pound of sugar the same price he would pay for an entire pound, the customer does not like it.

I know that when we come to the other end of the transaction, and this cotton that the New England or southern manufacturer has bought at the combined weight of cotton and bagging is turned into cloth and that cloth is wrapped up in bagging exactly the same as cotton is wrapped up in bagging—when that cotton is returned to the South in the form of cloth no southern merchant will permit the mill to weigh into the weight of that bale the burlap in which it is contained, or will pay for the burlap at the price of the cloth, on the assumption that he would have to pay for the cloth the same price that he would pay for the combined weight if he paid for only one.

In one case, when the cotton comes to the mill, the combined weight of both is charged for. When it is returned to the South in the form of cloth, only the cloth is allowed to be charged for.

The whole of this mystery lies in the assumption that is made upon the part of the planter in the South that in case he were not allowed to weigh both materials he would have to charge just that much more for his cotton. Whether that is the case or not no living man can possibly tell. The price of cotton, like the price of every other product, is determined by the demand and the supply. It is not determined by the Liverpool market for cotton. The Liverpool market is merely one of the thermometers that register the price of cotton. The New York Cotton Exchange is another thermometer that measures the price of cotton for this country. The New Orleans and Memphis

exchanges are other thermometers. But what makes those thermometers go up and down is not the demand of Liverpool nor the demand of America; it is the combined demand of the entire world in its relation to the combined supply of the entire world.

No man's mind has ever yet been found clear enough and accurate enough to discover whether that thermometer would go up or down on account of some variation in the tare upon the cotton. The fact remains that when a man raises cotton that is worth 12 cents a pound, he gets 12 cents a pound for the bagging that incloses the cotton; when he raises cotton that is worth 20 cents a pound, as many of the planters do in the State which the Senator from Mississippi so ably represents, he gets 20 cents a pound for the bagging; and he gets the 12 cents or the 20 cents, as the case may be, for bagging and for hoop iron that cost him identically the same price in each case.

I think that is the situation, as I understand it.

Mr. WILLIAMS. Mr. President, I am astonished, then, that the Senator, who has been so long engaged in the business, does not understand it. He speaks of a "hocus pocus" and an "assumption." Here is the plain physical fact: When a bale of cotton goes to the market in Liverpool it is weighed with the bagging and the ties both upon it, and then 6 per cent of its weight is deducted from it before it is paid for.

Mr. LIPPITT. I have acknowledged that.

Mr. WILLIAMS. That is not a "hocus pocus"; that is not an "assumption." That is a physical fact, and that is not trusting to the market to bring a price for the cotton—

Mr. LIPPITT. May I ask the Senator one question?

Mr. WILLIAMS. Yes.

Mr. LIPPITT. Is it not true that that cotton in the Liverpool market is paid for at a price that is 6 per cent higher than the price that would have been charged for that cotton if it had been sold to a New England buyer?

Mr. WILLIAMS. No; exactly the opposite is the truth. The truth is that cotton is paid for in America at a little over 6 per cent less than it brings in Liverpool; and one of the reasons for it is because the American buyer is competing with Liverpool in buying the cotton.

The Senator from Rhode Island can not teach me any fundamental elementary principles of political economy. When the Senator undertakes to put me in the attitude of having said that Liverpool alone fixes the price of cotton he is making an assumption. I say, however, that the controlling factor in fixing the price of cotton is Liverpool, because it is the greatest market for cotton in the world.

There is the physical fact. I sell 100 bales of cotton to-day to Fall River. I sell another hundred bales of cotton to-day to be delivered in Liverpool. I sell each of those 100 bales at exactly the same price per pound. When my cotton gets to Liverpool they physically deduct this 6 per cent. Upon a 500-pound bale that is 30 pounds. Now, the Senator says that I get paid at the rate of 10 cents per pound for the bagging and ties in the first instance if that is the price agreed upon, and 20 cents per pound if the cotton is worth 20 cents.

Mr. LIPPITT. Mr. President—

Mr. WILLIAMS. Wait one moment. He forgets that when the tare of 6 per cent is calculated, if it is 10-cent cotton I have \$3 deducted from what I would have received, and if it is 20-cent cotton I have \$6 deducted from what I would have received, because the tare, the deduction, is a percentage of weight; that weight is multiplied by the price of the cotton, and that is the way in which bagging and ties are allowed for.

If the Senator were to sell a bag of cloth or something put up in a box with an agreement that so many pounds should be deducted for the weight of the covering or the weight of the box he would not be receiving pay for the covering or for the box. When we sell this cotton with an agreed tare of 6 per cent we are not receiving pay for the number of pounds that the tare comes to at the price at which the total was calculated. Of course you can not weigh the cotton separately from the bagging and ties unless you stop to take off the bagging and ties. Hence, for generations it has been agreed at Liverpool that a certain percentage of tare should be allowed.

Mr. LIPPITT. What is that percentage?

Mr. WILLIAMS. Six per cent. In a 500-pound bale there is 30 pounds deducted.

Mr. LIPPITT. Now, just let me ask the Senator a question.

Mr. WILLIAMS. There is one more thing—

Mr. LIPPITT. If the Senator will let me ask him one more question I will not interrupt him again.

Mr. WILLIAMS. I hope the Senator will let me finish this sentence, because I want to complete the statement. There is one more thing done. At one time some cotton shippers or exporters, whether planters or not—there being dishonest men among them, like all others—tried to increase the amount of bagging and the amount of ties so that the tare would not cover

it. An arrangement was then made that whenever there were more than 6 ties and more than a certain number of yards of bagging extra tare was to be charged.

I now yield to the Senator.

Mr. LIPPITT. The Senator very rightly says that there is a 6 per cent allowance for tare when cotton is sold to Liverpool. If cotton is worth 10 cents a pound, 6 per cent would be—

Mr. WILLIAMS. Three dollars.

Mr. LIPPITT. It would be 10.6 cents per pound. I think that is correct, is it not? Figured on the price of the pound, if 6 per cent is added for the tare, where the cotton is worth 10 cents per pound without it the price would be 10 cents plus 6 per cent of 10 cents, which is sixty one-hundredths, or a total of 10.6 cents per pound.

Mr. WILLIAMS. The Senator means if the cotton were sold without the burlap or ties it would be 10.6 cents per pound.

Mr. LIPPITT. I simply mean, so far, that 6 per cent of 10 cents is six-tenths of a cent.

Mr. WILLIAMS. That is absolutely true; yes.

Mr. LIPPITT. Yes. Now, then, if that cotton were charged to a New England mill at 10 cents a pound by a factor in Memphis, it would be charged to the Liverpool mill at 10.6 cents per pound. Is not that correct?

Mr. WILLIAMS. I do not think so.

Mr. LIPPITT. I so understand it. The Senator has himself said that there is an amount added to the price to compensate for the tare.

Mr. WILLIAMS. There is an amount deducted from the price.

Mr. LIPPITT. I understand that every merchant, every factor in Memphis who has a bale of cotton that he has bought, if he sells that bale to a New England cotton mill at 10 cents a pound, would charge the same bale to a Liverpool buyer at 10.6 cents a pound. The reason he would charge it to the latter at 10.6 cents a pound is simply because he is going to allow the Liverpool merchant a tare that is equivalent to the difference between the price he is charging to the two places. That is the way this business is carried on.

Mr. WILLIAMS. If that is the way the business is carried on, it is absolutely news to me. I know that I sell my cotton to men who are buying for Liverpool, and I sell to men who are buying for Fall River.

Mr. LIPPITT. And the Senator gets identically the same price.

Mr. WILLIAMS. And they give me identically the same price.

Mr. LIPPITT. Exactly.

Mr. WILLIAMS. So the statement that the cotton producer gets the difference is not true.

Mr. LIPPITT. And the Senator is paid for both the cotton and the bagging.

Mr. WILLIAMS. The Senator from Rhode Island promised me that if I would let him ask me a question he would not interrupt me again. So the statement that the cotton producer receives payment for his bagging and ties is not true. According to the Senator's own statement, he says that after the buyer has bought the cotton from me he adds six-tenths of a cent on each 10 cents' worth of cotton to the price to Liverpool. If that be true, then the buyer gets paid for the tare, but I never get paid for it.

I do not think that is the way they do. If that is the way they do in invoicing that cotton to Liverpool at Fall River, it is absolutely news to me. I never heard of it in my life.

Mr. LIPPITT. If the Senator will read the department reports upon the matter, he will see that it is so.

Mr. WILLIAMS. I never heard of it in my life, and I do not believe there is any cotton buyer in Yazoo City who buys cotton from me at 10 cents a pound who adds six-tenths of a cent to it on that account when he sells it to Liverpool. Of course he adds something to it, because he is buying cotton in order to sell it at a profit.

As to what fixes the price of the cotton, of course nobody is stupid enough to say that Liverpool alone does it. The entire demand for the product all over the world, as contrasted with the supply, fixes it; but when the major demand is in one place, then that place is the controlling factor in the price.

Mr. WEEKS. Of course I knew that the Senator from Mississippi and his party were lost to reason on this subject before I commenced the discussion. I ask for a vote.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Massachusetts.

The amendment was rejected.

Mr. THOMAS. Mr. President, I offer as an amendment an additional paragraph, to be numbered 4034, which I ask to have read.

The VICE PRESIDENT. The amendment will be stated.
The SECRETARY. On page 124, after line 18, it is proposed to insert the following as a new paragraph:

4034. Alcohol, ethyl, of a proof strength of not less than 180° and containing denaturing materials of such character and quantity as to render it unfit as a beverage or for liquid medicinal purposes: *Provided*, That the proper denaturation of such alcohol (including denatured alcohol brought to the United States from Porto Rico) shall be determined in such manner as the Secretary of the Treasury may by regulations prescribe; and all such alcohol admitted free of duty or tax shall not be subject to any internal revenue tax.

The amendment was agreed to.

IMPORTATIONS IN AMERICAN VESSELS (S. DOC. NO. 179).

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read:

To the Senate:

In reply to the resolution of the Senate, dated August 20, 1913, reading as follows:

Resolved, That the Secretary of State be directed, if not incompatible with the public interest, to transmit to the Senate copies of all protests filed against paragraph J, subdivision 7, of section IV (V as amended) of H. R. 3321, "An act to reduce tariff duties and to provide revenues for the Government, and for other purposes," together with copies of all correspondence that has passed between this country and any foreign country relating thereto, and copies of any report or reports prepared or made thereon by any officer of the United States, the subject referred to being the provision in the tariff bill providing for a discount of 5 per cent on all duties on goods, wares, and merchandise imported by vessels admitted to registration under the laws of the United States.

I transmit herewith a report from the Secretary of State pointing out that the information called for by the resolution has already been communicated by the Department of State to the Committee on Finance of the United States Senate.

WOODROW WILSON.

THE WHITE HOUSE, September 4, 1913.

The PRESIDENT:

The undersigned, the Secretary of State, has received the resolution of the Senate dated August 20, 1913, reading as follows:

Resolved, That the Secretary of State be directed, if not incompatible with the public interest, to transmit to the Senate copies of all protests filed against paragraph J, subdivision 7, of section IV (V as amended), of H. R. 3321, "An act to reduce tariff duties and to provide revenues for the Government, and for other purposes," together with copies of all correspondence that has passed between this country and any foreign country relating thereto, and copies of any report or reports prepared or made thereon by any officer of the United States; the subject referred to being the provision in the tariff bill providing for a discount of 5 per cent on all duties on goods, wares, and merchandise imported by vessels admitted to registration under the laws of the United States."

In response to this resolution, the undersigned has the honor to point out that the Department of State has already transmitted to the chairman of the Committee on Finance of the United States Senate, for the information of that committee, copies of all notes addressed to the department by the foreign diplomatic representatives in Washington protesting against the discount of 5 per cent allowed on all duties imposed on goods, wares, and merchandise imported by vessels admitted to registration under the laws of the United States. No further correspondence with these representatives has taken place save mere acknowledgment by the department of the receipt of their notes and the statement to them that copies of their notes had been transmitted to the appropriate committees of Congress. Copies of a letter from the Secretary of the Treasury dated May 26, 1913, and of this department's reply of May 28, 1913, discussing the question of the alleged conflict of the provision with the stipulations of some of our treaties, are inclosed.

It appears, therefore, that the information requested by the resolution is in large part already at the disposition of the Senate.

Respectfully submitted.

W. J. BRYAN.

DEPARTMENT OF STATE,
Washington, August 29, 1913.

TREASURY DEPARTMENT,
Washington, May 26, 1913.

The SECRETARY OF STATE.

SIR: I have the honor to invite your attention to subsection 7, paragraph J, of section 4 of the pending tariff bill (H. R. 3321), which provides for a discount of 5 per cent on such goods, wares, and merchandise as shall be imported in vessels admitted to registration under the laws of the United States.

It has been pointed out to me, directly and indirectly, that this provision may result in the violation of many of our treaties with foreign nations, and is almost sure to result in international complications and diplomatic negotiations. Consequently, I earnestly suggest the advisability of submitting to the counselor for the State Department or such other officer as you may deem proper the question as to whether or not this provision is in violation of any existing treaty rights.

In view of the importance of this matter and the necessity for early action, I shall be greatly obliged if you will furnish me with the desired opinion at the earliest possible moment.

Yours, very sincerely,

WM. G. MCADOO.

DEPARTMENT OF STATE,
Washington, May 28, 1913.

The SECRETARY OF THE TREASURY.

SIR: Replying to your letter of the 26th instant, in which you request an expression of the opinion of the department as to whether subsection 7, paragraph J, of section 4 of the pending tariff bill (H. R.

3321) conflicts with the provisions of our treaties, I have the honor to say:

The clause in question reads as follows:

"J. Subsection 7. That a discount of 5 per cent on all duties imposed by this act shall be allowed on such goods, wares, and merchandise as shall be imported in vessels admitted to registration under the laws of the United States."

We have treaties with numerous countries, including the Argentine Republic, Austria-Hungary, Belgium, Colombia, Costa Rica, Denmark, Great Britain, the Hanseatic Republics, Italy, Japan, the Netherlands, Norway, Prussia, Spain, and Sweden, which provide, in one form or another, that neither contracting party shall charge a lower rate of duty on merchandise imported in its own vessels than it charges on merchandise imported in vessels of the other contracting party.

The earliest of these treaties now in force is that with Great Britain, concluded July 3, 1815, during the administration of Madison. It contains (art. 2) the following clause:

"The same duties shall be paid on the importation into the United States of any articles the growth, produce, or manufacture of His Britannick Majesty's territories in Europe, whether such importation shall be in vessels of the United States or in British vessels, and the same duties shall be paid on the importation into the ports of any of His Britannick Majesty's territories in Europe of any article the growth, produce, or manufacture of the United States, whether such importation shall be in British vessels or in vessels of the United States."

The convention of commerce and navigation with Denmark, concluded April 26, 1826, during the administration of John Quincy Adams, contains (Art. III) the following clause:

"They (the contracting parties) likewise agree that whatever kind of produce, manufacture, or merchandise of any foreign country can be, from time to time, lawfully imported into the United States, in vessels belonging wholly to the citizens thereof, may be also imported in vessels wholly belonging to the subjects of Denmark; and that no higher or other duties upon the tonnage of the vessel or her cargo shall be levied and collected, whether the importation be made in vessels of the one country or of the other."

Following this passage, there is a reciprocal provision as to importations in American vessels into Denmark.

Substantially similar stipulations may be found in Article III of the treaty of commerce and navigation with Sweden and Norway, concluded July 4, 1827.

Article III of the treaty of commerce and navigation with Prussia, concluded May 1, 1828, contains the following stipulation:

"All kinds of merchandise and articles of commerce, either the produce of the soil or of the industry of the Kingdom of Prussia, or of any other country, which may be lawfully imported into the ports of the United States in vessels of the said States, may also be so imported in Prussian vessels, without paying other or higher duties or charges, of whatever kind or denomination, levied in the name or to the profit of the Government, the local authorities, or of any private establishments whatsoever, than if the same merchandise or produce had been imported in vessels of the United States of America."

The article contains a reciprocal provision as to importations into Prussia in American vessels.

Similar clauses exist in the treaty of commerce and navigation between the United States and Austria-Hungary, concluded August 27, 1829.

The convention of commerce and navigation between the United States and the Netherlands, concluded August 26, 1852, contains the following article:

"ARTICLE I. Goods and merchandise, whatever their origin may be, imported into or exported from the ports of the United States from and to any other country in vessels of the Netherlands shall pay no higher or other duties than shall be levied on the like goods and merchandise imported or exported in national vessels. Reciprocally, goods and merchandise, whatever their origin may be, imported into or exported from the ports of the Netherlands from and to any other country in vessels of the United States shall pay no higher or other duties than shall be levied on the like goods and merchandise imported or exported in national vessels."

The treaty of commerce and navigation with the Argentine Republic, concluded July 27, 1853, briefly provides as follows:

"ART. VI. The same duties shall be paid and the same drawbacks and bounties allowed upon the importation and exportation of any article into or from the Territories of the United States, or into or from the Territories of the Argentine Confederation, whether such importation or exportation be made in vessels of the United States or in vessels of the Argentine Confederation."

It will be observed that Article VI, above quoted, refers to drawbacks and bounties. Similar stipulations are found in other treaties.

The various stipulations above quoted suffice to show the purport of the treaty provisions with which the proposed subsection is alleged to conflict. This allegation appears to be well founded if, as seems to be the case, it is intended by the subsection to allow the discount on duties only on merchandise imported in American registered vessels. Governments having treaty stipulations with the United States such as those above quoted probably would not object to the discount if it were extended, in conformity with those stipulations, to merchandise imported into the United States in their respective vessels; but they would not acquiesce in a discriminatory levy of lower duties on goods imported into the United States in American registered vessels because it was called a discount. It is the fact that a lower duty is charged, and not the term by which the reduction is described, with which the department is obliged to deal.

The department has received one communication from a Government with which we have at present no such treaty stipulations as those above quoted. This communication proceeds from the Government of France, whose ambassador at this capital has made to the department, with reference to the subsection in question, the following statement:

"This is tantamount to what was formerly styled the 'flag surtax' that was given up because, as every nation availed itself of it, there was no advantage in maintaining a system that was bringing inconvenience to all and profit to none. If such a clause were enacted, reciprocal measures would unfailingly be taken. The French administration would have no choice in the matter, since it would be bound to act upon article 6 of the law of May 19, 1868, which directs the levying of countervailing duties on the vessels of any government which, to the detriment of our own marine, adopts a system of duties or taxes from which its own is exempt."

I have the honor to be, sir,
Your obedient servant,

J. B. MOORE,
Counselor.
(For the Secretary of State.)

Mr. GALLINGER. Mr. President, I observe that the President says that the information called for has been transmitted to the Committee on Finance. This is a matter in which some of us are considerably interested. I rise simply to express the hope that the committee will put the Senate in possession of the facts as early as possible, so that we may give consideration to them.

The VICE PRESIDENT. The Chair will state to the Senator from New Hampshire, in the interest of time, that the Chair thinks a duplicate copy of the papers is attached to the message of the President, and will appear in the Record. The Chair believes the information is contained there.

Mr. GALLINGER. That will be very satisfactory.

Mr. THOMAS. The chairman of the committee is not present in the Chamber, but I have no doubt—

Mr. SIMMONS entered the Chamber.

Mr. BRANDEGEE. The chairman of the committee has just come on the floor.

Mr. GALLINGER. I had no purpose to consume any time. I wished merely to make the suggestion; that was all.

The VICE PRESIDENT. The contents of certain treaties are set out in the accompanying documents.

Mr. SIMMONS. Mr. President, I am advised that, in my absence, the Senator from New Hampshire [Mr. GALLINGER] made some inquiry with reference to the provision in the House bill making a differential in favor of goods imported in American bottoms.

Mr. GALLINGER. The only suggestion I made, if the Senator will permit me, was that the message from the President suggested that the answer had been communicated to the Finance Committee, and I ventured to say that I hoped the committee would find it convenient in some way to put the Senate in possession of it, as I for one Senator wanted to look into it a little.

Mr. SIMMONS. I will say to the Senator that I have not published all the letters that have been sent to the committee. I have published all the briefs, but I have not published all the letters. If, however, the Senator desires any communication that I have from the State Department or any other department of the Government with reference to this matter or any other matter, I shall be very glad to put it in his possession.

Mr. GALLINGER. My observation was not at all in criticism of the committee. In response, the Chair suggested that he felt quite sure the information was appended to the communication that the President sent in, and I said that was entirely satisfactory. I simply want to get the facts, that is all.

Mr. JONES. Mr. President, as I understand, not only the communication from the President, but the copies accompanying it will appear in the Record to-morrow morning.

The VICE PRESIDENT. It has been so ordered.

Mr. JONES. I should like to call the attention of the chairman of the Finance Committee to that. If that does not cover all of the papers, or letters now in the hands of the Finance Committee relating to the subject matter of the resolution, I should like to have anything additional put in the Record.

Mr. SIMMONS. I will get what I have and give it to the stenographer.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BRANDEGEE. Mr. President, if the Senator is willing, I should like to offer an amendment to paragraph 534, on page 141. It is a paragraph of the leather schedule. I do not know which Senator is the chairman of the subcommittee on the leather schedule.

Mr. HUGHES. I will say to the Senator that I have certain changes to suggest to that paragraph myself. If it will suit the purpose of the Senator, I should prefer to have him wait until the paragraph is perfected. Then, if it does not satisfy him, he may offer his amendment.

Mr. BRANDEGEE. My only reason for rising was that I thought the paragraph had been acted upon. I knew it had been passed over once, but I did not know it had been passed over again.

Mr. HUGHES. We have not yet reached it.

Mr. BRANDEGEE. I will ask the Senator from New Jersey if the amendment to paragraph 534 contemplated by him refers at all to harness and saddlery hardware?

Mr. HUGHES. No; it does not.

Mr. BRANDEGEE. Then, I will say to the Senator, if I may be allowed to do so at this point, that some time ago I introduced an amendment proposing to insert in line 17, on page 141, after the first word in the line, to wit, the word "unfinished," the words "except harness and saddlery hardware." The amendment was referred to the Committee on Finance.

Inasmuch as the Senator says the committee is considering some amendments to this paragraph, I desire to say now for his information that one of my constituents, who is in the business of manufacturing harness and saddlery hardware, wrote me some time ago that he thought this paragraph would put his product upon the free list, although it has nothing at all to do with leather.

Mr. HUGHES. I will say to the Senator that his constituent is correct. He construes the paragraph in the same way that I construe it. The object of the committee in making the change was so that saddlery hardware would come in free, as saddlery and harness do.

Mr. BRANDEGEE. If that is the case it seems to me it is somewhat unfair, because on page 50 of the bill, under paragraph 169, "articles or wares not specially provided for in this section, * * * if composed wholly or in chief value of iron, steel, lead, copper, nickel, pewter, zinc, aluminum, or other metal, but not plated with gold or silver, and whether partly or wholly manufactured" carry a duty of 20 per cent ad valorem. Under the Payne bill they carry a duty of 45 per cent ad valorem.

In connection with the proposition to put upon the free list harnesses, sole leather, and different kinds of leather, together with their saddles, I do not see why metal rings and buckles and things of that kind, which heretofore have borne a duty of 45 per cent, and articles similar to which, under paragraph 50, bear a duty of 20 per cent in this bill should be permitted to come in free under this paragraph as parts of harness. It simply puts out of business the few, and I suppose not very large, manufacturing concerns in this country that make these things, which are in a certain sense part of a harness but are no part of the leather of the harness. They are additions to it and ornamental things entirely independent of the harness, and are made in factories that make other similar articles for other purposes.

I have said all I care to say upon this subject at this time; and I have said it now because I want the Senator and his committee or subcommittee to consider the matter if they intend to report any amendment to this paragraph.

Mr. THOMAS. Mr. President, the committee on yesterday offered a substitute for paragraph 116, which was adopted. My attention has been called to a possible ambiguity in one of its expressions. I ask leave to recur to it, so that I may move to strike out the words "wire or wires provided for in this section" and substitute therefor the words "of the foregoing," so that it will read "any of the foregoing."

The VICE PRESIDENT. The question is on reconsidering the vote whereby the substitute paragraph was adopted.

The motion to reconsider was agreed to.

Mr. BRANDEGEE. So that it would read how if amended, Mr. President?

The SECRETARY. It is proposed to strike out the words "wire or wires provided for in this section" and insert "of the foregoing," so as to read:

116. Round iron or steel wire; wire composed of iron, steel, or other metal except gold or silver; corset clasps, corset steels, dress steels, and all flat wires and steel in strips not thicker than seven hundredths of 1 inch and not exceeding 5 inches in width, whether in long or short lengths, in coils or otherwise, and whether rolled or drawn through dies or rolls or otherwise produced; telegraph and telephone wires; iron and steel wire coated by dipping, galvanizing, or similar process with zinc, tin, or other metal; all other wire not specially provided for in this section, and articles manufactured wholly or in chief value of any of the foregoing; all the foregoing, 15 per cent ad valorem; wire heddles and healds; wire rope; telegraph, telephone, and other wires and cables covered with cotton, silk, paper, rubber, lead, or other material; all the foregoing and articles manufactured wholly or in chief value thereof, 25 per cent ad valorem; woven wire cloth made of iron, steel, copper, brass, bronze, or other metal, 30 mesh and above, 30 per cent ad valorem.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. GALLINGER. I will venture to propound an interrogatory to the senior Senator from North Carolina, and I hope he will not misunderstand my purpose in doing it.

My attention was called yesterday to the fact that we probably should devote more hours to the consideration of the bill than we have been devoting; and I, for one Senator, said I should be very glad if it could be arranged. I will ask the Senator if it is in contemplation in the near future to meet at an earlier hour, or to hold night sessions? I will say to the Senator that it would be agreeable to many of us on this side of the Chamber if that were done.

Mr. SIMMONS. The Senator will understand that I have been very anxious for longer hours, and especially that we might get to night sessions; but so many matters have been referred back to the Finance Committee that during this week we have found it necessary for the committee to meet at night.

Then we have had some caucuses, as the Senator knows. Tomorrow it will not be practicable for us to hold a long session, but after that, if it is necessary, I hope we may sit longer hours than we have done.

Mr. GALLINGER. I feel sure that whenever the Senator and his committee get to a point where that suggestion is to be made, it will be cordially concurred in by Senators on this side of the Chamber.

Mr. SIMMONS. I am very glad to know, as I have learned from private sources as well as from the public statement of the Senator, that the Senators on the other side are ready and willing to cooperate in every way to bring this bill to final passage.

Mr. GALLINGER. Yes; to pass the bill.

The SECRETARY. The next amendment passed over is on page 130, where the committee proposes to insert a new paragraph to be known as paragraph 427½, as follows:

427½. Blankets, composed wholly or in chief value of wool, valued at less than 40 cents per pound.

Mr. THOMAS. I move to amend the amendment by striking out the comma after the word "wool," on line 18, and inserting the words "or cotton" and a comma.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The SECRETARY. The next paragraph passed over is paragraph 433. The Committee on Finance propose, in paragraph 433, page 131, line 13, after the word "music," to strike out the word "engravings"; in line 14, before "lithographic," to strike out "etchings"; and in line 14, after "prints," to strike out "bound or," so as to make the paragraph read:

433. Books, maps, music, photographs, lithographic prints, unbound, or in bindings over 20 years old, and charts, which shall have been printed more than 20 years at the date of importation, and all hydrographic charts, and publications issued for their subscribers or exchanges by scientific and literary associations or academies, or publications of individuals for gratuitous private circulation, not advertising matter, and public documents issued by foreign Governments.

Mr. LODGE. Mr. President, this paragraph was passed over with a view, I think, of the committee reconsidering the wording. I am entirely in agreement with what the committee has done in the amendment. I think it is very desirable, indeed, to accomplish the purpose which it aims at, and I think it will. I was rather troubled about the wording and thought it might lead to serious difficulty, such as the case of an old book of great value in a new binding of comparatively small value, when the intent was to bring the book in free, as to whether if the binding was dutiable it would fall on the book. But after trying to reword it and examining it with more care, I think that this distinguishes the binding from the book.

I do not think there is any ambiguity about it, because the general proposition that they shall have been printed more than 20 years follows, and I think it will cover it all.

Now, there is one other point. I suppose it would not be so interpreted, but grammatically what follows "and charts" would apply only to charts. Putting in the word "and" makes the clause "over 20 years old" apply to charts. Of course, it is intended to apply to everything.

If I may ask the Senator from Maine—I have been talking with him about it—I do not see that it would do any harm to put charts back in the general list "books, maps, and charts." It is true charts are not usually bound, but that does not make any difference; they would come in as unbound. I think it would be perfectly safe to make it read, "books, maps, charts, music," and so forth. Charts are sometimes bound as books and sometimes unbound, and it would make no disturbance to put charts back. That would leave the clause "or in bindings over 20 years old" apply to books, and it would leave the whole thing covered by the relative sentence.

Mr. JOHNSON. I am willing to accept the amendment proposed by the Senator from Massachusetts. Our only purpose in placing "charts" in line 15 was that we did not suppose charts were bound.

Mr. LODGE. Sometimes I suppose they are. In large folio volumes certainly charts are bound. I have seen them. I suppose that means really wall charts as distinguished from maps, but in any case they would come in as unbound.

Mr. JOHNSON. I move then, in line 15, to strike out the words "and charts."

The amendment to the amendment was agreed to.

Mr. JOHNSON. I move to insert the word "charts" after the word "maps" in line 13.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The SECRETARY. The next amendment passed over is in paragraph 434, page 131, line 22. The committee report in the first line of the paragraph, after the word "Books," to

strike out "and pamphlets printed chiefly in languages other than English; also books."

Mr. JOHNSON. I ask that the committee amendment be disagreed to.

The amendment was rejected.

Mr. JOHNSON. There is another committee amendment in the paragraph the adoption of which I ask.

Mr. THOMAS. The Senator from Maine will remember that it was also agreed that we would suggest, after the word "printed," in line 22, to insert the words "wholly or," so as to read:

Books and pamphlets printed wholly or chiefly in languages other than English.

Mr. LODGE. By unanimous consent, that change can be made.

Mr. JOHNSON. Having restored the language by disagreeing to the amendment of the committee, I move now to amend the language restored by inserting, after the word "printed," in line 22, the words "wholly or."

The amendment was agreed to.

The SECRETARY. In line 24 the committee reports to insert, after the word "blind," the words "and all textbooks used in schools and other educational institutions; Braille tablets, cubarithmes, special apparatus and objects serving to teach the blind, including printing apparatus, machines, presses, and types for the use and benefit of the blind exclusively."

The amendment was agreed to.

The SECRETARY. On page 132 the committee propose to strike out paragraph 438, which reads as follows:

438. Bran and wheat screenings.

The amendment was agreed to.

Mr. JOHNSON. The committee amendments in paragraph 435 have been agreed to?

The VICE PRESIDENT. They have been agreed to.

The SECRETARY. Paragraph 450, on page 133, relative to cash registers, and so forth, was passed over at the suggestion of the Senator from Illinois [Mr. SHERMAN].

Mr. THOMAS. The committee proposes an amendment there by inserting before the comma, after the word "separators," on line 15, the words "valued at not exceeding \$75."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 133, in line 15, after the word "separators" and before the comma insert "valued at not exceeding \$75."

The amendment was agreed to.

Mr. SHERMAN. Mr. President, I move to amend paragraph 450 by striking out in line 14 the words "sewing machines," and to transfer those words to paragraph 167 and insert them after the word "presses," in line 18, so that sewing machines will be dutiable at 15 per cent.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 133, line 14, it is proposed to strike out the words "sewing machines" and the comma and to insert the same words in paragraph 167, on page 49, after the words "printing presses" and the comma.

Mr. SHERMAN. Mr. President, the reasons I have for offering this amendment I will give very briefly. Sewing machines have heretofore been dutiable, I think, at 45 per cent. About 50 per cent of the domestic machines are manufactured by one company. The balance are made by seven independent and competitive companies. The seven companies last year, by the figures they have presented to me, made about 650,000 domestic machines. They have about 6,500 men on their pay rolls. There is something like \$8,000,000 of capital altogether in the seven companies. There are three of those companies in the State of Ohio, one in the State of Massachusetts, and three in the State of Illinois. Those seven companies are in no combination. All of them are in constant and active competition with each other. They manufacture almost entirely domestic machines operated by foot power. There may be with one company a small output of power machines.

In addition to the seven sewing-machine companies there is one company employing about 400 men in the city of Chicago, entirely devoted to the manufacture of power machines. Those machines are used in boot and shoe manufacture, in sewing heavy felts, and in such work as can be done only by a power machine. They are largely if not entirely used by special lines of trade and do not enter into the general domestic sewing-machine market.

The objection I find to free listing sewing machines entirely is in the effect it will have on the seven independent companies. The Singer Sewing Machine Co. is amply able to manufacture and sell under any schedule that may be prepared in this Chamber. They now manufacture and put upon the market of this country something over 50 per cent of the total number supplied

annually. The Singer Co. not only has its factories in the United States but it has very large plants elsewhere. There is one factory in Canada, a very large plant in Scotland, in Germany there is at least one, and in Russia there is another. They manufacture for their European trade entirely, I believe, from the foreign plants. The Singer Co. is a large concern. Its name is known universally where sewing machines are used.

They have, as I remember, something like \$60,000,000 of capital in their allied concerns both here and abroad. They have, in addition to that, \$40,000,000 surplus. There are about 12,000 workmen on the pay rolls in this country and abroad. At least 75 per cent of the mechanical force engaged in their manufactures are in foreign countries, leaving about 3,000 of the 12,000 in this country.

Free listing sewing machines will have no appreciable effect on this large company, but it will have an injurious effect upon the seven competitive companies. I think instead of regulating the price or lowering it or interfering with what might be called a trust, if one exists, in this line of manufacture, it would be more beneficial than otherwise to the larger company. The result would be what I fear will be the result in other lines, namely, the large concerns will not be affected by this change, while the smaller ones, which are less able to stand the competition from abroad, will be the companies that will suffer finally from free listing or from a greatly reduced rate.

I have been disposed to listen to the representatives of the seven independent companies. They say they can continue to do business in this country with a 15 per cent protection. Free listing the article, however, will be very injurious to their line of manufacture, and will only result in time practically in putting the business in the hands of the one large company with which the seven companies are now competitive as well as being competitive with each other.

Mr. LODGE. Mr. President, on the occasion when this item of sewing machines was before the Senate for consideration, or on the day afterwards, I said something about it and had printed some letters from some of the independent manufacturers. I can add nothing to what has been said by the Senator from Illinois [Mr. SHERMAN], who has covered the whole case. There is no doubt in my mind, however, that putting sewing machines on the free list will wipe out the independent operators and that it will not be of disadvantage to the Singer Co. at all, because they have factories abroad, and I think they will take possession of the business.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

The SECRETARY. The next amendment passed over is on page 133, after line 19, where the committee propose to insert a new paragraph, as follows:

450½. Cast-iron pipe of every description.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The SECRETARY. The next paragraph passed over is paragraph 476, page 135, passed over at the request of Mr. SMOOT. The paragraph reads as follows:

476. Cryolite, or kryolith, natural.

Mr. JOHNSON. Mr. President, that was passed over at the suggestion of the Senator from Utah, but the committee suggest no change. Cryolite is made synthetically, and it is the intention of the committee to leave synthetic cryolite on the dutiable list.

Mr. GALLINGER. The Senator from Utah [Mr. Smoot] is absent from the Chamber only for a few moments, and perhaps it would be well to let the paragraph go over.

Mr. JOHNSON. Very well; let the paragraph be passed over until he returns.

The VICE PRESIDENT. The paragraph will be temporarily passed over.

The SECRETARY. The next paragraph passed over is paragraph 486, on page 136, relating to emery ore and corundum. The committee have reported an amendment to the paragraph, which was passed over at the request of Mr. Smoot.

Mr. GALLINGER. Let that paragraph likewise go over for a few moments, as the Senator from Utah has not returned.

Mr. THOMAS. Let the paragraph go over.

The VICE PRESIDENT. The paragraph will be temporarily passed over.

The SECRETARY. On page 137, paragraph 492, flax straw, was passed over at the request of Mr. McCUMBER.

Mr. McCUMBER. Mr. President, I submitted some remarks on that subject yesterday in the hope that the committee would at least take up the matter and give heed to my suggestion or

consider the matter further in conference—one of the two. I do not care to present any additional statement.

Mr. WILLIAMS. I listened very attentively to the Senator and we did take it up, but concluded to stand by the action of the committee.

The SECRETARY. The committee proposes an amendment to paragraph 492, page 137, line 10, after the word "straw," to insert "flax, not hackled or dressed; flax hackled, known as 'dressed line,' tow of flax, and flax noils; hemp and tow of hemp; hemp hackled, known as 'line of hemp,'" so as to make the paragraph read:

492. Flax straw, flax, not hackled or dressed; flax hackled, known as "dressed line," tow of flax, and flax noils; hemp, and tow of hemp; hemp hackled, known as "line of hemp."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The SECRETARY. On page 137, paragraph 498 was passed over at the request of Mr. LODGE. The committee propose an amendment to strike out the paragraph, as follows:

498. Glass enamel, white, for watch and clock dials.

Mr. LODGE. I asked to have that paragraph passed over in connection with the watch paragraph, which has been adopted. I am sorry the committee did not adopt a specific duty, and I can not but smile when I think of time detectors classed with presses. This is merely an additional burden on the watch-makers. The watch industry has been obliged to suffer a heavy lowering of duty, including the duty on clocks of all kinds, and putting a duty on glass enamel is simply imposing a tax on their raw material. I am quite aware that it is impossible to make a change, and I do not care to detain the Senate on it further.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee, striking out paragraph 498.

The amendment was agreed to.

The SECRETARY. The next paragraph passed over is paragraph 505, on page 138, passed over at the request of Mr. SMOOT.

Mr. JOHNSON. Mr. President, I should like to recur to paragraph 503, on page 138. The committee wishes to move an amendment by striking out, in line 18, the words "natural and uncompounded."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 138, paragraph 503, line 18, after the word "oils," it is proposed to strike out "natural and uncompounded."

Mr. LODGE. I am very glad that that amendment has been proposed by the committee, for I think with those words in the intent of the paragraph might be defeated. It certainly would in the case of grease and fats used for stuffing and dressing leather.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. JOHNSON. The committee also moves to insert in place of the words stricken out the words "not chemically compounded."

Mr. LODGE. I do not know what the effect of that will be, but I assume the committee has examined into it and has ascertained that that will not interfere with the purposes of the paragraph.

Mr. JOHNSON. We understand that it will not interfere with the purpose which the committee had. It will only strike out oils which are chemically compounded and not where there is a mechanical mixture of oils.

The SECRETARY. It is proposed to insert in lieu of the words stricken out the words "not chemically compounded."

The amendment was agreed to.

Mr. KERN. I ask unanimous consent that when the Senate adjourns to-day it adjourn to meet at 2 o'clock to-morrow afternoon.

The VICE PRESIDENT. Is there objection? The Chair hears none, and that order is made.

The SECRETARY. Paragraph 518, on page 140, was passed over at the request of Mr. Smoot.

Mr. THOMAS. I desire to ask whether paragraph 505 was not also passed over at his request?

Mr. SMOOT entered the Chamber.

The VICE PRESIDENT. The Senator from Utah has returned to the Chamber. The Secretary will state the first paragraph which was passed over at the suggestion of the Senator from Utah.

The SECRETARY. Paragraph 476, page 135, reading as follows:

476. Cryolite, or kryolith, natural.

Mr. SMOOT. Mr. President, I desire to call the attention of the Senator from Maine to that paragraph. The word "natural" has been added to the present law. The effect of that is to restrict free entry to the natural cryolite. The cryolite which is made synthetically under that provision can not come in free. I do not know why that should be. It is virtually used for the same purpose, and I do not see why the synthetic should not come in free as well as the natural.

Mr. JOHNSON. Mr. President, the synthetic cryolite is made, we are informed, from sodium fluoride and from aluminum fluoride, both of which are dutiable at 15 per cent. Therefore synthetic cryolite is left upon the dutiable list. It was only intended to place upon the free list the natural cryolite.

Mr. SMOOT. I will say to the Senator, however, that under the bill in all other cases, as I recall, the synthetically manufactured article has been free whenever the natural article has been put on the free list. For instance, there is synthetic indigo, and I could enumerate a number of items similar to that. The synthetic article has been treated the same as the natural, and I wondered why the natural and synthetic cryolite should not be treated alike. I am perfectly aware that the solution from which the synthetic cryolite is made is dutiable, but I can not see if we are going to allow the article to come in that it makes a particle of difference whether it is the natural or whether it is the synthetic. I simply wanted to call the Senator's attention to it and see if he did not agree with me in that view.

Mr. JOHNSON. Mr. President, I will say that the committee considered the matter, and we distinguished cryolite from indigo, because no natural indigo is now imported; practically all the imported indigo is synthetic.

Mr. SMOOT. Ninety per cent of it.

The SECRETARY. Paragraph 486, page 136, was passed over at the request of Mr. Smoot. The committee have reported an amendment to the paragraph, after "corundum," in line 23, to insert a comma and the words "and crude artificial abrasives, not specially provided for," so as to make the paragraph read:

486. Emery ore and corundum, and crude artificial abrasives, not specially provided for.

Mr. SMOOT. Mr. President, I have no objection to the paragraph being adopted as it is, but I will call attention to it in connection with the dutiable list before the bill finally passes from the Committee of the Whole to the Senate.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The SECRETARY. On page 138, paragraph 505, gum was passed over at the request of Mr. Smoot.

Mr. SMOOT. Mr. President, I shall not ask to have a vote upon that. What I really wanted was to have amber upon the free list, where it always has been; but we took a vote upon that, and I shall not ask now to have another one.

The SECRETARY. The next paragraph passed over is paragraph 518, page 140, to which the committee have reported an amendment in line 2, after the word "water," to insert "and colors obtained from indigo," so as to make the paragraph read:

518. Indigo, natural or synthetic, dry or suspended in water, and colors obtained from indigo.

Mr. SMOOT. Mr. President, in my opinion that will allow not only indigo, synthetic and natural, to come in free—which is perfectly proper, and under the present law both come in free—but the words "dry or suspended in water," in my opinion, will allow indigo paste to come in free of duty. If it does we need not expect that any synthetic indigo or any natural indigo will ever come in. To-day indigo paste is dutiable, and it always has been. Of course, it is more highly condensed in the form of paste than it is in its natural state. I ask the Senator from Maine if that was his intention. If so, I am not going to say anything more about it.

Mr. JOHNSON. Mr. President, I move to amend the committee amendment by striking out the word "colors" in the second line and substituting in lieu thereof the word "dyes."

Mr. SMOOT. That, of course, is obviously right, the same thing applying as in the case of alizarin.

The VICE PRESIDENT. The amendment proposed by the Senator from Maine to the amendment reported by the committee will be stated.

The SECRETARY. On page 140, line 2, it is proposed to amend the committee amendment by striking out the word "colors" and inserting the word "dyes."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The SECRETARY. Paragraph 534, on page 141, was passed over. The paragraph relates to leather not specially provided for, and so forth.

Mr. GALLINGER. Mr. President, I was about to ask that that paragraph might go over for the day. I have communicated by telegraph during the last hour with a constituent of mine engaged in the manufacture of saddlery, asking a certain question about it. It will not delay the consideration of the bill if Senators will be willing to let the paragraph go over until to-morrow.

The VICE PRESIDENT. In the absence of objection, the paragraph will be passed over.

The SECRETARY. Paragraph 548, page 142, meats, was passed over at the request of Mr. McCUMBER.

Mr. McCUMBER. Mr. President, I offer to the amendment proposed by the committee the amendment I send to the desk.

Mr. WILLIAMS. If the Senator will wait a moment, the committee would first like to offer an amendment to perfect the paragraph according to its idea, and then the Senator's amendment can follow.

Mr. McCUMBER. Very well.

Mr. WILLIAMS. I offer the amendment I send to the desk. The language underscored in the amendment is the new part of it, the remainder being a copy of the language as it is in the bill.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. After the word "sufficient," in line 26, it is proposed to insert:

And such meats and meat products shall have all the rights and privileges of meats and meat products inspected by the Bureau of Animal Industry of the Department of Agriculture as prescribed in the act of June 30, 1906.

The VICE PRESIDENT. The Chair will call the attention of the Senator from Mississippi to the fact that there are some interlineations in the manuscript.

Mr. WILLIAMS. When I sent the amendment up I called the attention of the Secretary to the fact that the words underscored comprised the amendment to the amendment.

The SECRETARY. There are two portions underscored. The first amendment is in line 16 of the committee amendment, after the word "products," to insert the words "of cattle, sheep, swine, and goats."

The VICE PRESIDENT. The question is on agreeing to the amendment.

Mr. LA FOLLETTE. Mr. President, I ask to have the amendment reported again. I followed it as best I could with the text before me.

The SECRETARY. On page 142, line 16, after the word "products," in the committee amendment, it is proposed to insert the words "of cattle, sheep, swine, and goats."

Mr. WILLIAMS. I will state, briefly, that that was put in there because the department was a little afraid it might apply to horse meat.

The amendment was agreed to.

The SECRETARY. In line 26, after the word "sufficient," at the end of the line, it is proposed to insert a comma and the words:

And such meats and meat products shall have all the rights and privileges of meat and meat products inspected by the Bureau of Animal Industry of the Department of Agriculture as prescribed in the act of June 30, 1906.

Mr. WILLIAMS. Mr. President, in line 23, before the word "inspection," the words "cattle and meat" should also be inserted.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. Before the word "inspection," in line 23, it is proposed to insert the words "cattle and meat."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WILLIAMS. Now I will ask the Secretary to read to the Senate the entire paragraph as it stands, so that Senators may understand it.

The VICE PRESIDENT. The Secretary will now read as requested.

The Secretary read as follows:

548. Meats: Fresh beef, veal, mutton, lamb, and pork; bacon and hams; meats of all kinds, prepared or preserved, not specially provided for in this section: *Provided*, That meat and meat products of cattle, sheep, swine, and goats brought to the United States shall be subject to the same inspection by the Bureau of Animal Industry of the Department of Agriculture as prescribed by the act of June 30, 1906, for domestic cattle and meats, unless the Secretary of Agriculture shall be satisfied that the government of the country whence the meat or meat products are exported maintains and enforces a system of cattle and meat inspection equal to our own, or satisfactory to him as being competent to protect the public health, in which case the certificate of such

government that such inspection has been made shall be sufficient, and such meats and meat products shall have all the rights and privileges of meat and meat products inspected by the Bureau of Animal Industry of the Department of Agriculture as prescribed in the act of June 30, 1906.

Mr. WILLIAMS. Mr. President, I wish to read a memorandum from the Department of Agriculture which was sent to me, accompanied by a letter from the President of the United States recommending that the matter be taken into consideration.

The memorandum is as follows:

In re paragraph 548 of House bill 3321 (63d Cong., 1st sess.) entitled "An act to reduce tariff duties," etc. Imported meats.

Paragraph 548 of the foregoing bill as reported to the Senate provides as follows:

There the writer simply repeats the language of the bill before these two amendments were offered. His comment then is this:

The officials of this department are of the opinion that this paragraph is merely declaratory of existing law and that it will not change existing conditions.

Imported meats and meat food products are now subject to the food and drugs act of June 30, 1906 (34 Stat., 768).

I wish Senators would keep that in mind. A great many of them seem to be oblivious to that fact.

As a condition precedent to the entry into the United States of such imported products—

Now, mark this—

certificates of competent foreign veterinarians, whose authority has been viséed by American consuls, are required.

A great deal was said, when we were discussing this matter before, about ante-mortem examinations.

I go on with reading the memorandum:

When offered for entry, meats and meat food products are also subject—

This is, when they get here—

to inspection which is made by inspectors of the Bureau of Animal Industry to ascertain whether or not they comply with the provisions of the food and drugs act. Imported meats and meat food products, however, even though they be accompanied by certificates of foreign inspection, and even though they pass inspection at ports of entry, are not permitted to enter establishments where inspection is maintained under the meat-inspection law by reason of a provision in that law which prevents the admission into inspected establishments of all carcasses (except carcasses of farm-slaughtered animals) and parts of carcasses, meats and meat food products of cattle, sheep, swine, and goats which have not received ante-mortem and post-mortem inspection by the United States Department of Agriculture. In other words, the carcasses and meats and meat food products of animals slaughtered outside of the United States in common with the carcasses of domestic animals (except farm-slaughtered animals) not slaughtered in inspected establishments must be denied entry into inspected establishments.

That is to say, if the amendment, as we had it before we added the last part of it at their suggestion, had stood alone.

Accordingly, beef from Australia, Canada, or any other foreign country in the present state of law can not be admitted into inspected establishments. Nor can they be admitted, in the opinion of department officials, if the foregoing provision of the tariff act becomes a law in its present form.

It appears from representations to this department that a very practical obstacle to commerce in imported meats exists on account of the fact that nearly all of the establishments in this country which are equipped for handling meats on a large scale have inspection under the meat-inspection law.

By the way, perhaps I had better explain that the reason why this inhibition existed was to prevent the exchangeability of meats upon the premises. Of course, if they had inspected meats upon the premises, and then had been permitted to have other meats that had not been inspected, domestic meats, they could have exchanged labels and certificates, and all that. Now, when these meats come in from abroad, they come in with certificates, too.

The memorandum goes on:

If it is desired that imported meats and meat food products shall have access to inspected establishments and receive the same treatment as is accorded to the products of domestic animals which have been inspected by United States inspectors of the Department of Agriculture, different legislation is needed than that contained in paragraph 548.

To accomplish this purpose, the addition to paragraph 548 is suggested of a clause providing that imported meats and meat food products within its provisions shall be received into inspected establishments and have the same rights and privileges as the meats and meat food products of animals inspected by the Department of Agriculture under the meat-inspection law.

Accompanying that they sent, drawn up at the department, the amendment which has been read.

If it is desired to leave imported meats and meat food products on their present basis, so far as inspection at ports of entry and transportation in interstate commerce is concerned, paragraph 548 as it now stands will be sufficient. This will not permit inspected establishments to handle such products.

Accompanying that was this amendment.

Accompanying that was a letter from the President saying that it looked as if a joker had slipped into the paragraph. It did not mean that a joker had slipped into it, but that lack

of a further provision might enable the law itself to operate as a joker, and imported meats might be gotten here in such a way that nobody could very well handle them for the market. Therefore we added the last four lines of the amendment.

Mr. GALLINGER. Just one word, Mr. President. I notice that in the memorandum from the department the term "meat food products" is used, while in the amendment it is "meat products." Would that make any difference? Would it not be better to include the word "food" in that paragraph throughout?

Mr. WILLIAMS. I think it would.

Mr. GALLINGER. There are three places, I think, where it would come in.

Mr. WILLIAMS. Yes; I think the Senator is right about that. The department itself drew up this amendment and did not use the expression "meat food products," but I think it would be well to insert that term.

Mr. GALLINGER. The first place is in line 16, the next is in line 22, and I think the third is in the last amendment.

Mr. WILLIAMS. I will look up the matter in a moment.

I ask unanimous consent that wherever the words "meat products" occur in the amendment they shall read "meat food products."

The VICE PRESIDENT. Is there any objection? The Chair hears none and unanimous consent is given.

Mr. CUMMINS. That request would simply perfect the amendment?

The VICE PRESIDENT. Yes.

Mr. CUMMINS. I have something to say about the amendment before it is adopted.

Mr. WILLIAMS. Oh, nothing in the world will prevent the Senator from doing that.

Mr. CUMMINS. I could not hear just what the Senator from Mississippi said and for what he asked unanimous consent. That is the reason I made the inquiry.

Mr. WILLIAMS. I asked unanimous consent, wherever the words "meat products" occur in the amendment, to make them read "meat food products."

Mr. CUMMINS. Precisely. I am perfectly satisfied with that. I did not hear just what the request was.

The VICE PRESIDENT. The question now is on the amendment proposed by the Senator from Iowa [Mr. CUMMINS], which was read on August 23.

Mr. WILLIAMS. Let us first adopt the amendments to the Senate amendment, so as to perfect it.

Mr. CUMMINS. I thought the amendments that had been proposed by the committee to perfect the amendment had been adopted.

The VICE PRESIDENT. The amendments to perfect the amendment proposed by the Senate committee have been adopted, but the amendment as amended has not been adopted, the Chair ruling that the amendment of the Senator from Iowa, which seeks to strike out the proviso offered by the committee and to insert other matter in lieu thereof, is the pending parliamentary question.

Mr. WILLIAMS. There is no doubt about that situation.

Mr. CUMMINS. Mr. President, I shall endeavor to be brief, because I have stated my view of this subject at a former time.

The amendments that have now been brought forward by the committee and have been incorporated into the proposed paragraph are commendable. They do aid the proposed law, but they do not at all meet the objection I made to it a few days ago.

I fancy that there are only a few people who have given the subject enough attention really to appreciate the issue between my amendment and that offered by the committee. If I may be permitted to restate it, the committee proposes that when meat shall come to our country from abroad it shall be inspected in accordance with the law of 1906. The importer of such meat has a right under the law to insist that it shall be admitted to our ports if it passes the examination or inspection of meats provided for in the law of 1906.

The importer has one further chance. If the administrator of the law is of the opinion that the provisions relating to such matters in the country from which the meat comes are equivalent to our own, then there is no inspection required, but the meat is admitted upon the certificate of the authorities of the country from which the meat comes. Primarily, however, the inspection required is an inspection of the meat, and the meat can be admitted of right into this country upon that inspection if it passes it.

I do not believe that is fair to our own producers of meat. I do not believe it furnishes the necessary protection to the consumers of imported meat. I believe that no meat should

come into the United States unless the country from which it comes has established and maintained a system of inspection the equivalent of or as efficient as our own. I think that ought to be a condition precedent to the admission of meats into the United States from foreign countries, and I think so because the purity or the wholesomeness of the meat can not be determined fully and completely by an inspection after the arrival of the meat in this country. There must be an ante-mortem and a post-mortem inspection at the place at which the animal is killed in order to provide the full measure of protection that the case demands.

When we were discussing the matter here the other day, it was rather assumed that a post-mortem inspection could occur at any time after the animal was killed. There is a sense in which, of course, any inspection of the meat after the animal is killed is a post-mortem inspection; but that is not the post-mortem inspection of which the Bureau of Animal Industry speaks when it discusses the subject. The post-mortem inspection is the inspection of the animal after it is killed and before it is converted into meat. The inspection of the various parts of the animal which are not converted into meat constitutes a part of the post-mortem inspection, and it has to be carried on and performed immediately; and that, in connection with the ante-mortem inspection, determines whether the animal is fit for food. After the meat is manufactured, and when it is about to pass into commerce or use, then the meat is also inspected in our country; and that part of the process can be carried on under the amendment proposed by the committee. That is, the meat can be inspected here after it arrives, and nothing more can be inspected. The Senator from Mississippi has treated the matter all the time as though the Department of Agriculture could require it before the meat enters our market.

Mr. LA FOLLETTE. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Wisconsin?

Mr. CUMMINS. I do.

Mr. LA FOLLETTE. I do not wish to interrupt the Senator's argument, but at that point, if I may inquire, what relative importance does he attach to the ante-mortem investigation or inspection as compared with the post-mortem inspection?

Mr. CUMMINS. The ante-mortem inspection is not so important as the post-mortem inspection. The ante-mortem inspection is like the warning process to the post-mortem examination that takes place immediately.

The post-mortem inspection is not that examination which is made of the meat from time to time as it is used or as it is sold, but it is the examination of the animal after it is killed and after the viscera is taken out and after its parts are exposed. That is the time when the inspector ascertains whether the animal is fit for food.

Mr. LA FOLLETTE. I so understand the relative importance of those two inspections, Mr. President.

Now, further, I should like to ask the Senator what importance especially he attaches to the inspection of the meat as differentiated from the post-mortem inspection.

Mr. CUMMINS. I think it is valuable, but it is valuable only for the purpose of ascertaining whether there has been deterioration; whether it has been so taken care of and so preserved that the process of disintegration has not begun. It may be well illustrated by the case of poultry. A fowl is killed perfectly good and sound. It is put into cold storage and kept there six months and taken out. It then ought to be examined in order to ascertain whether during the time of its storage such deterioration or disintegration has gone on as to render it unfit for food. That is an illustration of the value which I attach to the inspection of the meat.

Mr. LA FOLLETTE. That inspection, Mr. President, if I understand the Senator aright, would not be very material in determining whether the meats were diseased, but rather in determining whether there had been deterioration in meats that were suitable to be branded as inspected and passed, but which, for some reason or other, perhaps improper storage or curing or canning, had deteriorated in quality. Am I right in that?

Mr. CUMMINS. That is the understanding I have of the three inspections.

Mr. LA FOLLETTE. Then, Mr. President, so far as the great question of the diseased quality of the meat is concerned, that must be largely if not wholly determined by the post-mortem examination.

Mr. CUMMINS. Very largely; it might be said almost entirely.

Mr. LA FOLLETTE. Almost entirely. If I understand the Senator aright—and his estimate of the relative importance of these inspections agrees with my own—the ante-mortem investigation is rather an unimportant and passing investigation.

In practice, I understand, in the stockyards connected with the packing houses this ante-mortem inspection is made quite largely by running the eye over the animals as they pass on the scales to be weighed.

Mr. CUMMINS. And also when something develops in the view of the animal that excites suspicion.

Mr. LA FOLLETTE. Some glaring defect.

Mr. CUMMINS. Then the animal is tagged.

Mr. LA FOLLETTE. Then the animal would be tagged.

Mr. CUMMINS. And the post-mortem examination of that carcass is all the more close and careful.

Mr. LA FOLLETTE. Now, Mr. President, if the Senator will pardon the interruption—

Mr. CUMMINS. Certainly.

Mr. LA FOLLETTE. If the ante-mortem examination is not so deeply significant in its importance and if the inspection of the meat products after the post-mortem examination goes more to the determination of the meat rather than to the detection of disease rendering the product unfit for human food, then the post-mortem examination becomes a tremendously important and vital inspection in the public interest.

Mr. CUMMINS. I so understand.

Mr. LA FOLLETTE. Now, Mr. President, if that is so with respect to these imported meats, since we can not claim the right to install inspectors in foreign countries to observe and pass judgment on their methods, in order to determine whether their post-mortem examination is made according to our standards, is it not of supreme importance that we require of the government seeking to import meats into our markets something that will go as far as it is possible for one government to go in dealing with another to insure the quality of that meat? Therefore is it not important, is it not vital, to our people that this proposed amendment should require, in the first place, that the foreign government should furnish a certificate with the meat that it is free from disease? That furnishes a standard. That is a standard in itself.

In other words, ought we not to require from those governments what those governments require from us? They require a certificate that the meats which we seek to export into their countries are from animals that are absolutely free from disease. I happen to have here a copy of the form of certificate which we have to furnish with every shipment of our meats to foreign countries in order to secure admission to their markets. This Government must certify that the meats are from animals free from disease, that the product is wholesome, healthful, and fit for human food. I think if we require less than that of foreign countries seeking entry to our markets, we not only do grave injustice to our people, but we belittle and disparage and discount our own standards.

I did not mean to take so much of the Senator's time.

Mr. CUMMINS. I am very glad to yield the time to the Senator from Wisconsin. He has stated with accuracy and impressively, as he always states a case, the view that I have attempted to express in my amendment. I became convinced when I argued it before that there was absent from my amendment what there ought to be in it, namely, a provision for a certificate. I have hoped that my amendment might be so perfected that it would include that requirement.

But my principal purpose in rising is to show that we are establishing here by the amendment proposed by the committee a standard that is not the standard foreign governments require of us. It is not the standard that we require of our own slaughtering plants. And we will be, as it seems to me, the laughing-stock of the world if we pass a provision of this kind that will admit the meats of the world upon the inspection of the product alone after it reaches our own ports.

Mr. WARREN. Will the Senator allow me?

Mr. CUMMINS. I yield to the Senator from Wyoming.

Mr. WARREN. I appreciate the strength of the argument that has been made, especially that we should require every consideration from other countries that is given to our meats in preparing them for shipment abroad. But I think that the ante-mortem examination, an examination of the live animal, is an important one.

Mr. CUMMINS. I did not say it was not an important one, I say it is not as important as the post-mortem examination.

Mr. WARREN. A disease like lumpy jaw is scarcely discovered except in live animals. I believe the Senator has rather strengthened than weakened the argument he has already made that we should have every guard on the ground where the animals are put on the market in foreign countries, and every kind of certificate from them that they may expect from us, as well as our examination after the meat shall have arrived here.

Mr. GALLINGER. Will the Senator permit me?

Mr. CUMMINS. I yield to the Senator from New Hampshire.

Mr. GALLINGER. As to the matter of an ante-mortem examination, the Department of Agriculture sends out agents or inspectors where tuberculosis is suspected in herds, the tuberculin test is used, and thousands of animals are slaughtered belonging to farmers when the test shows there is a tuberculous condition. I think it might be well to keep that in mind as one of the ante-mortem tests.

Mr. CUMMINS. We could not apply that in connection with a tariff bill, because the tuberculin test is one which requires two or three days or more to perfect. When cattle are brought to a slaughterhouse they are not usually, and I do not know that they are ever, subjected to that test immediately before killing. But the inspector goes into the pen or watches them as they go over the scales, or in some way takes a view of them. He sees an animal with the lumpy jaw or with evident indication of disease of some other kind, and that animal is then put under suspicion. Possibly the disease may be so far advanced that the animal is at once driven away and not slaughtered at all, except to go into the tank or into some other manufacture than food. When the animal is killed and all its parts examined it is that examination which is the most valuable of the three, although all of them are important.

I want to call attention again to what you are doing here. This meat comes in free—

Provided, That meat and meat products brought to the United States shall be subject to the same inspection—

The amendment made by the committee just a moment ago does not change this in any degree—

by the Bureau of Animal Industry of the Department of Agriculture as prescribed by the act of June 30, 1906, for domestic cattle and meats.

Will anyone tell me how the examination required in the law of 1906 with respect to domestic cattle can be carried into effect after the meats reach the port of New York or any other port of the United States? It is a contradiction in terms and is obviously meaningless.

That is the examination which is provided for, and upon that examination these meats, if they pass it, go into the consumption of the people of the United States. But if the shipper or the importer can convince the Secretary of Agriculture that the country from whence the meat comes maintains a system of inspection of both cattle and meats, then there is no examination whatever provided for. We must, as it seems to me, keep our eyes single upon the fact that we are proposing here to admit foreign meats upon examination of the meats alone, and even that may be abandoned or waived if the Secretary of Agriculture is willing to accept a certificate that a foreign system prevails for ante-mortem and post-mortem inspection.

That is a condition upon which there shall be no examination. It does not take away from the importer the right to insist upon selling our people the foreign meat if the meat itself will pass the inspection. That, as suggested by the Senator from Wisconsin [Mr. LA FOLLETTE], means nothing more than to see that the meat has not deteriorated since the animal was killed, because all scientists agree that the diseases from which we desire to protect the people can not be discerned or detected in the meat after it has reached the point at which it is ready for sale.

I am sure that my Democratic friends do not want, first, to make the discrimination they are making against our own producers of meat. I am sure they do not want to give the importer the advantage that is given to him in this provision. But passing to an infinitely higher consideration, I am sure they do not want to subject the health and the lives of the people of the United States to the dangers that lie in the sale of diseased meat. If you could determine that after the meats have landed in our ports I would not say a word, but you can not. There is not a scientist in the land who will assert a contrary doctrine. Therefore I should like some explanation, I should like some reason, for the rule that has been announced in this paragraph.

Mr. President, it had escaped my mind and I had not modified my own amendment as I said the other day that I would. I think the amendment ought to contain a provision for the foreign certificate. I should like to have this paragraph passed over until to-morrow, when I shall present a modification of that kind.

Mr. LA FOLLETTE. If I may be permitted, Mr. President, I will say that I have prepared an amendment that I shall ask to have printed and I am going to ask to have this paragraph go over. It is altogether too important to be disposed of in the closing few moments of the session to-day, and I should like to have—

Mr. WILLIAMS. I do not want to pass the paragraph over any more.

Mr. LA FOLLETTE. It will have to go over.

Mr. CUMMINS. It may be that I shall be willing to accept the amendment proposed by the Senator from Wisconsin.

Mr. LA FOLLETTE. With the consent of the Senator from Iowa, if it is not interrupting him—

Mr. CUMMINS. Not at all.

Mr. LA FOLLETTE. I will ask to have the amendment read by the Secretary, if the Senator does not mind.

Mr. CUMMINS. I shall be very glad to hear it.

Mr. LA FOLLETTE. That is a substitute for the committee proviso.

Mr. WILLIAMS. Has the Senator asked that it be read for the information of the Senate?

Mr. LA FOLLETTE. I have.

The VICE PRESIDENT. The Secretary will read the amendment.

The SECRETARY. On page 142, line 15, in place of the committee proviso, it is proposed to insert the following:

Provided, however, That none of the foregoing meats shall be imported into the United States from any foreign country unless the same are certified by the proper authorities of such foreign country, in a form to be prescribed by the Secretary of Agriculture, to have been derived from animals entirely free from disease and to be sound, healthful, wholesome, and in every other respect fit for human food, and to contain no poisonous or deleterious dyes, chemicals, preservatives, or other ingredients: *And provided further*, That if the President, after due investigation, shall find that the system of meat inspection maintained by any foreign country is not the substantial equivalent, or is not as efficient as the system established and maintained by the laws of the United States, or that reliance can not be placed on the certificates required under this section from the authorities of such foreign country for meat imported into the United States, he may proclaim that none of the foregoing meats shall be imported into the United States from such foreign countries: *And provided further*, That none of the foregoing meats imported into the United States from any foreign country shall be sold in the United States until they have been examined and inspected by inspectors appointed for that purpose by the Secretary of Agriculture, and have been found to be sound, wholesome, healthful, and in every other respect fit for human food, and to contain no poisonous or deleterious dyes, chemicals, preservatives, or other ingredients.

Mr. CUMMINS. Mr. President, the proposed amendment just read seeks to reach the very same object that I have sought in my amendment. I am inclined to think that it is more effective than mine, and I shall be very glad to withdraw mine and accept the proposed substitute of the Senator from Wisconsin. It combines what I have proposed with the additional provision for a certificate from the foreign country. It was obvious to me the moment the Senator from Mississippi [Mr. WILLIAMS] pointed it out the other day, that my amendment ought to have contained a provision for such a certificate. If the Senator from Mississippi, who stands opposite me there, with the Senator from Wisconsin between, will accept the amendment proposed by the Senator from Wisconsin, I will do so, and in that way we can settle the matter right now.

Mr. WILLIAMS. Mr. President, the difference between my acceptance of a proposition and the acceptance of the same proposition by the Senator from Iowa is perfectly plain and obvious. Some days ago, as the Senator from Wisconsin will remember, I requested him to give me a copy of his amendment so that the subcommittee might consider it; and I should have been very glad if he had complied with that request—

Mr. LA FOLLETTE. Mr. President—

Mr. WILLIAMS. But to ask me to accept an amendment which I have merely heard read here upon the floor, without the opportunity to give it that consideration and care that I ought to give so important a matter as this, is too much.

Now, I will say, both to the Senator from Wisconsin and the Senator from Iowa, that this matter has given the subcommittee and it gave the Committee on Finance a great deal of trouble. The Department of Agriculture substantially drew the committee amendment as it is, and having drawn it, I feel that we have spent enough public time over it as it is.

The matter will be thrown into conference between the two Houses, and I can assure the Senator from Wisconsin, so far as I can have any control or voice in the matter, that when the conferees meet his proposed amendment shall receive careful consideration; but I can not undertake to accept the amendment upon the spur of the moment in this sort of hasty manner. I should have been very glad indeed to have had the advantage of it earlier in the subcommittee—

Mr. LA FOLLETTE. Mr. President—

Mr. WILLIAMS. So that we might have studied it out. It may possibly be that it is preferable to the one we have here. It, at least, takes care of the certificate part of it. There are some defects about it, hearing it at first blush. I think the authority ought to be placed in the Secretary of Agriculture and not in the President; but that is a mere matter of form, for, of course, if it were placed in the President the Secretary of Agriculture would exercise it. I would rather that we would go ahead, take a vote upon the committee amendment, adopt it, and then we can consider the matter further in conference.

Mr. CUMMINS. Well, Mr. President, so far as I am concerned, I am not quite willing to submit it to a vote of a conference.

Mr. LA FOLLETTE. Mr. President, if the Senator from Iowa will have the kindness to yield to me just for a moment; I sought to interrupt the Senator from Mississippi, but was not able to get him to yield—

Mr. WILLIAMS. I did not know the Senator was trying to get me to yield.

Mr. LA FOLLETTE. I wish simply to say that I would have submitted the amendment which I have proposed here this evening in time for the Senator to have considered it—or for his committee to have considered it—before they proposed their amendment if it had been possible for me to do so; but, like every other Senator upon this floor, I am pressed with work, and I was not able sooner to bring the matter to his attention. Indeed, the subject came up a little earlier this afternoon than I expected it would. I hope, however, Mr. President, that the discussion upon this very important provision may continue until the adjourning hour, so that the Senator from Mississippi and his associates may have the opportunity to compare these various amendments and to consider them.

Mr. WILLIAMS. I am not willing to recommit the provision.

Mr. LA FOLLETTE. I am not asking to have it recommitted, Mr. President, but I am asking the Senator for an opportunity to compare the amendments.

Mr. WILLIAMS. Mr. President, merely from listening to the amendment it struck me as being possibly all right or probably all right; but the matter will be open for conference between the two Houses, and the amendment, I can assure the Senator, so far as I have anything to do with the conference, will be considered there. I will say that, so far as I am personally concerned, I am not altogether satisfied with the Senate committee amendment, but it was the best I could get. I had the Department of Agriculture draft the amendment, and in the letter which I read to the Senate here to-day they rather intimate that the existing law is sufficient.

Senators do not seem to be aware of the fact that veterinary surgeons whose competency is certified by American consuls in Europe and every other country from which meat is exported, now make ante-mortem examination of meat shipped to the United States.

Mr. CUMMINS. That is only by rule or order; it is not by virtue of law.

Mr. GALLINGER. If the Senator will permit me, it may surprise some Senators on the other side to have me repeatedly say that I am anxious to have this bill proceeded with as rapidly as possible, but that is the way I feel. I will say to the Senator from Mississippi that, for the purpose of economizing time, it is better that the request which has been made that this paragraph go over until to-morrow be conceded, for the reason that, if it is not, I am satisfied that the paragraph will be debated until 6 o'clock, when it will then go over until to-morrow, and we will simply waste half an hour. So I hope the Senator will agree to let the paragraph go over.

Mr. WILLIAMS. I am anxious to get this bill out of the Committee of the Whole on Saturday at any rate.

Mr. GALLINGER. So am I.

Mr. WILLIAMS. And I think it is an abuse of the public patience to continue the matter at much further length. This matter was discussed the other day all day long, and I think it was discussed a part of another day. We recommitted the paragraph, because we became convinced by the discussion that it probably ought to be further amended. If there is any way of arriving at a vote of the Senate—and I do not know whether there is; I do not believe human ingenuity has ever discovered any—we ought to arrive at it.

Mr. GALLINGER. If the Senator will permit me further, a very important amendment has been offered. I look upon it as an extremely important amendment. The Senator from Mississippi says that he simply heard it read, as I only heard it read. Does not the Senator think that it would really economize time to give Senators an opportunity to examine it?

Mr. WILLIAMS. No, I do not. I think if Senators would let us proceed with the business of the Senate we could take up the amendment later if necessary.

Mr. GALLINGER. I have nothing further to say. I think the request that the paragraph should go over until to-morrow was a very reasonable one. We have passed over other paragraphs. I can assure the Senator, from some knowledge that I possess, that no progress will be made if the request is refused.

Mr. WILLIAMS. This matter went over once before, and, so far as I can see, it went over merely for the purpose of having repeated speeches which were formerly made.

Mr. CUMMINS. Mr. President—

Mr. WARREN. I want to suggest to the Senator—

Mr. CUMMINS. I have the floor, have I not, Mr. President? The VICE PRESIDENT. The Senator from Iowa has the floor.

Mr. WARREN. I beg pardon.

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Wyoming?

Mr. CUMMINS. I yield to the Senator from Wyoming.

Mr. WARREN. The Senator from Mississippi is quite right that matters can be arranged in conference, but my experience in conference has led me to believe that it is well beforehand to cover the ground and broaden the lines on a disputed question so far as possible in order to enable the conferees to arrive at a proper conclusion. Now, why not take this amendment as it is offered and accept it, and then have in conference the amended provision as well as the original proposition?

Mr. WILLIAMS. For the very simplest reason in the world: We happen to be the majority party and do not care about having some particular amendment—

Mr. WARREN. You would be the majority party in conference.

Mr. WILLIAMS. We propose to be here, too.

Mr. WARREN. Am I to understand, then, that whatever may be offered by the minority party, however good it may be, must be denied because it comes from the minority party?

Mr. WILLIAMS. The Senator can not say that. We have accepted, I suppose, 15 or 20 amendments from the minority party.

Mr. WARREN. I should like the Senator to make a record of them.

Mr. WILLIAMS. The Senator from Utah [Mr. SMOOT] has suggested six or seven amendments which were adopted, and the Senator from Wisconsin [Mr. LA FOLLETTE] two or three—two that I know of—and several other Senators have suggested amendments which have been agreed to. What I say about this is that in its present shape we prefer the Senate amendment, because we do not now know well enough what the other is, and we should not be asked to accept the other amendment as a basis for conference instead of our own.

Mr. CLARK of Wyoming. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Wyoming?

Mr. CUMMINS. I do.

Mr. CLARK of Wyoming. In the first place, nobody is asking the Senator from Mississippi to accept any amendment, and in the next place, the committee have possibly considered the amendment which they have presented here within the last 20 minutes, but no other Member of the Senate has had an opportunity to consider that amendment, nor has the Senate had an opportunity to consider the very important amendment which was offered as a substitute by the Senator from Wisconsin. Therefore the Senate as a whole has had neither of these amendments before it for 30 minutes.

The whole general subject of meat inspection, of course, has been discussed, but these amendments go to the matter of detail and should have some consideration. So, I say, it seems to me that justice to the Senate, justice to the committee, and justice to the bill itself requires that some consideration should be given to these two amendments and that the one should be compared with the other. It occurs to me the request that the paragraph go over until the beginning of the session to-morrow is a very reasonable one.

Mr. WILLIAMS. The Senator is mistaken in his statement of facts. Two requests were made that we accept the amendment, one by the Senator from Iowa [Mr. CUMMINS] and the other by the Senator from Wyoming [Mr. WARREN].

Mr. CLARK of Wyoming. The amendment was offered by the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. WILLIAMS. I understand that.

Mr. CLARK of Wyoming. And the Senator from Wisconsin has not asked that the amendment be accepted by the committee, and the Senator from Iowa simply said that he was willing to accept the amendment in place of his if the Senator from Mississippi was willing to accept it.

Mr. CUMMINS. If he was willing, I was also willing to accept it.

Mr. CLARK of Wyoming. That is the situation.

Mr. CUMMINS. That is the condition.

Mr. WILLIAMS. Mr. President, the assumption that because we have not considered a particular amendment which has been thrown at us, therefore we have not considered the subject matter, is rather strange.

Mr. CLARK of Wyoming. Mr. President, I have not made that assumption. I said we had considered the subject matter,

but the details of arriving at it were also very important, and we should have an opportunity of considering them.

Mr. WILLIAMS. But the committee has considered the subject matter.

Mr. CLARK of Wyoming. But the Senate has not.

Mr. SIMMONS. If the Senator from Mississippi will pardon me a moment—

Mr. WILLIAMS. I am willing to let it go over.

Mr. CUMMINS. If the Senator from North Carolina desires to interrupt me I will be very glad to yield to him.

Mr. SIMMONS. I was simply going to suggest to the Senator that probably we should save time by allowing the paragraph to go over. I understand the Senator from Mississippi has consented to that. If the paragraph goes over until to-morrow, I presume that will be satisfactory to the Senator from Iowa.

Mr. CUMMINS. I am perfectly willing that that disposition shall be made of it. I am not particularly anxious, however, because the debate can go on, and there are here Senators who are ready to speak upon the subject.

Mr. SIMMONS. I ask the Secretary to proceed with the reading of the bill.

The SECRETARY. The next paragraph passed over is paragraph 558, on page 144, relative to cut nails, and so forth. A portion of the paragraph only was recommitted to the committee on request of Mr. STONE. The portion recommitted to the committee extends down to and includes the word "section," in line 7.

Mr. THOMAS. Mr. President, my recollection is that an amendment was offered to the paragraph and adopted.

The VICE PRESIDENT. There was an amendment suggested but it was not adopted.

Mr. THOMAS. Then, after the word "nails," in line 6, I move that the words "horseshoe nail rods," be inserted.

The VICE PRESIDENT. The committee report back the portion of the paragraph recommitted and propose an amendment, which will be stated.

The SECRETARY. After the word "nails," in line 6, it is proposed to insert "horseshoe nail rods."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The SECRETARY. The next paragraph passed over is on page 146.

Mr. JOHNSON. Mr. President, before we reach that paragraph, I wish to offer an amendment to paragraph 561. In line 22 of that paragraph, I move to strike out the "period" after the word "manner," and to insert a semicolon and the words "palm nuts and palm nut kernels."

Mr. SMOOT. That puts them on the free list, the oil made from the nut being also on the free list.

Mr. JOHNSON. Yes. I am directed by the committee to offer that amendment.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 561, page 144, line 22, after the word "manner," it is proposed to insert a semicolon and the words "palm nuts and palm nut kernels."

The amendment was agreed to.

Mr. SMOOT. Before going to the paragraph stated by the Secretary, I should like to call the attention of the Senator to paragraph 566, in relation to lubricating oils.

Mr. JOHNSON. I wish to offer an amendment to that paragraph, which I think will meet the Senator's objection.

On behalf of the committee, I offer the following amendment to paragraph 566, page 145, lines 10 and 11: After the words "paraffin oil" and the semicolon, I move to strike out the words "lubricating oils not specially provided for in this section."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 145, in paragraph 566, lines 10 and 11, it is proposed to strike out the words "lubricating oils not specially provided for in this section" and the semicolon after the word "section."

The amendment was agreed to.

The SECRETARY. On page 146 paragraph 572 was passed over at the request of the senior Senator from Massachusetts [Mr. LODGE]. It is the paragraph relative to printing paper.

Mr. LODGE. Mr. President, I had that paragraph passed over because I wanted to take it up in connection with paragraph 651. We have dealt with the question of paper, however, and the countervailing duties in another section of the bill. I said what I had to say in regard to the countervailing duties provided in the case of paper and showed, I think, that they were entirely ineffective, and I do not care to do it here.

The VICE PRESIDENT. The paragraph contains no amendment.

The SECRETARY. The next paragraph passed over is paragraph 585, on page 147, which was passed over at the request of the senior Senator from North Dakota [Mr. McCUMBER].

Mr. McCUMBER. I offer an amendment to the paragraph, which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In line 24, page 147, in the committee amendment, it is proposed to strike out the numerals "10" and insert in lieu thereof the numerals "20," so that it will read:

Provided, That any of the foregoing specified articles shall be subject to a duty of 20 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on such articles imported from the United States.

Mr. McCUMBER. Mr. President, this paragraph places "potatoes, and potatoes dried, desiccated, or otherwise prepared, not specially provided for in this section," upon the free list, unless there is a countervailing duty. In case of a countervailing duty it imposes a duty of 10 per cent ad valorem against the country which has the duty upon our own products.

The two countries most likely to export potatoes to the United States under this free-trade bill will be Canada and the Argentine. In looking over the Canadian laws, I find that Canada levies a duty of 20 cents a bushel upon American potatoes. Australia levies a duty of 13 cents a bushel upon them, and Argentina levies a duty of 28.4 cents a bushel upon them.

Maine has now become one of the great potato-producing States of the United States. New York produces great quantities of potatoes, as do Minnesota, Michigan, Wisconsin, and all of the border States.

The great rivals of the farmers of these border States are the farmers of the Provinces of Ontario and Quebec. By this bill, in connection with the Canadian law, we are about to compel the farmers of those States who produce potatoes and wish to sell them in Canada to pay a duty of 20 cents a bushel, and then we turn around and say to the Canadian farmer, "You can bring your potatoes into the United States for 10 per cent ad valorem." With potatoes worth ordinarily, we will say, from 30 to 40 cents a bushel, the 10 per cent ad valorem will amount to 3 or 4 cents a bushel.

Why, again, should this discrimination be made against the American farmer? My amendment seeks to place them at least on a parity and to treat the American farmer who pays taxes and who performs the duties of American citizenship as justly as we treat the Canadian farmer who does not assume these duties. But why does the Democratic Party desire to punish him and treat him less cordially than it treats the Canadian farmer?

You know that the lands on which potatoes are produced in this country are at least as valuable as the Canadian lands, and in most cases more valuable. You know, also, that the cost of labor in producing potatoes in this country is somewhat greater at least than the cost of producing them in the Provinces of Ontario and Quebec.

If I have understood the Democratic policy at all aright as it has been uttered many times upon this floor, it is that all species of imported property should produce their just proportion of the revenue of the country. If you are about to free any particular article from the revenue-producing laws, there ought to be some special benefit derived by the American people in general from taking that particular article out of the general rule.

Why have you departed from that Democratic policy this year? Why have you departed from it in reference to the potato crop?

The only reason I can see for relieving the Canadian, the Australian, or the Argentine crop from the usual or proper duty upon imports for the purposes of revenue only is either that we are to be benefited generally or that there has been some sort of a trust in the production of these particular farm products.

If there is a trust in Maine or in New York among the farmers to uphold the price of potatoes, or if there is a like trust in Michigan or in Wisconsin or in Minnesota, I have not heard anything about it.

Then, if it is not because of the existence of a trust, it must be because the product is so high priced that it is an imposition upon the American public and the American farmer can not produce potatoes in this country at rates that are just to the rest of the American people. That can be the only ground for this action.

I should like some Senator who votes to put on the free list potatoes from Canada to tell me why he thinks potatoes have been too high and the price should be lowered by importing them free. As a rule, in my country, year in and year out, they will not average over 35 cents a bushel. They are to-day

so cheap that the farmers can not afford to export them out of the State. Yet I can not say that at the present time there would be any particular danger of an influx of the Canadian crop, because the potato crop generally is rather large in the United States, and they are so cheap that it would not even pay the Canadians to export them. But the time when we need protection is when we have a very poor crop and when our neighbors have a very good crop, because it will cost as much and even more per bushel to raise potatoes in case of a poor crop as it will cost when you get a rather full crop. That is the time when we ought to have protection. When it costs the farmer 40 or 50 cents a bushel to raise the potatoes and he has an American demand at that price, he ought to be entitled to sell them for that price. But by your legislation you say: "No; we will now fill your market with the foreign product, because our neighbors have had a prolific crop, and they can afford to ship them in for less than you can afford to raise them for."

Mr. President, this is simply a little amendment offered in good faith, with the hope that the other side will see the equity of treating our own people as kindly as they treat our neighbors.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota to the amendment of the committee.

The amendment to the amendment was rejected.

The SECRETARY. The committee proposes the following amendment:

In line 22, after the word "section," insert:

Provided, That any of the foregoing specified articles shall be subject to a duty of 10 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on such articles imported from the United States.

The amendment was agreed to.

The SECRETARY. Paragraph 588, on page 148, relating to quinine, was passed over at the request of the Senator from Maine [Mr. JOHNSON].

Mr. WILLIAMS. That paragraph was passed over because the Senator thought I might have an amendment to make to it. He was mistaken. I have none. By the way, there is one amendment there to which I wish to call attention. The small "q" in line 25 ought to be a capital "Q."

The SECRETARY. It is proposed to strike out the following words:

Quinine, and its combinations with acids and compounds, not subject to duty in this section—

And to insert, with a capital "Q," the words:

Quinia, sulphate of, and all alkaloids or salts of cinchona bark.

The amendment was agreed to.

Mr. THOMAS. Mr. President, turning back to paragraph 585, I think the second comma after "potatoes," in line 21, should be eliminated.

The SECRETARY. On page 147, line 21, after the word "potatoes" where it occurs for the second time, it is proposed to strike out the comma.

The amendment was agreed to.

The SECRETARY. Paragraph 626, on page 152, relating to tanning material, was passed over at the request of the senior Senator from Connecticut [Mr. BRANDEGEE].

Mr. BRANDEGEE. That has been acted upon.

Mr. McCUMBER. I will ask if paragraph 621 was not also passed over?

The SECRETARY. Yes; paragraph 621 was passed over.

Mr. McCUMBER. I have an amendment to offer to that paragraph.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 152, at the end of line 18, it is proposed to insert a colon and the following words:

Provided, That any of the foregoing specified articles shall be subject to a duty of 25 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty upon such articles imported from the United States.

Mr. McCUMBER. Mr. President, paragraph 621 purposes to put "swine, cattle, sheep, and all other domestic live animals suitable for human food not otherwise provided for" upon the free list.

I have asked the other side for reasons for putting other farm products upon the free list, and I have not yet received from them any suggestion of a real reason except that they desired to do so. I shall not again ask them the same question, but I wish to bring to their attention certain facts.

The countries that will export cattle to the United States after this bill becomes a law will be Canada, Australia, and Mexico. Possibly, there may be some from the Argentine, but I doubt if they will ship anything but meats. The Canadian

import duty on cattle of all kinds is 25 per cent ad valorem. The Australian duty is \$2.43 per head. The duty of the United States, under this bill, will be nothing.

If the American farmer wishes to export to Canada a steer worth \$60, he will be compelled to pay a duty of \$15. If the Canadian farmer desires to send a steer worth \$60 into the United States, he will not be compelled to pay anything.

Does not every man acquainted with the stock-raising industry in the United States know that it costs the American farmer far more to raise a steer to the value of \$60 than it costs the Canadian farmer? The Canadian northwest affords a pasturage for cattle superior to any part of the United States. Yet, notwithstanding the natural advantages which the Canadian farmer has over the American farmer, the Democratic Party accentuates the disadvantage of the American farmer by saying to him: "You must pay \$15 duty to the Canadian Government if you take your steer across the line"; while to the Canadian farmer it says: "We will allow you to bring your steer into the United States and usurp the market of the American farmer without the payment of a penny."

I should like to have the chairman of the Finance Committee give me a single reason why the free-trade gate between this country and Canada should not swing both ways. Why do you pull down your customhouses on this side of the line, while the Canadian customhouses still stand on the other side? What spirit of servility has taken possession of your party that opens wide your door to the Canadian when he shuts his door in your face?

I do not expect to have any reason given why we should have free trade in meat products. This is a tariff bill for revenue only. I will admit that the intention is that it is not even for incidental protection, but it is a tariff for revenue only. The revenues of the country, whether levied by direct taxation or levied in any other form, should ordinarily bear equally upon all kinds of property, unless there is a particular reason why some specific property should be relieved from that taxation.

The point I am trying to get at is why the Democratic Party in a bill for raising revenue has carefully eliminated from the effect of that bill everything that comes in competition with the American farmer, or nearly everything, to be more correct. Somebody ought to have a benefit from it. It ought to help the majority, at least, of the American people. There are 33,000,000 Americans directly interested in agriculture—five times as many as are directly interested in any other single business in the United States. They are an important factor in our American citizenship. We are trying every year to bring the people back to the farm. Every man who utters that and then does not facilitate the means of getting the American citizen back to the farm in some way is uttering what he knows is absolutely baseless, because you will never get them back to the farm until you can make farming as remunerative as city employment.

Instead, therefore, of such legislation going as far as we can go by legislation in seeking to accentuate the drift of population from the city to the farm in every possible way, by this bill you are attempting to drive people from the farm into the city. You are attempting to drive the citizen away from the farm by opening up new fields of competition, when his struggle for existence is more strenuous to-day than in any other profession in the United States. Not one of you is ignorant of that fact.

Now, is it to cheapen the food product for the other two-thirds of the American people? I do not believe, and I doubt if you believe, that it will materially affect the retail price of meat in this country. But if it does affect the retail price to any extent whatever, is not the average man engaged in city employments far better able to pay the quarter of a cent, if it may be, a pound extra because of a reasonable tariff than the farmers of the country are able to lower the present price of their cattle, their sheep, and their swine? It requires four times as much expended energy upon a farm to produce a pound of beef as it does on the part of the city laborer to buy that pound of beef. Anyone acquainted with agricultural statistics and the comparative wages between the two classes will know this to be the truth.

I have already cited an excerpt from a report of the Agricultural Department giving the average earnings of the farms in the United States. I believe it is comparatively correct when it states that the average earnings of the average farmer of the United States and his family are not more than \$318 per year net. The family is composed of, say, five adult persons, and it is about \$60 each a year for the five, or about \$5 a month for each person. These are the actual earnings as shown by the department. Everywhere we are opening up the gateways to create greater compensation. We are throwing away the little

revenue that the Government might derive from the levy of this tariff for the benefit of somebody. It is an injury to him. If it is not an injury to him it can not be a benefit to anybody else. If it is a benefit to anyone else then the injury a hundred times outweighs the little benefit.

Mr. President, I ask for a vote.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from North Dakota [Mr. McCUMBER].

Mr. McCUMBER. I ask for the yeas and nays upon the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the Senator from Michigan [Mr. TOWNSEND], which I transfer to the Senator from Virginia [Mr. MARTIN] and vote "nay."

Mr. CHILTON (when his name was called). I announce my pair with the Senator from Maryland [Mr. JACKSON], and withhold my vote.

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Nevada [Mr. NEWLANDS]. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. REED (when his name was called). I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Arizona [Mr. ASHURST] and vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON]. I transfer that pair to the junior Senator from South Carolina [Mr. SMITH] and vote "nay."

The roll call was concluded.

Mr. REED. I transferred my pair a moment ago to the Senator from Arizona [Mr. ASHURST]. He has come into the Chamber, and I therefore withdraw my vote. I now transfer my pair to the Senator from Tennessee [Mr. SHIELDS] and vote "nay."

Mr. ASHURST. I vote "nay."

Mr. CHILTON. I transfer my pair, as previously announced, to the Senator from Oklahoma [Mr. GORE] and vote. I vote "nay."

Mr. JAMES. I wish to inquire if the junior Senator from Massachusetts [Mr. WEEKS] has voted?

The VICE PRESIDENT. He has not.

Mr. JAMES. I have a pair with that Senator and withhold my vote. If he were present, I should vote "nay."

Mr. CHAMBERLAIN (after having voted in the negative). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withdraw my vote.

Mr. STONE. I have a general pair with the Senator from Wyoming [Mr. CLARK]. As he happens to be absent, I withhold my vote.

Mr. LEWIS. I am paired with the Senator from North Dakota [Mr. GRONNA]. If he were present, I should vote "nay."

Mr. THORNTON. I desire to announce the necessary absence of the Senator from Alabama [Mr. BANKHEAD], and also that he is paired with the Senator from West Virginia [Mr. GORE].

The result was announced—yeas 26, nays 37, as follows:

YEAS—26.

Bradley	Dillingham	Lodge	Root
Brandagee	Fall	McCumber	Sherman
Bristow	Gallinger	Nelson	Smoot
Catron	Jones	Norris	Stephenson
Clapp	Kenyon	Page	Sterling
Colt	La Follette	Penrose	
Cummins	Lippitt	Poinsett	

NAYS—37.

Ashurst	Lane	Robinson	Thomas
Bacon	Lea	Saulsbury	Thompson
Bryan	Martine, N. J.	Shafroth	Thornton
Chilton	Myers	Sheppard	Tillman
Fletcher	O'Gorman	Shively	Vardaman
Hitchcock	Owen	Simmons	Walsh
Hollis	Pittman	Smith, Ariz.	Williams
Hughes	Pomerene	Smith, Ga.	
Johnson	Ransdell	Smith, Md.	
Kern	Reed	Swanson	

NOT VOTING—32.

Bankhead	Crawford	Lewis	Smith, Mich.
Borah	Culbertson	McLean	Smith, S. C.
Brady	du Pont	Martin, Va.	Stone
Burleigh	Goff	Newlands	Sutherland
Burton	Gore	Oliver	Townsend
Chamberlain	Gronna	Overman	Warren
Clark, Wyo.	Jackson	Perkins	Weeks
Clarke, Ark.	James	Shields	Works

So Mr. McCUMBER's amendment was rejected.

The SECRETARY. The committee propose the following amendment to paragraph 621: Page 152, line 16, after the word "Swine," insert:

Cattle, sheep, and all other domestic live animals suitable for human food not otherwise provided for in this section.

The amendment was agreed to.

Mr. THOMAS. On behalf of the committee I offer a substitute for paragraph 326.

The VICE PRESIDENT. The amendment will be read.

The SECRETARY. Paragraph 326, page 96, woven fabrics, was passed over. Insert as a substitute the following:

326. Woven fabrics in the piece, composed wholly or in chief value of silk, not specially provided for in this section, weighing not more than one-third of 1 ounce per square yard, \$3 per pound; weighing more than one-third of 1 ounce but not more than two-thirds of 1 ounce per square yard, if in the gum, \$2.25 per pound; if ungummed, wholly or in part, \$2.20 per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$2.65 per pound; if weighing more than two-thirds of 1 ounce but not more than 1 ounce per square yard, if in the gum, \$1.80 per pound; if ungummed, wholly or in part, \$2 per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$2.50 per pound; if weighing more than 1 ounce but not more than 1½ ounces per square yard, if in the gum, \$2.25 per pound; if ungummed, wholly or in part, \$2 per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$2.65 per pound; if weighing more than 1½ ounces but not more than 2½ ounces, and if containing not more than 20 per cent in weight of silk, if in the gum, 55 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 70 cents per pound; if containing more than 20 per cent but not more than 30 per cent in weight of silk, if in the gum, 70 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 90 cents per pound; if containing more than 30 per cent but not more than 40 per cent in weight of silk, if in the gum, 90 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1 per pound; if containing more than 40 per cent but not more than 50 per cent in weight of silk, if in the gum, 95 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1.35 per pound; if containing more than 50 per cent in weight of silk, or if wholly of silk, if in the gum, \$1 per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$2.20 per pound; if weighing more than 2½ ounces but not more than 8 ounces per square yard, and if containing not more than 20 per cent in weight of silk, if in the gum, 45 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 55 cents per pound; if containing more than 20 per cent but not more than 30 per cent in weight of silk, if in the gum, 65 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 75 cents per pound; if containing more than 30 per cent but not more than 40 per cent in weight of silk, if in the gum, 75 cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1 per pound; if containing more than 40 per cent but not more than 50 per cent in weight of silk, if in the gum, \$1 per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1 per pound; if containing more than 50 per cent in weight of silk, or if wholly of silk, if in the gum, \$1.80 per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$2 per pound. Woven fabrics in the piece, composed wholly or of chief value of silk, if dyed in the thread or yarn, and the weight is not increased in dyeing beyond the original weight of raw silk, if containing less than 30 per cent in silk, 85 cents per pound; if containing more than 30 per cent but not more than 45 per cent in weight of silk, \$1.05 per pound; if containing more than 45 per cent in weight of silk, \$2.05 per pound; if weight is increased in dyeing beyond the original weight of raw silk, if weighing more than one-third of 1 ounce but not more than 1 ounce per square yard, if black (except selvages), \$2 per pound; if other than black, \$2.50 per pound; if weighing more than 1 ounce but not more than 1½ ounces per square yard, if black (except selvages), \$1.70 per pound; if other than black, \$2 per pound; if weighing more than 1½ but not more than 1¾ ounces per square yard, if black (except selvages), \$1.50 per pound; if other than black, \$2 per pound; if weighing more than 1¾, but not more than 2 ounces per square yard, if black (except selvages), \$1.50 per pound; if other than black, \$2 per pound; if weighing more than 2 but not more than 8 ounces per square yard, and if containing not more than 30 per cent in weight of silk, if black (except selvages), 65 cents per pound; if other than black, 80 cents per pound; if containing more than 30 per cent but not more than 45 per cent in weight of silk, if black (except selvages), \$1 per pound; if other than black, \$1.15 per pound; if containing more than 45 per cent in weight of silk but not more than 60 per cent, if black (except selvages), \$1.25 per pound; if other than black, \$1.35 per pound; if containing more than 60 per cent in weight of silk, or if composed wholly of silk, and if having not more than 440 single threads to the inch in the warp, if black (except selvages), \$1.35 per pound; if other than black, \$1.80 per pound; if having more than 440 but not more than 600 single threads to the inch in the warp, if black (except selvages), \$1.50 per pound; if other than black, \$2 per pound; if having more than 600 but not more than 760 single threads to the inch in the warp, if black (except selvages), \$1.65 per pound; if other than black, \$2 per pound; if having more than 760 but not more than 920 single threads to the inch in the warp, if black (except selvages), \$1.70 per pound; if other than black, \$2.15 per pound; if having more than 920 single threads to the inch in the warp, if black (except selvages), \$2 per pound; if other than black, \$2.50 per pound; if printed in the warp and weighing not more than 1½ ounces per square yard, \$3 per pound; weighing more than 1½ but not more than 2 ounces per square yard, \$2.75 per pound; weighing more than 2 ounces per square yard, \$2.30 per pound. But in no case shall any goods made on Jacquard looms or any goods containing more than one color in the filling, or any of the goods enumerated in this paragraph, including such as have India rubber as a component material, pay a less rate of duty than 45 per cent ad valorem, nor a greater rate than 55 per cent ad valorem.

All manufactures of silk, or of which silk is the component material of chief value, including such as have India rubber as a component material, not specially provided in this section, 45 per cent ad valorem.

Mr. SMOOT. Mr. President, in the last line of the amendment just read either the Secretary misread it or the word "for" is omitted. It should read "provided for in this section." As the Secretary read it, it is "provided in this section." The word "for" ought to be inserted there.

The VICE PRESIDENT. The Secretary will read the language referred to by the Senator from Utah.

The Secretary read as follows:

Provided in this section.

Mr. SMOOT. As I have stated, it should be "provided for in this section."

The VICE PRESIDENT. The amendment will be so modified.

Mr. SMOOT. Mr. President, I am not going to discuss this amendment at all. It proposes specific instead of ad valorem rates. That means that there are some of the rates that are very low indeed, and I am only going to make one remark in relation to the matter. The maximum rate provided in the bill is 55 per cent. In my opinion, that should be 65 per cent. I wish to state merely in a few words why that should be the rate.

There are the very finest silk goods manufactured, we will say, in France or in Japan; they are very popular; they sell at a good price; but just as soon as their popularity is gone the price is immediately cut in two and sometimes even more. Those goods are shipped into this country, and, of course, their value being so low, even the 55 per cent ad valorem rate, which is the maximum here, would be very little protection, if any.

With that statement I shall say no more, Mr. President, except merely to add that I should be very glad to have specific duties provided for instead of ad valorem duties.

Mr. JONES. Mr. President, I simply want to know what is being voted on. It sounded like the reading of an entire tariff bill.

Mr. HUGHES. I will say to the Senator from Washington that it is an amendment substituting specific for ad valorem rates.

Mr. JONES. In what paragraph or schedule?

Mr. HUGHES. Paragraph 326 of the silk schedule. The ad valorem rates are changed into specific rates and a maximum clause is provided, so as to catch any hidden rates.

Mr. JONES. Has the matter been considered in the Senate as in Committee of the Whole at all?

Mr. HUGHES. It is being considered now.

Mr. JONES. The amendment was just read a moment ago, and I was curious to know whether the other side thinks it ought to be adopted without any discussion or consideration.

Mr. HUGHES. The paragraph was passed over at the request of the Senator from Utah.

Mr. JONES. If Senators on the other side want it acted on in that way, I have no objection.

The VICE PRESIDENT. The question is on the amendment.

The amendment was agreed to.

Mr. BRANDEGEE. Mr. President, I should like to offer an amendment to paragraph 360, on page 112, which I send to the desk.

The SECRETARY. In paragraph 360, page 112, in line 1, after the word "descriptions," it is proposed to insert "except of wool or hair or both and."

Mr. BRANDEGEE. Mr. President, I offer that amendment for this reason: I have here the following letter from a maker of gun wads:

NORWALK, CONN., June 10, 1913.

HON. FRANK B. BRANDEGEE,
Senate Chamber, Washington, D. C.

MY DEAR SENATOR: A rather peculiar feature of the proposed tariff bill appears in relation to a product by a corporation in which I am interested. This company, the Lounsbury & Bissell Co., of Norwalk, manufactures a felt of wool and cattle hair, which is shipped in sheets to the manufacturer of gun wads.

We are informed that this sheet felt if imported would be subject to a 35 per cent ad valorem tariff under Schedule K, paragraph 297, page 87, but if the foreign manufacturer will only cut that felt up into gun wads—in other words, apply a little more labor—it will then be admitted on a 10 per cent ad valorem under section 360 of the proposed bill, which provides "gun wads of all descriptions, 10 per cent ad valorem." If section 360 could be amended to read "gun wads of all descriptions, except of wool or hair, or both, 10 per cent," it would make the provisions of the bill more consistent.

For what particular reason ammunition manufacturers should obtain the manufactured wad cheaper than they can already manufacture felt sheet is something that I can not grasp, and I have not been able to find anyone to explain why 360 was inserted in the proposed bill.

Will you kindly take this up and present to the committee the inconsistency and, at least seems to me, the injustice of such a provision? The competition for the felt sheet will be keen enough, but to give the foreign manufacturer a bonus of 25 per cent in addition, as the effect of 360 will be, seems to me to present an oversight by the drafters of the bill. It probably will be expensive enough for us to readjust ourselves, if possible, to the new conditions under the reduced rate, but

to have this additional handicap is certainly unfair, especially when I can neither find nor learn of any reason for the insertion of such a provision.

Very truly, yours,

EDWIN O. KEELER.

Mr. President, that argument appeals to me. If it is a fact, as it appears, that the felt sheets of which these gun wads are made carry a duty under Schedule K of 35 per cent, why the manufactured products of that should only carry a duty of 10 per cent I do not see. I therefore have offered the amendment.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Connecticut.

The amendment was rejected.

The SECRETARY. The next paragraph passed over is paragraph 626, at the request of Mr. BRANDEGEE. The paragraph relates to tanning material, and so forth.

Mr. BRANDEGEE. That paragraph was acted on the other day, and I shall not ask any further vote on it.

The SECRETARY. The amendment proposed by the committee in paragraph 626, page 152, line 24, after the word "quebracho," is to strike out "of nutgalls, of Persian berries," and to insert "and," and in line 25, after the word "bark," to strike out "of sumac."

The amendment was agreed to.

The next amendment passed over was, in paragraph 626, page 153, line 1, after the word "chestnut," to strike out the semicolon.

The amendment was agreed to.

Mr. JOHNSON. Mr. President, in paragraph 629, on page 153, line 12, on behalf of the committee, I move to amend by inserting, after the word "Tea," the first word in the paragraph, the words "not specially provided for in this section."

Mr. SMOOT. That is to provide against the paragraph in which tea sweepings are provided for?

Mr. JOHNSON. Yes; that is the object of the amendment. Tea sweepings have a place on the dutiable list.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Maine [Mr. JOHNSON].

The amendment was agreed to.

Mr. SMOOT. Mr. President, I ask that paragraphs 646, 651, 657, and 658 be passed over to-night. The senior Senator from North Dakota [Mr. McCUMBER] desires to speak upon paragraph 646, and the Senator—

Mr. STONE. What is that paragraph?

Mr. SMOOT. The paragraph containing the provision putting wheat upon the free list with a countervailing duty.

Mr. GALLINGER. I suggest to the Senator to let them be reached in order and then to make the request.

Mr. STONE. Are we to have the Senator's speech on wheat repeated?

Mr. SMOOT. Let the paragraphs come up in their regular order, and I will then request that they go over.

The SECRETARY. The next paragraph passed over is paragraph 646, wheat, wheat flour, semolina, etc.

Mr. SMOOT. I ask that that paragraph go over.

Mr. WILLIAMS. What is the reason for passing it over?

Mr. SMOOT. The senior Senator from North Dakota [Mr. McCUMBER] has an amendment to offer to that paragraph. Not thinking that the Senate would remain in session longer than 6 o'clock, he made an appointment, because of which he was compelled to leave the Senate. He asked me to request that the paragraph go over until to-morrow morning.

Mr. WILLIAMS. Mr. President, we can not object to these requests. It seems to be a custom of the Senate to agree that whenever it is inconvenient for a Senator to be present—

Mr. SMOOT. I will say to the Senator that I am just as anxious as he is to get through.

Mr. WILLIAMS. That the public business of 90,000,000 people ought to be halted.

Mr. SMOOT. I think that is hardly a proper thing to say.

Mr. THOMAS. Mr. President, with the consent of the Senator from Utah, I want on behalf of the committee, to offer an amendment to paragraph 646, which does not affect the purpose for which it is to go over. I send the amendment to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In the committee amendment in paragraph 646, page 156, after the words "United States," line 7, it is proposed to insert the following proviso:

Provided further, That the importation of weed seeds, whether or not mixed with bran or wheat screenings, is prohibited unless the same shall have been ground or otherwise treated so that the seeds will not germinate.

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The paragraph will be passed over until to-morrow morning.

The SECRETARY. Paragraph 649, on page 156, was passed over at the request of Mr. JONES.

Mr. JONES. I will not ask for any delay on that. If I have any amendment to offer, I will offer it in the Senate.

The SECRETARY. The next paragraph passed over is on page 157, paragraph 651.

Mr. POINDEXTER. Mr. President, my attention was diverted when we passed paragraph 649. What disposition was made of it?

The VICE PRESIDENT. It has been agreed to as it stands.

Mr. POINDEXTER. I offer an amendment to that paragraph.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 157, line 6, after the word "section," at the end of the paragraph, it is proposed to insert the following proviso:

Provided, That when an export duty is imposed by any foreign country, or any Province or subdivision thereof, on logs, blocks, or other raw material from which lumber or shingles are manufactured, or if the export of such logs or raw material from such foreign country, or any Province or subdivision thereof, into the United States shall be prohibited, then in either event there shall be levied and collected a duty of \$1.25 per thousand feet upon lumber and 25 cents per thousand upon shingles imported into the United States from such foreign country.

Mr. POINDEXTER. Mr. President, I will ask the committee if it would be willing to consider this amendment? It seems to me that it is an eminently fair and reasonable one. It meets a condition which exists in British Columbia. From some particular classes of land in British Columbia there is a prohibition of the export of logs into the United States.

Mr. SIMMONS. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from North Carolina?

Mr. POINDEXTER. I yield to the Senator.

Mr. SIMMONS. If the Senator is willing to let that amendment be referred to the committee, we will be glad to take it up to-night and consider it.

Mr. POINDEXTER. I shall be delighted to have it take that course.

The SECRETARY. Page 157, paragraph 651, mechanically ground wood pulp, etc., has been passed over.

Mr. GALLINGER. Mr. President, let that paragraph go over, the Senator from Massachusetts being absent and desiring to address some remarks to that paragraph. I will venture to make the suggestion that it is not a loss of time in any event, because, unless the request is acceded to, the matter will be taken up in the Senate and the same amount of time consumed.

The SECRETARY. On page 159, paragraph 654, works of art, etc., was passed over at the request of Mr. LODGE.

Mr. SMOOT. I ask that that paragraph go over.

The VICE PRESIDENT. The paragraph will be passed over.

The SECRETARY. On page 162, paragraph 657 was recommitted to the committee. It relates to works of art, productions of American artists, etc.

Mr. SMOOT. If the committee are going to offer an amendment to this paragraph I should like to have them do so when the Senator from Massachusetts is here.

Mr. WILLIAMS. Before the paragraph goes over I should like to have the committee amendment to it as it stands adopted.

Mr. BRANDEGEE. Did I understand the Secretary to say that that paragraph had already been recommitted?

The VICE PRESIDENT. The Chair understands it has heretofore been recommitted to the committee.

Mr. BRANDEGEE. Then, it is now in the hands of the committee.

Mr. WILLIAMS. I understand that, but it has come back and the committee is ready to report. The Senator from Utah has requested that it be again passed over. Before it is passed over again, I should like to have the amendment which the committee has recommended adopted here. The first amendment is to strike out the words "excluding and," in line 15, and to substitute for them the word "including."

Mr. THOMAS. In other words, it is to restore the House provision.

Mr. WILLIAMS. The committee amendment should be disagreed to. I move that the Senate committee amendment there be disagreed to.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was rejected.

Mr. WILLIAMS. That will leave it just where we want it. In line 14, I ask on behalf of the committee that the amend-

ment inserting the indefinite article "a" and striking out the word "incorporated" be accepted.

The SECRETARY. In line 14, after the word "or" it is proposed to insert the article "a" and to strike out the word "incorporated" before the word "religious."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WILLIAMS. In line 17, after the word "windows," I move to strike out the comma and to insert the words "imported to be used in houses of worship."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. After the word "windows," in line 17, it is proposed to strike out the comma and to insert "imported to be used in houses of worship."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WILLIAMS. Now that the amendment has been perfected according to the committee's ideas, we will pass it over.

Mr. SMOOT. Does the Senator, then, want to disagree to the amendment of the Senate committee in relation to the words "excluding" and "except"?

Mr. THOMAS. No.

Mr. SMOOT. What are you going to do with those?

Mr. WILLIAMS. We move to strike out the word "except," in line 17, and to insert in lieu thereof the word "excluding."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On line 17, page 162, the committee proposes to strike out the word "except" and to insert the word "excluding."

The amendment was agreed to.

Mr. WILLIAMS. Now it is perfected.

Mr. SMOOT. Now, let it go over, Mr. President.

The VICE PRESIDENT. The paragraph will be passed over.

The SECRETARY. Paragraph 658, the following paragraph, has been passed over at the request of the Senator from Massachusetts.

Mr. SMOOT. I should like to have that go over until to-morrow morning.

The VICE PRESIDENT. That concludes the section.

Mr. JOHNSON. Mr. President, I should like to refer to the chemical schedule for a few changes.

In paragraph 65, page 16, line 24, I move to strike out the words "chlorate of."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 16, paragraph 65, line 24, it is proposed to strike out the first two words in the line, the words "chlorate of," and the comma.

The amendment was agreed to.

Mr. JOHNSON. On page 147, paragraph 584, line 17, after the semicolon following the words "cyanide of," I move to insert the words "chlorate of."

Mr. SMOOT. Putting chlorate of potash on the free list?

Mr. JOHNSON. Yes; putting chlorate of potash on the free list.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 147, paragraph 584, line 17, after the words "cyanide of" and the semicolon, it is proposed to insert the words "chlorate of" and a semicolon.

The amendment was agreed to.

Mr. JOHNSON. On page 17, paragraph 67, line 6, after the word "soaps" and the colon, I move to strike out the word "Perfumed" and make the first letter of the word "toilet" a capital letter.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 17, line 6, it is proposed to strike out the second word in the line, the word "Perfumed"; also, to strike out the word "toilet" and insert the same word with a capital letter before the word "soaps."

The amendment was agreed to.

Mr. JOHNSON. In the same line, I move to strike out the numerals "40" and in lieu thereof to insert "30."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 17, line 6, it is proposed to strike out "40" and insert "30."

The amendment was agreed to.

Mr. JOHNSON. In line 7 of the same paragraph I move to strike out the numerals "30," and insert in lieu thereof the numerals "20."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 17, line 7, before the words "per centum," it is proposed to strike out "30" and insert "20."

The amendment was agreed to.

Mr. JOHNSON. In line 8, after the word "soap" and the comma, I move to strike out the words "and unperfumed toilet soap."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to strike out, in line 8, after the word "soap" and the comma, the words "and unperfumed toilet soap."

The amendment was agreed to.

Mr. JOHNSON. In line 9, after the word "soaps," I move to insert the words "and soap powders."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. After the word "soaps," in line 9, it is proposed to insert the words "and soap powders."

The amendment was agreed to.

The SECRETARY. On page 166, in section 2 of the bill, the clause of the committee amendment beginning in line 14, with the words "For the purpose of this additional tax," was passed over and recommitted at the request of the Senator from Mississippi [Mr. WILLIAMS].

Mr. CUMMINS. Mr. President, as we passed through the bill I offered an amendment to be inserted immediately after the free list and before the income-tax provision. It was referred to the committee. I have no desire to take it up at this moment if the committee is not ready to report upon it.

Mr. WILLIAMS. The committee desires to offer an amendment, which I will send to the desk.

Mr. CUMMINS. I assume, Mr. President, that that is not the amendment to which I have referred.

The VICE PRESIDENT. The Chair is unable to tell until the Chair hears the amendment.

Mr. WILLIAMS. The committee wishes to perfect the paragraph by amending it.

Mr. CUMMINS. But, Mr. President, a parliamentary inquiry. Am I entitled to the floor?

Mr. WILLIAMS. I thought I had the floor. The first thing in order is the report of the committee. The paragraph had been recommitted and the committee is ready to report.

The VICE PRESIDENT. The Senator from Iowa is inquiring about the previous section.

Mr. WILLIAMS. Oh, the previous section. I did not so understand.

The VICE PRESIDENT. The Senator from Iowa undoubtedly is entitled to the floor.

Mr. CUMMINS. I rose simply to ask a question.

As we passed through the bill I offered an amendment relating to rates of freight on imports as distinguished from rates of freight upon domestic production. At the request of the chairman of the Finance Committee, my amendment was referred to the committee. I have not heard anything about it since. I rose to inquire whether the committee is ready to report upon it.

Mr. WILLIAMS. The committee is ready to report upon it; but I thought we were considering the committee amendments first.

I will state to the Senator from Iowa that the committee took the amendment into careful consideration. We came to the conclusion, in the first place, that the Senator was going to have rates declared discriminatory and unequal and cancel them whenever they were import rates forming a part of a joint-traffic rate, but that wherever they were export rates he made no provision at all to cover the matter. His amendment, therefore, did not work both ways. He seemed to be willing to let an inequality exist between freight rates from Pittsburgh to New York, for example, for consumption in New York, and freight rates from Pittsburgh to New York en route to Liverpool.

The committee therefore reports to the Senate that this is a matter for the consideration of the Committee on Interstate Commerce, being a question of railway rates. The Committee on Finance accordingly asks that it be relieved of the consideration of the subject matter, and that it be referred to the Committee on Interstate Commerce.

Mr. CUMMINS. Mr. President, I then offer the amendment. It is in the possession of the Secretary, I assume, if the committee has returned it. It is to be inserted immediately after paragraph 659 on page 164.

At the request of the chairman of the committee, I did not submit my views upon this matter at all, and it remains unargued as far as I am concerned. I wish to be heard upon it briefly, but I do not wish to be heard upon it to-night. We have reached a time when we ought to adjourn, I think. I ask the pleasure of the chairman of the committee in that regard.

Mr. SIMMONS. At the time the Senator brought up his amendment a few moments ago my attention was diverted from

the proceedings of the Senate, and I did not know he had brought it up until I heard the statement made by the Senator from Mississippi.

The Senator is correct in his statement that I suggested to him at the time he offered his amendment that he refrain from discussing it at that time and let it go to the committee. What the committee did about it was to reach the conclusion that it would be better not to encumber this measure with legislation of that particular character. We thought it was more properly legislation that was affiliated with and connected with and related to railroad transportation, and our suggestion is that that is the proper place for it. Of course, if the Senator desires, however, to discuss the matter and to offer it as an amendment to this bill, we shall have to act upon it.

Mr. WILLIAMS. I will make the point of order that it is not germane. It is clearly a matter of fixing freight rates, and is not germane to the bill.

Mr. GALLINGER. Mr. President, I suggest that the Senator's point of order is not well taken.

Mr. CUMMINS. There is no rule in this body requiring an amendment to be germane.

Mr. GALLINGER. Except to an appropriation bill.

Mr. CUMMINS. Except to an appropriation bill. However, I have no disposition to go on to-night, in view of our decimated numbers here.

Mr. GALLINGER. Mr. President, we have been here now for almost eight hours, and it has been a very hot day. As the Senator from Iowa desires to have this matter go over until tomorrow, I hope the chairman will agree now to lay the bill aside. I understand a short executive session is desired.

Mr. SIMMONS. I had hoped that we might go on until 7 o'clock, but I am advised that it is desirable to have an executive session. In view of that fact, I ask that the bill may be laid aside for the day.

EXECUTIVE SESSION.

Mr. KERN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 6 o'clock and 57 minutes p. m.) the Senate adjourned until to-morrow, Friday, September 5, 1913, at 2 o'clock p. m.

NOMINATIONS.

Executive nominations received by the Senate September 4, 1913.

MINISTERS.

Thomas H. Birch, of New Jersey, to be envoy extraordinary and minister plenipotentiary of the United States of America to Portugal, vice Cyrus E. Woods, resigned.

Charles J. Vopicka, of Illinois, to be envoy extraordinary and minister plenipotentiary of the United States of America to Roumania, Servia, and Bulgaria, vice John B. Jackson, resigned.

APPRAISER OF MERCHANDISE.

Bernard B. McGinnis, of Pennsylvania, to be appraiser of merchandise in the district of Pittsburgh, in the State of Pennsylvania, in place of John D. Pringle, superseded.

COLLECTOR OF INTERNAL REVENUE.

C. Gregg Lewellyn, of Pennsylvania, to be collector of internal revenue for the twenty-third district of Pennsylvania, in place of Daniel B. Heiner, superseded.

UNITED STATES ATTORNEYS.

John H. Gleason, of New York, to be United States attorney for the northern district of New York, vice George B. Curtiss, whose term has expired.

Francis Fisher Kane, of Pennsylvania, to be United States attorney, eastern district of Pennsylvania, vice John C. Swartley, resigned.

PROMOTIONS IN THE ARMY.

COAST ARTILLERY CORPS.

Lieut. Col. Harry L. Hawthorne, Coast Artillery Corps, to be colonel from September 2, 1913, vice Col. Frederick Marsh, retired from active service September 1, 1913.

Maj. Henry D. Todd, jr., Coast Artillery Corps, to be lieutenant colonel from September 2, 1913, vice Lieut. Col. Harry L. Hawthorne, promoted.

Capt. William Forse, Coast Artillery Corps, to be major from September 2, 1913, vice Maj. Henry D. Todd, jr., promoted.

First Lieut. Carr W. Waller, Coast Artillery Corps, to be captain from September 2, 1913, vice Capt. William Forse, promoted.

APPOINTMENTS IN THE ARMY.

COAST ARTILLERY CORPS.

Corpl. Edward Oliver Halbert, Forty-seventh Company, Coast Artillery Corps, to be second lieutenant in the Coast Artillery Corps, with rank from August 30, 1913.

Master Gunner Harry Lee King, Coast Artillery Corps, to be second lieutenant in the Coast Artillery Corps, with rank from August 30, 1913.

PROMOTIONS AND APPOINTMENTS IN THE NAVY.

Lieut. Commander Frank Lyon, an additional number in grade, to be a commander in the Navy from the 1st day of July, 1913.

Lieut. Commander John McC. Luby to be a commander in the Navy from the 1st day of July, 1913.

Lieut. Frederick L. Oliver to be a lieutenant commander in the Navy from the 1st day of July, 1913.

Lieut. (Junior Grade) Arthur A. Garcelon, jr., to be a lieutenant in the Navy from the 1st day of July, 1913.

Stanley E. Crawford, a citizen of Pennsylvania, to be an assistant surgeon in the Medical Reserve Corps of the Navy from the 25th day of August, 1913.

RECEIVERS OF PUBLIC MONEYS.

Joseph E. Terral, of Hobart, Okla., to be receiver of public moneys at Woodward, Okla., vice Charles C. Hoag, term expired May 21, 1913.

D. E. Burkholder, of Chamberlain, S. Dak., to be receiver of public moneys at Gregory, S. Dak., vice Oliver C. Kippenbrock, term expired March 15, 1913.

REGISTER OF THE LAND OFFICE.

Edwin M. Starcher, of Fairfax, S. Dak., to be register of the land office at Gregory, S. Dak., vice Thomas C. Burns, term expired March 15, 1913.

CONFIRMATIONS.

Executive nominations confirmed by the Senate September 4, 1913.

AMBASSADOR.

Henry Morgenthau to be ambassador extraordinary and plenipotentiary to Turkey.

SECRETARY OF EMBASSY.

Edward Bell to be second secretary of embassy at London, England.

SECRETARY OF LEGATION.

John Van A. MacMurray to be secretary of legation at Peking.

POSTMASTERS.

IOWA.

M. H. Kelly, Waterloo.

J. S. Wildman, Blockton.

PENNSYLVANIA.

Samuel K. Henric, Youngwood.

George F. Kittelberger, Curwensville.

Harry B. Krebs, Mercersburg.

Edward J. Loraditch, Sand Patch.

William H. McQuilken, Glen Campbell.

Charles E. Putnam, Linesville.

John H. Shields, New Alexandria.

Clayland M. Touchstone, Moores.

WITHDRAWAL.

Executive nomination withdrawn September 4, 1913.

RECEIVER OF PUBLIC MONEYS.

Joseph E. Terrell to be receiver of public moneys at Woodward, Okla., which was sent to the Senate August 29, 1913.

HOUSE OF REPRESENTATIVES.

THURSDAY, September 4, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite and Eternal Spirit, Father of all souls, we bless Thee that Thou hast spared our lives and brought us to the light of this day. Keep us, we beseech Thee, throughout its remaining hours to the high-water mark of Christian manhood, that whatever work we may accomplish may be to the good of the common weal and redound to Thy glory. And Thine be the praise, through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

SALE OF MEAT IN ENGLAND.

Mr. KINKEAD of New Jersey. Mr. Speaker, I ask unanimous consent that the letter which I send to the Clerk's desk be read.

Mr. FOSTER. Reserving the right to object, what is the letter about?

Mr. KINKEAD of New Jersey. It is about the sale of meat in England, showing the discrepancy in the price.

Mr. FOSTER. I object, Mr. Speaker.

Mr. MANN. Reserving the right to object—

Mr. BORLAND. Objection has already been made.

URGENT DEFICIENCY BILL.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7898, a bill making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes. The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7898, with Mr. Flood of Virginia in the chair.

The CHAIRMAN. The House is in the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7898. The Clerk will report the title of the bill.

The bill was reported by title.

The CHAIRMAN. The Clerk will proceed with the reading of the bill.

The Clerk read as follows:

CIVIL SERVICE COMMISSION.

Examination of fourth-class postmasters: For necessary additional office employees, printing, stationery, travel, contingent, and other necessary expenses of examinations, \$30,000; field examiners at the rate of \$1,500 per annum each, for work in connection with members of local boards and other necessary work as directed by the commission, \$9,000; in all, \$39,000, to be available during the fiscal year 1914.

Mr. KINKEAD of New Jersey. Mr. Chairman, I move to strike out the last word.

Mr. BARTLETT. Mr. Chairman—

Mr. KINKEAD of New Jersey. I do so for the purpose of asking that the communication I send to the Clerk's desk be read in my time.

Mr. FOSTER. Mr. Chairman, I object.

Mr. KINKEAD of New Jersey. Mr. Chairman, the gentleman is clearly out of order. I have been recognized, and I am talking under the five-minute rule.

Mr. FOSTER. The letter, I will say to the gentleman from New Jersey, can only be read by unanimous consent.

The CHAIRMAN. The gentleman can read the letter himself if he desires to do so.

Mr. BORLAND. Mr. Chairman, I reserve the point of order, that the letter does not apply to the paragraph under debate.

Mr. FITZGERALD. I make the point of order that it is too late. Debate has already commenced and an amendment has been offered.

Mr. BORLAND. No debate has commenced.

Mr. FITZGERALD. The amendment has been offered.

Mr. KINKEAD of New Jersey. This letter, I will say, Mr. Chairman, comes from the Rev. John J. Lawrence, of Binghamton, N. Y., and it reads as follows:

255 WASHINGTON STREET,
Binghamton, N. Y., September 2, 1913.

EUGENE F. KINKEAD, Esq.

MY DEAR SIR: Your two telegrams of yesterday are to hand. I presume that any newspaper statement you have seen connecting my name with a criticism of the American Beef Trust must have been based upon the statements made by a reporter in the Binghamton Press of last Saturday. That account was "written up" by a reporter in a way distasteful to me, and terms and phrases were used for which my interview gave no warrant. I will place the whole case before you very carefully.

I have long had a suspicion that some American productions are sold more cheaply in Great Britain than at home, and on my recent visit I promised a friend that I would compare the prices of American meat in England with the prices here.

On or about Wednesday, July 30, my daughter and I visited the city of Hereford, England. It is not a large city (probably not more than 20,000 people). The railway station is at one extreme end of the city; in fact, there appears to be a walk of nearly one-fourth of a mile from the station before getting right into the city.

On our way from the station, on the left-hand side, and just past the entrance into Hereford, we noticed a meat store, with prices affixed to nearly every piece of meat for sale.

Mr. FOSTER. Mr. Chairman, I rise to a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. FOSTER. The gentleman is not speaking to his amendment.

The CHAIRMAN. The gentleman from New Jersey will suspend the reading. The point of order is made that the gentle-

man from New Jersey [Mr. KINKEAD] is not speaking to his amendment. The point of order is sustained.

Mr. KINKEAD of New Jersey. Mr. Chairman—

The CHAIRMAN. The gentleman will proceed in order.

Mr. KINKEAD of New Jersey. Mr. Chairman, the bill that we have before us to-day has a peculiar connection with the question I have presented, and realizing that the gentleman from Illinois [Mr. FOSTER] understands the connection with the bill, I will proceed with the reading of the letter in order.

Mr. MANN. Will the gentleman yield for a question?

Mr. KINKEAD of New Jersey. I will be very glad to yield to the gentleman from Illinois.

Mr. MANN. Do I understand that because of the appointment of fourth-class postmasters the gentleman is beefing? [Laughter.]

Mr. KINKEAD of New Jersey. The gentleman has had more experience with fourth-class postmasters than I have. I come from the city of Jersey City, whereas he comes from the town of Chicago.

Mr. MANN. If the gentleman had given attention to the question I asked he would have been able to catch my remarks.

Mr. KINKEAD of New Jersey. I can not hear you. I have tried to be as courteous to the gentleman as he has been to me. I said I could not hear him.

Mr. MANN. The gentleman is so excited since he became candidate for State chairman he does not listen to anybody else.

Mr. KINKEAD of New Jersey. I know, and the gentleman from Illinois [Mr. MANN] agreed to come up to New Jersey and make a speech for me if I needed it. [Laughter.]

I continue to read:

I can not now recall the name of the store, but am positive as to its location. We saw that the prices were low. We inquired, and were told that it was "American meat" (exclusively). Thinking that the word "American" might be ambiguous to the salesman, I said, "What do you mean by 'American'? Do you mean Canadian?" He replied, "No; I mean the States."

Both my daughter (a young college student of 19) and I carefully priced the meat. The most expensive piece was a fine sirloin of perhaps 10 or 12 pounds. That was 8d. (16 cents). The next piece was 7d. (15 cents). Hind quarters of lamb were marked 7d. (15 cents). There were excellent boiling pieces of beef marked down as low as 5d. (10 cents). I could not discover any pork.

Both my daughter and I can positively swear to these prices. On that point there can be no possible question.

The quality of the meat looked splendid. Now the question is, Was it American meat? You can readily see that on that point—really the vital point—I have no positive proof. It would not be English meat sold as American, because English meat commands a higher price. In assuring me that the meat came from "the States" the man may have been speaking falsely. I noticed splendid meat at about the same prices in Shrewsbury, England, but on careful examination I found that came from Argentina.

One thing seems sure. Either that Hereford butcher was selling United States beef at prices about 50 per cent less than we pay for the same, or he was selling Argentine beef or beef from some other part of North or South America as United States beef and deceiving the English people.

And even if it was United States meat I can, of course, have no proof that it was sold by the Beef Trust. I never mentioned Beef Trust to the Binghamton reporter. For all I know there may be a hundred independent concerns selling United States beef all over Britain.

What I do know and can swear to is the fact of that Hereford store; the prices of the meat; the quality of the meat; the fact that the salesman assured me that it was United States meat.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. KINKEAD of New Jersey. Mr. Chairman, I ask unanimous consent to conclude the reading of this letter. It is only about half a minute longer.

The CHAIRMAN. Is there objection to the gentleman's request?

Mr. MANN. Reserving the right to object, I would like to ask the gentleman from New York [Mr. FITZGERALD], in charge of the bill, whether it is his intention to permit during the afternoon the discussion of any one of a thousand and one subjects that have no relation to the bill? Of course, if he intends to do that, I shall object.

Mr. FITZGERALD. I do not propose to have any further extraneous discussion.

Mr. MANN. Then the gentleman is playing favorites.

Mr. FITZGERALD. I will say to the gentleman from Illinois that the gentleman from New Jersey [Mr. KINKEAD] is a member of the committee.

Mr. MANN. The gentleman from New York knows that he can not discriminate in that way.

Mr. FITZGERALD. The gentleman from New Jersey was not permitted to speak yesterday. Let us hope he will get 10 minutes to-day. I hoped that he would have 10 minutes of the time set aside for general debate.

Mr. KINKEAD of New Jersey. Mr. Chairman, I am only asking for six minutes.

The CHAIRMAN. The gentleman from New Jersey asks unanimous consent to be allowed to proceed for one minute longer. Is there objection?

There was no objection.

Mr. KINKEAD of New Jersey. I proceed:

My own opinion, which I offer respectfully, is that this whole matter calls for very careful and impartial investigation. Are you aware that taking the "lb" as the unit, the American pays two and a-half times as much for his bread as does the Englishman, while a large proportion of English bread is made from American flour. This I have tested and proved by actual loaves of bread, priced, paid for, and exhibited side by side. It is all part of the same general question.

I am rather curious to know your impression of these statements of fact carefully made.

Yours, truly,

JOHN J. LAWRENCE.

Mr. Lawrence is from Binghamton, N. Y. Of course, Mr. Chairman, I do not wonder at my good friend from Chicago [Mr. MANN] now and then showing signs of temper. I said during the Sixty-second Congress that we would be able to prove before the discussion of the tariff was over that American beef was sold in Great Britain and other European countries at a lower price than we were paying for it in this country. I do not wonder now, I say, that the gentleman representing the home of the packers, representing the home of Morris and Swift, the home of Armour and Cudahy, should rise in his place and ask the chairman of the Committee on Appropriations if he were going to allow discussion in this Chamber during the afternoon on a question of whether Americans would be further compelled to pay more for their meat than the prices at which American meat is sold to the people of European countries.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. MANN. Mr. Chairman, I ask that the gentleman from New Jersey have five minutes more.

Mr. FITZGERALD. Mr. Chairman, I demand the regular order. I object.

Mr. BARTLETT. Mr. Chairman, I desire to offer an amendment to this paragraph. I offer it on my own responsibility.

The CHAIRMAN. The gentleman from Georgia [Mr. BARTLETT] offers an amendment which the Clerk will report.

The Clerk read as follows:

Amend, page 2, at the end of line 6, by inserting the following:

"The Executive orders of May 7, 1913, October 15, 1912, and November 30, 1908, placing the positions of postmaster of the fourth class in the classified service and all regulations made thereunder are hereby revoked, and hereafter appointments to said positions shall be made in the same manner as obtained prior to the making of such Executive orders."

Mr. FITZGERALD. Mr. Chairman, I reserve a point of order on that amendment.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] reserves a point of order on the amendment.

Mr. FITZGERALD. I make the point of order.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] makes the point of order. The Chair would like to hear the gentleman from New York on the point of order.

Mr. FITZGERALD. It is new legislation, and it is not germane to this paragraph.

Mr. BARTLETT. Mr. Chairman, this paragraph—I am discussing the point of order—provides for \$39,000 in this bill to pay the expenses of holding the examinations for the selection of fourth-class postmasters, which had not been done prior to these orders.

Rule XXI, paragraph 2, provides that—

No appropriation shall be reported in any general appropriation bill, or be in order as an amendment thereto, for any expenditure not previously authorized by law, unless in continuation of appropriations for such public works and objects as are already in progress. Nor shall any provision in any such bill or amendment thereto changing existing law be in order, except such as being germane to the subject matter of the bill shall retrench expenditures by the reduction of the number and salary of the officers of the United States, by the reduction of the compensation of any person paid out of the Treasury of the United States, or by the reduction of amounts of money covered by the bill: *Provided*, That it shall be in order further to amend such bill upon the report of the committee or any joint commission authorized by law or the House Members of any such commission having jurisdiction of the subject matter of such amendment, which amendment being germane to the subject matter of the bill shall retrench expenditures.

• This proposition, Mr. Chairman, has been before the House since the adoption of this rule, known as the Holman rule, and it has been enforced since the beginning of the Sixty-second Congress, and, in my judgment, this amendment meets absolutely the exceptions to the rule provided for in the rule.

It certainly will save the expenditure of this \$39,000 carried in this paragraph of the bill, because the paragraph in the bill and the evidence which is before the House now, accessible to the Chair, which will not be disputed by the Chair, is that this \$39,000 and the \$9,000 which is asked for in this bill is to pay the traveling and other expenses made necessary by this order of 1913 and the other orders which required the examination

under the Civil Service Commission of all applicants for postmasterships. So that, Mr. Chairman, we reduce the expenditures of the Government and we reduce the amount carried in this bill.

If I were to discuss the question for an hour I could not make it plainer than by this statement that its purpose is to repeal the orders which make it necessary to expend this money. If this proviso is adopted, then it will not be necessary to expend the \$39,000 that we carry in this paragraph of the bill. That is all I desire to say, Mr. Chairman.

The CHAIRMAN. The Chair thinks the amendment is subject to the point of order. It is new legislation and does not reduce expenditures. The Chair sustains the point of order.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. If the Executive order made by President Wilson, modifying the Executive order of President Taft relative to fourth-class post offices, is to remain in force and effect the \$30,000 appropriation provided for in this paragraph is absolutely necessary. Whether or no that modification ought to remain in force is of course a matter of opinion.

For a good many years I had to do with recommending the appointment of fourth-class postmasters. It was never an altogether pleasant job, and I do not think that in the aggregate it added to my popularity, though I did make an earnest effort to recommend the postmasters the majority of the people wanted and those who would render good service. I am inclined to think that the old method, so far as it affected the service, was a good one, because I am sure that under the old system we got good postmasters in my part of the country at least.

But the old system did entail a very great deal of work, and placed a large responsibility upon Members of Congress, which I do not think ought to be placed upon them. There ought to be some other method devised. But unfortunately, in my opinion, the method that has been devised is not a very satisfactory one. Of course this appropriation will give the Democratic brethren a chance at the post offices, and I think they ought to have it. However, it will not only give them a chance, but a cinch, for under the plan that has been devised, unless there be three Republicans standing higher in the examination than any Democrat, a Democrat will get the job; and when we contemplate the long and weary years during which the brethren were kept from the pie counter, I do not know but this is a fair evening up of matters, provided they get good postmasters, which I hope they will. The difficulty is that the new rule applies to small offices, and it is going to be difficult in many instances to find people qualified, and so situated locally that they can take these offices, who will take the trouble to pass an examination. If the limit was placed at post offices paying \$250 or \$300 a year, then I think the plan would probably work out fairly well; but to provide for examinations in all offices paying above \$180 a year will include many offices where the department will find a great deal of difficulty in getting people who are willing to serve, who will take the trouble to take the examination. I have been asked by the Civil Service Commission as have, I assume, all Members, to assist by suggesting to people in the various localities that they bestir themselves and take the examination, and in some cases I have taken the trouble to do that, realizing of course that some Democrat is almost certain to get the job. The difficulty is that few are inclined to take the trouble to take an examination for a small office when there is great doubt as to whether or no he will secure the position, no matter how well qualified, after he has gone to some considerable trouble and expense. In my opinion the real fault of the order is that it includes the smaller offices.

As to the offices paying less than \$250 per annum, in my opinion the policy ought to be followed that is now followed with regard to the smaller offices—the postmaster being appointed on the recommendation of an inspector of the department. I am sure if we had control of the administration, I for one would not clamor for the responsibility of recommending fourth-class postmasters.

Mr. BARTLETT. Mr. Chairman, I hold in my hand the various orders on this subject, which I will insert in the RECORD so that the Members of the House and the country may be informed as to what they were and the dates when they were promulgated.

The orders are as follows:

EXECUTIVE ORDER.

Schedule A, Subdivision V, paragraph 4, of the civil-service rules is hereby amended to read as follows:

"4. All employees on star routes and in post offices having no city free-delivery service, other than postmasters of the fourth class, in

Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, and Michigan."

THEODORE ROOSEVELT.

THE WHITE HOUSE, November 30, 1908.

EXECUTIVE ORDER.

Schedule A, Subdivision VII, paragraph 4, of the civil-service rules is hereby amended to read as follows:

"4. All employees on star routes and in post offices of the third and fourth classes, other than postmasters of the fourth class, except those in Alaska, Guam, Hawaii, Porto Rico, and Samoa."

The regulations governing the appointment of postmasters of the fourth class shall be amended so as to provide that all appointments at offices where the compensation is \$500 or more shall be made from a certification of three names instead of one, and where the compensation is less than \$500 all appointments shall be made on the recommendation of post-office inspectors, after personal investigation, in the manner prescribed for making appointments in the States of Massachusetts, New York, Ohio, and Illinois.

WM. H. TAFT.

THE WHITE HOUSE, October 15, 1912.

EXECUTIVE ORDER.

The Executive Orders of November 30, 1908, and October 15, 1912, bringing the positions of postmaster of the fourth class into the competitive classified service are hereby amended by adding thereto the following:

"No person occupying the position of postmaster of the fourth class shall be given a competitive classified status under the provisions of said orders unless he has been appointed as a result of open competitive examination, or under the regulations of November 25, 1912, or of January 20, 1909, or until he is so appointed."

"At any post office of the fourth class where the present postmaster was appointed otherwise than as above set forth, appointment shall be made in accordance with the regulations approved November 25, 1912, as amended this date; and for this purpose the Civil Service Commission shall hold an open competitive examination for each such office having an annual compensation of as much as \$180, such examinations for all such post offices to be held by States as requested by the Postmaster General; provided that in the event that for any such examination less than three persons apply, the Civil Service Commission may, in its discretion, authorize selection in accordance with the provisions of the regulations as amended this date governing selections for appointment to offices having annual compensation of less than \$180; and in like manner the regulations of November 25, 1912, as amended this date, shall be applied to each office where the annual compensation is less than \$180 and where the present incumbent was appointed otherwise than as above set forth."

WOODROW WILSON.

THE WHITE HOUSE, May 7, 1913.

Mr. Chairman, it is a little remarkable that this spasm of civil righteousness with reference to the appointment of fourth-class postmasters should come from our Republican friends after they have been in office for 16 years, and then by a general order covered their appointees into the classified service, as now done by the order of President Taft, being dated October 15, 1912. Of course it will not do now to say that the order of President Wilson was passed in order to give Democratic Congressmen an opportunity to select fourth-class postmasters. It does nothing of the sort. President Wilson's order simply provides for an examination of postmasters under the civil service where the compensation is more than \$180 a year. Where the compensation is less than \$180 a year the office is to be filled on the recommendation of an inspector. Where the compensation is more than \$180 a year there is to be a competitive examination under the rules and regulations of the Civil Service Commission.

Mr. Chairman, it was never contemplated when the civil-service law was enacted that these fourth-class postmasters, or any other kind, should be put under the civil-service law. The first order of President Roosevelt exempted from operation the postmasters south of the Potomac River. That looked like a sort of a political move, to which I have called attention heretofore, that the only people, mostly the people in that section, were Republican officeholders. That was done to permit the Republican national committee, whose chairman was at the same time Postmaster General, the opportunity to manipulate these offices and employees in the interest of the Republican candidate for President at the national convention.

Mr. STEENERSON. Will the gentleman yield?

Mr. BARTLETT. I will.

Mr. STEENERSON. When a postmaster has filled the office for 15 or 16 years satisfactory to the patrons, what is the object of a civil-service examination? Is it to make a vacancy, or is it to find out if he is really fit for it?

Mr. BARTLETT. I do not know whether it is to create a vacancy or not; but what was the object of covering him into the place when he was appointed on the recommendation of the members of the party in power, regardless of whether the people of that section desired him for postmaster or not? Take my own section of the country. There has not been a postmaster from the Potomac River to the Rio Grande appointed within the last 16 years upon the recommendation of the patrons of the office or of the Congressman. [Applause on the Democratic side.] A Congressman when he would go with a petition of every patron in the office to the Postmaster General, saying that

the people of that place desired the appointment of this man or this woman, without regard to politics, the Postmaster General would say, "You know the rule; these are political appointments, and we must consult Mr. Johnson," or some Republican referee, sometimes a white man and very often "a nigger." [Applause on the Democratic side.]

Mr. STEENERSON. Then the gentleman admits that the purpose of this order is to create vacancies and not to improve the service?

Mr. BARTLETT. No; the purpose of this order is to right the wrong and injustice that President Taft did when he placed all the fourth-class Republican offices under the civil-service law and did not permit an opportunity for investigation.

Mr. MONDELL. Will the gentleman yield?

Mr. BARTLETT. I will.

Mr. MONDELL. Under the modified form of the order my friend now will go to the Post Office Department and name one man of the three highest on the list. Is not that satisfactory to him?

Mr. BARTLETT. I do not know whether I will or not.

Mr. MONDELL. The gentleman realizes that he will have an opportunity to do that?

Mr. BARTLETT. I do not know whether I will or not.

Mr. MONDELL. Then the gentleman is not well informed.

Mr. BARTLETT. I apprehend that the Democratic Postmaster General will carry out the law better than the Republican Postmaster General, who run it for the purpose of serving the Republican Party. [Applause on the Democratic side.] As far as I am concerned, I would put the law where there would be no pretense or sham about it, and where the people's representative who knows who the people desire to be appointed should recommend the man for appointment, without being hobbled and strangled by a specious pretense of the civil service.

Mr. MOORE. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Georgia yield to the gentleman from Pennsylvania?

Mr. BARTLETT. Yes.

Mr. MOORE. When we get down to brass tacks, is not the real purpose of the amendment to enable the Democratic Party to return to the vicious spoils system?

Mr. BARTLETT. Not to return to any vicious Republican spoils system.

Mr. MOORE. Would not the Democrats take advantage of it if they could?

Mr. BARTLETT. I apprehend that the Democrats, or most of them, think that when we turned the Republicans out we intended to turn them all out, from the President down.

Mr. MOORE. And put Democrats in?

Mr. BARTLETT. We believe, at least speaking for my people and the section from which I come, that this order will at least give us an opportunity to demonstrate that the men in office, put there without regard to competency, are not as competent and as satisfactory as will be men put there by the recommendation of the people's representatives, who know what the people want. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. BARTLETT. Mr. Chairman, I ask for two minutes more.

The CHAIRMAN. The gentleman from Georgia asks that his time be extended two minutes. Is there objection?

There was no objection.

Mr. BARTLETT. Now I will yield to the gentleman from Pennsylvania for a question.

Mr. MOORE. Will not the spoils system be sweeter under Democratic rule than under Republican rule?

Mr. BARTLETT. I do not know what the gentleman calls the spoils system under Democratic rule. I know that there is no office, in my judgment, under Democratic administration that could not be better filled by a Democrat than by a Republican. [Applause on the Democratic side.] If you can call that the spoils system, you are welcome to so denominate it.

Mr. MOORE. But it will be sweeter under Democratic rule.

Mr. MADDEN. Mr. Chairman, I move to strike out the last two words.

Mr. FITZGERALD. Mr. Chairman, I move that all debate on the pending paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from New York moves that all debate on the pending paragraph and all amendments thereto close in five minutes.

Mr. MANN. Mr. Chairman, I hope the gentleman will modify that motion. The gentleman from Illinois, my colleague [Mr. MADDEN], wants five minutes and I want five minutes.

Mr. AUSTIN. Mr. Chairman, I wish to offer a genuine amendment.

The CHAIRMAN. The gentleman from New York moves that all debate on this paragraph and all amendments thereto close in five minutes.

Mr. MANN. Mr. Chairman, I hope the gentleman will not insist upon that motion.

Mr. FITZGERALD. Who desires time?

Mr. MANN. My colleague desires time, and I want some time, and the gentleman from Tennessee [Mr. AUSTIN] desires to offer an amendment.

Mr. FITZGERALD. I will make it 15 minutes. I might want 5 minutes myself.

Mr. MANN. Make it 20 minutes and take 5.

Mr. FITZGERALD. Oh, let us make it 15.

Mr. AUSTIN. I only want a minute.

Mr. MANN. Very well.

Mr. FITZGERALD. Then I modify it to 15 minutes, Mr. Chairman.

The CHAIRMAN. The question is on the motion of the gentleman from New York that all debate on the pending paragraph and amendments thereto close in 15 minutes.

The motion was agreed to.

Mr. MADDEN. Mr. Chairman, I move to amend, in line 2, page 2, by striking out the figures "\$30,000."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 2, line 2, strike out "\$30,000."

Mr. MADDEN. Mr. Chairman, I am moving to strike out only one item at this time. Later on we can strike out more. It seems to me that the order of the President did not go quite far enough. If I were President of the United States and were going to issue an order which had for its purpose the changing of the politics of the men who occupied places under the Government, I would have written an order so plain that everybody would understand what it meant. Of course, this order calling for examinations to ascertain the qualifications of men who occupy places as fourth-class postmasters is a mere subterfuge. There can be no doubt about that. Why spend money to do something which is bound to be done anyway? I am in favor of turning these offices over to the Democrats. [Applause on the Democratic side.] I believe that Republicans are better Republicans when they go up and down with their party, and I believe that Democrats are better Democrats when they go in and out with their party. [Applause on the Democratic side.]

I believe that the administration, whatever its politics, ought to be surrounded with men of like political faith; and if I were issuing this order I would issue an order so broad that it would say upon its face that what we wanted to do was to put Democrats in where Republicans now are. I would not put the Government to the additional expense of spending \$30,000 to do a thing which I had already made up my mind to do without the expenditure of any money.

Mr. MONDELL. Mr. Chairman, will the gentleman yield for a question?

Mr. MADDEN. I have not the time to yield now.

Mr. MONDELL. Just a short question.

Mr. MADDEN. Just a minute. You are imposing a burden upon the taxpayers in your attempt to change the politics of the men who occupy these places. Why not change them and not impose these burdens? It is an outrage on the people of the Nation to call for an appropriation to turn men out of office and put other men in, when you have already made up your mind that you are going to turn them out anyway.

Mr. MONDELL. Does the gentleman not think that if Democrats are to be appointed to these places it is important that we should know that Democrats are appointed who will be able to read and write—hence the necessity for the examination?

Mr. MADDEN. Of course it does not always follow that a man who is a Democrat needs to know how to read and write to hold an office. I know a good many cases where within the last three months they were appointed to local offices to hold clerical positions in violation of all the civil-service laws of our State, and many of them that were appointed could not even handle a pen.

They had to remove those men because they were not capable of performing those duties. But I am in favor of doing everything the Democrats want to do except that I am against the appropriation of any money as a subterfuge to try to blind the people with the idea that an examination is being held to ascertain the qualifications of men when, as a matter of fact, no attempt will be made to ascertain those qualifications. They will just take the man by the coat collar who has the proper brand upon him and has the political influence in the neighborhood from which he is to be appointed and put him first on that

list, and whether he is first or last upon the list they will appoint him to the place.

Mr. HEFLIN. Will the gentleman yield for a question?

Mr. MADDEN. Surely.

Mr. HEFLIN. An examination has been conducted at a fourth-class office in my district. The man who received the highest grade was the man appointed to that position—

Mr. MADDEN. And he is a Democrat.

Mr. HEFLIN. He is a Democrat and—

Mr. MADDEN. Of course he is.

Mr. HEFLIN. No Republican who contested for the place was competent to stand the examination. [Applause and laughter.]

Mr. BARKLEY. Will the gentleman permit a question?

Mr. MADDEN. I will.

Mr. BARKLEY. The gentleman made the statement that some person in the community would be taken by the collar and put at the head of the list. Does the gentleman realize that the local examining boards throughout the United States who hold these civil-service examinations are 90 per cent Republicans?

Mr. MADDEN. Oh, I do not know anything about that. Of course, I would not undertake to say what their politics will be, but I know the purpose of this order, and the order will result in a restoration of Democrats to all the places which are now occupied by Republicans, and I am glad the Democrats have got nerve enough to do the thing they want to do, and the only objection I have to the whole proposition is that they did not have influence enough with the President to have him write a plain order that everybody could understand.

Mr. HARDY. Will the gentleman yield for one question—

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. HARDY. Does the gentleman think the civil service under the Democratic rule is as big a farce as it was under the Republican rule?

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MADDEN. I do not know anything about the civil service.

Mr. MANN. Mr. Chairman, I ask to be recognized for three minutes so that the gentleman from Tennessee [Mr. AUSTIN] may have the other two minutes. Mr. Chairman, I congratulate the distinguished gentleman from Alabama [Mr. HEFLIN] that after searching through all the examinations which have been held that is the only conspicuous instance he has been able to find where a Democrat stood at the top of the list. I supposed that you might possibly find a case where they would stand at the bottom of the three, and thereby secure the appointment; and it was upon that theory that the present order was issued. The order was, of course, an abandonment of real civil-service reform. [Laughter on the Democratic side.] Mr. Chairman, when the distinguished gentleman from Georgia [Mr. BARTLETT] was talking to the House and inveighing against the merit system and in favor of the spoils system and declaring that every office under the Democratic administration ought to be filled by Democrats, nearly every gentleman on the Democratic side of the House waved his hands in wild applause. [Applause on the Democratic side.] Mr. Chairman, the Democratic side of the House is in favor of the spoils system, but lacks the nerve to put it into the law. Nearly every man there has applauded the spoils system to put Democrats in office. You have a two-thirds vote in the House. You have the Committee on Rules that can make it in order at any time. If you believe in it, why do not you have the sand to bring in a rule and pass it? You are too cowardly to do that. You content yourself with applauding and then writing home to your constituents and saying that when Mr. BARTLETT, of Georgia, declared that every office under the Democratic administration ought to be filled by a Democrat you applauded him and used your influence in favor of it; but you are afraid to put it into the law. We dare you to put it into the law.

Mr. BARTLETT. May I interrupt the gentleman just a moment?

Mr. MANN. I have only three minutes.

Mr. BARTLETT. The gentleman will recall on a roll call that we voted to repeal this order last year and it then went over to the Senate and was stricken out.

Mr. MANN. You did not propose to repeal the law at all last year. You had an amendment in, yes, that did not amount to anything; and it is true we let you pass it in the House, and a large share of your Members were afraid to vote for it, and you only receded when a Republican Senate struck it out. You did not need to recede.

You had the power in the House. It is nonsense to say that you have not the power to do this. You have the power, and you have the desire. The only thing you lack is the nerve. [Applause on the Republican side.]

Mr. BARTLETT. We did not have a Democratic Senate last Congress.

Mr. AUSTIN. Mr. Chairman, I wish to offer an amendment, but I will wait until the amendment of the gentleman from Illinois [Mr. MADDEN] has been disposed of.

The CHAIRMAN. There are two minutes left to the gentleman from Tennessee [Mr. AUSTIN] and five minutes to the gentleman from New York [Mr. FITZGERALD].

Mr. AUSTIN. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Tennessee offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 2, at the end of line 6, amend by adding the following proviso:

"Provided, That no examination shall be ordered at any fourth-class post office filled by an honorably discharged Federal or Confederate soldier or sailor or the widow of any honorably discharged Federal or Confederate soldier or sailor."

Mr. FITZGERALD. Mr. Chairman, I make the point of order, first, that there was an amendment pending, and, second, that this is new legislation.

Mr. MANN. Let us vote on the pending amendment, then.

Mr. AUSTIN. I will reserve my time, then, until the amendment submitted by the gentleman from Illinois [Mr. MADDEN] is disposed of.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois [Mr. MADDEN], to strike out "\$30,000," in line 2, page 2.

The question was taken, and the amendment was rejected.

Mr. FITZGERALD. Mr. Chairman, I make the point of order that it is new legislation.

Mr. MANN. Will not the gentleman reserve the point of order until the gentleman from Tennessee [Mr. AUSTIN] has used his time?

Mr. AUSTIN. I am entitled to my two minutes, anyway.

Mr. FITZGERALD. Oh, yes.

Mr. AUSTIN. Mr. Chairman, I had entertained the hope that the gentleman who has charge of this bill, the chairman of the Committee on Appropriations, would permit the House to vote on this meritorious proposition. There is new legislation written all over this deficiency bill, and when the committee comes in here reporting a bill carrying new legislation it ought not to hesitate, to say the least, in the matter of giving the membership of this House an opportunity to write new legislation in the bill, especially where a majority of the House may desire to do so. This amendment should not be objected to. There should not be a vote on either side of the Chamber in opposition to it. There are a number of fourth-class post offices filled in a satisfactory and efficient manner by honorably discharged Federal and Confederate soldiers and the widows of soldiers.

Mr. BURNETT. Does the gentleman know of any Confederate soldier that ever got an office under a Republican administration?

Mr. AUSTIN. There are a number in the district represented by my colleague from Virginia [Mr. SLEMP].

Mr. BURNETT. Will you name them? It is not so.

Mr. SLEMP. I will say that the postmaster at Tip Top, Va., was an old Confederate soldier and under the rules of the Civil Service Board will not be entitled to the examination.

Mr. BURNETT. And he went over to the Republicans?

Mr. SLEMP. No, sir; he has been a Republican for over 30 years.

Mr. BURNETT. And he deserted from the Confederate Army?

Mr. SLEMP. He did not. His name is J. H. Gillespie, and there is no finer character living in Virginia, and no soldier in the Confederate Army had a better record, and yet he will not be permitted to hold this office under the new rule.

Mr. AUSTIN. I will say to the gentleman from Alabama [Mr. BURNETT] that Mrs. Longstreet is the widow of a distinguished Confederate soldier, and I appeal to the chairman of this committee, in the interests of the old soldiers of this country, both those on the Union and Confederate side, to withdraw his point of order.

The CHAIRMAN. The point of order is sustained. The amendment is clearly new legislation.

Does the gentleman from New York [Mr. FITZGERALD] desire to be recognized?

Mr. FITZGERALD. The gentlemen on that side who are criticizing the order of President Wilson should at least read it before they indulge in criticism. It is:

The Executive orders of November 30, 1908, and October 15, 1912, bringing the positions of the postmasters of the fourth class into the competitive classified service, are hereby amended by adding thereto the following:

"No person occupying the position of postmaster of the fourth class shall be given a competitive classified status under the provisions of said orders unless he has been appointed as a result of open competitive examination, or under the regulations of November 25, 1912, or of January 20, 1909, or until he is so appointed."

In other words, this horde of Republican officeholders who have been selected in the southern section of the country, which has uniformly voted the Democratic ticket, upon the recommendation and approval of the so-called and well-known political Republican referees, shall not be fastened upon the pay rolls of the country to the end of their days until they have demonstrated their capacity to discharge the duties of the offices they fill. [Applause on the Democratic side.]

Should any Republican object to such a provision as that? And the criticisms indulged in by the two gentlemen from Illinois demonstrate that they are unable to conceive of any public official in any administration being actuated by a motive higher than the sordid political one which actuated the Republicans during the past six or eight years. It was not necessary and it is not necessary to legislate these Republicans out of office. The President could have revoked President Taft's order covering them all into the civil service. But although Members on this side of the House and members of the Democratic Party throughout the country believe that in a Democratic administration Democrats should be appointed to office, so that the country will get the character of administration for which it voted, they have no desire to follow the practice of Republicans and put incompetent persons in office. They are ready to subject the men they recommend for office to the severest tests that can be applied under the civil-service law; and they do it, Mr. Chairman, with a confidence that is not possessed by our Republican friends. The Democrats know that the men they recommend for office are so highly qualified that they can pass the civil-service examinations. [Applause on the Democratic side.]

The Republicans know that the men who are now in office never will qualify if subjected to the test. [Applause on the Democratic side.]

The matter is so simple that it needs no argument. The gentleman from Tennessee [Mr. AUSTIN] has found one Confederate soldier holding office under a Republican administration. But so far as I am concerned, Mr. Chairman, believing in the merit system, the mere fact that a man has served either in the Confederate or the Federal Army would not induce me to put him upon the pay roll of the Government in some lucrative office if he were not competent to fill the office. I do not believe that the honorably discharged soldiers of either army—the men who sacrificed so much in the contest, either those who marched in the Army of the Gray, or the men who fought according to their convictions in the Army of the Blue—desire to be treated in such a manner and put unfairly and improperly upon the pay rolls as a burden to the country unless they are competent to discharge the duties of the offices to which they are appointed.

By the terms of the Revised Statutes, honorably discharged soldiers of the Army and sailors of the Navy in certain conditions are given a preference under the civil-service law, and the only thing they have asked is that that law be honestly administered. During the 14 years of my service I have had brought to my attention continually complaints that in the administration of the law, in the discharge of men from various governmental services the Republican administration, although it boasted so much of its interest in the old soldiers and sailors, frequently turned them out because it was of some petty political advantage to put more active and younger men in their places. [Applause on the Democratic side.]

The old soldiers and sailors never asked to be held regardless of qualifications. They did ask and did expect an honest administration of the law. They will get that in this administration, and be a man a Democrat or a Republican, the law will be impartially enforced with respect to him. If there be any Republicans in office who are competent to fill the places and who have the qualifications to enable them to pass the examinations—and I doubt, from my experience, whether there are many—they need not worry. They will continue on the pay roll. [Applause on the Democratic side.]

Mr. AUSTIN. Mr. Chairman, I offer the following amendment which I send to the Clerk's desk.

The CHAIRMAN. The gentleman from Tennessee [Mr. AUSTIN] offers an amendment. Where does this amendment come in? The Chair will ask the gentleman from Tennessee.

Mr. AUSTIN. On page 2, at the end of line 6.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 2, at the end of line 6, insert the following: "No portion of the sum herein appropriated shall be used for the purpose of holding an examination for the purpose of filling an office now held by an ex-Federal or an ex-Confederate soldier, or the widow of such a soldier."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee [Mr. AUSTIN].

Mr. FITZGERALD. Mr. Chairman, I make the point of order that this amendment is new legislation.

Mr. AUSTIN. It is only a limitation on the appropriation, and I think under the invariable rulings of the Chair has been held in order under the Holman rule.

The CHAIRMAN. The Chair thinks it is a limitation on the appropriation. The question is on the amendment.

The question being taken, on a division (demanded by Mr. MANN) there were—ayes 45, noes 75.

Mr. MANN. I ask for tellers.

Tellers were ordered, and the Chairman appointed Mr. AUSTIN and Mr. FITZGERALD.

The committee again divided, and the tellers reported—ayes 48, noes 82.

Accordingly the amendment was rejected.

The Clerk read as follows:

Relief and transportation of destitute American citizens in Mexico: For relief of destitute American citizens in Mexico, including transportation to their homes in the United States, to be expended under the direction and within the discretion of the Secretary of State, to be available during the fiscal year 1914, \$100,000. Authority is granted to reimburse from this appropriation the appropriation for "Emergencies arising in the Diplomatic and Consular Service" for such sums as shall have been expended for relief purposes in Mexico from said appropriation for "Emergencies."

Mr. MOORE. Mr. Chairman, I move to strike out the last word. I should like to ask the chairman of the Committee on Appropriations if any provision has been made or asked for with a view to protecting the property of American citizens who are obliged to leave Mexico.

Mr. FITZGERALD. The only request was for an appropriation so that destitute Americans who desire to leave Mexico may be brought to the United States.

Mr. MOORE. Has the committee any information that it can give to the House with regard to the important question of the preservation of the property of Americans who are compelled to abandon it?

Mr. FITZGERALD. The committee has no information. All the information the committee has is printed. There is nothing on that question.

Mr. MOORE. We have passed the opium item. I will ask the gentleman whether \$1,000 was all that the department asked for that purpose.

Mr. FITZGERALD. That was all.

Mr. MOORE. Bills have already passed the House relating to this question, which were prepared, I think, very largely, by one of the department agents who was abroad. I desire to know whether you need any more money.

Mr. FITZGERALD. They stated that \$1,000 would pay the expenses incurred.

Mr. MOORE. Much money has been spent, however.

Mr. FITZGERALD. Yes; \$45,000; and in addition to that considerable sums from the emergency funds available under the diplomatic appropriation.

Mr. MOORE. But the department is satisfied that \$1,000 is all that is now needed.

Mr. FITZGERALD. That is all the department finally asked.

Mr. MURRAY of Oklahoma. Mr. Chairman, this appropriation seems to be intended to assist American citizens to leave Mexico. I want to preface my remarks by saying that I have no property in Mexico and no relatives there; neither has any member of my family any property in Mexico.

This is the first time in the history of diplomacy that I have ever known a request for the citizens of one country to leave another country in the face of the declaration that there would be no war. Let us analyze this proposition of paying the way of American citizens out of Mexico and a listing of their property. Who is to guarantee the repayment of that property in the event that it is destroyed by the bandits in Mexico? Evidently this Government can not do it under its present policy. It will fall upon the future administration of Mexico. Let us assume that it will amount to no more than \$1,000 apiece for each of the 40,000 Americans in Mexico, on an average. That would make it amount to more than \$40,000,000, and it is fair

to say that it will amount in the aggregate to a billion dollar claim upon Mexico, which will stagger that country, without counting the expense of its civil butchery.

And where will those American citizens ever get the return of their property? Yesterday we witnessed here a controversy over the payment of \$6,000 to the heirs of an Italian subject who had been murdered in this country. What will it be with Mexico after the trouble is over, if it ever ends, and we demand the payment of that \$1,000,000,000? It will end there unless we enforce it by arms, and it will cost more to enforce it than than to protect this property now.

Mr. Chairman, I am as much opposed to war as any man, but there are worse things than war. Rapine and murder are worse than war. In the early history of this Government we have other illustrations that showed the absurdity of moral suasion. We believe in moral suasion, but will it reach a mob? If it will, why do we not appeal to the anarchists of this country and remove the guards from the gates at the White House? If moral suasion is a sufficient protection against crime, why not repeal all the laws which provide hanging for murder? Let us be practical men. We know from experience that no argument will convince a mob except that argument be spoken through the voice of the cannon and musket.

Peace and moral force; that is a great philosophy. It is the thing we hope for, the thing we are driving to, but which we shall never reach until the entire world is Christianized and they understand the philosophy of Christianity. The altruism or philosophy of Christianity is "Love thy neighbor as thyself." I call your attention to the philosophy drawn from history, that the first thing people think about when they first embrace Christianity is to fight. The spread of Christianity over Europe and the organization of the crusades to redeem the holy sepulcher is an illustration of that. The awakening of China and the breaking out of secession is another illustration. If I had time I could produce other illustrations tending to prove this nature of mankind.

The philosophy of Christianity—"Love thy neighbor as thyself"—in the last stage and Confucianism are the only doctrines in the world that believe in peace. Confucius said, "Build a wall around you; let no one go out and no one come in; live at home"; and under that doctrine for 4,000 years the Chinese lived in peace.

We choose to embark on the seas of world relations and a world commerce. Then we see that thereafter we have established expensive consular service throughout the world, with ambassadors and foreign banks, as provided in the bill just passed Congress, and we established the gold dollar that would be good all over the world. What for? To encourage commerce. We have long since learned that commerce is the handmaid of agriculture, and without commerce agriculture could not live.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. MOORE. Mr. Chairman, I ask unanimous consent that the gentleman's time be extended five minutes.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent that the gentleman from Oklahoma be given five minutes more. Is there objection?

There was no objection.

Mr. MURRAY of Oklahoma. Then we started in with the policy of saying to Americans, "Get out of Mexico"; and yet the very purpose of encouraging American citizens to go into another nation is to carry on commerce and trade. We defend that trade. In 1842 we sent a navy to China to conduct the ships of merchandise through the straits. In 1843 we landed the marines on the coast of China, when there were then only 200 Americans in all China, to protect those Americans, or a part of them, from the mob. In 1872 we took Matamoras, Mexico. In 1863 we opened the ports of Japan by force of arms in obedience to a treaty made with Japan in 1852 or 1853 by Perry. And never have we had war when we stood upon the rights of treaties, nor will we have war when we stand upon the rights of treaty, although we have intervened more than forty times to protect the lives and property of our citizens in foreign lands.

The doctrine of protecting American citizens' life and property in all the world is not a new doctrine. It is a doctrine that has gone hand in hand with every administration of this Republic, and the men who have adhered most closely to it have enjoyed the greatest personal popularity. Among them were Monroe, Jackson, Lincoln, Grant, and Roosevelt, who steadfastly adhered to the doctrine of protecting American citizens everywhere.

Reference to the political conventions will show that at no time has a party gone into power that did not have a stronger

platform than its opponent. The strongest platform in line with those ideals is that laid down in the Baltimore platform.

It is interesting to observe the platform declarations made since the organization of the Government touching American foreign policies—the Monroe doctrine and the protection of American citizens abroad as well as at home. I repeat that prior to the Civil War no political party, except the Democratic Party, announced a foreign policy, save and except the platform upon which Henry Clay ran for President in 1832. This declaration was but a meager one, and in these words:

We consider the life, liberty, property, and citizenship of every inhabitant of every State is entitled to national protection.

And even this is susceptible to a double construction and could be construed as meaning such national protection at home without such protection abroad.

Prior to the Civil War the Democratic Party, both by administration and treaty, as well as by platform declaration, was bold and vigorous in its adherence to an international policy. In its platform of 1840, with Martin Van Buren as its candidate for President, it announced:

That every citizen and every section of country has a right to demand and insist upon an equality of rights and privileges, and to compel ample protection of person and property from domestic violence or foreign aggression.

This same section was specifically reaffirmed in 1844, with the adoption of an additional provision for American expansion. These planks were repeated in 1848, in 1852, and again in 1856. In addition to this declaration in 1856 the Democratic Party announced a more comprehensive international plank by affirming the Monroe doctrine, commerce, and protection of American citizens abroad. In the platform it declares:

Resolved, That the administration of Franklin Pierce has been true to the great interests of the country. * * * It has signally improved our treaty relations, extended the field of commercial enterprise, and vindicated the rights of American citizens abroad.

Again, in section 2, it says:

Resolved, That our geographical and political position with reference to the other States of this continent, no less than the interest of our commerce and the development of our growing power, requires that we should hold as sacred the principles involved in the Monroe doctrine. Their bearing and import admit of no misconstruction; they should be applied with unbending rigidity.

And again, section 5:

Resolved, That the Democratic Party will expect of the next administration that every proper effort be made to insure our ascendancy in the Gulf of Mexico, and to maintain a permanent protection to the great outlets through and emptied into its waters the products raised out of the soil and the commodities created by the industry of the people of our western valleys and the Union at large.

In 1860 we find in the platform upon which Breckinridge was nominated a broader policy governing American territory, together with the following declaration:

The Democratic Party of the United States recognizes it as the imperative duty of this Government to protect the naturalized citizen in all of his rights, whether at home or in foreign lands, to the same extent as its native-born citizens.

Then came the Republican convention of 1860, which nominated the immortal Abraham Lincoln, and which was the first party platform in opposition to the Democratic Party that announced, in unmistakable language, its policy to protect American citizens at home and abroad. It used this language:

The Republican Party is opposed to any change in our naturalization laws * * * and is in favor of giving a safe and efficient protection to the rights of all classes of citizens, whether native or natural born, at home and abroad.

In the same year the Constitutional Union Party, which nominated for President John Bell, of Tennessee, announced the same doctrine in these words:

We hereby oblige ourselves to maintain, protect, and defend, separately and unitedly, that great principle of public liberty and national safety, against all enemies, at home and abroad.

After this the Democratic Party, until after the nomination of Tilden and Cleveland, had but meager expressions touching the Monroe doctrine and the policy of protecting American citizens abroad, and the obligations of the Government having fallen upon the Republican Party, they with great energy asserted some doctrines adhered to for the first 60 years of the Republic under Democratic rule. In the midst of a great civil war, when it taxed its resources to maintain itself, in the face of the Mason and Slidell controversy with Great Britain and the fear that Great Britain would recognize the Southern States as an independent government, with the election of a President in 1864, nominated Abraham Lincoln again for the Presidency, and, following the example of the President in contesting the claims of the Holy Alliance of Europe, seeking by subterfuge to place Maximilian on the throne of Mexico, the Republican

Party fearlessly and boldly, in section 11 of their platform, announced this doctrine:

Resolved, That we approve the position taken by the Government that the people of the United States can never regard with indifference the attempt of any European power to overthrow by force or to supplant by fraud the institutions of any republican government on the Western Continent, and that they will view with extreme jealousy, as menacing to the peace and independence of their own country, the efforts of any such power to obtain new footholds for monarchical governments, sustained by foreign military force, in near proximity to the United States.

Students of history will recall that from the beginning of this Government there had been an issue between us and European Governments, particularly with Great Britain, upon the question of the right to impressment of American seamen; that this was the first cause of the War of 1812; and that although this war terminated satisfactorily to the United States, it left this question unsettled—the question of “expatriation,” the British doctrine that “Once a citizen, always a citizen”—and it was not settled until Grant was made President of the United States, and its settlement was largely due to the firing on a foreign war vessel by the United States Navy and the prevention of the taking away of an American citizen who had become naturalized from one of the European monarchies.

In the Republican platform of 1868, when Gen. U. S. Grant was nominated for the Presidency, we find this broad principle enunciated:

The doctrine of Great Britain and other European powers, that because a man is once a subject he is always so, must be resisted at every hazard by the United States as a relic of feudal times not authorized by the laws of nations and at war with our national honor and independence. Naturalized citizens are entitled to protection in all their rights of citizenship as though they were native born; and no citizen of the United States—native or naturalized—must be liable to arrest and imprisonment by any foreign power for acts done or words spoken in this country; and, if so arrested and imprisoned, it is the duty of the Government to interfere in his behalf.

We find in the platform of 1872, when Grant was nominated for the second time for the Presidency, a repetition of this doctrine:

The doctrine of Great Britain and other European powers concerning allegiance—“Once a subject always a subject”—having at last, through the efforts of the Republican Party, been abandoned, and the American idea of the individual's right to transfer allegiance having been accepted by European nations, it is the duty of our Government to guard with jealous care the rights of adopted citizens against the assumption of unauthorized claims by their former Governments.

The settlement of this doctrine of the right of “expatriation”—the right to change citizenship—finally won by the United States Government, was due to the vigorous, broad, and comprehensive foreign policy and administration of President Grant. This second Grant platform enunciated the principles of Jefferson in his first inaugural address. In section 4 it reads as follows:

The National Government should seek to maintain honorable peace with all nations, protecting its citizens everywhere and sympathizing with all people who strive for greater liberty.

After the administration of Grant the foreign policy enunciated by the Republican Party was weak until the nomination of William McKinley in 1896. In this platform it enunciated the principles of reciprocity, trade with foreign nations, merchant marine, foreign relations with the Western Hemisphere, and sympathy with the victims of the Armenian massacres, and a reassertion of the Monroe doctrine. After this the policy of the administration of the Republican Party departed from the old principles of Jefferson—“Peace and commerce with all nations and entangling alliances with none”; “Encouragement of republican governments and their protection from the monarchies of the Old World”—and substituted therefor the doctrine of imperialism.

It may be noted in all the platform-making history of this Republic that there was never an instance of an election of a candidate for President upon any ticket where his foreign policy, as expressed in his platform, was less comprehensive than his opponent upon the Monroe doctrine and the protection of American citizens in foreign lands.

Returning to the Democratic doctrine since the Civil War, we find that in the canvass of 1866, with Horatio Seymour for the Presidency, enunciations of the old principles of the Democratic Party, but with less vigor than his opponent, Gen. Grant. Here is section 8 of that platform:

Equal rights and protection for naturalized and native-born citizens at home and abroad; the assertion of American nationality which shall command the respect of foreign powers and furnish an example and encouragement to people struggling for national integrity, constitutional liberty, and individual rights, and the maintenance of the rights of naturalized citizens against the absolute doctrine of immutable allegiance, and the claims of foreign powers to punish them for alleged crime committed beyond their jurisdiction.

The next broad and comprehensive declaration of the old ante bellum Democratic doctrine was found in the platform of

1884, upon which Grover Cleveland was elected to the Presidency:

We favor an American continental policy based upon more intimate commercial and political relations with the 15 sister Republics of North, Central, and South America, but entangling alliances with none.

The Democratic Party insists that it is the duty of the Government to protect with equal fidelity and vigilance the rights of its citizens, native and naturalized, at home and abroad, and to the end that this protection may be assured, United States papers of naturalization, issued by courts of competent jurisdiction, must be respected by the executive and legislative departments of our own Government and by all foreign powers. It is an imperative duty of this Government to efficiently protect all the rights of person and property of every American citizen in foreign lands, and demand and enforce full reparation for any invasion thereof. An American citizen is only responsible to his own Government for any act done in his own country and under her flag, and can only be tried therefor on her own soil and according to her laws; and no power exists in this Government to expatriate an American citizen to be tried in any foreign land for any such act.

This country has never had a well defined and executed foreign policy, save under Democratic administration. That policy has ever been in regard to foreign nations, so long as they do not act detrimental to the interests of the country or hurtful to our citizens, to let them alone; that as a result of this policy we recall the acquisition of Louisiana, Florida, California, and of the adjacent Mexican territory, by purchase alone, and contrast these grand acquisitions of Democratic statesmanship with the purchase of Alaska, the sole fruit of a Republican administration of nearly a quarter of a century.

Under a long period of Democratic rule and policy our merchant marine was fast overtaking, and on the point of outstripping, that of Great Britain. Under 20 years of Republican rule and policy our commerce has been left to British bottoms, and the American flag has almost been swept off the high seas. Instead of the Republican Party's British policy, we demand for the people of the United States an American policy.

Another instance where the broader international policy was successful is found in the defeat of Cleveland by Harrison, wherein they expressed themselves on the protection of our fisheries and the Monroe doctrine. Upon the Monroe doctrine the platform says:

The conduct of foreign affairs by the present administration has been distinguished by its inefficiency and its cowardice. Having withdrawn from the Senate all pending treaties effected by Republican administrations for the removal of foreign burdens and restrictions upon our commerce and for its extension into better markets, it has neither effected nor proposed any others in their stead.

Professing adherence to the Monroe doctrine it has seen, with idle complacency, the extension of foreign influence in Central America and of foreign trade everywhere among our neighbors. It has refused to charter, sanction, or encourage any American organization for constructing the Nicaraguan canal, a work of vital importance to the maintenance of the Monroe doctrine and of our national influence in Central and South America and necessary for the development of trade with our Pacific territory, with South America, and with the islands and farther coasts of the Pacific Ocean.

In the race for the Presidency of 1892 the Democratic platform, upon which Cleveland was elected for the second time, announced a foreign policy, as follows:

The Democratic Party is the only party that has ever given the country a foreign policy, consistent and vigorous, compelling respect abroad and inspiring confidence at home. While avoiding entangling alliances, it has aimed to cultivate friendly relations with other nations, and especially with our neighbors on the American Continent, whose destiny is closely linked with our own, and we view with alarm the tendency to a policy of irritation and bluster which is liable at any time to confront us with the alternative of humiliation or war. We favor the maintenance of a navy strong enough for all purposes of national defense and to properly maintain the honor and dignity of the country abroad.

In addition to this comprehensive policy this platform gave expression to the question of “reciprocity,” “sympathy for the oppressed in foreign lands,” “immigration,” “waterways,” and “Nicaraguan canal.”

In the platform of 1896, upon which W. J. Bryan was first nominated for the Presidency, we find the following declaration:

The Monroe doctrine, as originally declared and as interpreted by succeeding Presidents, is a permanent part of the foreign policy of the United States and must at all times be maintained.

We extend our sympathy to the people of Cuba in their heroic struggle for liberty and independence.

Again, in the platform of 1900 the Democratic Party dealt with the question of “Cuba,” “the Philippines,” “the Monroe doctrine,” “militarism,” the “Nicaraguan canal,” and the “Hay” treaty, but made the mistake to adopt negative policies without affirming a constructive policy upon these several questions, and hence it may be observed that the American people, through their party platforms and administrations, have invariably stood for a constructive, progressive international policy rather than a negative one; that on the whole they prefer peace and commerce with all nations and entangling alliances with none; the maintenance of the Monroe doctrine and the protection of American citizens in foreign lands; sympathy for the oppressed and encouragement to Republican institutions; that on the whole they have opposed imperialism or force for the purpose of acquisition of territory, while standing equally strong for the American system of government and the rights of

American commerce in foreign seas and the rights of American citizens in foreign lands, not only by party platform declarations but by more than 40 instances of intervention by force during the past hundred years of administration.

In the campaign of 1912 the marked difference between the Democratic, the Republican, and the Progressive platforms is noted. The Democratic Party took a bold stand in favor of the "Monroe doctrine," the "efficiency of an army and navy," the "independence of the Philippines," the "protection of Americans in foreign lands," and particularly the Jews in Russia, and a demand for a new Russian treaty guaranteeing these rights, and the "Panama Canal," which constitutes the broadest constructive affirmative declaration in many years touching an international policy, crowning these policies with the following bold and aggressive stand touching the rights of American citizens wherever resident or sojourning:

We commend the patriotism of the Democratic Members of the Senate and the House of Representatives which compelled the termination of the Russian treaty of 1832, and we pledge ourselves anew to preserve the sacred rights of American citizenship at home and abroad. No treaty should receive the sanction of our Government which does not recognize that equality of all our citizens, irrespective of race or creed, and which does not expressly guarantee the fundamental right of expatriation.

The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government both for himself and his property.

From all these platform declarations it will be observed that all parties that had for their support any great body of the American people have proclaimed adherence to the Monroe doctrine and "the protection of American citizens at home or abroad."

For years before 1912 we had taken a negative policy, but this time we pursued a constructive policy, and on that it may be asked, What is a constructive policy? I insist, Mr. Chairman, that intervention does not mean a declaration of war against Mexico or any other nation. It does not include imperialism, a large standing army or navy. It does not mean the acquisition of territory or involve any other program of force or sordid commercial dollar diplomacy nor a violation of any sound progressive policy of peace. A sound, just, and comprehensive American policy consists in this: A well-equipped and thoroughly trained but relatively small army and navy; the extension of American commerce to all seas and ports of the world; peace, honest friendship, and commerce with all nations, entangling alliances with none; adherence to and maintenance of the Monroe doctrine as the sheet anchor of protection of republican institutions in the Western Hemisphere; the protection of American citizens, their property, homes, and families, whether found in America, upon our borders, or in foreign lands throughout the world; the preservation and integrity of the Nation and the glory of the flag; the encouragement of liberty everywhere and the extension of republican governments and democratic institutions throughout the two Americas—all this by peaceful diplomacy, if possible; by force, if necessary.

That, Mr. Chairman, I conceive to be the genuine American doctrine. I am as strong an advocate of peace as anybody, and it is no new doctrine. I call attention to failures in the past in an effort for peace by an impractical policy. Up to 1807 we had for 20 years paid the Barbary States more than a million dollars to keep them from arresting American citizens. In 1787 we made a treaty with Morocco, in which we paid them \$80,000 not to make slaves of Americans. In 1796 we made one with Algiers, and paid \$40,000 for the liberation of 13 Americans, and then we gave them tribute of \$25,000 a year for exemption from capture of our people. In 1800, when the tribute was sent upon an American war vessel, William Bainbridge, the great American citizen, was compelled to go to Constantinople at the instance of the Bey, flying a foreign flag. He then said: "I hope the next time that I pay tribute I can bear it with arms." Finally, after an effort to restore peace, paying them tribute every year, they, the Barbary States, themselves could not be satisfied and declared war, and what was the result? Decatur and Bainbridge went there and wrecked their ships. William Eaton, of the United States Army, went into the interior and organized an army and came across the border and dethroned the reigning Bey. When that treaty was concluded the first Christian Nation in the world said to the Barbary States: "We will pay you no more tribute." And yet that war cost us less, in all that war there were fewer Americans imprisoned and fewer murders committed than there were during the 20 years that we paid the Barbary States tribute in the name of peace, in a vain effort to preserve peace by our servility. Such will our experience prove to be by such cowardly policy with the groups of banditti in Mexico.

Less loss of life and property will occur if we will boldly stand upon our treaty rights with Mexico and make their mobs to understand that no American citizen must be harmed.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. AUSTIN. Mr. Chairman, I desire to get some information about this item of \$100,000 for the Secretary of State to pay the expenses of American citizens now in Mexico and to know whether that is the full amount asked by the State Department?

Mr. FITZGERALD. It is.

Mr. AUSTIN. A morning paper states that there are 7,500 Americans on their way from Mexico to the United States. An appropriation of \$100,000 would not mean an average expenditure of \$20 apiece.

Mr. FITZGERALD. Mr. Chairman, I have great respect for the accuracy of the press upon some occasions, but my experience has been that it would never do to appropriate money in accordance with the statements appearing in the press. We base our action in appropriating money upon the requests submitted by the departments in charge of the various services. Prior to the submission of this request, the Red Cross Society, cooperating with the State Department, had expended about \$20,000 in defraying the passage of destitute Americans in Mexico who desired to come to this country. The Red Cross Society was unable to continue the work because of limited funds available for that purpose. The State Department has used some funds that could be used for that purpose. The Secretary requested \$100,000 at this time, and the committee recommended it.

Mr. AUSTIN. When was the request of the Secretary made to the Committee on Appropriations? Was it not before this general exodus of Americans began?

Mr. FITZGERALD. I think it was in June.

Mr. AUSTIN. The transportation of 7,500 Americans at \$10 each would be \$75,000, and no transportation can be obtained from Mexico to the United States for any such sum.

Mr. FITZGERALD. I assume that the State Department is better informed about these matters than is the gentleman, or the sources from which he is obtaining his information, and if this sum be not sufficient, the Department of State undoubtedly in a proper manner will communicate that fact to Congress. So far as I am aware there will be no disposition to refuse ample funds to meet these necessities.

Mr. AUSTIN. What is there in the complaints made by American citizens that they are forced to leave Mexico in the steerage of the vessels plying between the Mexican ports and the ports of the United States?

Mr. FITZGERALD. I do not know whether there have been such complaints or not, but I do not believe that the Government is under any obligation to furnish accommodations de luxe to destitute Americans who desire to come home.

Mr. AUSTIN. Well, but the administration has told them to come home, and the administration has gone further and said, we will not invade Mexico—

Mr. FITZGERALD. I believe it has done a patriotic thing.

Mr. AUSTIN. We will not send any troops into Mexico to protect Americans, and therefore we put them on notice to leave Mexico, and if the Government of the United States takes that position we ought to make an appropriation sufficiently large here to bring every American out of Mexico and not on a freight train or in the steerage, but by the very best accommodations.

Mr. GARRETT of Texas. Will the gentleman from Tennessee yield? Does the gentleman think this Government ought to pay the way of men worth millions of dollars from Mexico who have gone there and stole property belonging to the Mexicans; does he think that we ought to pay their way? Those whose way we propose to pay are those who are not able to pay their way.

Mr. AUSTIN. I do not believe the American citizens in Mexico have obtained their money there or property there by larceny—

Mr. MURRAY of Oklahoma. Will the gentleman yield?

Mr. AUSTIN. I can not answer both gentlemen in my limited time.

Mr. MURRAY of Oklahoma. I desire to answer the question of the other gentleman. I will state to the gentleman who has just spoken that those who own millions in Mexico are now in the United States. The men we are taking out are the colonists who have gone there under concessions to make homes for their families. The rich are already here. [Applause.]

Mr. FITZGERALD. Let me say to the gentleman from Tennessee, which will perhaps explain some of the misinformation which sometimes gets out about these matters, at one time

my recollection is that there were a large number of our citizens in Mexico who wanted to come back at once. There was one steamer available for everybody if they were put on that steamer. There were many in excess of accommodations if it were entirely occupied, and I suppose some discomfort and inconvenience existed, and unsatisfactory arrangements had to be made to bring those people out in time, but I do not know there is any disposition at any place to do other than to provide accommodations which would be reasonably satisfactory to everybody desiring to leave Mexico if they are available.

Mr. AUSTIN. Can the gentleman tell us how much money has been already expended out of the funds of the State Department for this purpose?

Mr. FITZGERALD. There is no information as to that. The Red Cross expended \$20,000 and some other funds have been expended.

Mr. AUSTIN. Is it the purpose to reimburse the Red Cross money out of the appropriation?

Mr. FITZGERALD. Not at all. The first suggestion was that the appropriation be made to the Red Cross, but the committee declined to consider that suggestion and made the appropriation to be expended under Government officials, and they could utilize such means as they deemed advisable.

Mr. MANN. Mr. Chairman, the President, in his message to the Congress, stated that he would send word to the various Mexican officials in Mexico that the Americans in that country should leave the country, and a great many of them have accepted that statement, believing that the declaration meant war, and they started to come home. There are now a large number at some of the seaports without accommodations, without money, and without means themselves to obtain passage, with nobody able or willing to furnish them with the money. In July, before the President had read his message to the Congress, the Secretary of State had sent an estimate through the Secretary of the Treasury to the Congress asking for this \$100,000 to enable Americans to be brought out. At that time there was no expectation they would need as much as it is plain they will need, and yet, dallying along as the House of Representatives and the Committee on Appropriations has been doing, with no feeling of responsibility in the matter at all, a communication addressed to the House on the 31st of July asking for \$100,000 in order to give protection to these Americans by sending them home, the House now on the 4th of September proposes to include in a general appropriation bill an item which can not possibly become a law for several weeks, and our distinguished and beloved Speaker yesterday, with naïveté which was truly interesting, stated that when the bill introduced by the gentleman from Virginia [Mr. Flood] to make this appropriation was introduced the Speaker, contrary to the rule, referred it, not to the Committee on Foreign Affairs, that had jurisdiction, but to the Committee on Appropriations, which did not have jurisdiction of the bill, in order that it might be expedited.

We could have passed the Flood bill days ago. It could have passed the Senate before this time. Even this little appropriation could have been made available so that American citizens, advised by their own country to leave a friendly nation, should not be hanging around the streets of seaboard towns urging for a chance to be given even steerage accommodations in the hottest climate on earth. [Applause on the Republican side.] And that is the responsibility. It is very like much of the rest that is going on.

Mr. FITZGERALD. Mr. Chairman, the statements of the gentleman from Illinois would be very unfortunate if based on fact. The State Department has been using a fund of \$90,000 for this purpose. This appropriation will reimburse that to the extent it is used. No one has suffered. There has been no delay. Accommodations have been furnished to those needing or desiring them. The Government will pursue the even tenor of its way without getting into a flight of excitement unnecessarily every time the gentleman from Illinois [Mr. MANN] imagines that it should.

Mr. MANN. Mr. Chairman, that the gentleman from New York [Mr. FITZGERALD] accuses me of getting excited on the Mexican situation seems very peculiar. I believe I am one of those who have kept their heads on the Mexican situation, and that is more than can be said of the majority side of this House.

Mr. FITZGERALD. There is no indication of anybody losing his head.

Mr. MANN. We have kept cool on this side of the House on the Mexican situation. We have not rushed into print, as the other side of the House has and even as the President has. But this is not a matter of determining what our course should be in Mexico. American citizens are at the seaports without accommodations to come home, and the best they can expect by remaining there for days is steerage accommodations

in the hot holds of hot vessels in the hottest climate on earth. And the gentleman says that we are taking good care of them!

Mr. FITZGERALD. The gentleman's statement is still inaccurate. They are not waiting at those ports to be brought home.

Mr. MANN. I say they are.

Mr. FITZGERALD. The fact is not conclusive, although the gentleman frequently thinks his statements are.

Mr. MANN. Well, my statement may not be conclusive, but it is true. That is more than the gentleman's statement is, for it is not correct.

Mr. BRYAN. Mr. Chairman, whether the American people in Mexico are waiting for steerage passage to the States, or whether they are standing about in hot places, the fact remains they are in distress. When a number of people, with their all, are told to leave a place where they have gone to carve out for themselves a livelihood, and are told to abandon what they have there in order to save themselves from the assassin's dagger, in order to prevent seeing all that they have lost, and they are told that their only safety is in flight, I say that they are in distress. When they turn from their homes, when they leave their positions, when they take their little ones and try to find a place of exit from that country, they are entitled to sympathy and consideration; and it grieves me to hear the gentleman from the State of Texas [Mr. GARRETT], the Lone Star State, the State that celebrates San Jacinto Day, the State where the Battle of the Alamo was fought, the State where there is more pride and more courage and more enthusiasm over all the battles with Mexico than anywhere else in this country—I say, it grieves me to hear him, in a moment of this kind, refer to those people with any such words as "stole" or "robber" or "thief." The men who are down there in Mexico—

Mr. McKENZIE. Will the gentleman yield?

Mr. BRYAN. Just for a moment.

Mr. McKENZIE. I want to ask the gentleman if he gets his information from the Washington Post?

Mr. BRYAN. I do not get my information from the Washington Post. I get my information from the fundamental sentiments of humanity. Anybody who does not know, anybody who does not realize the situation those people are in, fails, it seems to me, to grasp a fundamental principle. I am as ready to denounce as anyone else the attempt of a few to gain large possessions, grants, and all that kind of thing; but of the people who have gone into Mexico by far the large majority of them, I believe, are honest, straightforward people, and I consider that while they are there we ought to give them the benefit of the doubt and at least believe them honest American citizens, and not refer to them in any such terms as they have been referred to.

And I favor some kind of an active policy and some kind of a movement that will mean a fair consideration of those people. I protest against their being referred to with sneers and with the statement that they deserve no sympathy. I agree with the gentleman from Illinois [Mr. MANN] and say that this House has been derelict and slow in appropriating this money, and that the amount ought to be doubled, and that those people ought to be out of there by now or have had an opportunity to get out.

Mr. OGLESBY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. BRYAN. Yes.

Mr. OGLESBY. I want to ask the gentleman if he is opposed to this item?

Mr. BRYAN. I am not opposed to appropriating the \$100,000, but I am taking advantage of this opportunity to express my protest against the methods by which we are affording relief to those people and to object to the language that was used in reference to them.

Mr. GARRETT of Texas rose.

The CHAIRMAN. The gentleman from Texas [Mr. GARRETT] is recognized.

Mr. GARRETT of Texas. Mr. Chairman, when I referred in my question a moment ago, addressed to the gentleman from Tennessee, to certain people in Mexico who had acquired property rights there by fraud I did not mean to say that there were not American citizens in Mexico that were just as honorable and just as honest as any man now residing in his home country. But if the gentleman believes for one moment that there are not now people in Mexico to-day who have acquired the property by unfair means that they claim to hold, and much of it, in my opinion, through the graft in connection with the administration that has passed away, which Madero overthrew, he is not familiar with the current history of that people.

Now, Mr. Chairman, so far as Texas is concerned, we do not want any trouble with Mexico. We had that 75 years ago, and we whipped her "to a frazzle"; and if there is any war talk

going to come on here all you have to do is take the bridle off the boys in Texas and they can attend to Mexico any time that is needed to be done.

But Texas is opposed to war. Texas is in favor of peace. Texans and the people who represent Texas on the floor of this House know something about the history of Mexico and her people, and if I had my way I would say, not only let the neutrality laws prevail, but I would go further and say, Give to those poor, struggling Mexicans who are trying to establish constitutional government the right to buy arms and ammunition on equal terms with the Federals, and let them have, if they can, the kind of government that they rightly deserve, and let them have for them and their children that great country that belonged to their fathers.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from Pennsylvania?

Mr. GARRETT of Texas. I can not yield now.

I want to say right here and now that I am opposed to war with Mexico and opposed to intervention. But I will say to this House that there are citizens and patriots in Mexico who are fighting, as they see it and understand it, for constitutional government, and I as a Texan will never agree that this Government shall ever recognize Huerta or anything that he stands for. [Applause.]

Mr. FITZGERALD. Mr. Chairman, I move that all debate on this paragraph and amendments thereto be now closed.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Texas [Mr. GARRETT] yield to the gentleman from Pennsylvania?

Mr. GARRETT of Texas. Yes.

Mr. FITZGERALD. I insist on my motion, Mr. Chairman.

Mr. MOORE. The gentleman's time has not expired. With reference to those who may properly or improperly be in Mexico, and have property there, the gentleman apparently concedes that there are some Americans who are lawfully in Mexico, does he not?

Mr. GARRETT of Texas. Certainly.

Mr. MOORE. And there are some who own property there which they do not hold fraudulently?

Mr. GARRETT of Texas. Oh, beyond question. I will say here and now if this appropriation is not large enough to pay the way of every American who can not get out of Mexico, I am in favor of making it larger.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. FITZGERALD. Mr. Chairman, I move that all debate on this paragraph and amendments thereto be closed.

Mr. FERRIS. I hope the gentleman will withhold his motion for a moment.

Mr. FITZGERALD. No; I think the gentleman had better not discuss Mexico.

Mr. FERRIS. I am not proposing to discuss Mexico.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] moves that all debate on this paragraph and amendments thereto be closed.

Mr. MOORE. Mr. Chairman, have I not the opportunity to speak?

The CHAIRMAN. Not if this motion carries. The question is on agreeing to the motion.

The motion was agreed to.

The CHAIRMAN. The Clerk will read.

Mr. AUSTIN. Mr. Chairman, I move to strike out "\$100,000" and insert "\$250,000" on page 2, at the end of line 18.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Tennessee [Mr. AUSTIN].

The Clerk read as follows:

Amend, page 2, line 18, by striking out "\$100,000" and inserting in lieu thereof "\$250,000."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee [Mr. AUSTIN], to strike out "\$100,000" and insert "\$250,000."

The amendment was rejected.

The Clerk read as follows:

Canton, Ohio, post office: The appropriation of \$20,000 contained in the sundry civil appropriation act for the fiscal year 1914 for alterations, improvements, and repairs of the Canton, Ohio, post office is made available also for enlargement and extension of said building within the limit of said sum.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order on the item for the Canton (Ohio) post office, \$20,000. The Clerk will read.

Mr. FITZGERALD. Mr. Chairman, in the last session of Congress authority was given—

Mr. MANN. Did the Chair sustain the point of order?

The CHAIRMAN. Does the gentleman make the point of order or reserve it?

Mr. MANN. I offered to reserve it, but the Chair said, "The Clerk will read," so I thought probably he had sustained it. I supposed the gentleman from New York would make some explanation of it. If he does not, I will make the point of order.

Mr. FITZGERALD. I was about to make an explanation. In the last session of Congress authority was given for alterations, improvements, and repairs of the public building in Canton, Ohio. It was proposed to rearrange the upper story so as to provide additional facilities. Upon more thorough investigation it was the opinion of the Post Office Department and the Supervising Architect's Office that it would be better, instead of putting some of the offices in the upper story, to build a small extension at the same cost. The Comptroller of the Treasury held that under the language in the authorization that could not be done, as it was an enlargement, not an alteration. This is to meet the recommendation, in order to permit the extension to be built, rather than an alteration of the upper story.

Mr. MANN. The original act authorized alterations, improvements, and repairs of this post office.

Mr. FITZGERALD. Yes.

Mr. MANN. The gentleman has not given any reason why we should increase the limit of cost \$20,000 and at the same time authorize an enlargement of the post office.

Mr. FITZGERALD. There is no increase of the limit of cost. This is to permit the \$20,000 that was appropriated for alterations, improvements, and repairs to be used to do certain work that the Comptroller of the Treasury has held to be an enlargement, and not to come within the definition of the three terms used.

Mr. MANN. I withdraw the point of order.

The CHAIRMAN. The point of order is withdrawn, and the Clerk will read.

The Clerk read as follows:

Lynchburg, Va., rent of buildings: For rent of temporary quarters at Lynchburg, Va., for the accommodation of Government officials, \$1,500.

Mr. HARRISON. Mr. Chairman, I have an amendment which I desire to offer, and I suppose this is as good a place as any.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Mississippi.

The Clerk read as follows:

Amend by inserting two paragraphs after line 20 and before line 21, on page 4, as follows:

"General expenses of public buildings: To enable the Secretary of the Treasury to execute and give effect to the provisions of section 6 of the act of May 30, 1908, as related to recent legislation; for foremen draftsmen, architectural draftsmen, and apprentice draftsmen, at rates of pay from \$480 to \$2,500 per annum; for structural engineers and draftsmen, at rates of pay from \$840 to \$2,200 per annum; for mechanical, sanitary, electrical, heating and ventilating, and illuminating engineers and draftsmen, at rates of pay from \$1,200 to \$2,400 per annum; for computers and estimators, at rates of pay from \$1,600 to \$2,500 per annum; the expenditures under all the foregoing classes not to exceed for the six months ending February 28, 1914, \$62,000; for supervising superintendents, superintendents, and junior superintendents of construction, at rates of pay from \$1,600 to \$2,900 per annum, not to exceed for the six months ending February 28, 1914, \$24,000; for expenses of superintendence, including expenses of all inspectors and other officers and employees on duty or detailed in connection with work on public buildings and the furnishing and equipment thereof under orders from the Treasury Department; office rent and expenses of superintendents, including temporary stenographic and other assistance in the preparation of reports and the care of public property, etc.; advertising; office supplies, including drafting materials, specially prepared paper, typewriting machines, adding machines, and other mechanical labor-saving devices, and exchange of same; furniture, carpets, electric-light fixtures, and office equipment, telephone service; books of reference, law books, technical periodicals and journals, subscriptions to which may be paid in advance; for contingencies of every kind and description, recording deeds and other evidences of title, photographic instruments, chemical plates, and photographic materials, and other articles and supplies and such minor and incidental expenses not enumerated connected solely with work on public buildings, the acquisition of sites, and the administrative work connected with the annual appropriation under the Supervising Architect's office as the Secretary of the Treasury may deem necessary and specially order or approve not to exceed for the six months ending February 28, 1914, \$36,216; Provided, That nothing herein contained shall include any appropriation for heat, light, janitor service, awnings, curtains, or any expenses for the general maintenance of the Treasury Building, surveys, plaster models, progress photographs, test-pit borings, or mill and shop inspections; in all, as in addition to the appropriation for 'general expenses of public buildings' contained in the sundry civil appropriation act for the fiscal year 1914, \$107,216."

SALARIES, OFFICE OF THE SUPERVISING ARCHITECT.

"For additional employees in the technical and administrative branches of the Office of the Supervising Architect for the six months ending February 28, 1914: Inspectors, 2 at \$2,400 per annum; 3 administrative clerks, at \$2,000 per annum; clerks, 5 of class 4, 10 of class 3, 9 of class 2, 9 of class 1, 14 at \$1,000 annum, 4 at \$900 per annum; skilled laborers, 4 at \$960 per annum; messengers, 4 at \$540 per annum."

annum, 2 at \$720 per annum; 1 messenger boy at \$560 per annum; total, \$43,000; in all, as in addition to the appropriation for 'salaries, Office of the Supervising Architect,' contained in the legislative appropriation act approved March 4, 1913."

Mr. FITZGERALD. Mr. Chairman, I make the point of order that this item is not authorized by law; second, that it is a change of existing law; and, third, that it is not germane to this portion of the bill.

Mr. HARRISON. Will the gentleman reserve his point of order?

Mr. FITZGERALD. I think we can dispose of the point of order, and in that way avoid a general discussion of the matter.

Mr. HARRISON. Mr. Chairman, I want to be heard on the point of order.

Mr. BARTLETT. Mr. Chairman, I want to make an additional point of order that this is a deficiency bill and that the amendment does not properly belong on a deficiency bill.

Mr. HARRISON. I think, Mr. Chairman, that this appropriation is authorized by law, and the status of the matter is this: There are 47 projects of public buildings that have been set aside from their chronological order by the Supervising Architect, some of them at the suggestion of Members of Congress and others because of circumstances that have arisen which necessarily have caused them to be held up. This appropriation is to give the Supervising Architect's Office an additional force, so that these 47 projects can be taken care of. They have not sufficient force to draw the plans and specifications for these 47 projects.

This proposition has been recommended by the Secretary of the Treasury. It was fully discussed before the Appropriation Committee of the House. The Supervising Architect appeared there and presented the question in full, and the whole matter is contained in the hearings before the Appropriation Committee.

In the event that this point of order is sustained or this appropriation is not written into this deficiency bill, this proposition will confront us: These 47 projects that ought to be now in course of construction, and for which two and a half million dollars have already been appropriated, will be delayed because of the want of an appropriation of approximately \$150,000.

Now, I think that these positions enumerated in the amendment can be created under this appropriation, because, as I understand it, executive departments of the Government are authorized under the law to employ such clerks or other employees as they need and for which appropriations are made. I read from the House Manual, page 355:

Executive departments being authorized by section 169, Revised Statutes, to employ such clerks, etc., as Congress may appropriate for from year to year held to be authority for making appropriation to pay salary of such clerks, etc.,

Now, some of these are clerks, some are copyists, laborers, messengers, and so forth, that are intended to perform a part of the work that the Supervising Architect and the Secretary of the Treasury say is necessary to draw the plans and specifications, and so forth, for these buildings.

The CHAIRMAN. Does the gentleman think the appropriation carried in this amendment would be a deficiency appropriation?

Mr. HARRISON. Yes; it is clearly a deficiency, because these buildings have been appropriated for and are being held up because, as the architect says, they have not sufficient force to make the plans and specifications, and it will take \$150,000 to do that work; that is, it will take that amount to run the office for six months.

Now, Mr. Chairman, I read from section 169 of the Revised Statutes:

SEC. 169. Each head of a department is authorized to employ in his department such number of clerks of the several classes recognized by law, and such messengers, assistant messengers, copyists, watchmen, laborers, and other employees, and at such rates of compensation, respectively, as may be appropriated for by Congress from year to year.

Now, this amendment certainly comes within the meaning of that statute. These employees are necessary, in the opinion of the Secretary of the Treasury, the head of the department, and under this section of the Revised Statutes he has the legal right to ask for that appropriation.

Now, in construing that section, I will read from the Manual a case in point, at page 356:

On December 6, 1912, third session Sixty-second Congress, Chairman GARNER ruled as follows:

"It seems to the Chair that the first question for the Chair to ascertain is whether or not section 169 of the Revised Statutes authorizes these clerks or whether the head of a department has the right to employ these five clerks. In 1906 Mr. Hull, of Iowa, was in the chair, and this identical question came up and was decided by him on a point of order made by Mr. Tawney upon clerks of a similar nature in the War Department. Mr. Hull held at that time, quoting section 169, that where the statute had authorized the heads of the department to em-

ploy clerks and other laborers that it was in order, and he overruled the point of order. He used this language:

"The first question is, What law authorizes this appropriation? The only law referred to is that contained in section 169 of the Revised Statutes, which is as follows."

Here he quotes the statute.

This is a similar case, Mr. Chairman, but then the gentleman from New York [Mr. FITZGERALD] happened to be on the other side of the question and cited the statute, section 169, as authority for that legislation.

Mr. Hull made this comment:

The next question, of course, is whether these clerks referred to in the items to which objection has been made are to be employed by the head of a department and in his department. The gentleman from Iowa, Mr. Hull, is quite correct in his statement of the ruling made by the occupant of the chair, Mr. Hopkins, as referred to on page 2404 of the Record, third session, Fifty-fifth Congress; but it appears that at that time the Chairman of the Committee of the Whole was not familiar with the ruling of the Attorney General, which has been submitted to.

And he went on and held that these clerks were to be employed as contemplated in section 169 of the Revised Statutes. The Chair is of the opinion that section 169 would apply to the clerks in this item, and, therefore, overrules the point of order.

Mr. Chairman, there was a case on all fours with this, and it says that under section 169 of the Revised Statutes, the head of the department had a right to employ these additional clerks, and so forth, and in this case all we ask for is that they employ these additional clerks, employees, and so forth, in order that the work that we have already appropriated for may be carried on and consummated. We submit that if we had to come in here and name specifically these 47 items and ask an appropriation of \$10,000 for, say, Laurel, Miss., because that is the one that I am particularly interested in, it would not do, for the reason that we do not know just how much of an appropriation would be needed to make the drawings, and so forth, for Laurel, Miss., or for some other place, or for any one of the 47 projects. So the amendment for the appropriation must be drawn in some language like that embodied in the amendment, and I submit that the point of order ought to be overruled.

Mr. FITZGERALD. Mr. Chairman, the gentleman from Mississippi relies on section 169 of the Revised Statutes for the authority for the employment of the persons enumerated in the amendment which he offers. Section 169 of the Revised Statutes provides that—

Each head of a department is authorized to employ in his department such number of clerks of the several classes recognized by the law, and such messengers, assistant messengers, copyists, watchmen, laborers, and other employees and at such rates of compensation respectively as may be appropriated by Congress from year to year.

This amendment does not cover clerks of the several classes, because the classes are fixed by section 167, and there are four—the fourth, the third, the second, and the first—and the compensation runs from \$1,800 to \$1,200. They are not messengers, assistant messengers, copyists, watchmen, laborers; and the only authority under which the gentleman can contend that these draftsmen and engineers and other employees specified in the amendment would be authorized is under the language "and other employees."

Mr. Chairman, that language has been construed definitely and followed for many years in the House in the consideration of appropriation bills.

Paragraph 3590, volume 4, of Hinds' Precedents, reads as follows:

The mere appropriation for a salary does not thereby create an office so as to justify appropriations in succeeding years. On February 7, 1902, the Committee of the Whole House on the state of the Union were considering the legislative appropriation bill, when the Clerk read the following paragraph:

"For Rural Free-Delivery Service: Superintendent, \$3,000; supervisor, \$2,750; chief of board of examiners of rural carriers, \$2,250; 3 clerks of class 4; 6 clerks of class 3; 25 clerks of class 2; 40 clerks of class 1; 50 clerks, at \$1,000 each; 115 clerks, at \$900 each; 3 messengers; 10 assistant messengers; 5 laborers; 1 female laborer, \$540; 3 female laborers, at \$500 each; two charwomen; in all, \$275,040."

Mr. THETUS W. SIMS, of Tennessee, made the point of order that these offices were not authorized by law.

Mr. James A. Hemenway, of Indiana, quoted section 169 of the Revised Statutes:

"Each head of a department is authorized to employ in his department such number of clerks of the several classes recognized by law and such messengers, assistant messengers, copyists, watchmen, laborers, and other employees, and at such rate of compensation, respectively, as may be appropriated for by Congress from year to year."

It was argued that the words "and other employees" sanctioned the creation of such offices outside the classified service as were provided for in the paragraph of the bill before the committee. It was also urged that the offices had been appropriated for in the last appropriation act and therefore were established by law.

The Chairman said:

"The Chair will ask the gentleman if he were drawing this statute if he would lay as much stress on the words "and other employees" coming, as they do, after "watchmen" and "laborers" as the gentleman seems to? Was that intended to include three and four thousand dollar employees? If the gentleman had been drawing the statute, would he have not placed that first? * * * The Chair would hold

that an appropriation bill may contain anything in relation to employees enumerated in these several sections; that is, clerks of classes 1, 2, 3, and 4 may be employed, as well as messengers, assistant messengers, watchmen, and laborers, to such number as the Appropriations Committee may see fit to provide for."

The CHAIRMAN. The Chair will ask the gentleman from New York a question. The gentleman from Mississippi [Mr. HARRISON] contends, as I understand, that these offices appropriated for in this amendment have been created specifically by law?

Mr. FITZGERALD. Oh, they are not created, and they never have been created. They do not exist. He bases his whole argument that the authority for these places is given in section 169 of the Revised Statutes, and under the repeated rulings when a gentleman offers a provision he must show the authority for the provision in order to have it in order upon the bill. It is incumbent upon him to point out the law which authorizes these places for which he proposes to make provision.

Mr. HARRISON. Will the gentleman yield for a question right there?

Mr. FITZGERALD. Certainly.

Mr. HARRISON. The gentleman is right in part and wrong in part. It is true we rely mainly upon this section 169 of the Revised Statutes, but as a matter of fact in 1910 the Supervising Architect's Office was given an appropriation of \$1,100,000, and in 1912, I believe it was, it only carried six hundred and fifty-odd thousand dollars, and in the decrease of that appropriation there were practically 80 of these different employees who were thrown out and the law which created them was never repealed. The fact was there was just a failure to appropriate for them.

Mr. FITZGERALD. The fact that an office is carried in an appropriation bill does not create an office, and if it is dropped out it can not be restored at any time unless specific authority be pointed out.

Mr. HARRISON. In that connection when these different offices were originally created—

Mr. FITZGERALD. Oh, they never have been created; I can not concede that.

Mr. HARRISON. Well, they had the clerks, laborers, and all these employees. Now, did not they get their appropriation under this section 169 of the Revised Statutes?

Mr. FITZGERALD. No, they did not. Certainly they did not; they could not, because the law specifically provides what can be employed under section 169, employees or clerks of the different classes, messengers, assistant messengers, and other employees. But to continue the statement of the Chair:

The Chair has no difficulty whatever in disposing of the strongest contention of the gentleman from Indiana that these offices are authorized by law. They are authorized by law for that year, that is for the life of the appropriation bill, and as has been decided time and again by the courts, nothing contained in an appropriation bill can live beyond the life of the bill.

Now, Mr. Chairman, these places are not offices carried in the appropriation bill for the current fiscal year or for the last current year. No authority exists in law for them. I have rulings, if the Chair desires them, pointing out that the words "other employees" refer only to employees of a grade not above that of laborer, the lowest employee enumerated in section 169 and the ruling is based upon the well-known rule of construction that specific items followed by general language are not enlarged by the recital of the general language. Now, Mr. Chairman, it seems to me that is sufficient to dispose of the question of order because the gentleman must, before he can have his amendment considered, present the law which authorizes these employees. I have several other grounds to urge against the employment of these persons which are quite good, but I do not wish to unduly occupy the time of the committee if the Chair is satisfied on that point.

The CHAIRMAN. The Chair is prepared to rule. There is no law authorizing these offices unless it is contained in the words "and other employees," and the Chair does not believe that it was the intent of the framers of the law in using the words to go to the extent the gentleman from Mississippi [Mr. HARRISON] contends; indeed, if his contention is correct, a point of order could hardly be sustained against the creation of any office in an appropriation bill. The Chair sustains the point of order.

Mr. AUSTIN. Mr. Chairman, I move to strike out the last word. Mr. Chairman, there has already been appropriated by Congress two and a half million dollars to be used in the construction of these 47 propositions—

Mr. FITZGERALD. If the gentleman will permit me to make a statement, perhaps I can correct a misapprehension that exists in the minds of many Members.

Mr. AUSTIN. I just took it from the hearings and the testimony of the Supervising Architect.

Mr. FITZGERALD. If the gentleman will permit me to make this statement, then he can proceed. Mr. Chairman, a number of Members are interested in public-building items. For the current fiscal year there is appropriated for the Supervising Architect's Office \$760,920. There is no item for payment under the Tarsney Act for outside architects, and if there were carried items of appropriations under the Tarsney Act, which is repealed, commensurate with the appropriations for the last two or three years, the appropriations for the current fiscal year would aggregate \$915,920. This is \$34,920 in excess of the appropriation for 1910, which, including fees for architects under the Tarsney Act, amounted to \$881,000. Prior to 1910 the services of experts and others in connection with public buildings were paid out of the appropriations for the buildings, and Congress enacted a provision prohibiting the use of such appropriations and requiring appropriations to be specifically made for such services. The last year under which appropriations were made under the old form the amount expended for this service was \$481,000.

For the current year the amount available is \$760,920, an increase of almost 100 per cent, and yet the output of the office is practically the same to-day as it was in 1910. Requests were made to increase the force in the Supervising Architect's Office at this time by nearly 100 per cent for the current fiscal year. The appropriations made at the last session of Congress were \$71,000,000 in excess of the appropriations made at any session of Congress since the beginning of the Government, and a deficit of \$25,000,000, regardless of any changes or falling off due to the tariff, is anticipated by those who have impartially investigated the conditions. With the fact before the committee that the Supervising Architect's Office was engaged in an attempt to coerce Congress into increasing this force improperly, they did not believe under the circumstances they were justified in increasing the force.

There were 47 projects for which appropriations were made, given places in chronological order, and work delayed on them for one reason or another, and in the last public-building bill legislation was enacted which enabled these projects to be taken up. When Members interested in these projects went to the Supervising Architect he stated he could not take them up for two or three years unless Congress appropriated \$180,000 for which he had requested an appropriation, and that amount was only for six months of this year and would necessitate about \$150,000 additional for the balance of the fiscal year. When questioned about this matter, he said they had outlined a program for three years, and because he had stated to some Member of Congress that the buildings authorized some time ago would be ready for the market three years from now he could not take up a matter that was not in that line, no matter how important, no matter how urgent, nor how necessary it might be. Inquiry was made, and it was ascertained that the employees in the Supervising Architect's office are employed seven hours a day. In every other department of the Government at Washington they are employed seven and one-half hours a day. If the time of these employees was lengthened a half hour or an hour, these 47 items would quickly be cleared up.

Section 7, of the act of March 15, 1898, is as follows:

Hereafter it shall be the duty of the head of each executive department to require monthly reports to be made to him as to the condition of the public business in the several bureaus or offices of his department at Washington; and in each case where such reports disclose that the public business is in arrears, the head of the department in which such arrears exist shall require, as provided herein, an extension of the hours of service of such clerks or employees as may be necessary to bring up such arrears of the public business.

In this office of the Government, in which employees work less hours than in any other, if the work is in arrears, they should be required to bring it up. There is one other reason which convinces the committee that this whole propaganda was a scheme to mislead Congress and to coerce it into enlarging unnecessarily the force in the Supervising Architect's office.

The gentleman from Michigan [Mr. DORMUS] came before the committee and called attention to the fact that authority had been given to make certain alterations and repairs in the post office at Detroit, to cost \$70,000. He pointed out that the conditions there were such that it was imperative that they should be remedied, and he was informed by the Supervising Architect that unless Congress appropriated \$180,000 to increase its force it would be impossible to do that work inside of two years. That was the statement made to Members of Congress interested in different projects. If that be the rule, it should be applied impartially, not only to Members of Congress but to the heads of departments. But the Secretary of the Treasury called the

attention of the committee to the fact that for \$40,000 alterations could be made in the old building of the Bureau of Engraving and Printing which would enable him to place in that building all of the auditors of his department with the exception of the Auditor for the Post Office Department, accommodate them from the 1st of July, and save \$35,000 in rent. If an appropriation of \$40,000 were made at this time, so that the work could be begun on the 1st of January, it could be ended on the 30th of June and that building be made available for occupancy. The committee suggested that the Secretary of the Treasury submit an estimate for that purpose, and the Supervising Architect was present when the suggestion was made.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN (Mr. HAY). Is there objection? [After a pause.] The Chair hears none.

Mr. FITZGERALD. The estimate was submitted, of \$40,000, to do the work, and not a dollar was requested nor a word is contained in that estimate for the technical services required to turn out the plans to do the work. So that it demonstrates that this statement, that these emergency projects can not be taken up, is not one that is strictly adhered to in the Supervising Architect's Office. It depends upon whether a Member of Congress or the head of a department is interested in it whether it will be adhered to.

The Secretary of the Treasury, after the Supervising Architect and the Assistant Secretary of the Treasury in charge of the public building items had been heard, was requested to appear before the committee, and he was asked to state what the policy of this administration is to be regarding the construction of public buildings. Last year \$20,000,000 was expended upon construction work, and it is conceded that if this increase in force were granted by Congress it would mean an increase in the amount expended for construction work by \$5,000,000 annually.

The Secretary said that at the time these estimates had been submitted his attention had not been called to the fact that in the last public building bill, approved on the 4th of March last, a commission had been created, consisting of the Secretary of the Treasury, the Postmaster General, the Attorney General, and two members of each of the Committees on Public Buildings and Grounds of the two Houses, to take up the entire question of the construction of public buildings and report a definite plan to be pursued. He expressed the belief that as that commission had organized since the estimates had been submitted, and as they could take the matter up and make a report at the next session of Congress, in his opinion it would be better to wait until the next session of Congress before pressing the estimates.

Mr. GARNER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. FITZGERALD. I yield to the gentleman.

Mr. GARNER. What remedy does the gentleman suggest to the Members who are interested in these 47 buildings?

Mr. FITZGERALD. Mr. Chairman, I am not prepared to point out a remedy, but I am prepared to call the attention of the House to some very important facts in reference to public buildings. From 1903 to 1914, a period of 12 years, the appropriations for the construction of public buildings amounted to over \$154,000,000. That is an average of \$12,800,000 a year. During the preceding 12 years, from 1891 to 1902, the appropriations aggregated \$51,000,000, an average of \$4,300,000 a year. From the beginning of the Government up to June 6, 1902, all public buildings authorized, including sites, numbered 460, and their cost amounted to \$160,499,000. Since the 6th of June, 1902, including the bill that was approved on that day, there have been authorized in six acts, including sites, 1,003 buildings, and at a total limit of \$113,139,000.

Mr. BURNETT. Since when?

Mr. FITZGERALD. Since the 6th of June, 1902. That is nearly three times as many buildings and sites as were authorized from the beginning of the Government up to that date and 67 per cent of their cost. The five bills from June 6, 1902, to June 25, 1910, authorized 699 buildings, including sites, at an aggregate cost of \$80,000,000.

With this information before the committee having some responsibility to the House and to the country with respect to recommendations for appropriations, the committee was unable to recommend increasing by 50 per cent the force in the Office of the Supervising Architect.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a moment?

The CHAIRMAN. Does the gentleman yield?

Mr. FITZGERALD. In a moment. In justice to members of the subcommittee, after the hearings were completed I invited the Democratic members of the Committee on Appropriations to meet, and I laid before them fairly and accurately a complete statement of the matter affecting the public buildings, and suggested the advisability of the members of the committee, before the subcommittee attempted to make any recommendations, expressing their views as to what the policy of the committee should be. I did that so that nobody might charge that my personal views may have affected this matter one way or the other; and the subcommittee unanimously agreed upon the policy which the subcommittee carried out in reporting the bill to the full committee.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MADDEN. Mr. Chairman, I would like to ask the gentleman a question.

Mr. AUSTIN rose.

The CHAIRMAN. The gentleman from Tennessee [Mr. AUSTIN] is recognized.

Mr. AUSTIN. Mr. Chairman, the Supervising Architect's Office deserves the attention and consideration of this House. We are constantly increasing the number of public-building projects in the omnibus public-buildings bills and at the same time failing to give the Treasury Department an increase in the force of its Supervising Architect's Office. Mr. MacVeagh, the predecessor of Mr. McAdoo, in order to reduce expenses under the Taft administration on the eve of the approaching elections, and to make a record for economy, had the Sixty-first Congress reduce this force 70 clerks, and hold down the annual appropriation on public buildings and grounds to \$12,000,000 a year.

The gentleman speaks about the amount of money appropriated for the administration of that office. I have the figures here, taken from the records of the Treasury Department, showing that there were paid in salaries in 1910, \$85,900; in 1911, \$84,400; in 1912, \$97,500; in 1913, \$83,850; and in 1914, \$235,920. There was only an increase of \$20,000 in 1914, and the balance of the increase results from a transfer of certain employees carried under the head of "General expenses."

The total number of buildings carried in the public-buildings act of 1908 was 234; in the public-buildings act of June, 1910, 251; in the public-buildings act of March, 1913, 327.

There are 209 public buildings authorized prior to the last public-buildings bill that are not under contract and the plans for which are not under preparation.

Under the present limited force of the Supervising Architect's Office 75 building plans per year are turned out, as against 125 public-building plans prior to the reduction of the force caused by failing to appropriate for the salaries of 70 clerks and assistants in that office. It will require the Supervising Architect's Office three years to complete the plans and specifications on every building authorized prior to the last public-buildings act, passed in March of this year. It will require until 1916, to complete these plans before any of the plans under the last public-buildings bill are taken up. Without an increase of the present force it will require until 1920 to complete all of the plans carried in the public-buildings bills heretofore authorized by Congress. So I want to say for the information of the new Members and the old Members that there will be no chance for the preparation of new public-building plans for seven years unless Congress increases the clerical force of the Supervising Architect's Office.

Mr. BORLAND. The gentleman has put before us very forcibly this program of the Supervising Architect's Office. But does not the gentleman know or believe that for all the smaller buildings, up to \$50,000, a uniform set of plans could be adopted by the Supervising Architect's Office, and that with slight changes of specifications they could be adapted to a great many cities of from 10,000 to 20,000 inhabitants, which would obviate the necessity for this elaborate three-year plan.

Mr. AUSTIN. I want to say to the gentleman that the present Supervising Architect is doing all in his power to standardize public buildings of a certain kind and character.

Mr. BORLAND. Will not that reduce the estimate of seven years that the gentleman has made?

Mr. AUSTIN. Not to any considerable extent, because already the department is standardizing the plans wherever they can be standardized.

Mr. BORLAND. I will say to the gentleman that a Member of Congress came before the committee—

The CHAIRMAN (Mr. HAY). The time of the gentleman from Tennessee has expired.

Mr. AUSTIN. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BORLAND. I will call attention to this fact: That a Member of Congress came before our committee and said he had been to see the Supervising Architect in regard to one of these buildings, and had been told that this elaborate program would take three years to carry out. He said, "Mr. Supervising Architect, give me the same plans that were drawn for the post office at Billville and put them through for the post office at Jimville," and they did it, and he had his post-office plans inside of 60 days.

Mr. AUSTIN. I know that the Supervising Architect's Office is doing everything possible to standardize public buildings.

Mr. JOHNSON of South Carolina. That is an awfully general expression. Will the gentleman tell us something he has done?

Mr. AUSTIN. The gentleman knows that in five minutes I can not explain the work of the Supervising Architect's Office.

Mr. JOHNSON of South Carolina. We will give you more time if you will give us some explanation.

Mr. AUSTIN. I want to say that the Supervising Architect's force will never be increased by the Committee on Appropriations, because that committee are opposed to increasing the amount of money annually expended for the construction of public buildings and grounds. While the gentleman says we expended \$20,000,000 last year, my recollection is that the hearings show that we expended \$14,000,000 last year, and if this program recommended by the Supervising Architect was adopted then the amount would be increased from \$14,000,000 to \$20,000,000.

Mr. FITZGERALD. The average expenditure which the estimates of the Supervising Architect's Office has been based upon is about fourteen millions a year. Last year there was expended twenty millions. That was due to the fact that the work was speeded up, and an increase of its force will increase the expenditure \$5,000,000. I have no desire to do anything except to state accurately the facts.

Mr. AUSTIN. The truth is, Congress in its public-buildings bills is authorizing more money for public buildings than the Treasury Department has estimated for that purpose. The Treasury Department is not increasing that amount—will not do it until the force in the Supervising Architect's Office is increased.

Mr. GARNER. Will the gentleman yield?

Mr. AUSTIN. Certainly.

Mr. GARNER. Is it not a fact also that the Treasury Department examines usually the amount of money that it wants to expend, and in consultation with the Appropriations Committee determines the amount regardless of what the wishes of Congress may be?

Mr. AUSTIN. We are absolutely in the power of the Secretary of the Treasury and the Committee on Appropriations in this matter, which concerns every Member of this House. We will not be free, we will not be able to satisfy the wishes of our constituents and do our full duty until we take hold of this matter and vote to increase the force in the Supervising Architect's Office.

I want to say, in answer to the criticism by the chairman of the Committee on Appropriations, that the present Supervising Architect is efficient, conscientious, and the best equipped man that ever held that position, and I have had an acquaintance with that office for many years.

Mr. FITZGERALD. I have not said anything to the contrary.

Mr. AUSTIN. In one of the first talks I had with the new Secretary of the Treasury we discussed this congested condition of the Supervising Architect's Office. Mr. McAdoo, a live, wide-awake, public man, a successful business man, stated that it was his earnest desire to clean up the congested condition in that office and bring the work up to date; and he asked the Committee on Appropriations for an appropriation and submitted an estimate of \$1,353,000, and then, after the hearing, in order to meet what he supposed were the wishes of that committee, he reduced that estimate to \$974,770, and the committee cut it to \$378,891, carrying in this bill for the Supervising Architect's Office \$603,891, when he had revised and cut his estimate down to \$974,770. We have in the person of the Secretary of the Treasury a man that can fill that position and will fill it with honor and credit to his party, to himself, and to the country, and I submit, with this subject in charge and control of this House, that when this new Secretary comes here with his first estimate to Congress in an earnest, honest endeavor to put that office, especially the bureau presided over by the Super-

vising Architect of the Treasury, in a first-class, businesslike condition, with up-to-date methods, you ought not to say no; you ought to uphold his hands and sustain and help him. [Applause.]

Mr. JOHNSON of South Carolina. Mr. Chairman, the gentleman from Tennessee [Mr. AUSTIN] is in error when he states that force in the Supervising Architect's Office has been reduced.

Mr. AUSTIN. In the Sixty-first Congress, I stated.

Mr. JOHNSON of South Carolina. We have constantly increased the force at the disposal of the Supervising Architect. The trouble with the gentleman's figures arises from the fact that he is not familiar with the appropriation bills. Some of the force in the Supervising Architect's Office has been provided for in the sundry civil bill, some in the legislative bill, and at one time some of it was paid for under the appropriation for public buildings.

But I want to say to the House that we have endeavored to bring all the force into the legislative bill, and when the gentleman read the figures for 1914, exceeding \$200,000, he thought it must be a mistake. It is not a mistake, but we have simply brought into the legislative bill the force that had been provided for in other bills. There has been absolutely no reduction in the force, but there has been a constant increase.

Mr. MacVeagh did reduce the force in the department by more than 500 persons during his four years, but most of that reduction was in the Auditor's office for the Post Office Department, and no part of the reduction was in the Supervising Architect's Office.

Mr. AUSTIN. My authority is the Supervising Architect himself.

Mr. JOHNSON of South Carolina. Well, I know more about it than he does.

Mr. AUSTIN. And his further statement was that the force was reduced 70 officials in that department by the Sixty-first Congress, and the last Congress gave him an increase of \$20,000.

Mr. JOHNSON of South Carolina. Mr. Chairman, I know more about it than the Supervising Architect, because I am on the committee that makes up the bills, and he is a new man up there.

I think it far more important that Congress should consider a question of policy than that it should consider a question of increasing this particular item in an appropriation bill. One reason why those of you who are interested in public buildings are required to wait from three to five years after Congress has authorized their construction is that the policy of the Supervising Architect's Office has been to make a separate plan for each building.

There may be to-day authorized not less than 75 buildings in the United States at a cost of \$60,000 each. Those buildings are located in every State in the Union. The Supervising Architect believes that he ought to make a separate plan for each one of those buildings. That costs about \$3,000 for each one. Do you believe that there is a business man in the United States who, if he were going to build 60 houses, whether warehouses or stores or apartment buildings, in 60 different cities of the United States, to cost exactly the same amount of money, would employ architects to make 60 different sets of plans? Travel throughout the country over a railway, and as you pass from station to station you see the railway company has standardized its depots. For towns of 5,000 people they have a certain style and a certain size. For towns of 10,000 people you find they have a certain size and a certain style, and so it is in all the railways and in all the great enterprises of the country. The cotton mills that build hundreds and thousands of houses adopt a certain plan, and in the building of those houses they follow those plans.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. JOHNSON of South Carolina. Mr. Chairman, I ask unanimous consent to proceed for one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. JOHNSON of South Carolina. I believe that we ought to go at this in a businesslike way. We ought to standardize these buildings. If the \$60,000 building which they designed for my town is artistic in South Carolina and good for the eye to look upon, then it would be artistic in Minnesota or Wisconsin or Maine. No two citizens of the United States in all probability would ever see these two buildings, one of which might be located in the State of Washington and the other in North Carolina. There is absolutely no reason why the Government should not go at it in a businesslike way, and if you will do that you will not have to wait for five years for your buildings.

Mr. CLARK of Florida. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of South Carolina. Certainly.

Mr. CLARK of Florida. Mr. Chairman, I desire to say to the gentleman that I thoroughly agree with the idea of standardization in a practical way. I am a member of the committee or the commission which now has that matter in charge, but I want to ask the gentleman if he does not realize that climatic conditions have something to do with building operations? In other words, does the gentleman believe a building that would do for South Carolina would, without any change, answer for Minnesota?

Mr. JOHNSON of South Carolina. Mr. Chairman, in reply to that I would say that the climatic conditions might affect the material out of which it was built, but it could not affect the style, the size of the house, and the general outlines of the plans.

The CHAIRMAN. The time of the gentleman from South Carolina has again expired.

Mr. JOHNSON of South Carolina. I know several post-office buildings in South Carolina costing the same amount, and yet there was a separate plan for each building.

Mr. MANN. Mr. Chairman, what is pending before the committee?

The CHAIRMAN. The motion of the gentleman from Tennessee, to strike out the last word.

Mr. Sisson. Mr. Chairman, I move to strike out the last two words.

Mr. MANN. Can we not reach some conclusion as to how long this is going to run?

Mr. Sisson. As far as I am concerned it will not run very long.

The CHAIRMAN. The gentleman from Mississippi moves to strike out the last two words.

Mr. BURNETT. Mr. Chairman, I desire to be recognized in opposition to that motion.

Mr. Sisson. Mr. Chairman, the gentleman from Tennessee [Mr. Austin] in his statement in reference to the Supervising Architect having done all he could to standardize buildings in this country has not stated it just exactly as I understand from the Supervising Architect himself. When he was before the Subcommittee on Appropriations I endeavored to get him to state if he was standardizing, and he did not answer positively that he was, but proceeded to show how difficult it was to standardize. I endeavored to get the Secretary of the Treasury to state what effort had been made to standardize since his term, and he said that his other duties had engrossed his time and that very little had been done. During that examination the Secretary of the Treasury himself stated that he had made these estimates without knowing the conditions in the architect's office, because his duties were so multifarious and there were so many departments under him that he had not gone into the matter fully. He finally told the subcommittee that he desired that this whole matter, except those absolute deficiencies, should go over until he, with the chairmen of the two committees of the two Houses and the other two members of the commission, could work out a plan whereby they would be able to save to the Government a great deal of money and work out a good plan of standardization. On page 697 of the hearings Mr. McAdoo said:

We are going very carefully into all of these questions, and I very much hope that the commission will be able to submit at the next session of Congress a very definite recommendation as to the policy to be pursued with respect to public buildings in all particulars, as well as to present a cohesive, consistent, and concrete plan for dealing with many of the questions which I think are in your mind. I think, therefore, if I may be permitted to say it, that we are indulging in a fruitless discussion now.

Why, because he was not then able to say in answer to my question that there was any plan of standardization, notwithstanding the fact that the law requires the standardization.

I want to say this in reference to the architect's office, that if spending, as they do, an average of 6 per cent, which is 1 per cent more than is charged by the commercial architects, they are getting the poorest results for the greatest amount of money that is possible for a bunch of men to get, we had better dispense with these skilled architects and get seven or eight unlettered farmers and put them in charge of the business, because down in my country, where the county supervisors, who are plain farmers, build a court house, and across the street you build a post office, you will find the court house costing \$40,000 to complete, seating about 500 or 600 people, with offices downstairs, with all the conveniences upstairs, built of St. Louis pressed brick, while in the same district you will find a \$55,000 one-story post-office building that is built of the ordinary brick of the country, and the only stone you will find in it is in the steps leading into the building, and the ordinary on-looker will know that the people are not getting the worth of their money out of the Supervising Architect's Office. If that is the result which these architects are getting, it is the highest

duty of every Member of this Congress to look into these matters suggested by the Secretary of the Treasury and know what is going on with the people's money. I am willing that these buildings may be constructed, but I am unwilling that they should be constructed until we ascertain whether or not the Supervising Architect's Office has done its full and its complete duty.

Now, as to the standardization, I want to say when you make a plan—and I have talked with many private architects, I have talked with many builders about this, and they will tell you that your plans ought to take into consideration the building material in the section in which it is to be located, but you may standardize a building and make a type for a \$50,000 building in the State of Alabama and use it in the State of Mississippi. You can use it in Georgia. You can standardize a building in Vermont and use it in all New England. You can standardize a building in Oregon and Washington and use the material there in that neighborhood and use it for that section. You can standardize a building out West. But what is the trouble? The trouble is that when that is done then every honest builder gets an opportunity to put in an honest bid, because he can know what he is doing.

The man who built the State capitol in my own State, Mr. Barnes—and there was not the slightest tinge of a suspicion, the slightest suggestion that the people did not get value received for the money for the State capitol. Yet a man like this could not and would not bid upon the plans and specifications handed out by this department because they were not standardized and the terms used were different in different plans.

The CHAIRMAN. The time of the gentleman has expired.

Mr. Sisson. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to proceed for five minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. Sisson. Now, you take the standard steel. They keep it on the shelves, as it were, in the great steel concerns, and when you order a piece of structural steel, it is a standard as much as a four-by-four post in an ordinary frame building. You find windows that are standards in size, and window frames of certain size, having a certain number of lights in them—a standard article—and yet in these post-office buildings they use terms making it necessary to use material of different sizes. He can use terms for windows which are off size. And for this reason, in many instances, on the larger contracts, men are unwilling to compete. And for that reason if for no other, they ought to have these buildings standardized and the terms standard, because every honest contractor and every honest builder could go and look at the type of the building, and when he put in his bid he would know when he complied with the terms of the contract for that type of building.

Now, I have a building in this bill which I think, like all the other Members, is being delayed. I have another which is authorized, and perhaps I will not get it in three years. But I am unwilling to have it erected until I shall know, or have reason to know, that the people of the United States are getting value received for it, until I know that every honest contractor, who submitted plans and specifications, may go over those plans and specifications, and know whether or not he is authorized, according to his construction, to put in a certain bid on it. Therefore I shall not hurry this matter until we get a complete report.

I have confidence in the gentleman from Florida [Mr. Clark], who is the chairman of the committee of this House, and his second, my good friend from Alabama [Mr. Burnett], although I do not know whether he is on the commission or not, and in Senator Swanson; and I also have confidence in the Secretary of the Treasury, and all these other gentlemen.

My friend says that the Secretary asked this. Yes; but he now especially repudiated the asking when he told us the facts. On the contrary, he asked that this building program go over until this commission could make a full and complete investigation and submit a plan to Congress, when Congress and the country would know in the future the people were getting value received for their money. There is something wrong in the Supervising Architect's Office. The private architect is willing to do the work for 5 per cent and supervise. It costs these gentlemen 6 per cent, with their office and all the material furnished. They have their office furnished and all their material furnished them; they have all their equipment there. They do not have to travel around over the country and hunt up jobs. They do not have to pay hotel bills while hanging around courthouses in order to ascertain whether or not they are going to get contracts let to them for courthouses and on other buildings to be constructed. The private architects have to go out into

the world and compete on bids; and yet the private architects make money on a 5 per cent basis, while the United States Government now is spending 6 per cent in this architect's office. Is there anything wrong? I do not know whether there is anything dishonest about it or not, but I do say that on its face it shows gross inefficiency, which ought to be investigated before men go further with this building program in the United States. And for that reason I stand with the subcommittee, I stand with the full committee, I stand with the Secretary of the Treasury in his recommendation that the law be carried out—that this matter be investigated before we go further.

Mr. GARNER. Mr. Chairman—

Mr. FITZGERALD. How much time does the gentleman from Texas want?

Mr. GARNER. I want only two or three minutes.

Mr. BURNETT. I want five minutes.

Mr. HARRISON. I would like five minutes.

Mr. CLARK of Florida. I would like three minutes.

Mr. COX. Give me three.

Mr. FITZGERALD. Mr. Chairman, quite a number of Members want to speak on the matter. I ask unanimous consent that debate on this question close at 3 o'clock and 30 minutes.

The CHAIRMAN (Mr. FLOOD of Virginia). The gentleman from New York [Mr. FITZGERALD] asks unanimous consent that debate on the paragraph under consideration close at 3 o'clock and 30 minutes.

Mr. COX. That ought to be divided up.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. GARNER. Mr. Chairman, I want to apologize to the committee for consuming five minutes on the proposition of striking out the last two words; but this question here is one that is at least six or seven years old. Those of us who have been here that length of time will recall the fact that at each session of Congress this identical question comes up and the Committee on Appropriations takes the same position each time; that is, it draws an indictment against the Supervising Architect's Office and says, "You do not need any more money, for we are not going to let you have more than a certain number of buildings each year."

That intimation was made clear this morning by the gentleman from Massachusetts [Mr. GILLET], when he drew an indictment against the Congress itself for making appropriations for public buildings at places where he thought the buildings ought not to exist. The same idea now comes from the gentleman from New York [Mr. FITZGERALD], when he indicts the Congress for making the authorizations of buildings when those buildings can not possibly be expected to be constructed for four or five years.

Mr. Chairman, I agree with the gentleman from New York and the gentleman from Massachusetts and their conclusions. I do not believe these authorizations ought to be made unless you intend in good faith to construct the buildings. But I beg leave to suggest to the gentleman from Massachusetts and to the gentleman from New York that the Congress is larger than the Committee on Appropriations; that when this Congress has spoken and declared that it is the policy of this Government to construct these buildings you and your associates ought not to stand in the way and prevent Congress from constructing these buildings. [Applause on the Democratic side.]

Mr. FITZGERALD. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from New York?

Mr. GARNER. I will.

Mr. FITZGERALD. The gentleman says I am standing in the way. I am not standing in the way.

Mr. GARNER. Oh, yes; the gentleman says he is not standing in the way of constructing these buildings, and yet every time the Secretary of the Treasury prepares to make an estimate, he knows what the estimates are, but he prevents the Secretary of the Treasury from making an estimate, because he can not draw the plans and specifications.

Mr. FITZGERALD. The gentleman from Texas is mistaken. The Secretary of the Treasury estimated for the force that he required in his office.

Mr. GARNER. Mr. Chairman, I have only five minutes. I submit to the gentleman from New York this proposition: If he will put in this bill an item of \$150,000 for an increase of the force of the Supervising Architect's Office, will not the Secretary of the Treasury submit an amendment for \$5,000,000 more in his next estimate? Will not the Secretary of the Treasury do that?

Mr. FITZGERALD. I guess he will.

Mr. GARNER. I guess he will, too. Then you prevent him from submitting the estimate.

Mr. FITZGERALD. There was nothing to prevent him from submitting an estimate for this additional force when the law required him to complete the buildings.

Mr. GARNER. We imagined when we put these 47 buildings on the top of the docket that you would take the whole of it. You will be delayed five or six months on your building that is now in process of construction, because these 47 buildings must be planned first. The plans and specifications must first be drawn.

The gentleman from New York has brought an indictment against the Supervising Architect which will either compel him to take up these 47 buildings or else the Secretary of the Treasury ought to be impeached.

Mr. FITZGERALD. I will say to the gentleman from Texas that I think we should do the thing that ought to be done now and let what should be done three years from now take care of itself at that time.

Mr. GARNER. I agree with the gentleman; but if you will give the Supervising Architect's Office this \$150,000, he will draw plans and specifications and go right along with this program that has been outlined. But the gentleman from New York is not willing to do that. Why? Because it will involve the expenditure of \$5,000,000 later. For what purpose? For a purpose that he thinks ought not to have been authorized in the beginning.

Mr. FITZGERALD. The gentleman from Texas is mistaken. Along with the gentleman from Texas I belong to a party that made certain promises, and I believe we ought to keep those promises and not attempt to bunko the people.

Mr. GARNER. Oh, the gentleman says we belong to a party that made certain promises and we ought to keep them. I agree with him in that. I voted with the gentleman from New York and with the gentleman from Massachusetts and others not to bring in these authorizations of public buildings. But when this Congress has deliberately spoken the gentleman from New York and his associates on the Committee on Appropriations have no right to hold us up and say, "We will put the veto on this House, and therefore we will not permit you to make it possible for the Secretary of the Treasury to prepare these estimates."

Mr. FITZGERALD. We have no power to do that.

Mr. GARNER. If you give us this money for this increase of force, we shall get some more estimates, shall we not? That, Mr. Chairman, answers the whole question. If you will give us the money for the force necessary to prepare the plans for the construction of these 47 buildings as an emergency, we will get an additional estimate of \$5,000,000 with which to construct the buildings. If you do not furnish this extra force, we can not get the estimates. Who is stopping it? Let the gentleman answer that question. Who is preventing these buildings from being constructed? The Committee on Appropriations.

Mr. Chairman, I agree with every word that the gentleman from Mississippi [Mr. Sisson] has said when he drew his indictment against the Supervising Architect's Office. The work of that office ought to be standardized. I have no criticism to make of the gentleman's indictment. I am in full accord with the Committee on Appropriations and with the theory which they hold, that some of these buildings in small towns ought not to have been authorized. But I do say that after I have been outvoted in this House and after the House has declared a policy, I have no right to stand in the way of it; neither has the Committee on Appropriations that right. [Applause.]

Mr. Sisson. Mr. Chairman, has the gentleman's time expired?

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. Sisson. I wanted to ask the gentleman one question about the extra hour.

Mr. CLARK of Florida. Mr. Chairman, I desire to say only a word or two on this subject of standardization. I happen to be a member of the commission charged with the duty of undertaking to devise some plan of standardization which will expedite the construction of Government buildings and largely be a measure of economy to the people of this country.

Mr. Chairman, no man in this House is more attached to the standardization of buildings than I am. I believe that the Government can save millions of dollars by creating a practical system of standardization, but it is a practical question and a great question. It is easy enough to say that a \$50,000 building at one place and a \$50,000 building at another place ought to be exactly the same and that the plans and specifications ought to be exactly alike, but if gentlemen will confer with architects and with builders they will find out that climatic conditions have a great deal to do with the construction of buildings. They will find that the topography of the country has a great

deal to do with the construction of buildings. I believe that in these smaller towns where the Government has no activity other than that of the post office there can be a practical standardization, but in order to do that I believe you will find that you must group the States together with reference to climatic conditions.

For instance, New England would make one group, the Rocky Mountain States another, the Southeastern States would make one, the Southwestern States another, and the Middle West, and so forth; but when you come to the construction of buildings where various activities of the Government are to be housed—the post office, the Federal courts, the customhouse, the land office, and all that—I do not believe that you can ever find a plan of standardization that will cover that class of buildings. We can make it apply to the smaller ones if you will group the States as I have suggested, where there is nothing but the Post Office Department to be provided for.

Mr. Sisson. Will the gentleman yield?

Mr. Clark of Florida. Certainly.

Mr. Sisson. I agree with the gentleman about the division; but with reference to the last buildings the gentleman speaks of, does he not believe that they can use a standard with reference to the materials that shall go into the buildings?

Mr. Clark of Florida. Yes; that may be true. But at the same time you ought to take into consideration the character of building material in the vicinity where the building is to be constructed.

Mr. Sisson. That is true.

Mr. Clark of Florida. Take it in Minnesota, where it is cold, or in Dakota. They desire a building constructed entirely different from what we would in Florida. There we want air, and we want verandas, and we want shade.

Mr. Clark of Missouri. Will the gentleman yield?

The Chairman. Does the gentleman from Florida yield to the gentleman from Missouri?

Mr. Clark of Florida. With pleasure.

Mr. Clark of Missouri. I am the daddy of this idea of standardization of buildings. I have fought for it for 15 years, and I would like to ask the gentleman from Florida what has the climate to do with the shape and dimensions of these buildings?

Mr. Clark of Florida. A great deal.

Mr. Clark of Missouri. How can it have anything to do with it?

Mr. Clark of Florida. In the State of Florida if you could get a perfectly round building with plenty of verandas, it would be more comfortable, because we need the breeze, and you could get it from every side and source.

Mr. Clark of Missouri. That is mere detail. Is it not true that pressed brick and terra cotta and steel, the three materials out of which you would build a forty or fifty thousand dollar building, are the best materials and are practically indestructible in any climate—especially terra cotta and pressed brick?

Mr. Clark of Florida. No; if you use brick very much in a damp climate you will have the walls covered with moss that is going to make it damp nearly all the time, and extremely unhealthy for those people that dwell within the building.

Mr. Hardwick. Will the gentleman yield for a suggestion?

Mr. Clark of Florida. Yes.

Mr. Hardwick. I want to say that that is exactly the experience that we have had in Augusta, Ga. We have a building of brick and it is extremely unhealthy.

Mr. Clark of Missouri. I want to ask the gentleman from Florida one further question. Has the committee been considering the question of laying down fixed conditions on which a town shall have a building at all, and the building of a certain price, so that the Secretary of the Treasury, when these conditions are performed can automatically order a certain building to be completed in that town?

Mr. Clark of Florida. Yes; that has been considered, but, of course, Mr. Chairman, we have reached no conclusion.

The Chairman. The time of the gentleman from Florida has expired.

Mr. Clark of Missouri. I ask unanimous consent that the gentleman's time may be extended 5 minutes.

Mr. Clark of Florida. Mr. Chairman, I do not want more than a minute.

The Chairman. The gentleman from Missouri asks that the time of the gentleman from Florida be extended five minutes. Is there objection?

There was no objection.

Mr. Clark of Florida. Mr. Chairman, as I said, I do not want more than a minute. So far as I am individually concerned, I shall oppose hereafter the construction of a public

building in any town where the interest upon the money invested is greater than the expense of the Government in renting suitable quarters therefor. [Applause.]

I believe that we have reached the time when the construction of public buildings at the expense of the Government in little 2-by-4 towns ought to cease. [Applause.] I think that business ought to be conducted upon a practical, common-sense basis. If, therefore, we can secure quarters in a town for the post office which are suitable, ample, and safe for less money than would be the interest at Government rate on the cost of a suitable building, then the Government, in my opinion, should not construct a building in such town. I believe this should be the general rule for our guidance, but of course there may be peculiar conditions which would create exceptions and take some cities or towns out of this general rule.

Mr. Davenport. I would like to ask the gentleman if he means his statement to apply to towns where they have a Federal court and all other United States offices?

Mr. Clark of Florida. Oh, no. I think every court in this land ought to be housed by the Government, and if the town is important enough to have a Federal court you will generally find that the interest upon the amount invested will be much less than the rentals that have to be paid by the Government for suitable quarters.

Mr. Davenport. I have a town of that kind in my district.

Mr. Sharp. Mr. Chairman, in the time allotted to me I do not know that I can improve by a more extended discussion the sentiment expressed in a rather surprising statement made by the gentleman from Florida during the last 2 minutes of his speech. I think he said more to the point in the last 2 minutes of his extended time than he had previously said in 10 minutes.

It seems to me, gentlemen, that we have been losing sight of the main object, and that it has been covered up in a mass of verbiage which would be delightful if we had the time to hear it, but which is not profitable.

I agree with much that has been said about standardizing these public buildings; but the basic proposition, if we would get anywhere at all in bringing about economy, is to draw the line on these appropriations, so that, as the gentleman from New York, chairman of the Committee on Appropriations [Mr. Fitzgerald] has informed us, instead of multiplying the amount of this appropriation during the past 12 years to twelve times what it was in the previous 12 years, we could permanently stop that bungle through which the public money flows so rapidly.

A dozen or 15 years ago many of our own party, who were then on the outside, criticized the extravagance of Congress because, as they said, it was a billion-dollar Congress. The reply was made by a distinguished Republican leader at that time that that was not a material objection, because this was a billion-dollar country. I submit, as a matter of correct logic, that if it was true that we had a billion-dollar Congress covering a period of 2 years 12 years ago because we had a billion-dollar country, we now have progressed to a most wonderful extent, because in that short time we have come to be a \$2,000,000,000 country, for we are now making appropriations aggregating a billion dollars or more each year.

During the time I have been a Member of this Congress, I have on a number of occasions raised my voice in protest against the unwarranted extravagance of this body in spending the public money, especially as it has to do with the Federal building appropriation. It has only been within the last two years, when we commenced to carry out the reform preached by our party for the last 30 years of lowering tariff duties, that we have been met with the correlative proposition that if we are going to thereby lose revenue we must meet our rapidly growing expenses by providing other sources of income. So we resorted then to reviving the old wartime income tax, from which we expect to get \$100,000,000 or more annually. I am heartily in favor of it. I believe it ought to come to pass. In its consideration, however, the question of its absolute necessity was quite as prominent as its justice. Then we levied a corporation excise tax, from which we are getting annually \$30,000,000 or so. I believe in that; but I want to warn my colleagues that the next move will be the inauguration of a Federal inheritance tax and the doubling of internal-revenue duties. You will remember that former President Taft proposed the first. He was at once confronted with the fact that we already have that burden imposed in not less than 36 of our States, and it would look like, and would indeed be, a very grievous burden to pile on top of the existing tax another equally burdensome levied by the National Government. That proposition had to be abandoned. But we can not go ahead spending public money in the way we are now doing and keep

free from a deficit without further increasing a grievous burden of taxation. If I had my way, not as it concerns this particular bill, but upon the construction of Federal buildings, I would inaugurate a very different policy. But I can not have my way about it. There are too many pieces of fat pork in this barrel. I do not say this offensively. It is the common designation of this kind of an appropriation. The appropriations for rivers and harbors go with it, and in many instances are equally censurable. But we have too many selfish interests at stake, and it would be hard to pass the kind of a law that I would propose.

If I had my way, I would have no Federal building constructed in any town unless the receipts of the post office of that town were at least \$50,000 a year and it had at least 10,000 inhabitants.

Mr. STEENERSON. Mr. Chairman, will the gentleman yield? Mr. SHARP. Just for one question.

Mr. STEENERSON. Has the gentleman ever inquired into the buildings that are in use as substations in the large cities like Chicago and one or two in Washington, where they are constructed by private capital and then rented for a period of 10 years or more at a very low rental? It seems to me that that would solve the problem that the gentleman has in mind.

Mr. SHARP. That might do so; but may I say one further word in respect to the gentleman from Florida?

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. SHARP. Mr. Chairman, I ask unanimous consent to proceed for one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SHARP. Mr. Chairman, the gentleman from Florida [Mr. CLARK], in closing his remarks, laid down a rule. He is a member of the Committee on Public Buildings and Grounds, and on this account his views on this question are important. If the rule or criterion referred to by the gentleman had been in effect—that is, no public building where the Government could rent a suitable private property for less than the annual fixed charges, including a low rate of interest and maintenance of a Federal building if constructed—then, I dare say, that out of the 1,200 post-office propositions mentioned by the chairman of the committee [Mr. FITZGERALD] the Government would not have had to construct more than one-third of those buildings at public expense. Even at this late day the inauguration of such a policy would annually save to the people of the United States fully \$10,000,000.

Mr. BURNETT. Mr. Chairman, I shall only say one or two words in regard to the question of standardization. Gentlemen may theorize upon that just as long as they desire, but there is a practical common-sense side to that question. There is no such thing as standardization on the question of cost. The distinguished speaker has referred to his paternity of that proposition, and yet I would like to see him or anybody else standardize as to cost. They may standardize upon the style of architecture, and yet when they come to the question of construction it depends not only upon climatic conditions, but also on the proximity to material, on freight rates, and many other things. We have a case in point before our Committee on Public Buildings and Grounds now. A bill was introduced by a gentleman from Kansas asking an additional appropriation because of the fact that the \$50,000 appropriated, which would construct a building in some States, on account of climatic conditions in Kansas will not construct a building there. Reference has been made to terra cotta. This gentleman has stated to our committee that on account of those climatic conditions in his State terra cotta can not be used as well as something else that is better adapted to the climate. Hence when it comes to the question of standardization it is practically a common-sense question.

When Mr. SHEPPARD was chairman of the committee, and after he left the House and I was the acting chairman of the committee, we always insisted upon the Supervising Architect—and he has to a very great extent acquiesced—reducing to a standard these buildings as much as possible, and great progress was made along that line; but when gentlemen think there can be standardization so as to apply to all of the States of the country they are absolutely mistaken.

Mr. Chairman, what I rose for was to reply to some criticisms of the gentleman from Massachusetts [Mr. GILLET] made yesterday in regard to this Democratic Congress and the Committee on Public Buildings. Here is one of the contributions of the gentleman. He says:

Personally, I do not believe that it is economy or that it is wise for this Government to put up a building in any place of less than 100,000 inhabitants, certainly not in a town of less than 50,000.

The gentleman would certainly object to and repudiate a charge of unwisdom on his part, and yet the gentleman himself in the last public buildings bill secured an appropriation—first asking for \$50,000 and then finally allowed \$80,000—for a building to be constructed in Amherst, Mass., the population of which is only 5,112. Mr. Chairman, when you find a gentleman who is always jumping on the Public Buildings Committee you generally find one who very quietly is insisting that he ought to be made an exception to that particular rule. Here is the gentleman seriously saying that it would be unwise for Congress to do a certain thing, and yet he comes up and in the town of 5,112 asks for \$50,000 in money and finally gets \$80,000 and then criticizes the Democratic Congress. Mr. Chairman, I want to call attention to the fact that the \$45,000,000 of which he speaks was not put on entirely by the House of Representatives, but much of it by a Republican Senate, and one of the troubles about these gentlemen who criticize the committee is that they generally do not know what they are talking about. I want to quote another statement that the gentleman from Massachusetts [Mr. GILLET] made. He says:

Now, of these 120 sites that are authorized over 100 are in towns which do not have annual postal receipts of \$10,000.

That is incorrect. The gentleman never took time; he makes a charge against the Democratic Party and a Democratic House, and he never took the time, Mr. Chairman, to look into the facts, but he makes the general broad assertion that 100 of the 120 sites did not have \$10,000 postal receipts. He goes on—

Mr. GILLET. Will the gentleman state how many are under?

Mr. BURNETT. Less than 100, not more than 60 of them, I think, and many of these put on by a Republican Senate. Much of the increase in the bill was put on by a Republican Senate at the end of the last session of Congress when we had to accept it, Mr. Chairman, or the bill would have been lost. Now, to show again that the gentleman does not know what he is talking about, but is going off half cocked, as these Republicans usually do, he makes this kind of statement. He said:

Up to this present Democratic economical administration it was the rule that no place which had less than 1,000 inhabitants and \$10,000 of postal receipts should have a public building.

Nobody ever heard of that 1,000 inhabitants except when it was conjured up in the fertile imagination of the gentleman from Massachusetts.

Mr. GILLET. Was not that corrected in the very next sentence?

Mr. BURNETT. That is sought to be corrected by a Democrat, who got it wrong, too, and I will show you what he said.

Mr. LLOYD. If the gentleman will permit, the rule was 10,000 inhabitants or \$10,000 of postal receipts.

That is not correct. I remember, Mr. Chairman, that the town of Demopolis, in my State, got an appropriation during the last Republican Congress of \$50,000 or \$60,000 where it had considerably less than \$10,000 receipts, and I will show nearly 20 cases in the public buildings bill, headed by Mr. BARTHOLOMEW and gentlemen on the other side, a Republican House, and a Republican Senate, where either sites or buildings were authorized in towns that had less than \$10,000 of receipts.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURNETT. Gentlemen ought to know, they ought to be conscientious enough to know, what they are talking about before indicting the committee or a Democratic Congress. [Applause on the Democratic side.]

The CHAIRMAN. The gentleman's time has expired; all time has expired, and the Clerk will read.

Mr. MANN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. Has debate expired by order of the committee?

The CHAIRMAN. It has, at 3.30.

Mr. HUMPHREY of Washington. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 4, after line 20, insert "Everett, Wash., \$50,000."

Mr. HUMPHREY of Washington. Mr. Chairman—

The CHAIRMAN. All debate on this paragraph has expired.

Mr. MANN. Mr. Chairman, it is not an amendment to the paragraph, but it is a new paragraph.

Mr. HUMPHREY of Washington. Mr. Chairman, I sent up the wrong amendment.

Mr. BARTLETT. Mr. Chairman, I reserve a point of order.

Mr. HUMPHREY of Washington. Mr. Chairman, I picked up the wrong piece of paper. The one I sent up is not correctly written, and I ask to withdraw the other and substitute this, in which the language is a little different.

The CHAIRMAN. Without objection, the gentleman from Washington withdraws his amendment and offers the following amendment, which the Clerk will report.

The Clerk read as follows:

Page 4, after line 20, insert "Everett, Wash., for completion of building under present limit, \$50,000."

Mr. BARTLETT. Mr. Chairman, I reserve a point of order or will make it unless the gentleman desires to be heard. My point of order is—

Mr. HUMPHREY of Washington. I do not think it is subject to a point of order.

Mr. MANN. What is the gentleman's point of order?

Mr. BARTLETT. I will reserve the point of order.

Mr. MANN. But what is the point of order?

Mr. BARTLETT. The point of order, Mr. Chairman, is that appropriations for public buildings, although they may be authorized, are not in order upon this, being a deficiency bill, this amendment not being for a deficiency. I will reserve the point of order if the gentleman desires.

Mr. MANN. No; let us settle it. Here is a public building that is authorized by law.

Mr. BARTLETT. I will read the Chair my authority. On page 373, section 3562, fourth volume of Hinds' Parliamentary Precedents:

Appropriations for the continuation of work on a public building, not to supply any actual deficiency, belong to the sundry civil bill and not to the general deficiency.

This is an urgent deficiency bill.

On March 17, 1880, the House was in Committee of the Whole House on the state of the Union considering the deficiency appropriation bill.

Mr. Benjamin Butterworth, of Ohio, offered the following amendment:

For completing the customhouse and post-office building at Cincinnati, Ohio, \$150,000, said appropriation to be immediately available.

Against this amendment Mr. Joseph C. S. Blackburn, of Kentucky, made the point of order under Rule XXI.

The Chairman ruled:

Although the bill under consideration is not, technically speaking, a general appropriation bill, yet rule 120 of the old series was always held to apply to bills of this character, as well as to original appropriation bills. The difficulty with the amendment of the gentleman from Ohio [Mr. Butterworth] seems to be that it does not come from any committee having any jurisdiction of the subject. The right of individuals upon their own responsibility to offer amendments to appropriation bills has been very much restricted by the third clause of Rule XXI of the new rules. Without commenting upon that clause, the Chair holds that the amendment is not in order coming from an individual Member of the House and not from a committee having jurisdiction of the subject matter.

Now, in section 3746, page 499 of the same volume, it says:

On June 18, 1902, while the general deficiency appropriation bill was under consideration in Committee of the Whole House on the state of the Union, Mr. George W. Steele, of Indiana, offered the following amendment:

On page 26, after line 21, insert:

"Marion Branch, at Marion, Ind.: For quartermaster and commissary storehouse and repairing old storehouse and constructing fireproof vaults therein for offices, \$30,000."

Mr. CHARLES L. BARTLETT, of Georgia, made the point of order that there was no legislation authorizing the appropriation; and Mr. Leonidas F. Livingston, of Georgia, raised the further point that the appropriation was not in order on this bill.

After debate the Chairman said:

"The Chair held in a former Congress, in reference to Annapolis Academy, that an amendment providing for an additional building there was in order. The Chair stated at the time that he so held in deference to former decisions, not because he would have so held had it originally come before the present occupant of the chair. If there was no other question involved now than the question of the enlargement of the plant, the necessary enlargement, the Chair would be inclined to hold that it was in order, following the precedent established in the Naval Academy case and the cases upon which it was based. But the Chair is inclined to think that the suggestion and point made by the gentleman from Georgia that it is not in order on a general deficiency bill is well taken."

Those are the two precedents, Mr. Chairman, and I know of none to the contrary.

Mr. MANN. Mr. Chairman, the Committee on Appropriations has jurisdiction over both the sundry civil bill and the deficiency bill. The cases cited by the gentleman, I think, are not in point. My recollection is they are not cases where the limit of cost is fixed by Congress in the public-building bill. It would not be in order to offer an appropriation here to increase the limit of cost.

Mr. BARTLETT. Mr. Chairman, I have no doubt about the correctness of my position, but I am not disposed to make the point of order, and I withdraw it in deference to a suggestion from the gentleman from New York [Mr. FITZGERALD], chairman of the Appropriations Committee.

The CHAIRMAN. The gentleman withdraws the point of order.

Mr. HUMPHREY of Washington. Mr. Chairman, I introduced this amendment for the purpose of calling attention to the condition we find ourselves in in view of the attitude which the

committee has taken. The city of Everett, in Washington, has a population of over 25,000, or about 30,000 people. In 10 years it grew from 7,000 to 26,000. We have had authorized the construction of a public building there now for over five years, and if the statements made in the hearing are true, it will be delayed for three years more. In other words, that city of 30,000 people, under the action now taken by the committee, can not have a public building for three years, and in all it will be open to a delay of over eight years. Now, I am glad to hear the chairman of the Committee on Public Buildings and Grounds say that hereafter he is going to have some policy. I listened to the gentleman from Alabama [Mr. BURNETT] a few moments ago, when in his remarks he resented the criticisms upon that committee. But that committee, so far as I could discover, had no policy whatever, except to give a public building to somebody that had influence enough to get it, or who happened to be upon that committee. While the city of Everett has been waiting for five years for sufficient money with which to complete its building, the committee refused to give the amount necessary, and we had to go to the Senate in order to secure it, although all over this country there were appropriations made for buildings in cities some of which did not contain 1,000 inhabitants. And although the postal receipts of the city of Everett last year were \$62,645, this committee, criticism of which the gentleman from Alabama [Mr. BURNETT] resents so quickly, refused to make any appropriation whatever to complete this building, but they did make appropriations for buildings in many small towns of 2,000 population or less.

And what was the excuse that was given? Because there must not be more than one appropriation to each congressional district, unless, of course, you were a member of the committee. I understand that some of the members of the committee succeeded in getting three. If ever there was a pure pork-barrel proposition it was this last public buildings bill.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield to me for just a minute?

Mr. HUMPHREY of Washington. I will.

Mr. MURDOCK. I know about Everett, and how rapidly it is growing, and I realize how important it is to get quick action on this item. In the report of the committee I find that the preparation of drawings was held up at the request of the former Congressman representing the district, so that it does not seem to be the fault of Congress, but the fault of the individual Congressman.

Mr. HUMPHREY of Washington. The gentleman is partially right. What I have said is not in relation to anything that happened before the last Congress. It was prior to that Congress, and because the city had grown so rapidly I requested further funds for this building and this was urged by the Treasury Department. It was one of the strongest letters that came before that committee. But we could make no headway there. We had to go to the Senate to get it.

This illustrious and virtuous Democratic committee would not permit it because there was another building proposed at Seattle, in that same district, and they absolutely drew the line and declared that because they had made an appropriation for Seattle they would not grant this increase for the building at Everett. This left them money to give to a lot of country villages, and to such gentlemen as happened to be so fortunate as to be members of the committee, at least some of them got as many as three buildings each inside of their districts.

Now, Mr. Chairman, to show the situation and to illustrate the downright unfairness to which we have been subjected by the committee which the gentleman from Alabama [Mr. BURNETT] has so highly eulogized, I ask leave to insert in the Record as a part of my remarks the statement made in the hearings upon this proposition.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] asks unanimous consent to insert in the Record the statement he has indicated. Is there objection?

Mr. MURDOCK. Reserving the right to object, Mr. Chairman, I would like to ask the gentleman if that is the statement of the department recommending this as a special project?

Mr. HUMPHREY of Washington. Yes; on page 130 of the hearings had before the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. HUMPHREY of Washington. This is the statement:

NO. 4.—EVERETT (WASH.) POST OFFICE AND CUSTOMHOUSE.

Population: 1910, 24,814; 1900, 7,838; 1890, ———. Postal receipts for the fiscal year ending June 30, 1912, were \$62,645.40.

Estimate to Congress, of January 22, 1908, on H. R. 4802, estimated for a two-story and basement building having 8,000 square feet of ground area, to cost \$230,000, including site.

Act of Congress of May 30, 1908, provides for a site and building at limit of cost of \$130,000. Site was purchased at a cost of \$12,000, leaving \$118,000 available for the building.

Preparation of drawings was held up pending further legislation by Congress increasing the appropriation at the request of the Congressman.

Estimate to Congress of January 18, 1912, on H. R. 16670, estimated for a two-story and basement building of 8,000 square feet ground area, to cost \$168,000 if of fireproof construction.

Act of March 4, 1913, authorizes increase limit of cost \$50,000. Amount available for the building at present, \$168,000.

Although the present amount available for the building is less than the department estimate of January 22, 1908, plans and specifications will be prepared in accordance with the new limit and bids solicited.

Inasmuch as this project was originally authorized in the act of 1908, should it not be taken up now it must be deferred for approximately three years, as it will be placed at the end of the act of 1910. The department therefore desires to consider it as a special project.

Mr. FITZGERALD. Mr. Chairman, in regard to the amendment requesting the appropriation of \$50,000 for the completion of the building at Everett, Wash., I want to say that if the appropriation were made it would not bring the building any nearer to completion, and not a dollar could be used. Ninety-five thousand dollars have been appropriated and are now to the credit of this public building. The addition of \$50,000 would not help the gentleman from Washington [Mr. HUMPHREY] at all.

I hardly think it fair for the gentleman from Washington to criticize the Democratic Congress for the situation in which the town of Everett finds itself with respect to this building. In 1908 the gentleman, or whoever represented the district, introduced a bill to authorize a site and building to cost \$230,000. A report was made on it from the Supervising Architect's Office, and in 1908 a Republican Congress, with all the information before it that could be obtained in such a manner, authorized the building and site, to cost \$130,000. If the amount fixed was insufficient, the gentleman should criticize the Republican Congress and his own lack of influence with his own party colleagues for his failure to convince them that in his Republican State \$130,000 was inadequate for the construction of a building at that place. Ninety-five thousand dollars has been appropriated; \$12,000 was expended for a site, and that left \$118,000 available for the building—\$118,000 for a building two stories high.

For some reason or other they were not satisfied with a building to cost \$118,000, and the Representative of the district, the gentleman himself, apparently delayed the construction of this two-story building in Everett and held it up from 1910 until 1913, when he was able to obtain an increase in the limit of cost for his building.

It comes with poor grace for him to criticize a Democratic House for refusing to do what a Republican House refused to do for him, or to try to exculpate himself for the delay occasioned by his own action by blaming a Democratic House. In this deficiency bill is carried every dollar that the department requested in order to carry on work in progress, the appropriations amounting to over \$650,000. The committee did not recommend a futile appropriation of \$50,000, which would have been made uselessly, in order to mislead the people of Everett into believing that thereby something was being done to accelerate the construction of the building; and that is all that would be done if this amendment had been adopted. It would simply mislead the people into the belief that something had been done toward advancing the project, when nothing had been done.

Mr. MURDOCK. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. MURDOCK. The statement the gentleman has just made seems to contradict the report from the department.

Mr. FITZGERALD. It does not.

Mr. MURDOCK. If the gentleman will permit, I will just read four lines here:

Inasmuch as this project was originally authorized in the act of 1908, should it not be taken up now it must be deferred for approximately three years, as it will be placed at the end of the act of 1910. The department therefore desires to consider it as a special project.

Does not that contradict the gentleman?

Mr. FITZGERALD. No. That does not ask for money to use on the building. That was one of the excuses they gave to have Congress increase the force in the Supervising Architect's Office by practically 50 per cent. They did not want any money for the building, and if the plan for that building should be taken up now there is no reason why the department, with \$767,000 appropriated for the services of the Supervising Architect's Office, should not give it attention.

Mr. HUMPHREY of Washington. The gentleman intimates that I was making this criticism because I did not get this increase sooner.

Mr. FITZGERALD. No. I say the gentleman should not criticize a Democratic House for not doing what a Republican House refused to do for him.

Mr. HUMPHREY of Washington. I should like to know whether a Republican House had an opportunity to make this increase?

Mr. FITZGERALD. Why, yes. The gentleman introduced a bill in January, 1908, H. R. 4802, providing for the erection of a two-story-and-basement building, to cost \$230,000, including the site. On May 30, 1908, a Republican Congress included a provision for a site and building for Everett, Wash., at a cost of \$130,000. That was in the public-building act. If the gentleman could have persuaded a Republican committee that he ought to have \$230,000, doubtless he would have got it then.

Mr. HUMPHREY of Washington. I should like to ask the gentleman from New York a question.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. FITZGERALD. I ask for five minutes more.

The CHAIRMAN. The gentleman from New York asks for five minutes more. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. In 1908 I introduced a bill, and the amount then asked was refused; but after that came the census returns, showing a tremendous growth and increase in population, and then the increased amount was asked; and unless I am very much mistaken there has not been a public-building bill since that time until the one we now have.

Mr. FITZGERALD. The mere fact that the population of the town had increased would not be a sufficient justification for an increase of the appropriation. It would depend entirely upon the amount of business done, and those figures are available all the time.

Mr. HUMPHREY of Washington. The amount of business increased too.

Mr. FITZGERALD. There was a public-building act in 1910.

Mr. DONOVAN. I wish to call the attention of the gentleman from Washington [Mr. HUMPHREY] to the fact that some Members of this House are very careless when they talk about money. If there is any one State in the Union that has had its share out of the "pork barrel," it is the State of Washington. The State of Washington and the State of Connecticut, from which I hail, are about equal in population and in wealth, according to the books. The last Congress gave the State of Washington \$3,836,000, and it gave Connecticut a beggarly \$400,000. The people of the Northwest were very eager when they put their hands into the Public Treasury, getting nearly half a million dollars for public buildings in four towns with populations of less than 10,000. Now they are growling because they did not get more.

Mr. HUMPHREY of Washington. Will the gentleman yield? The gentleman has made a statement that I want to correct.

Mr. DONOVAN. I will yield.

Mr. HUMPHREY of Washington. How much did the gentleman say had been the appropriation for buildings in the State of Washington?

Mr. DONOVAN. The State of Washington, which is about the same in population and in wealth as the State of Connecticut, received \$3,836,000, and the State of Connecticut received only \$419,000. In other words, the State of Washington received nine times as much as the State of Connecticut.

Mr. HUMPHREY of Washington. Will the gentleman state how much Connecticut received from the Government before the State of Washington was admitted into the Union?

Mr. DONOVAN. I will not state, for I do not know.

Mr. HUMPHREY of Washington. How many cities has the gentleman in his State with over 10,000 inhabitants?

Mr. DONOVAN. I will not say, for I do not know. The moment your people got into the trough the question of the "pork barrel" was over, for you took it all. Again I repeat that in that part of the United States, as in no other part of the United States, nearly half a million dollars was contributed to four towns for public buildings, with a total population in the four towns of less than 10,000 people.

Mr. GILLET. Mr. Chairman, the gentleman from Alabama criticized me because I declared, and I hold to that firmly now, that if I had my way appropriations should be limited to cities of 100,000 or 50,000 population, while I had introduced in the last Congress a bill for the town of Amherst with only 5,000 inhabitants. That is one of those charges of personal inconsistency, which seem for the moment effective, which catch momentary attention, but which when you reflect turn out to be fallacious and worthless. It might catch a momentary applause, but I am sure would make no lasting impression. The facts are these:

I found that the whole House, every Member of the House, was getting a bill for a public building. Although I thought there ought not to be any public-buildings bill in that session.

I did not propose that my district should be the only one left out because I suggested no town. Was there any inconsistency in that? I vote every year against the appropriation for garden seeds. I think it is an unwise and selfish appropriation of the public money, but I send out my quota of seeds, for I do not think my district ought to lose them and every other district have them.

In the same way I am sure the membership of the House will recognize that there was no inconsistency or impropriety on my part in taking a public building for a town in my district when every other district was getting one, just because I thought it was bad policy to authorize the great majority of the buildings, including my own. I was opposed to the bill, but if I could not succeed in defeating it I did not want my district to suffer for my opinions.

What are the facts? I supposed when the Democratic Congress was organized, as it was said to be organized in the interest of economy, that there would be no public-building bill in that Congress, and for a long time I put in no proposition. But I found toward the end of the Congress that everyone was putting one in and that a report was soon to be made. So I prepared and offered a bill. Remembering that we were told by Mr. PALMER that the committees had been organized with a special aim at economy, that the Democratic Party was trying to make a record for economy, I supposed that the standard cost for buildings would be at least as low as in the Republican Congresses and so I put in a bill for the town of Amherst for a building to cost \$50,000. That town had over 5,000 inhabitants, with postal receipts of \$24,000. That economical Democratic committee thought I was too modest and that my suggestion of \$50,000 was too small and increased it to \$80,000. Now, I do not think that is any abandonment of the principle which I believe in, that no appropriation at all should be made for any cities or towns except large ones. I will vote and work for any such limitation. I will try to defeat any bill without it, whether I have an appropriation in it or not; but if a bill goes through despite my opposition, and I can not prevent it, I do not want my district to be the only one discriminated against.

I was pleased to hear the gentleman from Florida [Mr. CLARK] the chairman of the Committee on Public Buildings and Grounds, say that in the future he would oppose any appropriation for a building the interest on the cost of which would exceed the existing annual expenditure for the office. If that had been put in effect in the bill which was passed at the last Congress, if the gentleman from Florida had acted then on the principle which he now says he stands upon, I think more than half of the propositions in that bill would have been eliminated. I fear, too, all its popularity would have been lost.

But if the gentleman from Florida really believes in that principle, let me suggest that it is not too late for him to act upon it now. There have been no appropriations for the last public buildings act, and it still rests with this House to say whether we shall appropriate for them or not. If the gentleman from Florida is really sincere, and his committee is with him, if the Democratic House wishes economy, there is still ample time to act on the principle which he proclaims; and I hope when the proposition comes before this House to appropriate for any of the hundreds of buildings authorized in towns where the annual expense does not begin to equal the interest on the cost of the public building, I hope that we shall see the gentleman from Florida oppose that appropriation and stand by the very sensible rule which he has announced.

I will gladly join with him. That is an evidence of progress. It indicates that the monstrous extravagance of the last bill has aroused reflection and hesitation and reconsideration. Despite your protestations of economy, I think everyone who investigates that bill will admit it was the most indefensible and extravagant public-buildings bill that has ever passed Congress.

Mr. HARDWICK. Mr. Chairman, will the gentleman yield?

Mr. GILLETTE. Certainly.

Mr. HARDWICK. I quite agree with the gentleman, but does he not think the Senate made it even worse?

Mr. GILLETTE. Oh, yes. Of course the Senate made it worse.

Mr. BURNETT. And it was a Republican Senate?

Mr. GILLETTE. Why certainly; but gentlemen seem to forget that that Democratic House started in with the battle cry of economy—that this committee was since organized in the interest of economy, and yet even the bill presented by this House was an indefensible one. Nobody ever claimed that economy was a senatorial attribute.

The gentleman says that I was entirely mistaken in my facts when I said that there were over 100 appropriations in that bill for towns with less than \$10,000 of postal receipts. I told my secretary to figure up the postal receipts of the various

places and he assured me that there were over 100 of that character. I may be wrong. The gentleman from Alabama may be correct, but I back the statement of my clerk against the offhand statement of the gentleman from Alabama.

Mr. MANN. Mr. Chairman, the gentleman from Massachusetts [Mr. GILLETTE] has referred, and several other gentlemen have referred, to the public-buildings bill passed in the last Congress. The gentleman from New York [Mr. FITZGERALD] was more apt in his designation of the bill, because he referred to it as a bill approved by the President on the 3d of March. The fact is that the public-buildings bill of the last Congress was never legally passed. It passed the House, went to the Senate, had a large number of amendments agreed to in the Senate, and was sent to conference. The conference report on the Senate amendments, with the exception of 4 out of 200, was never acted upon by the House. It was never presented to the House. The gentleman from Georgia [Mr. HARDWICK], who made quite a gallant fight against that bill at the last session, might possibly accomplish his purpose if he could proceed, which I do not think he is required to do, through some court and attack that bill. It is true that the Committee on Enrolled Bills certified to the Speaker that the bill had been truly enrolled. It is true that the Speaker signed the bill and that the Vice President signed the bill and that as an enrolled bill it was transmitted to the President and that the President put his approval upon it, but it is also true that so far as the action of the House of Representatives is concerned the Journal of the House showed that it has just as much effect as a public law as though the Committee on Enrolled Bills had cited Hinds' Precedents as the law and had the Speaker certify it had passed the House and the President approves it.

Mr. SIMS. Mr. Chairman, will the gentleman yield?

Mr. MANN. Certainly.

Mr. SIMS. Would it not be the duty of the Attorney General under these circumstances—

Mr. MANN. Oh, I do not intend to say what the duty of the Attorney General is.

Mr. SIMS. I do not mean exactly that, but in other words, some of these buildings are public buildings. Some of them are to be constructed in the District of Columbia, where they have no Member of Congress, and there is a project which was authorized by the Senate to buy all of the unsalable stuff between the Potomac River and the Soldiers' Home. I would like mighty well to contest the validity of that provision of the bill. I have a site for a building in the bill, and I think I would be doing a good work to lose that site if I could stop the Washington project.

Mr. MANN. Mr. Chairman, the Attorney General is better qualified to tell what his duties are than I. I have a great deal of confidence in the Attorney General. I do not believe that any bill after it has been erroneously certified to by a committee of the House and certified to by the Speaker under error and approved by the President under error ought to be permitted to stand as a law, because that stultifies the proceedings of the House, and unless the House or Congress or some other official takes action it shows that we do not hold sacred the proceedings of the House.

I yield to the gentleman from Georgia [Mr. BARTLETT].

Mr. BARTLETT. The gentleman, of course, knows while in a court they would accept as a verity the Journal of the House, yet the court, I apprehend, would not accept as a verity something which the House Journal did not show to be the truth.

Mr. MANN. The Journal of the House shows that the conference report upon over 200 of these Senate amendments was never acted upon by the House, and that the only conference report on this bill that was acted upon was a conference report involving four amendments.

Mr. BARTLETT. That being so, then the mere fact the enrolling clerk certified it to the presiding officer would not prevent anyone from attacking the fact of its being passed by the House, because the courts, while they will not permit the Journal to be attacked, certainly would not hold where the Journal failed to show that the act passed that that fact could not be shown, I apprehend.

Mr. MANN. I have not undertaken to look up the law upon that subject, but I have undertaken to look up the facts.

Mr. HARDWICK. I am afraid the gentleman can not answer my question. I was of the opinion that the certificate of the Speaker and of the President of the Senate to the President, sending the bill to him, probably would control if that were tested in a court of law.

Mr. MANN. I had supposed there must be some way, as very frequently there is some way about State legislatures, of testing questions by the journal. It would certainly seem, if the Speaker through error or design should certify that a bill had

passed the House that had never been introduced and signed by himself, and the Vice President or the Presiding Officer of the Senate should do the same, that there was no way to correct it except by repeal. Of course the gentleman understands I am not making any criticism of the Speaker for signing the bill.

Mr. HARDWICK. I know that.

Mr. MANN. Nor the Committee on Enrolled Bills.

Mr. HARDWICK. I am just taking the gentleman's argument a little further. Suppose the journal were doctored, too, and that might happen—

The CHAIRMAN. The time of the gentleman has expired.

Mr. FITZGERALD. Mr. Chairman, just a moment to make this statement. In Clark against Field, I think it is reported in One hundred and forty-third United States Supreme Court, in an opinion handed down by Mr. Justice Harlan, he held that the court would not go behind the certificate of the Vice President and the Speaker on a bill.

Mr. MANN. I think, if the gentleman will pardon me—

Mr. FITZGERALD. That case arose, if the gentleman will pardon me, from litigation in connection with the McKinley Tariff Act. A concurrent resolution was passed authorizing the conferees to insert in the bill a provision which had not been in it. The question raised was that the provision had never passed the two Houses of Congress as required by the Constitution. The United States Supreme Court took the very broad position that it would not go behind the certificate of the two presiding officers.

Mr. MANN. I should assume that a bill passed and certified to and approved by the President was not subject to a collateral attack. It was a collateral attack made in that case, but certainly would be subject to direct attack.

Mr. HARDWICK. The gentleman means of course if somebody should enjoin the Treasury Department from paying out money under the provisions of the bill, or something like that.

Mr. MADDEN. Mr. Chairman, the discussion of this amendment has taken a very wide range—

Mr. FITZGERALD. Mr. Chairman, I move that all debate on the pending paragraph and all amendments thereto close in five minutes. We lose sight of what is before the committee.

The CHAIRMAN. The gentleman from New York moves that all debate on the pending paragraph and amendments thereto close in five minutes.

Mr. THOMPSON of Oklahoma. Does that mean that Members will be prohibited from offering an amendment?

Mr. FITZGERALD. Oh, no; it is simply on the pending paragraph.

Mr. THOMPSON of Oklahoma. That is all right.

The CHAIRMAN. The motion is that debate on the pending amendment be closed in five minutes.

The motion was agreed to.

Mr. MADDEN. Mr. Chairman, inasmuch as the debate on the pending amendment has not been confined exactly to the amendment, I am going to ask the indulgence of the committee for five minutes to talk on the question of standardization of buildings.

I come from a city with 196 square miles of area and a population of 2,500,000 people, with the greatest post office in America, having more receipts than the post office in New York City and having 6,750 men employed in that great institution. The central post-office building not only contains the courts and the marshal's office and the collector of customs' office, but we have for the conduct of the postal business of the city of Chicago 50 subpostal stations, located in various sections. The Government of the United States never presumes to erect these buildings. Private individuals build them and rent them to the Government for post-office purposes.

The man who constructs the building enters into a lease with the Post Office authorities for a period of 10 years, and the Post-Office authorities direct the character of building to be constructed. The owner of the building then furnishes not only the building but the heat and the light and all the furniture that is required in the conduct of the postal business. All of the furniture and all of the buildings are of standard design.

The work in every one of these buildings is done on a single floor. It is done with greater economy than a like business is done anywhere else in the United States. We have receipts amounting to \$26,000,000 a year, and we run the office on the basis of 28 per cent of the receipts. These expenses have been reduced within the last two or three years under the present postal management of the city of Chicago from 35 to 28 per cent.

There is one way by which the Government of the United States could be saved a lot of money and have the business of the Post Office Department conducted along economical, scientific business lines. In the rural districts of the United States—for

example, in an agricultural county—a post-office building can be erected in the county seat and a postmaster appointed, a man of high-class executive ability, in that place, and all the towns of the county outside of the county seat could be made sub-postal stations, superintended and directed by the postmaster at the county seat. You could get somebody in the town to erect a standard building, to furnish the heat and the light, and to furnish the furniture, and in this way the rent the Government would be called upon to pay for the use of the building would not exceed 10 per cent of the cost to the Government under the present method.

If you want standardization, if you want economy, if you want business practice, if you want to conduct the post office along scientific business lines, here is an outline of a suggestion for you. The Democrats are in control. They go before the people on the theory that they want economy. This is a suggestion for economy.

The chairman of the Committee on Public Buildings says that you can standardize. Well, you can standardize buildings of a certain class above the ground, but nobody can standardize the foundation of a building, because every foundation of every building is put in under different conditions. You can not standardize a building where the foundation is laid in rock; you can not standardize a building where the foundation is laid in quicksand. The two conditions are totally different. You can standardize the superstructure of a plain, soap-box form of building, and that is all.

But the way to standardize is for the Government to discontinue investing its money in public buildings and get somebody in every town where a public building for a post office is required, to put up a building of a standard class, situated so that you will get a light from the roof, so that the men can see without artificial light every hour of the day, no matter how cloudy the day may be.

We have reached the climax, the acme, I may say, of perfection in the construction of our subpostal stations in our great city. I had the honor of visiting these stations within the last three or four weeks, and I was amazed to see the facility with which business there is conducted; and I recommend this to every city, to every village, and every county all over the Nation. If you adopt it, you will gain the commendation of the people everywhere, you will save the public money, and you will facilitate the movement of the mails. You will do a thing that will gain for you the reputation for business wisdom which a good many people now think you have not got.

Mr. HULINGS. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The time for debate has closed. The question is on the amendment offered by the gentleman from Washington [Mr. HUMPHREY]. The Clerk will report the amendment. The Clerk read as follows:

Page 4, after line 20, insert as a new paragraph the following: "Everett, Wash.: For completion of building under present limit, \$50,000."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I desire to offer an amendment.

Mr. HARRISON. I desire to offer an amendment, Mr. Chairman.

The CHAIRMAN. The gentleman from Mississippi offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 4, after line 20, add as a new paragraph the following: "For preparing plans, specifications, and drawings for post-office building at Laurel, Miss., the sum of \$4,000, to be paid out of any appropriation heretofore appropriated for the construction of said post-office building."

Mr. FITZGERALD. Mr. Chairman, I make the point of order that it changes existing law. The act of 1908 prohibits the payment of any services for the preparation of plans out of the appropriation made for the building, and I insist upon the point of order. I refer the Chair to section 6 of the public buildings act of 1908.

Mr. HARRISON. Mr. Chairman, I concede the point of order. I thought that the gentleman from New York [Mr. FITZGERALD] would be charitable enough not to make it.

The CHAIRMAN. The point of order is sustained.

Mr. HOWARD. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Georgia [Mr. HOWARD].

The Clerk read as follows:

After line 20, on page 4, insert the following: "For completing United States post office and courthouse at Atlanta, Ga., \$22,500."

Mr. FITZGERALD. Mr. Chairman, I make a point of order on that. Unless it comes within the limit of cost it is not in order. I have no information on it.

Mr. HOWARD. Mr. Chairman, I do not think it is subject to a point of order. It has been authorized by law. I hope the gentleman from New York [Mr. FITZGERALD] will withhold his point until I can make an explanation about it. Then the Chair can rule on it.

Mr. FITZGERALD. I will reserve the point of order.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] reserves the point of order.

Mr. HOWARD. Mr. Chairman and gentlemen of the committee, I have no criticism to make of the Committee on Appropriations or anybody else. I want to say at the outset that I have the most affectionate regard for everybody who is a Member of this House on this side and a sneaking and affectionate regard for every Member on that side. [Laughter and applause.]

I think the omission of this item in the bill is simply an oversight on the part of this splendid committee. That accounts for their failure to bring in this appropriation.

I represent the next largest city in the world, except New York and Chicago—the city of Atlanta, the most prosperous city in the United States without any exception. We have \$1,256,000 of annual postal receipts. In the year 1905 Congress appropriated a million dollars for the erection of a post-office building in that city. In that building we have the United States court, the United States marshal's office, the internal-revenue collector's office, the different bureaus which the United States Department of Agriculture has established there, and there the immense business of the Atlanta post office is carried on, including that of the Railway Mail Service. They lack sufficient money to complete the fifth floor of that building. They had \$18,750 left. In the last Congress, in connection with the last public building bill, an estimate was sent from the Treasury Department asking for \$22,500 to complete this fifth floor.

Now, I want to make a plain, honest, frank statement to you gentlemen. The people in the district believe that we are entitled to have this building completed. The judge of the United States court has stated to me that even his jury rooms, even portions of his court room and halls, are being used by officers of the Federal Government when his court is not in session. The congestion in that office is a disgrace to the Government of the United States. They have hardly room enough to turn around in. We can go on and save this Government money if you will make immediately available this sum of \$22,500. If you do not do this, you are going to force the people of that office to go outside and rent quarters somewhere else.

Now, it is a pure business proposition. My distinguished and good friend from New York [Mr. FITZGERALD] will say that this has not been estimated for by the Treasury Department. A Congressman has got no way to go down and catch the Secretary of the Treasury by the burr of the ear and make him prepare an estimate for anything. If he does not make the estimate, if somebody did not have the influence to make him make the estimate, if the exigencies of the occasion will not permit him to make the estimate, how shall we ever get the money?

Here is a plain proposition that exists. I tell you that there is a great area on the fifth floor of this magnificent building, a great big unfinished hall; that it will take \$22,500 in addition to the \$18,750 that they have left to make that unfinished hall useful and to relieve the congestion in that office, and I can not, as a Representative of my people, get the appropriation of \$22,500. The last Congress authorized that this money be appropriated, but this committee, with the multitude of things that they have to deal with, overlooked bringing in this additional appropriation of \$22,500. But I know they would have brought it in if they had thought of it, and I asked them not to make any strenuous objection to this.

This is a business proposition, I repeat, and I hope that my good friend from New York [Mr. FITZGERALD], the chairman of the committee, and my distinguished colleague from Georgia [Mr. BARTLETT] will realize the importance of making immediately available this \$22,500, so that the Government can go ahead and complete this building and relieve this congested situation which has existed over four years and a half in the city of Atlanta. The receipts of that post office are such that the post office is entitled to it. We are entitled to the consideration that I have asked at your hands.

I ask you to grant this \$22,500, committee or no committee. I do not do this disrespectfully to the Committee on Appropriations, because I would not offend a hair of the head of any member of that committee for my good right arm in its shoulder

socket. But it is a business proposition, in which this Government is involved.

Mr. ADAMSON. In order to utilize the fifth story, is it only necessary to finish the interior?

Mr. HOWARD. That is all.

Mr. ADAMSON. Do the elevators and staircases run up to the fifth floor?

Mr. HOWARD. Yes. All in the world they have to do is to put in walls and doors, and complete the floors, and do the plastering, and put in electrical fixtures, and \$22,500 will finish it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FITZGERALD. Mr. Chairman, the gentleman is mistaken as to the relief he wants. The department has the authority now to do this work, to enter into contracts for it and to do it without the appropriation. It does not want this appropriation. It does not ask for it, and it will not spend it if it gets it.

Mr. HOWARD. If the gentleman will permit an interruption right there, I should like to say that the Supervising Architect himself wrote me a letter in the last session of Congress stating the urgent necessity of having this amount put in. My distinguished colleague from Georgia [Mr. BARTLETT]—

Mr. FITZGERALD. Let me finish my statement. I shall not mislead either the gentleman from Georgia or the House. At the last session of Congress the gentleman secured an increase in the authorization for this building, so as to enable this \$40,000 to be expended in the fitting up of this floor. Although there is a balance of \$17,500 on hand, and although authority to contract for work to the amount of \$22,500 additional has been given, the Supervising Architect says that unless the gentleman from Atlanta joins with other Members to secure an appropriation of \$180,000 to increase his force, he will not undertake this work. That is one of the methods to which the architect resorted in order to obtain that money.

Mr. HOWARD. I would not go into that conspiracy with the architect or anybody else, as far as that is concerned.

Mr. FITZGERALD. That makes no difference. The Supervising Architect has stated that, and his statement is in the hearings.

Mr. HOWARD. Will the gentleman allow me—

Mr. FITZGERALD. Let me finish this statement. He has stated in the hearings that unless he gets that \$180,000 to increase his force he can not or will not prepare the plans to fit up that floor.

Mr. MANN. Will the gentleman yield for a question?

Mr. FITZGERALD. I yield to the gentleman.

Mr. MANN. If Congress should make this appropriation, would it not be a direction to the Treasury Department to proceed with the expenditure and do this work?

Mr. FITZGERALD. Congress has already made the appropriation in the case of Everett, Wash. It has appropriated \$95,000 for the building, out of a total authorization of \$168,000.

Mr. MANN. Yes; but that appropriation of \$95,000 that the gentleman refers to was not sufficient to construct such a building as the Supervising Architect thought ought to be constructed, which opinion was afterwards confirmed by Congress.

Mr. FITZGERALD. What the committee did about these matters was this: In every instance in which the department asked for money to carry on work authorized, to complete work under way, the committee recommended the amount. Those recommendations amount to something in the neighborhood of \$650,000.

Mr. MANN. But, after all, if Atlanta is short of space and is renting space and has a fourth floor of its public building unutilized, is it not a common-sense business thing to do to provide the money, not a large amount, which will enable it to utilize that space and stop paying rent?

Mr. FITZGERALD. My contention is that the department ought to do it. It has the authority to do it.

Mr. MANN. Where is the authority?

Mr. FITZGERALD. I shall read the authority to the gentleman. They are not renting any buildings in Atlanta at present. The gentleman is mistaken about that. There are no buildings rented.

Mr. MANN. They are short of space down there. If this floor is not completed, they will soon have to rent.

Mr. FITZGERALD. There is no statement of that character.

Mr. HOWARD. If the gentleman will permit me right there, I made the unequivocal statement that there was a necessity and a congestion, and I do not think the gentleman from New York is justified by anything that is on file in his committee in making the statement that there is no congestion. I know of my own knowledge that there is.

Mr. FITZGERALD. I did not say there was not.

Mr. HOWARD. I have made the statement, and the Supervising Architect so states here.

Mr. FITZGERALD. I have not said there was no congestion.

Mr. HOWARD. I understood the gentleman to make that statement.

Mr. FITZGERALD. I said they were not renting any buildings. The gentleman from Illinois [Mr. MANN] inadvertently said they were.

Mr. ADAMSON. I want to ask the gentleman a question.

Mr. FITZGERALD. Let me make this statement first.

Mr. ADAMSON. All right.

Mr. FITZGERALD. The public-building act authorizes the Secretary to enter into contracts for the completion of each of said buildings within its respective limit of cost, including sites, and it includes Atlanta, Ga., \$22,500. The contracts could have been let, the work could have been done, and probably finished by this time if the department so wished. The statement is made that it will not do the work. The gentleman need not misunderstand me. I have never had any desire to oppose appropriations for public buildings under way or to refuse the money necessary to carry them on.

The Committee on Appropriations invariably recommend the entire amount which the department states will be needed until the next bill carrying appropriations is passed.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. ADAMSON. Mr. Chairman, I ask that the gentleman's time be extended five minutes in order that he may answer a question.

The CHAIRMAN. The gentleman from Georgia asks that the time of the gentleman from New York be extended five minutes. Is there objection?

There was no objection.

Mr. ADAMSON. I gathered from the statement of the gentleman from New York that the Secretary of the Treasury is only willing to do this work on condition that a larger appropriation is allowed for another purpose. I wish to ask if the gentleman thinks it would be proper and desirable to use such language in making this appropriation as would direct and require him to do this particular work?

Mr. FITZGERALD. I do not think it is necessary to do so. The Supervising Architect and the Secretary of the Treasury made an estimate and asked for an appropriation for the Bureau of Engraving and Printing so that it will be ready for occupancy on the 1st of July. They made no request for any increase of the force in order to do that work. They will have to prepare plans and specifications and do the same things that must be done in order to do this work. In this case they have authority to contract for the work, which they have not in the other. The money would be made available when required.

Mr. ADAMSON. As a great many know, there is a crush of business and great necessity for this work in Atlanta, but I understand that when the Representative of the Atlanta district applies to the Treasury for this specific work he is informed:

It will not be done unless you appropriate \$160,000 for other work.

Mr. FITZGERALD. My contention is that that is a policy that can not be defended; that when the Committee on Public Buildings and Grounds increases the limit of cost in certain buildings because of urgent conditions which necessitate increased facilities it is no justification for the department to say that they will not proceed with the work until its force is increased.

Mr. ADAMSON. Could we not remedy the matter by some linguistic formula and say that he is directed and required to complete the fourth story of this building?

Mr. FITZGERALD. I do not think it is necessary.

Mr. MANN. Will the gentleman yield for a question?

Mr. FITZGERALD. I doubt if I have any more time.

Mr. MANN. This bill carries an appropriation of \$40,000 for refitting the Bureau of Engraving and Printing. The gentleman's statement has been that the Treasury Department would not pay any attention to appropriations made by Congress and would not take up anything out of its order. What, then, is the object of making this appropriation of \$40,000 if it will not be reached for four or five years?

Mr. FITZGERALD. Because the Secretary of the Treasury and the Supervising Architect said if this appropriation were made at this time and in this form the work would be finished by the 30th of June. That shows that they have adopted a different policy, or that they treat this improvement differently from the improvements in which individual Members of Congress are interested. That is the reason I was so heartily in favor of giving them this appropriation, in order to demonstrate that in asking the Congress for an increase of force they

were using methods to force Congress into increasing the force that could not be justified. The item for the Bureau of Engraving and Printing is in the exact form in which it was submitted, and no suggestion was made that any additional help was necessary in order to do the work.

Mr. MANN. Now, the answer of the gentleman from New York is very ingenious, but not as frank as the gentleman from New York usually is in dealing with the House. The Secretary and the Supervising Architect informed the committee that if the appropriation was made it would be expended. They would have informed the committee, if they had been asked, if any appropriation had been made for any building it would be expended.

Mr. FITZGERALD. The gentleman from Illinois is mistaken. In every item submitted the committee asked whether the money was needed, and they indicated in some instances that they could not use it and in other instances that they could.

Mr. MANN. I am not endeavoring to criticize the committee and have no intention of criticizing the committee. I think if I had been on the committee I should have done the same as the committee did; they had to lay down some rule and stick to it, but I do not think the House is bound by the action of the committee. If Congress makes an appropriation in full for the building, the Supervising Architect and the Secretary of the Treasury will proceed to expend the money. In this case, if this appropriation of \$40,000 is made for this work, the inside of the Bureau of Engraving and Printing will be torn out and the change made available for the auditor's office. If the amendment of the gentleman from Georgia prevails, and we appropriate \$22,500, the partitions on the fourth floor of the Federal building will be torn out and the improvements will be made during the fiscal year with the appropriation. No department will refuse to do that amount of work.

Mr. Sisson. Mr. Chairman, will the gentleman yield?

Mr. MANN. Mr. Chairman, I yield so that the gentleman from Mississippi may ask the gentleman from New York a question.

Mr. Sisson. The question I want to ask is, if about two or three years ago, in 1911, the city of Atlanta did not ask Congress to donate it a certain building and a piece of property down there, upon the ground that they had all of the public buildings they needed, and that Congress then agreed to permit the city of Atlanta to have that building and property there, for which it paid about \$40,000, according to my recollection?

Mr. HOWARD. Mr. Chairman, will the gentleman from New York permit me to answer that question?

Mr. FITZGERALD. Mr. Chairman, I will state my recollection of it. Congress did vote to the city of Atlanta, under certain terms, the old post-office building, but I do not recall the conditions—

Mr. HOWARD. I will state that the city of Atlanta gave the Government—

Mr. FITZGERALD. Oh, let me finish—that it was because of the fact that they had all of the public-building accommodations that they required.

Mr. Chairman, in reference to the gentleman's amendment, the department under the law has complete authority to do this work.

Mr. HOWARD. Mr. Chairman, I hope the gentleman from New York will permit me to answer the gentleman from Mississippi [Mr. Sisson], because he is trying to prejudice this case.

Mr. FITZGERALD. Certainly.

Mr. HOWARD. The city of Atlanta granted to the United States Government, without the cost of a penny to the United States Government, the entire lot upon which the post-office building was constructed, and when this grant was made from the Government to the city of Atlanta the city of Atlanta paid the Government \$95,000 for the building, which was every penny it was worth.

Mr. FITZGERALD. Oh, it got a very good bargain.

Mr. HOWARD. It got a bargain in that it got an old shack of a building, and the only value in it was the lot, and we gave them the lot in the first place.

Mr. FITZGERALD. Oh, the gentleman ought not to so impugn the capacity of the officials of the city of Atlanta. They just turned over in their anxiety to get that building for a city hall for Atlanta, and they got it at a bargain.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. Sisson. Mr. Chairman, the purpose of the question that I asked was to show the significance of this situation, that the officials of the city of Atlanta at that time represented that the Government had all of the property it needed, that it had the space it needed, and that the Federal Government did not need

this building and that Atlanta did need it for official purposes. Upon that theory the Government accepted the condition.

Mr. ADAMSON. That will be true when they finish the building which they started.

The CHAIRMAN. Does the gentleman from New York insist upon his point of order?

Mr. FITZGERALD. It is not subject to the point of order, and I withdraw the point of order.

Mr. HOWARD. Mr. Chairman, I ask unanimous consent for two minutes in order that I may read a short paragraph from the Treasury Department as to the absolute need for the completion of this building.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. HOWARD. I will read:

The contract for the construction of the building did not include the finishing of the fifth story, and as additional space is very urgently required to accommodate the needs of the public service, a report was submitted to Congress February 4, 1913, on H. R. 28529—

Which was the bill introduced by myself—

for the performance of this work at an increase of \$40,000 in the present limit. Act of Congress, March 4, 1913, authorized an increase of \$22,500. This is essentially a continuation of a preceding authorization. Nevertheless, as far as the current program of the work is concerned, it has no place. It is, so to speak, an additional project. In order to complete the work in connection with which it is a supplemental authorization it is desired to consider this as a special project.

Mr. Chairman, I want to say that this is not one of those cases where the Government has to go to the expense of drawing plans and specifications. They have already been drawn. All in the world they have to do is to put a force of men to work. The plans and specifications and everything that is essential to the completion of this work are on file in the Supervising Architect's Office, and, if he desires, within 10 days after this \$22,500 is made available he can put a force of hands to work in the Atlanta post office for the completion of this fifth story which we so much need and desire. Now I will yield to the gentleman.

Mr. OGLESBY. Has the gentleman any assurances that this work will be done if this appropriation is made?

Mr. HOWARD. I absolutely know that it will be done.

Mr. OGLESBY. What assurance has the gentleman?

Mr. HOWARD. I will guarantee that it will be done, even if I have to spend two-thirds of my time in the Supervising Architect's Office until they do get a force of hands to work. [Applause.]

The CHAIRMAN. The time of the gentleman has expired. The question is on agreeing to the amendment offered by the gentleman from Georgia.

The question was taken, and the amendment was agreed to.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 4, between lines 20 and 21, insert as a new paragraph the following:

"Oklahoma City, Okla., for the purpose of employing a supervising architect to construct an addition to the post-office building, the sum of \$5,000, or so much thereof as may be necessary."

Mr. FITZGERALD. Mr. Chairman, I make the point of order that this is not authorized by law.

Mr. THOMPSON of Oklahoma. I hope the gentleman will withhold his point of order.

Mr. FITZGERALD. Well, it is subject to the point of order. Does the gentleman desire to speak to his amendment? If so, I will withhold the point of order for five minutes. Mr. Chairman, I reserve the point of order for five minutes.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I want to say in behalf of this new paragraph to this bill that I want to reaffirm all that has been said by the gentleman from Georgia [Mr. Howard] with reference to his city of Atlanta, except I want to add to it that Oklahoma City is the largest city in the world, not excluding Chicago and New York, to its age. In 1907, when Oklahoma adopted a constitution and sent it here for approval by the President, charges were made that it was a sectional constitution, that it did not conform to the Constitution of the United States, and that it did not provide a fair basis of representation in the legislature as between the Democratic and Republican Parties, and President Roosevelt ordered a special census to be taken, at an expense of more than \$50,000, to determine if these charges were true. By that special census the population of Oklahoma City was shown to be a little over 34,000 people. In 1910, when the Federal census was taken, the population of Oklahoma City was shown to be over 65,000, or an increase of nearly 100 per cent in three years. In this good day,

Mr. Chairman, the population of Oklahoma City is 100,000, and I do not think there will be any dissent on this floor or in this country against the statement I make that Oklahoma City is the largest city in the world to its age, and it is likewise one of the very best. Now, Mr. Chairman, there are more than 500 postal employees in Oklahoma City. All railway mail divisions center in Oklahoma City. The internal-revenue district of the State has offices in Oklahoma City, and the Federal court has just now moved its headquarters to Oklahoma City. I was there less than one month ago, and there is absolutely no room in the Federal building in Oklahoma City for these different departments which are moving down to Oklahoma City to make it their headquarters. In addition to this, the parcel post has just been inaugurated, and I am informed that it will be necessary to double the employees of the postal service at that point. Now, Mr. Chairman, I want to call the attention of the committee to this fact. Originally there was an appropriation of \$30,000 to acquire a site at Oklahoma City and \$250,000 to erect a building. That was when the population of Oklahoma City was 34,000.

After that and when the population was increased a subsequent appropriation was made of \$130,000, \$100,000 to be used, if necessary, for the purpose of purchasing an additional site, and \$30,000 to make extensions to the building. After that a third appropriation was made of \$150,000 for addition and extension to the present building. That appropriation is now available, but the Supervising Architect of the Treasury Department in a conversation that I had with him a few days ago told me that this \$150,000 now appropriated and now available in making the addition and extension to that Oklahoma City building could not be used until there were sufficient funds appropriated by the Congress in order to provide additional architects so that the work of the architect's department could be carried on. Now, Mr. Chairman, it will be about four years until that work can be commenced unless this appropriation is made. This \$150,000 that has already been appropriated can not be expended unless a small sum is appropriated here to provide for an architect to supervise the preparation of plans and specifications for that additional building. I submit it is not fair to the people of that new and growing and splendid city that their service be paralyzed and that they be made to suffer for want of push, and energy, and enterprise on the part of their elder but more sleepy neighbors.

Now, Mr. Chairman, we are entitled to this. The \$5,000 will not amount to the rent that it will be necessary to expend on the part of the United States for one year. So I fail to see, Mr. Chairman, how it would be economy on the part of the Government if we fail to appropriate a sufficient sum to provide for this additional expenditure so that the additional work may be done there that was contemplated by the appropriation that has already been made by the Congress. We are not asking for any additional appropriation. All we are asking for is the appropriation for architectural service so that the money already appropriated may be expended.

In the name of justice to the people of that splendid city, in the name of economy for all the people, I ask this small amount that the money already appropriated may be used and the business of the people facilitated. I am asking for right and justice in the name of a great and brave people who have by their energy and their courage built the greatest city in the world of its age.

The CHAIRMAN. Does the gentleman from New York [Mr. FITZGERALD] insist on his point of order?

Mr. FITZGERALD. I insist on the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. THOMPSON of Oklahoma. I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Oklahoma [Mr. THOMPSON] makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred gentlemen are present—a quorum.

Mr. HULINGS. Mr. Chairman—

Mr. REED. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from New Hampshire [Mr. REED] offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 4, after line 20, add, as a new paragraph, the following: "Laconia, N. H.: For post-office building, \$75,000."

Mr. FITZGERALD. Mr. Chairman, I reserve a point of order on that.

Mr. REED. Does the gentleman make his point of order?

Mr. FITZGERALD. I reserve it. I want to see what it is, first.

Mr. REED. It is for \$75,000 for the Laconia post office.

Mr. FITZGERALD. Yes; I reserve a point of order on that.

The CHAIRMAN. The gentleman from New Hampshire [Mr. REED] is recognized.

Mr. REED. Mr. Chairman, I might delay this body for an indefinite period if I desired to speak upon the different phases of this question that has been entered into here this afternoon. I have no desire, however, to say anything in relation to the subject that has been so ably discussed and so thoroughly covered. I refer to the subject of the architect's office, of which it has been said, and has not been denied, that for every plan and specification that comes from that office it adds 6 per cent to the entire construction cost of the building. It seems to me that that is an outrageous price and a most ridiculous and extravagant proposition, and that it should be taken out of the hands of any department that adds that expense to the cost of any building. This country is fairly teeming with architects who would be glad, I am sure, to do the entire work of furnishing plans and specifications for every public building which will be erected by the United States Government for the next 100 years, if they are furnished with rent, light, heat, and all the paraphernalia to do the work with, for 1 per cent, if permitted to standardize the buildings, and be tickled to death to get the job. But I have no time to discuss that proposition. It has been very thoroughly covered.

I want simply to say to this distinguished body that there are four cities in my State for which appropriations have been authorized for the purpose of building post offices. Laconia, the one place for which I have attempted to amend this bill, was authorized an appropriation in the bill of March 4, 1913, of \$75,000. The city is of the required size, has more than the sufficient number of dollars in postal receipts required by law, but the post office is, notwithstanding, now occupying a rented building. Only recently I received a communication from the postmaster of that city, in which he stated that the lease on the building would expire about September 1; that he had already been served notice by the landlord of the building that if a new lease was desired it could only be had at nearly a 50 per cent increase upon the rent now paid, and would be carried from the date of the expiration of the present lease.

That is the situation that always confronts us when we are forced to occupy a leased building in which to do the post-office or any other business of this country. It is unsatisfactory and is a premium upon graft. No landlord in this country is going to let the United States Government have any building at any place where they are forced to accept a lease without from time to time increasing the rent and taking advantage of the opportunity which is presented thereby of extorting a few dollars or a few hundred dollars out of the United States Government.

I am free to confess that I have no hope of getting an appropriation for this building through at this time, the point of order having been made, although it has been authorized by a previous bill in this body. But I sincerely hope and trust, gentlemen, that you will give this matter your earnest and careful consideration. It is very much needed. It is very much more needed than a number of propositions of this kind that were passed in the same bill in which this appropriation was provided for on March 1, 1913.

Mr. SHARP. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. REED. Yes; certainly.

Mr. SHARP. How large a city is Laconia?

Mr. REED. It is a city of between ten and fifteen thousand inhabitants.

Mr. SHARP. What are the postal receipts?

Mr. REED. That I am not able to answer accurately.

Mr. MURRAY of Oklahoma. And it may be added that it is the center of all the surrounding country up there. [Laughter.]

Mr. REED. I would like to ask the gentleman to repeat the statement he made to my colleague in language that I was unable to hear.

Mr. MURRAY of Oklahoma. I said it was the center of all the surrounding country up there.

Mr. REED. No; not quite that yet, although it has that alfalfa country of yours backed off the map.

Mr. FITZGERALD. Mr. Chairman, the building was only authorized at the last session of Congress, and even if the appropriation were made now it would not help the gentleman, because he would not get the building. I make a point of order on that.

The CHAIRMAN. The point of order is sustained.

Mr. HULINGS. Mr. Chairman, I offer an amendment which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Pennsylvania [Mr. HULINGS].

The Clerk read as follows:

Page 4, line 20, after the figures "15,000," add a new paragraph, as follows:

"For the payment of a just share by the United States of the cost of paving, curbing, sewerage, and repair thereof on such parts of the public streets and alleys surrounding property owned by the United States and situated in various cities in the United States, the sum of \$100,000."

Mr. FITZGERALD. Mr. Chairman, I make the point of order on that. It is legislation.

Mr. HULINGS. I hope the gentleman will withhold his point for a moment.

Mr. FITZGERALD. It is useless to discuss that.

Mr. MANN. Let the gentleman have an opportunity to make a statement. Let him have five minutes.

Mr. FITZGERALD. It is legislation. I will ask the gentleman to withdraw his amendment for the present. He can offer it and get time to discuss it a little later on.

The CHAIRMAN. Does the gentleman from Pennsylvania [Mr. HULINGS] withdraw his amendment?

Mr. HULINGS. I will for the present.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. HULINGS] withdraws his amendment. The Clerk will read.

The Clerk read as follows:

New York (N. Y.) assay office: All unexpended balances of appropriations heretofore made for the enlargement, extension, remodeling, or rebuilding of the assay office in New York, including balances of appropriations made or available for vaults therefor, after the payment of outstanding liabilities on account thereof, are reappropriated and made available for the erection of a new structure on the site of the present assay office, including vaults, the services of consulting engineers, other specially trained engineers, and draftsmen to be selected by the Secretary of the Treasury at such rates of compensation as he may deem just and reasonable, and for all such other purposes requisite for the complete construction of such building, including the vaults therefor, all within a total limit of cost not exceeding the balances of appropriations hereby reappropriated.

Mr. REED. Mr. Chairman, I raise a point of order against that. That is new legislation.

Mr. FITZGERALD. Authority was given heretofore to alter the old assay office in the city of New York. The Secretary of the Treasury stated that it would be more economical and better, instead of attempting to repair the old building, to tear it down and put a new building in its place for the amount already authorized. There is no increase in the limit of cost, and there is no increase in the appropriation. It is subject to a point of order if anybody desires to make it.

Mr. REED. I make the point of order, Mr. Chairman.

The CHAIRMAN. The point of order is sustained. The Clerk will read.

The Clerk read as follows:

To pay amount found due for architects for services performed in connection with special repairs of the Treasury Building, \$540.

Mr. HARRISON. Mr. Chairman, reserving the right to object, I notice in that item, from line 9 to line 11, on page 6, this language is used:

To pay amount found due for architects for services performed in connection with special repairs of the Treasury Building, \$540.

What difference is there between that provision and the one we have asked for with respect to these 47 other projects? Is there any authority of law for this?

Mr. FITZGERALD. It is the amount of money found due under a contract entered into under the Tarsney Act. The work has been done. The services of the architects were obtained under the law, and there was a dispute about their compensation. This amount has been finally ascertained as due them.

Mr. HARRISON. Mr. Chairman, I withdraw the point of order.

The CHAIRMAN. The point of order is withdrawn. The Clerk will read.

The Clerk read as follows:

For compensation (not exceeding in the aggregate \$15,000 and at a monthly compensation not exceeding \$300 each, to be fixed by the Secretary of the Treasury) and traveling expenses of agents to select and recommend sites that have been authorized by law for public buildings, for the fiscal year 1914, \$30,000.

Mr. GILLET. Mr. Chairman, I make a point of order against that paragraph.

The CHAIRMAN. The gentleman from Massachusetts [Mr. GILLET] makes a point of order against the paragraph.

Mr. GILLET. It seems it is so clear, Mr. Chairman, that it is not authorized by existing law that there is no necessity of discussing it.

Mr. CLARK of Florida. Mr. Chairman, will not the gentleman from Massachusetts reserve his point of order?

Mr. GILLET. Certainly.

Mr. HARRISON. Mr. Chairman, may I ask the gentleman from Massachusetts [Mr. GILLET], who is a member of this committee, for what purpose is this appropriation intended? Will the gentleman explain? He is a member of the committee,

Mr. GILLETT. Perhaps the chairman of the committee [Mr. FITZGERALD] had better answer. I do not wish to assume to have charge of the bill.

Mr. FITZGERALD. Mr. Chairman, I hope the gentleman will reserve the point of order.

Mr. CLARK of Florida. I want to discuss the point of order.

The CHAIRMAN. The Chair will recognize the gentleman from Florida.

Mr. CLARK of Florida. I will yield first to the gentleman from New York [Mr. FITZGERALD], who desires to make a statement.

Mr. FITZGERALD. Mr. Chairman, I desire to make a statement on behalf of the committee. I hope the point of order will not be insisted on.

There are some 300 sites authorized to be acquired for public buildings. The sites have been advertised for under the law, and tenders have been made in the various localities where the sites are to be selected. In some instances two, three, half a dozen, or a dozen tenders have been made of sites to the Treasury Department. The practice heretofore has been to select some employee in the Supervising Architect's Office who for some reason desired to make a trip to the locality where the site was to be purchased and to send him to inspect the various sites and make a recommendation to the department as to the one best suited for the work and which under all the circumstances would be most beneficial and economical for the Government to purchase. In many instances employees desiring to take their leave were detailed upon these trips, and the opinion is that they were neither competent nor sufficiently interested to make the best recommendations on behalf of the Government.

The Treasury Department believes it will be economical and for the best interests of the Government to select half a dozen men of sufficient capacity, to be sent to the various localities in the country, examine the sites tendered, acquire accurate information as to the value of these sites, make an inspection to determine the advisability of locating public buildings upon the sites tendered, and make a report to the department. It is the opinion of those charged with this work that if this is done, sites much more satisfactory from the standpoint of the Government will be selected and prices can be obtained that will result in economy. It is believed that if this practice be followed, all of these 300 sites can be selected within six months, and thereafter the necessary steps taken to purchase them.

At the outset, when the matter was first suggested, I was opposed to the suggestion; but upon careful investigation, upon inquiry from different sources, I came to the conclusion that with some 300 sites to be acquired, involving an expenditure of at least \$3,500,000, affecting the location of more than 300 public buildings for the transaction of the business of the Government, an expenditure of \$15,000 for the compensation of competent men would be not only desirable, but would be more than repaid in the results to be obtained.

I sincerely trust that this item will not be eliminated from the bill. The expenditure for traveling expenses will be incurred regardless of whether the particular persons are employed, and this will merely enable more competent men to be selected to perform this work.

Mr. CLARK of Florida and Mr. HULINGS rose.

The CHAIRMAN. The Chair will recognize the gentleman from Florida [Mr. CLARK] to discuss the point of order.

Mr. HULINGS. I understood the point of order was withdrawn.

Mr. GILLETT. Oh, no.

The CHAIRMAN. The point of order was reserved. The gentleman from Pennsylvania [Mr. HULINGS] will be recognized in due time.

Mr. CLARK of Florida. Mr. Chairman, we have heard a great deal to-day about economy in the matter of these public buildings. The practice heretofore has been to appropriate \$15,000, I believe, to pay the expenses of agents to go about over the country to select these sites. These agents have been selected from among the clerks, stenographers, and other people in the Treasury Department who simply wanted a jaunt over the country.

When I was up at the Treasury Department a few weeks ago one of the Assistant Secretaries of the Treasury told me that one man in that office had been to him two or three times recently asking to be designated as one of the agents to go up into New England to select these sites. It was in the summer time, and it would simply give this man a little outing. If it was in the winter time, he would have requested to be sent to Florida or Louisiana or some other State in the South.

Now that is the character of the agents who have gone out heretofore to select these sites. They have been stenographers and clerks who knew no more about the value of real estate than a Texas jackrabbit would know if you sent him on a similar mission. The result has been that the Government has been required to pay enormously more than the property was worth; and now when we have an opportunity to institute a real reform that means a saving of hundreds of thousands of dollars to the Government, gentlemen make points of order.

It is the intention of the Secretary to select gentlemen for this work from the different localities where sites are to be selected who are acquainted with property values, gentlemen of integrity and high character and knowledge along these lines. Of course the point of order must be sustained if insisted upon; but if my friend from Massachusetts is as true to his declarations of love for economical administration as he hoped to-day I was, and as I believe I shall show him in the future I am, he will withdraw this point of order.

Mr. GILLETT. Mr. Chairman, I presume there may be some foundation for the statements made by the gentleman from Florida and the gentleman from New York. Very likely employees who want to go to a cooler climate have occasionally requested such an assignment, just as we notice the Secretary of War has just returned from an official trip through the Northwest, and the Secretary of the Navy has been at Newport and other New England resorts.

Mr. MANN. Where is the Secretary of State?

Mr. GILLETT. It all shows that human nature is about the same in the Cabinet and subordinate offices of the Government.

But these personally requested assignments have been rare. I believe, Mr. Chairman, that these men who select the sites have in the main well performed their duty. I have heard in my region little criticism either upon their judgment or their ability. It does not require any great capacity to wisely select a site. It requires good judgment and impartiality and honesty, and that is about all. I believe, Mr. Chairman, we are quite as likely to get that from subordinates in the Treasury Department as they are from men appointed by the Secretary of the Treasury, as he expects, outside of the civil service, because that means that they will not be appointed by the Secretary from the men he knows best fitted for the positions, but they will be appointed because the gentleman from Florida or the gentleman from New York or other influential Democrats wish to get places for their friends. Therefore, I believe the present system is more economical and will bring better results than this desired change, which merely offers more patronage. If the other side of the House wants to take the responsibility of carrying this, they can do it in the Senate, or they can get a rule. Therefore, Mr. Chairman, I now make the point of order that this is not authorized by existing law.

The CHAIRMAN. The point of order is sustained.

Mr. AUSTIN. Mr. Chairman, with all due respect for the present occupant of the chair, I appeal from the ruling of the Chair.

The CHAIRMAN. The gentleman from Tennessee appeals from the ruling of the Chair. The question is, Shall the decision of the Chair stand as the judgment of the committee?

The question was taken, and the decision of the Chair was sustained.

Mr. COX. Mr. Chairman, I move to strike out the last word.

Mr. MURDOCK. Mr. Chairman, the gentleman from Pennsylvania [Mr. HULINGS] has an amendment, which he has sent to the desk, inserting a new paragraph.

Mr. HULINGS. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Page 6, between lines 17 and 18, add a new paragraph, as follows: "For the payment of a just share by the United States of the cost of paving, curbing, sewerage, and repairing thereof on such parts of the public streets and alleys bounding property owned by the United States and situated in boroughs and cities in the United States, the sum of \$100,000."

Mr. BARTLETT. Mr. Chairman, I reserve a point of order on the amendment.

Mr. HULINGS. Mr. Chairman, I only desire a moment to bring to the attention of the House a matter that I think is of importance. I believe that the United States, while it does pay for light and water and heat for its public buildings situated in towns and cities, and for things of that sort, should also pay for the arrangements that are necessary in the way of disposing of sewage and the paving of the streets contiguous to its public buildings. While I understand that this measure has been before the House many times in the past, I have heard no substantial reason advanced why the United States should

not pay its full share of the paving and curbing and sewerage and the improvements of its real estate in like manner as any private owner of abutting property on the street is compelled to pay under the law.

The department has refused to make contributions for these purposes on the ground that there is no appropriation for it. It is a matter that is standing in the way of public improvements in many places. While this may be thrown out under a point of order made by some of our parliamentary sharps, still I believe it is a matter that should be brought up and disposed of by Congress, as I can imagine no reason why the Government should insist that private owners of adjoining property should pay for the improvement of Government property.

Mr. MANN. Will the gentleman yield?

Mr. HULINGS. Certainly.

Mr. MANN. Has the gentleman made any estimate of the amount of money which would be required if Congress should undertake to pave the streets surrounding the public buildings throughout the United States?

Mr. HULINGS. I have not the slightest idea. I believe \$100,000 will be only a drop in the bucket, but it would be enough to inaugurate the system. It is right that the Government should stand in and pay the cost of proper and necessary street improvement, and this powerful Government should not stand at the cost if it is right. It will not cost the Government, which is the aggregate of the people, any more than its fair share. The individuals who are now obliged to pay for the Government's share of these improvements often do so from slender purses, and the refusal of the Government to contribute simply makes it inequitable and often impossible for the people in towns where there are Government buildings to make much-needed public improvements.

Mr. FITZGERALD. Mr. Chairman, before insisting upon the point of order, I will state that there is a general statute which prohibits the acquisition of any site by the United States in any city unless there is a law in the State in which the city is situated which forever makes that property exempt from taxation, and in a case that went to the United States Supreme Court it was held that an assessment for improvements came within the prohibition and the United States could not be made liable for assessments for improvements. That statute was adopted by Congress after careful consideration, and to attempt to change it at this time would not only be a reversal of policy, which has been fixed for years, but it would entail the expenditure of untold millions of dollars.

Mr. HULINGS. Mr. Chairman, I desire to say that I will not resist the point of order if it is made, but I have already presented to this House a bill which covers the same subject, and the purpose of offering this amendment at this time is more to bring the matter to the attention of Members of Congress in order that they may consider it.

Mr. MANN. The gentleman should get the attention of the Committee on Public Buildings and Grounds, because that committee has legislative authority over the subject and can provide for the introduction of such a provision.

Mr. MURDOCK. Mr. Chairman, will the gentleman from New York yield?

Mr. FITZGERALD. Certainly.

Mr. MURDOCK. Does the Government property stop at the sidewalk in every instance?

Mr. FITZGERALD. It depends entirely upon the way in which they acquire title. If the Government acquires title to the center of the street, they have that title.

Mr. MURDOCK. As a matter of fact, they do not acquire title to the center of the street, and what I want to get out of the gentleman is this: Do they require, as a rule, sidewalk space?

Mr. FITZGERALD. I am not sufficiently informed to answer the gentleman.

Mr. MURDOCK. I have been informed that in New York City—I think it is in the case of the customhouse—the Government pays rental to the city of New York for space used under the sidewalk.

Mr. FITZGERALD. That is a different matter. Under a city ordinance in the city of New York no one is permitted to put a vault outside of the building line except upon obtaining a permit from the city authorities and the payment of an annual fee based upon the amount of space that is used. Even the owner of the property can not do so.

Mr. MURDOCK. Even if the title is in the private individual, he must pay for the space used under the sidewalk?

Mr. FITZGERALD. Yes.

Mr. MURDOCK. Does the gentleman know whether the Government does that in New York in any instance?

Mr. FITZGERALD. I do not know. I doubt it, because there is no appropriation with which I am familiar out of which it could be paid, unless perhaps it may be paid out of the customs appropriation. My doubt is emphasized by this fact, that in the city of New York a franchise was granted to the Government to lay a pneumatic tube from the customhouse to the appraisers' stores, and I think legislation was obtained to make it in perpetuity.

Mr. MADDEN. But they would not need any legislation. The Government would have a right to lay that pneumatic tube without any authority from the city.

Mr. FITZGERALD. Oh, no; it would not.

Mr. MADDEN. Oh, yes. The Government has a right to take any street in any city in the United States upon which to lay its pneumatic tubes, without any authority from the city.

Mr. FITZGERALD. The gentleman is mistaken. The United States would have to condemn a right under the provisions of the Constitution, authorizing it to acquire property rights by the exercise of eminent domain. This was granted without any such proceedings. Mr. Chairman, I insist upon the point of order.

The CHAIRMAN. The point of order is sustained.

The Clerk read as follows:

REVENUE-CUTTER SERVICE.

To supply a deficiency in the appropriation for expenses of the Revenue-Cutter Service, including all objects of expenditure authorized in said appropriation for the fiscal year 1913, \$4,857.

Mr. MURRAY of Oklahoma. Mr. Chairman—

Mr. MANN. Mr. Chairman, I move to strike out the last word for the purpose of suggesting that in the ordinary course of events—

Mr. FITZGERALD. I suggest we get down to line 15 on the next page. The gentleman from Oklahoma desires to offer an amendment.

Mr. MANN. What is it about?

Mr. FITZGERALD. He wants to make a few remarks.

Mr. MANN. What about?

Mr. MURRAY of Oklahoma. I want to discuss the Revenue-Cutter Service.

Mr. MANN. The gentleman does not want to discuss the Revenue-Cutter Service. Coming from the part of the country he does, he does not know anything about that service.

Mr. FITZGERALD. The gentleman from Indiana [Mr. Cox], at my request, waited until this time to submit some remarks on the public-buildings matter, along the line of those already submitted, and he desires to have them appear in the Record with those already made, and I hope the gentleman will withhold his point.

Mr. MURRAY of Oklahoma. Mr. Chairman, I move to strike out the last word. Mr. Chairman, the House will doubtless understand the difficulty I have in discussing a subject not directly in connection with this bill and yet conform to the rule, so that I may not be taken off the floor by a point of order. This paragraph relates to the Revenue-Cutter Service, whose duties, I am informed by the committee, will be to see that the revenues are collected; incidentally, of course, it will have to do with contraband goods.

Mr. MANN. Well, they do not have anything to do with the collection of the revenue. I said the gentleman did not know.

Mr. MURRAY of Oklahoma. I will accept the gentleman's information on that point. Incidentally they would have to do with the embargo against certain goods. This Nation has never, except in two instances, entered upon a system of embargo. First, in 1807 Mr. Jefferson, with an idea that the country could exist without any military force, conceived the notion that by retaliation and by exclusion of commerce war could be prevented. It was first favored by the agricultural States, but they later demanded its repeal when they suffered for a market. Jefferson lived to regret it, and it is the only policy that he advocated that he ever had cause to regret.

In after years he said, speaking of the Shay rebellion:

God forbid we should ever be 20 years without such. * * * What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure. (Jefferson's Works, vol. 2, p. 267.)

Jefferson's own party repudiated the embargo doctrine. In 1809 Congress, fresh from the people, or at the behest of the people, repudiated that act of embargo. The President plead with Congress not to repeal it until the 1st of June, but in February they made the act take effect on the 1st of March. Now we have come to the proposition of an embargo upon a certain kind of goods that may be used in war, and that embargo is fixed under a resolution of Congress and declared by President Taft and still continues. If this is intended to continue I am opposed to it. The doctrine of neutrality in every nation, and especially of this, has been that a neutral power is not called

upon to cause any of its citizens to sacrifice any of their rights to trade with the world.

Mr. Jefferson, when Secretary of State, so stated to the British minister, and it was stated by every Secretary of State since when the question arose; and yet we say that because there is a war in Mexico, or rebellion, that firearms and ammunition and everything that may be used in war shall be prohibited from being shipped across the border, and so absurd is that doctrine and so unjust in its application that in El Paso a retail merchant stands indicted and under bond for selling cartridges to a Mexican in his retail business. The only limitation we can exact of a merchant is that if the goods should be sold and one of the belligerent parties gets possession of them he can not ask his Government for compensation for their destruction. I had hoped that since the experience of this country in the embargo act of 1807 to 1809 we would never engage in this policy again.

Now, the President says he holds to Taft's order because he is opposed to Huerta. In that opposition I think he is wise, but inadvertently he is assisting Huerta, because the latter has the ports where they collect the Mexican revenue, and guns may be shipped through those ports to the Huerta government unless we close them.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. MURRAY of Oklahoma. Let me finish this sentence, and then I will close.

Mr. MANN. Mr. Chairman, reserving the right to object, I will say to the gentleman, if he proceeds along these lines again after he finishes the sentence I will make a point of order against it.

Mr. MURRAY of Oklahoma. I am discussing this question.

Mr. MANN. I will leave that to the Chair.

Mr. MURRAY of Oklahoma. Let me finish this sentence.

Mr. MANN. All right. I do not think that side of the House ought to discuss the Mexican situation and ask this side to keep still.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent for an extension of a minute. Is there objection? [After a pause.] The Chair hears none.

Mr. MURRAY of Oklahoma. The patrol on the land border of Mexico by the United States Regulars cuts the insurgents off from getting arms, and thereby instead of making a balance between the two it creates a situation which aids Huerta to the detriment of the insurgents. The only way to insure fair play is to follow the international law. Situated as we are, let American merchants sell their goods anywhere in the world under the international law, and give the contending Mexican hands equality. That would not aid Huerta but would put them both on the same basis. I cordially approve of the President in his opposition against Huerta; but I oppose such unjust restriction against American commerce, without which agriculture will suffer, as it did in the embargo act of 1807, which caused its repeal.

The CHAIRMAN. The gentleman from Indiana [Mr. Cox] is recognized.

Mr. COX. Mr. Chairman, I will not consume time this evening if the gentleman from Illinois [Mr. MANN] wants to adjourn.

Mr. MANN. I am not raising any question. I always love to listen to the gentleman from Indiana.

Mr. COX. I do not want over three minutes.

Mr. MANN. Will the gentleman yield to let the gentleman from Maine [Mr. HINDS] make a request?

Mr. COX. I will.

Mr. HINDS. Mr. Chairman, I ask unanimous consent to extend my remarks in the Record.

The CHAIRMAN. The gentleman from Maine [Mr. HINDS] asks unanimous consent to extend his remarks in the Record. Is there objection? [After a pause.] The Chair hears none.

The gentleman from Indiana [Mr. Cox] is recognized.

Mr. COX. Mr. Chairman, I only want to make a statement in connection with the arguments made this evening, pro and con, by some of the Members as to an appropriation of \$150,000 for the purpose of enlarging the Supervising Architect's Office.

I do not believe that enough of importance is attached to the statute read by the gentleman from New York [Mr. FITZGERALD] which provides that whenever a department finds itself in arrears, it can exact longer hours of service of its employees. I understand the employees of the Supervising Architect's Office work only seven hours per day. Now, to the point.

Two years ago this summer, my committee, the Committee on Expenditures in the Treasury Department, investigated to some extent the Supervising Architect's Office, and I found it to be

true that some of the employees in the Supervising Architect's Office, after working seven hours a day, went out and employed themselves with private architects.

Now, the query occurs to my mind why this statute is not being enforced. If there is a congestion in the Supervising Architect's Office, under the statute which is now in force and which gives the Secretary of the Treasury the power, I would like to know why he does not exact of these employees a few longer hours each day so as to work out the congestion there? If that statute be enforced, these employees could well afford to work a few extra hours each day for the Government instead of, following their day's work, employing the remainder of their time, three or four or five hours, with outsiders, that work could soon be caught up, and then every Member of this House who is insisting on public buildings would not be required to ask Congress to appropriate \$150,000, or any other sum of money, to work out that congestion.

Now, I am not saying, Mr. Chairman, that the present Secretary of the Treasury has failed to look into that matter, but I do believe it to be the part of wisdom for the Secretary of the Treasury to look into it and see whether or not the employees of the architect's office after working seven hours per day are employing the remainder of the day and selling the remainder of their time to private enterprise.

Mr. HARRISON. Mr. Chairman, I agree with what the gentleman from Indiana says with respect to the employees working seven hours a day in the Supervising Architect's Office. It should be remedied. There is no reason why they should not work eight hours as they do in other departments of the Government. But I do not believe all the criticism that has been heaped upon the Supervising Architect this afternoon has been just. Neither do I believe that the Secretary of the Treasury has been placed in the proper light in all that has been said about him.

I saw some of the economical spirit that pervades the Committee on Appropriations manifested a few moments ago. There was an item that carried \$30,000 appropriation in order to send out agents through the country to select sites for some buildings that can not be started for over three years yet. That is economy. And a few moments before I saw the chairman of the committee and his colleagues on the committee fight against an appropriation of \$150,000 that I asked consideration of in order to carry out the plans that had been recommended by the Supervising Architect and the Secretary of the Treasury to make it possible to expend two and one-half million dollars that had already been appropriated for.

I submit to any fair-minded Member here that it is more proper and more economical to appropriate \$150,000, as we have asked for, in order to carry on these 47 projects which the Secretary of the Treasury has recommended, and which in most cases have been held up for one or two years, and which have been appropriated for, and everything ready for erecting the building except lack of funds to draw and prepare the plans and specifications, rather than to expend \$30,000 to send out some agents to select some sites that can not be built upon for over three years yet. [Applause.]

I understand that there is a sentiment here now, since the point of order has been made against this \$30,000 appropriation, in favor of bringing in a rule whereby this item will be put back. I submit to the fairness of the Committee on Appropriations, and I appeal to the high-mindedness of every Representative here, that when that rule is reported a like rule should be reported to the effect that an appropriation of \$150,000 for these 47 sidetracked projects that have been recommended by the Secretary of the Treasury should be included also.

I say I believe the Secretary of the Treasury has been erroneously quoted, because the hearings show that he went before the Committee on Appropriations and pleaded before that committee and backed up the Supervising Architect on this proposition for increased force, saying that this proposed expenditure of \$150,000 was a just expenditure and was needed in order to carry on the work on those buildings that had been sidetracked last year and previous years. In some cases the appropriations had been made as far back as 1908, and the first appropriation in some of those cases was made as far back as 1906, and have been held up for different reasons.

The Secretary of the Treasury asked the committee to make this appropriation, and I read in those hearings where my distinguished colleague [Mr. Sisson], together with the distinguished chairman of this committee [Mr. FITZGERALD], and my friend from Georgia [Mr. BARTLETT], began to pop questions at him and examined him as they would examine an adverse

witness on the witness stand; and, finally, after my friend there, the chairman, had submitted many questions to him, he said:

Why, Mr. McAdoo, don't you know that President Taft last year said that there would be a \$25,000,000 deficit in the Treasury, and do you want to pile up another expenditure in view of that fact?

And when the chairman of the committee put that question to him in that way, the Secretary said:

Maybe this matter can be carried over to the next appropriation bill.

Mr. FITZGERALD. Did he not put it a little differently?

Mr. HARRISON. Not until the gentleman put it in that light.

Mr. FITZGERALD. Did he not say that when these estimates were submitted his attention had not been called to the fact that the commission of which he was the head had been organized to take up the entire subject of the construction of public buildings and report a definite plan to be pursued, and then expressed the belief that inasmuch as that commission had organized since the estimates were submitted, they could take the matter up and make report at the next session of Congress, and therefore in his opinion it would be better to defer until the next session the transmission of the estimates?

Mr. HARRISON. He did not put it in just that way. The gentleman has depicted it in his own words.

Mr. FITZGERALD. Read what the Secretary said.

Mr. HARRISON. I shall be glad to read it. This question was asked by my colleague [Mr. Sisson] after the Secretary of the Treasury had been under examination for some time.

Speaking of the standardizing of public buildings, Mr. Sisson said:

Do you mean to convey the idea, then, that the Supervising Architect's Office can not standardize the buildings which shall cost, say, \$50,000, and that they can not standardize another class that will cost, say, \$75,000, so that when an authorization is made for a building at a cost of \$50,000 or \$75,000 or \$100,000 it can not be constructed in accordance with standards fixed for such buildings?

Secretary McAdoo. I mean to say that you can, but, of course, it is not a building that will cost only \$75,000, but it is a building which must meet a local situation; it is a building which must be adapted to the lot on which it is to be placed, and, again, it is a building to meet the requirements of that particular locality—

And so on. Then the gentleman from Mississippi [Mr. Sisson], following up the question, said:

Then the Supervising Architect's Office has deliberately determined that they will not carry out that plan?

Does the gentleman from New York [Mr. FITZGERALD] want to hear that?

Mr. FITZGERALD. Yes. I was present.

Mr. HARRISON. I will read. Mr. McAdoo, answering, said:

I think that statement is wholly wrong.

Mr. Sisson. The Supervising Architect has deliberately disregarded the intention of Congress in that respect.

Secretary McAdoo. I think that is an altogether wrong inference. Let me say this: I was going on to say that since these estimates were submitted the Public Buildings Commission which was authorized by the act of March 3, 1913, has been organized, and the Secretary of the Treasury is the chairman of that commission. We are going very carefully into all of these questions, and I very much hope that the commission will be able to submit at the next session of Congress a very definite recommendation as to the policy to be pursued with respect to public buildings in all particulars—

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. HARRISON. Mr. Chairman, may I have a few minutes more?

The CHAIRMAN. The gentleman from Mississippi [Mr. HARRISON] asks unanimous consent to proceed for three minutes more. Is there objection?

There was no objection.

Mr. HARRISON. That was in answer to the questions about standardizing the public buildings of this country.

Mr. FITZGERALD. Read on.

Mr. HARRISON. He says:

As well as to present a cohesive, consistent, and concrete plan for dealing with many of the questions which I think are in your mind. I think, therefore, if I may be permitted to say it, that we are indulging in a fruitless discussion now.

That is what he said. Then, farther down, the chairman [Mr. FITZGERALD] put it to him in this way:

The CHAIRMAN. The situation is this: As the chief fiscal officer of the Government, you are required to outline the fiscal policy and make recommendations to Congress. Now, President Taft in his message to Congress of February 26 pointed out that without any change at all in our fiscal arrangements there would be a deficit this year of at least \$25,000,000. There will be a change in our tariff law, and, if the customary results follow, there will probably be a further falling off in revenues. Then the question arises whether the department recommends any appropriations that will increase during this year the output of public buildings.

Secretary McAdoo. The reasons why this estimate was submitted, have already been stated. I wish to say, however, in that connection that, since the Public Buildings Commission has been organized and we have been working upon these building matters, I think it would be well to omit from these estimates all of those projects with the exception of the appraiser's stores at Boston.

That is what he said.

Mr. FITZGERALD. Yes.

Mr. HARRISON. He did not state that he did not know anything about this commission before he made the estimate.

Mr. Sisson. He did state that.

Mr. FITZGERALD. Yes; he did.

Mr. HARRISON. I have not seen it in the hearings here.

Mr. Sisson. There are a good many things that were said that do not appear in those hearings.

Mr. FITZGERALD. Whether the gentleman has seen it or not, he made that statement. My statement stands upon its merits.

Mr. HARRISON. I have read what I see there in the hearings, and the gentleman can read into it what he wants to. I understand that a good deal was stricken out of the record about this matter.

Mr. FITZGERALD. I do not know whether it was stricken out or not. The Secretary made the statement in a way that he did not intend to make it, and he may have taken the whole thing out.

Mr. HARRISON. I have not seen in the hearings what the gentleman asserts. He may be right, but I have read carefully the hearings and I did not see that.

Mr. FITZGERALD. The transcript of the hearing was sent to the Secretary himself, and it is possible that he did strike it out.

Mr. HARRISON. Mr. Chairman, I say it is not fair to the Members of Congress who represent districts wherein these 47 projects are located and which have been held up for different reasons, that they be delayed three years more by the Supervising Architect, because of the action of this Committee on Appropriations in failing to report this appropriation, and I submit that this \$150,000 should be appropriated so that the department may go ahead with these plans, that these towns may get these buildings constructed at an early date for which appropriations have already been made.

Mr. Sisson. I want to state to my friend from Mississippi that he is entirely mistaken about this matter. When the Supervising Architect was before this committee, in the presence of Mr. McAdoo, when we examined the Supervising Architect and examined Mr. McAdoo in reference to this situation, Mr. McAdoo himself specifically stated that he knew nothing about the existence of this commission, and that the moment he knew about the commission and the condition that was prevailing in the architect's office, he without hesitation said it was proper and right that this matter should go over.

The gentleman from Mississippi [Mr. HARRISON] now complains because his matter is not taken up. Let me say to my friend that if there had been no special session of Congress he could not have gotten his building until the regular session. He takes advantage of the fact that there is a deficiency bill here, and there is a systematic campaign on the part of the Supervising Architect's Office, in an endeavor to compel Congress to do something that we do not believe we ought to do. My friend, the gentleman from Indiana [Mr. Cox], stated here a moment ago that when his committee investigated the matter it found that these men, who are working seven hours a day, are going out and doing private outside work.

I did not know that myself when this architect was before us. Gentlemen here think more of these projects in their districts to get money out of the Treasury, and of using the Federal Treasury, if need be, to procure a little money in the nature of a campaign fund on these projects. Why, you can not afford to put the membership of the House upon that basis. If a man's only right to remain depends upon the amount of money he can secure for his district, then statesmanship has gotten to a low ebb.

And there is this other thing about it. When gentlemen talk about the Secretary of the Treasury as if he was not in accord with the position of the committee, I want to say that there is nothing in it, nor has anybody criticized the Secretary of the Treasury. On the contrary, I stand here now and indorse every word that the Secretary of the Treasury said, and say that he is a good business man and wanted this matter to go over until he could thoroughly investigate it.

Mr. BURNETT. Will the gentleman yield?

Mr. Sisson. No; I can not. The gentleman from Florida [Mr. CLARK], the chairman of the Committee on Public Buildings and Grounds, is here now, a member of that commission, and he wanted that matter investigated so that he could ascertain whether or not things are going on right in the architect's office. The statement was made by the gentleman on the floor that the office down there cost 6 per cent of the cost of the project. When private architects go out and bid for the architect's plans, they will supervise the entire building for 5 per cent.

The statement was made that gentlemen would be glad to take it for 2 per cent, and yet Members are insisting on the Supervising Architect's office force being increased 50 per cent. Every man who has been a Member of Congress any time knows that when you attach a man's name to the roll temporarily you never can get him off the roll. Why? Because some man, some Member, stands in with the architect and will not permit him to take it off. And yet men are willing in order to get a building to increase the Supervising Architect's Office 50 per cent. I am willing that buildings should take the regular course, and, so far as I am concerned, it is immaterial what Members may think about my course and conduct here just so long as I think I am right.

I want to say in regard to the chairman of the Committee on Appropriations that I have served with him for some time, and he is not only eminently fair, but he is courageous and infinitely more liberal in many of these matters than I would be. I have heard him criticized here because he is endeavoring to stand by a pledge which we made the American people to economize in public expenses. Would to God his critics were as sound as he is.

[The time of Mr. Sisson having expired, by unanimous consent his time was extended one minute.]

It comes with poor grace from a Democrat to criticize the chairman of the Committee on Appropriations and the committee, who are endeavoring to install and carry out the pledge of the platform. If that criticism came from Republicans, it would be different, but it does not come from them; it comes from Democrats here who in their extravagance make the Republicans look like thoroughbred economists. Ex-Congressman Dickson, of my State, called these Democrats who were of this extravagant type "Chitling Democrats."

Mr. REED. Mr. Chairman, I would like to ask the gentleman a question. The gentleman has referred to Democrats as a hungry lot of fellows who have just got their noses up to the trough. I want to ask him if the bill is not filled with all sorts of things that seem to indicate that the committee has had its nose to the trough and excluded every other Democrat? [Laughter.]

Mr. Sisson. I have not a single thing on earth in the bill.

Mr. FITZGERALD. Nor has any other member of the committee.

Mr. Sisson. No member of the committee has anything in the bill.

Mr. REED. But the districts represented by members of the committee have got all they want.

Mr. FITZGERALD. No district represented by any member of the committee has got what it wants, as far as I know.

Mr. ADAMSON. Mr. Chairman, I make a point of order against the gentleman from Mississippi mentioning chitling at this time of day, for we are getting hungry. [Laughter.]

Mr. HARRISON. I would like to ask the gentleman from Mississippi if he is in favor of displacing these 47 projects and putting ahead of them these buildings that were way behind them in their chronological order?

Mr. Sisson. Not at all. I want every building taken up in the order in which the authorization was obtained. That is the rule of the office. I would not have my own building taken up out of order one single minute or day. I resent anybody else having theirs taken up.

Mr. FITZGERALD. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee determined to rise; and the Speaker having resumed the chair, Mr. Flood, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7898, the urgent deficiency bill, and had come to no resolution thereon.

LEAVE OF ABSENCE.

Mr. Good, by unanimous consent, was given leave of absence indefinitely on account of illness.

COMMERCE WITH PHILIPPINE ISLANDS (H. DOC. NO. 217).

Mr. GARRETT of Tennessee. Mr. Speaker, I desire to submit a request for unanimous consent to extend my remarks in the Record. I have here a compilation made by Mr. John B. Worcester of certain statistical matter on the commerce with the Philippine Islands furnished me by Mr. Erving Winslow, which I desire to print in the Record.

The SPEAKER. The gentleman from Tennessee asks unanimous consent to extend his remarks in the Record. Is there objection?

Mr. MANN. Reserving the right to object, how long is it?

Mr. GARRETT of Tennessee. It is rather difficult for me to say just how much space it will take.

Mr. MANN. Does the gentleman prefer to have it printed in the Record rather than as a House document?

Mr. GARRETT of Tennessee. I think I would prefer the Record.

Mr. MANN. Of course the printing of such things in the Record is in such fine print that no one with any respect for his eyes will read it.

Mr. HARDWICK. I think the gentleman should not ask to have it printed as a House document until we can see what the Committee on Printing will say about it.

Mr. GARRETT of Tennessee. I will ask unanimous consent to print it as a House document.

The SPEAKER. The gentleman from Tennessee changes his request and asks to have it printed as a House document. Is there objection?

Mr. HARDWICK. Mr. Speaker, I have heretofore reserved the right to object until we could have some estimate of the cost or send it to the Committee on Printing.

Mr. MANN. Oh, it will not cost very much.

Mr. HARDWICK. Very well, I shall not object.

The SPEAKER. The Chair hears none and it is so ordered.

ADJOURNMENT.

Then, on motion of Mr. FITZGERALD (at 5 o'clock and 59 minutes p. m.), the House adjourned until to-morrow, Friday, September 5, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATION.

Under clause 2 of Rule XXIV, a letter from the Acting Secretary of War, transmitting with a letter from the Chief of Engineers, report on examination of Shell Creek, De Soto County, Fla., from Hickman to Belmont (H. Doc. No. 216), was taken from the Speaker's table, referred to the Committee on Rivers and Harbors, and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. STEPHENS of Texas (by request): A bill (H. R. 7926) to enable the Secretary of the Interior to complete the work of preparing final citizenship rolls of each of the Five Civilized Tribes in Oklahoma, and to distribute the estates of said tribes among the beneficiaries entitled to share therein, and for other purposes; to the Committee on Indian Affairs.

By Mr. KINKAID of Nebraska: A bill (H. R. 7927) to provide for second homestead and desert-land entries; to the Committee on the Public Lands.

By Mr. ASWELL: A bill (H. R. 7928) for the erection of a Federal building at Winnfield, La.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 7929) to authorize a survey of Cane River from Grand Ecote, La., to Colfax, La.; to the Committee on Rivers and Harbors.

By Mr. ADAMSON: A bill (H. R. 7934) to amend the act entitled "An act to regulate commerce," approved February 4, 1887, as heretofore amended, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CLARK of Florida: Resolution (H. Res. 243) making certain portions of H. R. 7898 in order during the consideration of same; to the Committee on Rules.

By Mr. KENT: Joint resolution (H. J. Res. 127) proposing the establishment of a monopoly for the manufacture of explosives by the Federal Government; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows.

By Mr. ADAIR: A bill (H. R. 7930) granting an increase of pension to Jeremiah Laughlin; to the Committee on Invalid Pensions.

By Mr. GARRETT of Tennessee: A bill (H. R. 7931) granting an increase of pension to Amasa J. T. Wilson; to the Committee on Invalid Pensions.

By Mr. HOWARD: A bill (H. R. 7932) for the relief of Ellen V. Orme, administratrix of the estate of William Pope; to the Committee on War Claims.

By Mr. NELSON: A bill (H. R. 7933) granting an increase of pension to Eugene M. Smith; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. GARRETT of Tennessee: Papers to accompany a bill granting an increase of pension to Amasa J. T. Wilson; to the Committee on Invalid Pensions.

By Mr. SABATH: Petition of Ambrosius Mannerchor, Elsass Lothringer Fortschrittsverein, and Harugari Liedertafel, opposing the placing of duty of 15 per cent on importation of books printed in German or any other foreign language; to the Committee on Ways and Means.

By Mr. STAFFORD: Petition of G. A. Bading, mayor of Milwaukee, Wis., and other citizens of that place and Chicago, protesting against the proposed 15 per cent tariff duty on books printed in foreign languages; to the Committee on Ways and Means.

Also, petition of George W. Wartenberg, acting chairman committee on Slavic Federation, and others of Milwaukee, Wis., requesting the President to arrange for a conference to settle the Balkan controversies; to the Committee on Foreign Affairs.

By Mr. WILLIS: Papers to accompany bill (H. R. 7925) granting a pension to William H. Dixon; to the Committee on Invalid Pensions.

SENATE.

FRIDAY, September 5, 1913.

The Senate met at 2 o'clock p. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Secretary proceeded to read the Journal of yesterday's proceedings, when, on request of Mr. SIMMONS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had agreed to a concurrent resolution (H. Con. Res. 8) providing for the distribution of 50,000 copies of House Document No. 1458, Sixty-second Congress, being "Prayers offered at the opening of the sessions of the Sixty-second Congress of the United States," in which it requested the concurrence of the Senate.

MEMORIAL.

Mr. CLAPP presented a memorial of sundry citizens of North Dakota, engaged in the pursuit of farming, remonstrating against free trade on farm products, which was ordered to lie on the table.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHAFROTH:

A bill (S. 3085) to amend section 20 of chapter 1 of the act entitled "An act to regulate commerce," approved February 4, 1887, and as heretofore amended, by fixing the limitation within which actions may be brought on bills of lading; to the Committee on Commerce.

By Mr. PENROSE:

A bill (S. 3086) granting an increase of pension to Sarah A. Stockman; to the Committee on Pensions.

By Mr. POINDEXTER:

A bill (S. 3087) providing for the relief of settlers on unsurveyed railroad lands; to the Committee on Public Lands.

A bill (S. 3088) for the relief of Edward Gaynor; and

A bill (S. 3089) for the relief of John L. Gruber; to the Committee on Claims.

A bill (S. 3090) granting an increase of pension to Bernhardt R. Britton; to the Committee on Pensions.

COMMERCE WITH CANADA.

Mr. THOMAS. Mr. President, the contiguity of the United States with Canada and the inevitable enactment of the pending tariff bill have for months been a source of great and continued apprehension upon the part of its opponents, who have filled the CONGRESSIONAL RECORD during that time with many dismal forebodings. One of the consequences of its passage is said to be the inevitable commercial invasion by that country of our own, that their superior competitive genius will overwhelm our industries and practically destroy them, reducing us to our original pursuits of agriculture, limited and controlled by the farm productions of the great Northwest, whose strong competition we can not meet or avoid.

I have no expectation that anything which can be said or written upon the subject will in any degree serve to remove this ap-

prehension of coming disaster from the minds of Senators, but I am in possession of a short article which may put a silver lining upon the cloud which now broods so ominously over the horizon of the immediate future, if we are to believe and credit the prophecies to which I have referred, so that others may see and be encouraged by it.

I refer to an article from the Washington Post of the 2d instant, concerning the growth of our commerce with Canada, which I ask unanimous consent to have read from the desk.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

[From the Washington Post, September 2, 1913.]

"HOLLAND" TELLS OF GREAT GROWTH OF OUR COMMERCE WITH CANADA.
NEW YORK, September 1.

In one of his rare visits in recent years to the United States James Stillman, chairman of the board, National City Bank, spoke to some of his friends about the inconceivably great opportunity which South America offers to the United States for commerce, trade, and the investment of capital for development of natural resources of all kinds. American bankers who also hold the view expressed by Mr. Stillman have been sending competent representatives to South America so that reliable information can be obtained respecting banking opportunities or other openings for the investment of American capital. These bankers, when they speak with this subject in mind, always refer to the effect upon North and South American commerce which is sure to be created by the opening of the Panama Canal.

Attention has been directed since the recent publication of the statistics of our international trade and commerce, which came from the Department of Commerce in Washington, to the fact that, although the eyes of bankers are turned toward South America and the attention of capital is being directed to the opportunities the southern continent offers, little or nothing is heard of our commercial and trade relations with Canada. Nobody seems to have thought of sending agents into Canada for the purpose of learning what opportunities for trade and expansion may be found there. And yet the information furnished by the Department of Commerce shows that we are likely to find for years to come our greatest customer in Canada, and more likely to establish our greatest American international commerce with Canada than with South America, no matter what the effect of the opening of the Panama Canal to navigation may be.

The leading men of finance of Europe have now become familiar with an American phenomenon, which a few years ago they would have deemed impossible, namely, a record-making advance upon foreign markets by American manufacturers within the past 10 years. But it rarely happens when our own men of business meet their friends who conduct large affairs in Europe that any reference is made to a phenomenon quite as startling as is that associated with the sudden growth of our exportation of manufactured commodities.

CANADA OUR BEST CUSTOMER.

In 1908 the money value of the entire commerce back and forth with Canada was, in round numbers, \$225,000,000. The Department of Commerce at Washington is now able to report that the commerce between the United States and Canada both ways was in the fiscal year which ended on June 30 somewhat in excess of \$500,000,000. We have therefore increased our reciprocal commerce with our neighbor on the north so greatly in five years that it has doubled, and, as a whole, reflects almost the largest commerce we have had with any nation. In fact, were it not that the cotton fields of the South contributed enormously to the aggregate of our foreign commerce with Great Britain, the commercial relations between the United States and Canada would in money value be actually greater than our commercial relations with Great Britain.

A SILENT GROWTH.

This growth has been steady, unsensational, and reflects a perfectly normal increase of trade relations between the Dominion of Canada and the United States. It has been secured without any flourish of trumpets and apparently by no other influence than the common recognition on both sides of the boundary line of the advantages of reciprocal trade relations. This growth is now spoken of in this city since these statistics were published as, with the single exception of our increase in exportation of manufactured products, the most significant and impressive phenomenon in the history of the international commerce carried on by the United States with other countries. We are exporting to Canada now commodities of approximately the money value of \$400,000,000 a year, and we are buying in Canada and bringing to this country commodities approximately of the money value of \$120,000,000.

THE PROMISE OF GROWTH.

As this increase has been steadily maintained since 1908, there is no reason to suspect that it was merely an ephemeral trade condition. All of the factors and features of this commerce point to continued increase in our commercial relations with Canada. From this point of view there can be good understanding of what President Mellen, of the New Haven system, had in view when he planned organic unity of the New England Railroad, and what the late President C. M. Hays, of the Grand Trunk Railway Co., also had in view when he planned an expansion into New England of the single-railroad system in New England which his company owns, the one stretching from Portland, Me., to Montreal, and the Central Vermont system, which his company controls by a long lease. President Hays is reported to have said a year or two before his untimely death, when the *Titanic* went down, that the New England States as a section of the United States offered the most tempting transportation opportunities to be found in any section of the Union, certainly for a railroad chiefly operated in the Canadian Dominion.

President Mellen wanted to get a good share of the traffic originating in or terminating in New England which represented Canadian industry and agriculture and Canada's demand for New England's manufactured commodities.

A GREAT DOMINION.

A country which is able, as is the Dominion of Canada at the present time, to carry on an international trade with one other country aggregating \$500,000,000 a year and at the present rate of increase likely to be twice that amount within the next 20 years is said here

to be entitled to consideration as one of the great industrial, agricultural, and commercial nations of the world.

It is borne in mind by those who speak of these astonishing new conditions that Canada has drawn from the United States within a few years several hundred thousand farmers who are opening up the rich wheat lands of British North America and presumably several million dollars. A good deal of this money comes back to the United States, for with the cultivation of virgin soil in western Canada there has arisen a great demand for cotton cloth, binder twine, iron and steel products, and a great deal of machinery.

Besides these commodities, we sell to Canada cattle, horses, and many agricultural products. Canada is buying from the United States very much more than China is, 20 times as much in fact; sixfold more than Japan, and 100 per cent more than France. Not until the magnitude of the figures which tell the story of our increased commerce within five years with Canada were published was there a realization of the fact that our neighbor on the north is now—if cotton be left out of consideration—our best customer, and is likely to be within a few years our best customer, no matter how much cotton the South sells to the manufacturers of Great Britain and the Continent of Europe.

HOLLAND.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Latta, executive clerk, announced that the President had, on the 4th instant, approved and signed the following act and joint resolution:

S. 2319. An act authorizing the appointment of an ambassador to Spain.

S. J. Res. 52. Joint resolution to authorize the appointment of Thomas Green Peyton as a cadet in the United States Military Academy.

PRAYERS OF CHAPLAIN OF HOUSE.

The VICE PRESIDENT laid before the Senate the following concurrent resolution (No. 8) of the House of Representatives, which was read and referred to the Committee on Printing:

Resolved by the House of Representatives (the Senate concurring). That there be printed for the use of the House of Representatives, to be distributed through the folding room, 50,000 copies of House Document No. 1458, Sixty-second Congress, same being "Prayers offered at the opening of the sessions of the Sixty-second Congress of the United States."

THE CURRENCY.

The VICE PRESIDENT. A resolution comes over from the previous day, which will be read.

The Secretary read Senate resolution 179, submitted yesterday by Mr. WEEKS, as follows:

Resolved, That the report and recommendations of the Committee on Banking and Currency on the bill H. R. 7837, entitled "A bill to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes," be made to the Senate Tuesday, December 2, 1913.

Resolved further, That it is the sense of the Senate that immediately upon the making of the report and recommendations the chairman of the Committee on Banking and Currency of the Senate, or some member of that committee acting in his behalf, shall at once move that the Senate proceed to the consideration of the said report and recommendations, thereby making the report and recommendations the unfinished business of the Senate.

Mr. WEEKS. Mr. President—

Mr. SIMMONS. I wish to ask the Senator from Massachusetts if he is not willing that the resolution shall be referred to the Committee on Banking and Currency.

Mr. WEEKS. I think it is fair and proper that a resolution of this character should go to the committee which has jurisdiction over the subject matter. As the committee is in session now and a prompt report, if a report can be obtained at all, can be made, and not desiring to delay action on the pending tariff bill, I move that the resolution be referred to the Committee on Banking and Currency.

The VICE PRESIDENT. Without objection, that action will be taken. The resolution is referred to the Committee on Banking and Currency.

THE TARIFF.

The VICE PRESIDENT. The morning business is closed.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BRADY. Mr. President, I have listened with much interest, and I hope with proper patience, to the discussion of the tariff question and the bill now under consideration.

The tariff has been so thoroughly discussed, not only during the present session but during the last half century, that I have been loath as a new Member of this body to attempt to add anything to what has already been said.

However, when a question so vital to the interests of all the people is being considered, for the purpose of enacting into law

certain provisions which it is believed will be materially detrimental, not only to the people of the State I have the honor in part to represent but to the people of the whole Nation, I feel impelled to at least make a few suggestions with the hope that they may receive some consideration by the majority Members of this body, and believing that the Western States have not received that consideration at the hands of Congress to which they are entitled, in view of the number and character of their citizenship, their great wealth, and greater possibilities, I will make a few observations and comparisons and trust I may succeed in changing the viewpoint of the East regarding that great section.

The people of this Nation have been generous to the people of the East. We of the West have sent millions of dollars to the eastern manufacturer for his products; we have contributed our full share of internal revenue and customs duties for the support of the Government and the benefit of the East without complaint. What has been done by the Government for these Western States as compared with the Eastern States? I desire at this time to call your attention to the magnitude of the great inland empire for which I am to-day speaking, which has contributed so much to the wealth of this Nation and which is being so unjustly discriminated against in this tariff bill. I am now speaking for the eight States known as the Rocky Mountain States—the States of Montana, Wyoming, Nevada, Colorado, Utah, Arizona, New Mexico, and Idaho. I maintain that these Rocky Mountain States have contributed more to the wealth of this country in the last 20 years than any other equal number of States, population considered.

These eight States are populated by a class of intelligent and industrious citizens and produce enough material wealth each year to cause the people of the East to realize that the people of that section of the country are entitled to more consideration, not only as to the question of a protective tariff but as regards many other governmental questions that must necessarily arise in the development of a young and growing Nation. What does this territory amount to, who inhabits it, and what does it produce? The boundaries of these eight Rocky Mountain States embrace an area of 901,775 square miles, equaling 577,135,100 acres. Of this area, 82,426,021 acres is timber land and 60,252,678 acres have been converted into farms. The report of the United States Geological Survey shows that these States produced from 1903 to 1911 the following values in minerals: Copper, \$726,270,042; lead, \$138,668,470. The production of gold from 1903 to 1912 amounted to \$468,333,630; silver, \$401,478,943; coal from 1903 to 1911, \$284,505,433; making the total mineral production for the years given of copper, lead, gold, silver, and coal, \$2,019,256,518.

The value of wool produced in these States from 1903 to 1912 was \$269,099,619; hay, \$577,479,642; barley, \$46,571,368; rye, \$2,397,586; oats, \$155,676,125; and wheat, \$265,790,181; making a total of farm products of \$1,317,014,521.

Therefore it will be seen that these States, during the period stated, have produced mineral and farm products of the value of \$3,336,271,039.

During the year 1911 alone they produced:

Copper	\$100,026,892
Lead	19,025,190
Gold	51,012,600
Silver	30,815,900
Coal	39,378,194
Iron	626,232
	\$240,885,008

FARM PRODUCTS.

Wool	24,504,350
Hay	75,158,000
Barley	8,892,000
Rye	445,000
Oats	25,705,000
Wheat	35,083,000
Potatoes	14,004,000

Sugar	183,791,350
	9,644,234
	193,435,584

LIVE STOCK.

Sheep	74,492,000
Swine	6,837,000
Milch cows	26,814,000
Cattle	129,514,000
Horses	121,547,000

Total	359,204,000
	793,524,592

Under the terms of this bill \$351,697,776 worth of these products that have received protection under existing laws are placed on the free list.

The figures that I have given above represent the production for the year 1911, and by any fair means of comparison, if you mean to be fair with the farmer and the people of the West, you

should give them the same consideration that you give to the manufacturer of the East; but in this bill you have left the manufacturer of the East with an average protection of 26.67 per cent, and, with a few exceptions, have placed on the free list the articles which are produced by the farmer. In other words, you compel the farmer to enter our markets on an equal footing with the foreign producer, while you leave an average protection of 26.67 per cent on the manufactured products.

Of the total production of copper, lead, gold, silver, coal, iron, wool, hay, barley, rye, oats, wheat, potatoes, sugar, sheep, swine, cattle, and horses, which amounts to \$793,524,592 in 1911, you have placed products amounting to \$351,697,776 on the free list which have heretofore had some protection. You have reduced products amounting to \$103,075,190, 50 per cent in the protection afforded by the present law, and you have reduced \$147,252,000 worth of these products 60 per cent.

Only five of the products mentioned receive any protection at all in this bill. The duty on lead has been reduced 50 per cent; barley and hay received the same cut; oats, 60 per cent; and horses, 60 per cent.

Now, what has been done by the Government for these States as compared with the Eastern States? As an illustration, since the foundation of this Government to the close of the fiscal year ending June 30, 1911, there has been appropriated by the Federal Government for the improvement of the rivers and harbors of this country \$627,098,236.05. Of this amount these eight States have received only \$122,610.25. While they have no great navigable rivers, yet I might mention the fact that the Snake River, which runs through the entire southern portion of my State and, in connection with the Columbia River, flows into the Pacific Ocean, is the seventh largest river in the world, and hundreds of miles of that stream can be made navigable and freight rates reduced if we could receive one-half of 1 per cent of what is annually appropriated for the improvement of the rivers and harbors of the Eastern States.

Then there is the question of public buildings. Since the foundation of the Government to July 1, 1908, there was appropriated by the Federal Government for public buildings in the States and Territories the sum of \$268,210,684. Of this amount there was appropriated for public buildings in the eight Rocky Mountain States only \$10,084,842.

As above stated, these States embrace an area of 901,775 square miles, which is 30 per cent of the total area of 3,616,494 square miles in the United States. Thus it will be seen that while we have 30 per cent of the area we have received only 3 per cent of the appropriations of the Federal Government.

One of the leading products of the eight States mentioned to be vitally affected by the provisions of this new tariff bill is raw wool.

Raw wool was first placed on the dutiable list in 1816, at which time a duty of 15 cents was imposed, and 25 per cent ad valorem on woolen goods. In 1824 the woolen schedule was revised and raw wool, as well as woolen goods, was given further protection. In the tariff revision of 1828 raw wool received a reasonable protection. In the tariff revision of 1832-33 the protection afforded raw wool was continued, and again in the revision of 1846 a protection duty on raw wool and woolen goods was continued. In 1857 the tariff was again revised, and while some grades of wool were placed upon the free list, yet the higher grades of wool were still given protection. In the tariff revision of 1861, under the Morrill Act, specific duties on wool were substituted for ad valorem rates, and raw wool in that bill received equitable protection. In the tariff act of 1864, which, of course, should be considered as a war measure, there was a marked increase in the rates of duty on both raw wool and woolen goods. In the tariff revision of 1867 raw wool was given protection as well as woolen manufactures. In 1883 the tariff was revised and a general reduction was made in rates and the free list increased. Yet this bill recognized the fairness of reducing the rates on raw wool rather than placing it on the free list. In 1890 the McKinley bill was enacted, which afforded ample protection to wool and woolen goods, under which the sheep industry flourished and the manufacturers of woolen goods greatly expanded their business. The only bill ever enacted by the Congress of the United States since 1816 that did not give some protection to raw wool was the bill passed August 27, 1894, known as the Wilson-Gorman bill, a Democratic measure. In 1897, upon the return of the Republican Party to power, the Dingley bill became a law. This was in effect for 12 years and gave protection to the producers of raw wool. The next and last tariff law that was passed, enacted August 5, 1909, and known as the Payne-Aldrich bill, gave protection to raw wool. So we are now for the second time in our history since 1816 facing the question of free raw wool. It is quite

true that a certain grade of wool was admitted free under the tariff bill of 1857, but the higher grades received protection. Therefore, the only period in the history of this Government since 1816 in which we have had free raw wool was from 1894 to 1897, during the life of the Wilson-Gorman law, which was forced through both Houses of Congress and was signed by a Democratic President. The effect of this law was most disastrous to the sheep industry.

It has been claimed that Schedule K has been the center of conflicts on the tariff question for the last 50 years. This is quite true, but it has not been the fault of the farmer and woolgrower. They have not been organized in a manner to properly protect their interests and that is the reason why the manufacturers, who have been organized and who have buffeted Schedule K about for the 50 years have secured what I believe is an undue and unfair advantage over the producer of raw wool; and now that our Democratic friends feel that something must be done by their party to show that they are going to materially reduce Schedule K they yield to the demands and influence of the manufacturer and slightly cut his rate of protection, and wipe out of existence the protection heretofore given to the producer. For what reason? Because some members of that party do not have the courage of their convictions to stand up for what they believe and know to be right. Instead of following their own conscience they yield to the powerful influence of the party lash and the dictation of the man who sits on yonder hill and directs the Democratic Party along the lines he thinks it should follow. And thus it is that the producer of raw wool has had to suffer for the sins of others, and every Democratic speaker on this floor has felt that he was here to assail this particular schedule. In the eloquent speech of the senior Senator from Montana, delivered on August 4, he used the following language:

Take, for instance, the miners of Butte, the smelter men of Anaconda and Great Falls, in my State, who get \$3.50 per day for their hard, unwholesome labor, out of which daily wage of \$3.50 they have to pay rent—or taxes and repairs if so fortunate as to own their little homes—out of which they have to buy shoes for themselves, their wives, and little ones; out of which they have to buy underclothing and outer garments, hats, bedclothes, furnishings, and food; out of which they have to pay doctor bills, drug bills, dental bills, and undertakers' bills when death ruthlessly invades family circles; who are entitled to wear woolen clothes in order to protect their bodies, their health, and their physical well-being and keep them strong for work in that rigorous climate; who are entitled to supply their children with woolen clothes to protect their little bodies from cold and exposure and illness as they go to school or do the family errands; who are entitled to sleep under woolen blankets for warmth, comfort, and health.

I happen to know something about Butte, about its mines, and its men and women. It is one of the splendid, prosperous cities of our Western States, and within its limits live the highest type of American manhood—the laborer who earns his bread by working with his hands. They are the most intelligent, the most skillful, and the best paid workmen in the world.

I have tramped with the prospector in the hills; have slept with him under his woolen blankets in camp; have gone down thousands of feet underneath the ground where hundreds of miners were performing their daily tasks; I have broken bread with them in their homes, and know something of their hardships and their happiness. They have had and do have a great many hardships to endure but the duty on raw wool is not one that they complain of, and they wear woolen clothes, too.

During my term as governor of my State the President of the United States passed through Montana and visited Butte. The governor of Montana requested me to join the party at Butte, and I did so, and at the great meeting there on the public square there were not only hundreds but thousands of as well-dressed, well-fed, sterling men and women as I have ever seen at a public gathering in my life. From the speaker's stand we drove through block after block in the main part of the city, while each side of the street was lined with thousands of intelligent, well-dressed school children, and I venture to say that 90 per cent of them were children of the miners that the senior Senator from Montana seems to think have been ground to the depths of sorrow and want on account of the duty on raw wool. I want to say to the people of the East who may not understand the situation and conditions in the West that not only the miners of Butte but the laboring men of every kind and class in the West are better paid, better housed, and better fed than in any country in the world, and they owe this to their own initiative, their own forethought, and their own self-preservation and the protection which has been afforded them under a Republican tariff policy. The State of Montana has one of the best, if not the best, system of labor unions and organizations in this country. They have united for the protection of their interests and the interests of their wives and children.

I fully agree with the Senator from Montana that the miner is entitled to all of the good things of this life and to all of the

advantages suggested in his remarks, but the miner requires something else for his happiness besides raw wool. I am a friend of the miner and the laboring man, and believe in organized labor, and I know that the laboring men of this country have secured results that are far-reaching and beneficial in effect by organizing for their own protection. They believe in protecting themselves and their families from unjust and unfair competition with cheap foreign labor, just as I believe in not only such protection for the laboring men but for the honest labor and honest capital of every American citizen, whether it be on the farm, in the mine, or factory. I believe in protection for both the labor performed and the capital invested, and you can not protect one in any fairness without protecting the other, and you can not remove protection from one without indirectly injuring the other, and for that reason I claim it is unfair to protect the manufacturer and at the same time refuse to give protection to the farmer and the woolgrower and the cane grower, and this I claim is what you have done in the bill now under consideration.

The senior Senator from Montana in the remarks I have quoted seems very solicitous for the welfare of the miner and his family, and endeavored to convince this body that the greater portion of his troubles had been caused by the duty on raw wool. Now, let us reason together for a moment and see what our Democratic friends are going to do for the happiness and welfare of this miner in the way of taxing him for the things that are necessary to his everyday comfort. While they give the miner free raw wool under the pending bill, the duty on which in a suit of clothes under existing law would not exceed 55 cents, yet, on the other hand, if the wife purchases some yarn with which to knit some stockings for the children you tax this family 15 per cent ad valorem for the same. If the wife desires to buy some woolen cloth, you charge her 35 per cent ad valorem; and in the same section you say, "Cloth, if made in chief value of cattle hair or horsehair, not specially provided for in this section, 25 per cent ad valorem." In a word, you seem to take special delight in punishing the sheep raiser. In this paragraph you put a duty of 35 per cent ad valorem on woolen cloth, and in the next sentence say that you will throw off 10 per cent if they will buy cloth made of horsehair or cattle hair, a thing which the farmers of this country do not produce.

Next, the miner will want to buy some hosiery, and you say in paragraph 297 "if composed wholly or in chief value of wool, if valued at more than \$1.20 per dozen pairs, 50 per cent ad valorem." There is not a miner's family in Butte or Great Falls or Anaconda that does not wear hose that cost more than \$1.20 per dozen. Therefore, whenever a miner desires to purchase hosiery for his family you immediately put a tax on him of 50 per cent of whatever the article cost.

The distinguished Senator also says "out of which they have to buy underclothing, outer garments, hats, bedclothes, furnishings, and foods." You make this miner pay a duty on every undergarment and outer garment that he wears, on the hat that he wears on his head, on the bedclothes under which he sleeps, on the furnishings in his house, and upon a large portion of the things that he has to purchase.

Again, he says "out of which they have to pay doctor's bills, drug bills, dental bills, and undertaker's bills when death ruthlessly invades the family circles," and yet you put a duty on almost every drug that a doctor would prescribe; and when "death ruthlessly invades the family circles" you tax him 25 per cent ad valorem on the tombstone that marks his grave; and yet you say that this miner is entitled to wear woolen clothes. I agree with you in that, but I do not agree that you should rob the farmers of this country of the protection to which they are entitled and then tax the laboring man on almost everything that he has to purchase.

The sugar-beet industry in my State will suffer materially if this bill becomes a law. It is a young and growing industry and has contributed to the material wealth of our State and has enabled the farmers to better improve their farms and increase their legitimate income. In the year 1911 there were 17,583 acres planted in sugar beets, from which there was harvested 206,221 tons of beets and from which there was manufactured 53,460,700 pounds of sugar. The growers received \$5 net per ton, delivered at the factory, and their revenue was \$1,031,105. There are four factories in the State of Idaho, and this number would be increased if the proposed tariff bill would give a reasonable protection to sugar.

The culture of beets very much improves the soil, but it requires skillful attention and first-class farming in every way. Sugar beets are one of the most valuable products known for the purpose of benefiting the land where crops are rotated.

In addition to the sugar beets sold, the tops have a value for stock feed amounting from \$1 to \$3 per acre, and the beet pulp is fed by the farmers and stockmen, which, together with alfalfa, makes all the feed required to fatten sheep and cattle for the market.

Idaho has over 1,000,000 acres of land that is well suited for growing beets in a commercial way, and as we now have only about 20,000 acres under cultivation it can readily be seen what this industry means to our State.

I wish to say relative to the beet-sugar industry in Idaho that I am fully convinced that the words of the senior Senator from Mississippi relative to the cane-sugar industry in Louisiana will apply to the sugar-beet industry in Idaho.

On the 19th of May the senior Senator from Mississippi [Mr. WILLIAMS] said:

I am perfectly willing to admit that free sugar will dismantle every sugarhouse in the State of Louisiana. I know it as well as I know my name is JOHN WILLIAMS. Mr. UNDERWOOD has admitted the same thing.

In 1912 the commissioner of immigration, labor, and statistics for Idaho made a short report on the sugar-beet culture in our State, and it gives such a splendid description of the industry in all of its features that I ask to have it inserted as a part of my remarks, without reading.

THE VICE PRESIDENT. That may be done, without objection.

The matter referred to is as follows:

THE BEET-SUGAR INDUSTRY.

The beet-sugar industry is one of the most important industries in Idaho. The accompanying table shows the acreage devoted to growing sugar beets, total tonnage grown, and the total production of sugar:

Factory.	Acre.	Beets.	Sugar.
1911.			
Idaho Falls.....	6,064	Tons. 66,704	Pounds. 18,732,800
Sugar City.....	7,380	94,139	23,394,400
Blackfoot.....	4,139	45,378	11,333,500
Total.....	17,583	206,221	53,460,700
1912.			
Idaho Falls.....	5,244	50,000	14,250,000
Sugar City.....	7,159	70,000	19,000,000
Blackfoot.....	4,971	41,000	10,856,500
Burley.....	3,000	25,500	4,500,000
Total.....	20,374	186,500	48,606,500

¹ This includes the acreage produced for the Parker auxiliary slicing station.

² New factory, just opened in 1912.

The growers receive \$5 net per ton, delivered at the factory or nearest railway loading station. This means that the farmers received \$1,031,105 for their 1911 crop of beets and \$932,500 for the 1912 crop.

The 1911 crop averaged the grower \$58.90 per acre. The 1912 crop averaged \$45.75 per acre. The 1912 tonnage was much lighter than usual, owing to the cool weather in the early part of the season, which caused delayed start and a lighter growth than common. It costs about \$30 per acre to produce the crop, charging the entire cost of production, including delivery to the factory or railway shipping station. Many growers receive returns double that shown by the average for the State; however, even the average crop is a profitable crop.

The four factories and one slicing station employed 653 people in the manufacture of 48,606,500 pounds of sugar in 1912.

The sugar-beet crop yields returns other than shown by the price received for the beets. The tops have a value for stock feed amounting to from \$1 to \$3 per acre, depending upon the manner in which they are handled. The beet pulp is sold to the farmers and stockmen at from 25 cents to 35 cents per ton at the factory. This pulp, together with alfalfa hay, makes an excellent fattening ration and is extensively used in fattening sheep and cattle. Larger yields of oats, barley, and most other crops are had following a crop of beets.

Large numbers of men, women, boys, and girls find profitable employment in the beet fields during the months of June and July, a time when employment is needed for the older school pupils.

Again, at harvest season in the autumn the beet fields give employment to many. The pay rolls from the beet fields distribute large sums of money that go into circulation in the early winter, at a time when it is most needed.

Sugar beets are a cash crop. The farmer knows what he is going to receive for his crop even before the seed is sown. It is not difficult to secure a cash advance upon the crop if it is needed to meet the labor pay rolls.

Not all districts of Idaho are well suited for growing sugar beets. The moderately high altitudes where bright sunshine prevails during the day and cool nights are common are districts where the beets thrive the best. A rich soil and proper cultivation are necessary to grow a profitable tonnage. Bright sunshine is necessary, that the foliage may properly assimilate the saccharine in the juices and assist in eliminating the soluble salts which commonly interfere with recovering the sugar from the juices while being processed in the factory.

It has been carefully estimated that Idaho has 1,200,000 acres of land that are well suited for growing beets in a commercial way.

The world's production of beet and cane sugar is about equal. It was formerly thought that beet sugar was not as sweet or not as valuable as cane sugar. It is now commonly known that the cane and beet sugars are identical, chemically speaking. In the earlier history of the manufacture of beet sugar in the United States occasionally an inferior lot of sugar was turned out. This was due, however, to the manufacturing process rather than to the saccharine content of the

beet. Good and bad sugar may be made from the juice of the sugar beet, just as good and bad butter may be made from the same batch of cream, the difference being entirely in the method of handling the cream and the individual who made the butter. The beet-sugar factories operate generally about one-third of the year, and therefore the sugar boilers do not have continuous experience in the recovery of sugar in the juice and in the refining process. Important progress has been made in the operation of beet-sugar factories, and many of the earlier disappointments have entirely disappeared, including much of the prejudice that formerly prevailed against beet sugar.

Mr. BRADY. A study of the history of tariff legislation discloses the fact that a majority of all parties at all times since the conclusion of the formative stage of the protective-tariff system, which ended about 1816, have realized the fairness and the justness of protecting the farmer and the producer of raw wool in this country.

If the vote cast at the last election demonstrated anything, it demonstrated the fact that a majority of the people of this Nation are to-day just as much in favor of protecting the legitimate industries of this country, and of protecting the farmer in the products of his toil, as they have ever been since the signing of the first tariff bill. Let us analyze for a moment the vote cast at the last election. Theodore Roosevelt, the candidate of the Progressive Party, which was pledged in its platform to protection, received 4,119,538 votes; William Howard Taft, the Republican candidate, received 3,484,980 votes; Woodrow Wilson, the Democratic candidate, received 6,293,454 votes. This shows a clear majority of 1,311,064 votes for the principle of protection. This shows a clear majority of 1,311,064 votes against the present incumbent of the White House and against the principles he represents on the tariff question. Our Democratic friends may say that this does not mean that this majority is opposed to the pernicious and dangerous doctrine advocated by the Democratic Party of a tariff for revenue only, but the people have demonstrated by their votes cast at the last election that they are not only unalterably opposed to a tariff for revenue only, but that they are in favor of a tariff for the protection of American industries and American workmen.

We find in the House of Representatives to-day Mr. MANN, a conservative Republican, and Mr. MURDOCK, an ardent Progressive, working side by side for the protection of the industries of this country, while in the Senate we find the senior Senator from Pennsylvania [Mr. PENROSE], a conservative Republican, and the senior Senator from Kansas [Mr. BRISTOW], a consistent Progressive, working for a law for the protection of the industries of this country. While these men differ widely in their views as to the rates of duties on certain articles and the method of applying the tariff principles, there is no question in the mind of anyone who understands the situation and present conditions that they and their adherents are unalterably opposed to the principle of a tariff for revenue only; and it must be conceded that a majority of 1,311,064 of the voters of this country are to-day in favor of a tariff for the protection of our industries and are opposed to a tariff for revenue only.

So far as the Republican Party is concerned, from the time of its organization to the present time it has adhered to the principles embodied in the first section of the first tariff bill, signed on the 4th day of July, 1789, by the first President of this Republic, which reads as follows:

Whereas it is necessary for the support of Government, for the discharge of the debts of the United States, and the encouragement and protection of manufactures that duties be laid on goods, wares, and merchandise imported, be it enacted—

And so forth.

I presume that some of our Democratic friends will say that the products of the farm, of the flock, and of the mine are not manufactured products, and should not be included within the meaning of the word "manufactures" as used in the section of the first tariff bill above referred to, but their position in this regard is no more unfair or unjust than their painstaking and cruel discrimination against the farmer, the woolgrower, and the miner of the West as exemplified in this bill. I maintain that in the truest sense the man who produces wheat, corn, rye, cattle, sheep, horses, swine, wool, and sugar beets and sugar cane ready for shipment to the market has manufactured those products just as much as the most skilled artisan has manufactured the many products that have received an average protection of 26.67 per cent under the terms of this bill. The farmer and the woolgrower must necessarily have an investment in their farms and ranches, must necessarily sustain losses in their flocks and their crops, and must stand the depreciation in values. They must work every hour of every day in order to "manufacture," if I may be allowed to use the term, the products of their farms and flocks, and there is absolutely no sane reason that can be given why these men should not receive the same ratio of protection as is given to the manufacturers.

It is not of the rates of duty on manufactured products in this bill that I complain, for I believe in the principle of protection, but I do not believe in the principle of discrimination. I believe the protective principle should be applied not only to the infant industries as our Democratic friends would have us say, but I believe that the benefits of a reasonable and honest protection should be extended to every industry in this country, wherever it is necessary in order to enable our producers to compete with foreign producers; to keep our people who labor on a higher plane and permit them to enjoy the good things of life when they are competing with the producers in the countries of the world where labor has no voice and the laboring man no opportunity.

Furthermore, I believe that capital honestly invested in legitimate enterprises is entitled to a just and reasonable protection in order to maintain competition with foreign concerns who manufacture the same products under labor conditions that would not be tolerated for a moment in this country. It would be much fairer and much more equitable in every way to give our manufacturers a reasonable protection, and if we find vicious men taking advantage of local conditions, as they will take advantage of world conditions in the event a free-trade policy is established in this country, to regulate the trusts by law and compel them to deal fairly with our people. I would accomplish this by enacting such antitrust laws as this Congress is empowered to enact, and which can be constitutionally enacted by the present majority of both Houses of Congress.

My judgment is that the establishment of a free-trade policy in this country would simply give this Nation world trusts to deal with instead of national trusts. We can regulate national trusts, but world trusts are beyond our control. Therefore I think it is better to protect the manufacturer and producer and regulate our national trusts by our own antitrust laws rather than to throw our markets open to the world and compel our manufacturers and producers to compete with world trusts that can smother competition and ruin our native industries. I believe that by honest effort and wise legislation our trusts can be controlled and competition restored in our own country. I am ready to vote as I talk, and the records of this body will disclose the fact that in every vote that I have cast here I have voted for legislation that would be beneficial to the masses of our people and along the lines that I have here advocated. But instead of pursuing this policy the Democratic majority are forcing the agricultural population of our country into competition with the world, while in a studied and systematic way they are giving generous protection to the man who manufactures the very materials that these American citizens produce.

Again I say I do not complain of the protection given to our manufacturers, but I do complain, and feel that my complaint is justified, that the Democrats in this bill have favored the manufacturer and have discriminated against the producer of raw material. It is quite true that at one time there was an equitable distribution of protective duties between the manufacturer and producer, but when the manufacturers felt that they had become strong enough to pass a tariff bill securing to themselves protection and at the same time securing cheaper raw materials they lost interest in the American producer and began to look more favorably on the Democratic doctrine of free trade in raw materials. They succeeded in passing a reciprocity bill, and, as a general rule, they will be pleased with this Democratic tariff bill, which gives them 26.67 per cent protection and places the products of the farmer, the sugar-beet grower, and the woolgrower on the free list. The Democratic majority, while talking tariff for revenue only and tariff for incidental protection, seem to have the habit of placing a duty for revenue only on the articles the farmer has to purchase and a duty for incidental protection on everything that the manufacturers produce and of placing everything that the farmer produces on the free list. While it is true that a great many of these rates have been reduced, yet the fact remains that you have only reduced the manufactured products down to an average of 26.67 per cent, while you have placed on the free list sugar, wool, and most of the farmer's products. I do not see how any fair-minded man can criticize me for standing here to-day and asking you, the Democratic majority of this body, to give the farmers of this Nation a square deal. I do not see how anyone can criticize me for standing here to-day and pleading for protection not only for the people of my own State, but for the people of all of the States of this Union, especially the farmers and producers of the eight Rocky Mountain States, which are to-day contributing \$1,000,000,000 per year to the material wealth of this Nation.

Mr. PENROSE. Mr. President, I had an understanding with the chairman of the committee that I might go on for a short time. I desire to facilitate his plans in the conduct of the bill.

I have here a memorandum regarding the prices of cream separators. There was some little misunderstanding about the prices which I do not think ought to remain in the Record without a correction. I ask to have the memorandum inserted in the Record.

The VICE PRESIDENT. Without objection, that will be done.

The matter referred to is as follows:

PRICES OF CREAM SEPARATORS.

European farmers, with whom time is not so much of an object as with our farmers, usually buy smaller-capacity machines than our farmers buy. This fact must be taken into consideration in any comparison of prices. Machines with a capacity of 250 pounds of milk per hour are about the smallest our American farmers buy, at a cost of \$24.70. The machines of this grade sell in Europe, in spite of cheaper cost of production, at practically the same price.

There is a machine sold in this country to some extent with a capacity of only 70 pounds of milk an hour. It is made by the American Separator Co., at Bainbridge, N. Y., and sells for \$15.95. Same machine last year was sold for \$14.95. This is the sort of machine that is popular with European farmers. There is a Swedish machine, handled in this country by Hibbard, Spencer, Bartlett & Co., of Chicago, at \$17.50, after paying the 45 per cent duty, but its capacity is only 90 pounds per hour.

Our American farmers usually pay from \$25 to \$100 for machines of from 250 to 1,000 pounds capacity and many of the larger farmers buy separators of much larger capacity. American manufacturers, under the spur of home competition, have been steadily increasing the capacity and efficiency of their machines without adding to their cost.

The manufacturers of separators are not contending for the retention of the present duty of 45 per cent, although six foreign manufacturers are now sending separators to this country and paying the duty; but they do claim that the cut to the free list is so drastic that it will ultimately put them out of business. A duty of 25 per cent would be highly competitive, and would put them on their mettle, but they believe they could meet the competition and continue the industry. There would be a considerable increase of revenue from a duty of 25 per cent.

This information is furnished by the chamber of commerce of the city of Poughkeepsie, N. Y., where is located the American plant of the De Laval Cream Separator Co., which is believed to be the most modern cream separator plant in the world.

Mr. PENROSE. Then I have here some figures regarding the labor conditions and the conditions in the industry generally concerning Philippine tobacco. I shall not read them to the Senate, but I shall ask to have them printed. I do desire, however, to call the attention of the Senate very briefly to a few facts in connection therewith.

Mr. President, the tariff act of 1909 admits to the United States free of duty all products of the Philippine Islands excepting rice, sugar in excess of 300,000 gross tons in any one fiscal year, wrapper tobacco or mixed wrapper and filler tobacco in excess of 300,000 pounds in any one fiscal year, filler tobacco in excess of 1,000,000 pounds in any one fiscal year, and cigars in excess of 150,000,000 in any one fiscal year. In other words, sugar, leaf tobacco, and cigars are admitted free of duty in the quantities named. The pending tariff bill removes these restrictions and admits to free entry without reservation or exception all articles the growth or product of or manufactured in the Philippine Islands from materials the growth or product of the Philippine Islands or of the United States or of both. Since the present law has been in force no rice seems to have come to us from the Philippines, and as the pending bill makes all sugar free of duty the effect upon our domestic industry of the free admission of sugar from the Philippines is an academic question. Therefore, in the few remarks which I purpose to make upon the Philippine section of the tariff law I shall confine myself to leaf tobacco and cigars. An examination of the statistics showing the importations of cigars and tobacco from the Philippine Islands and of the statements which have been furnished by those who are engaged in the industry in the United States convinces me that the right of free entry now enjoyed by Philippine cigars and tobacco has brought about a competition which is destructive of American industry, and in justice to the wage earners in the United States who are succumbing to the competition of the oriental labor of the Philippine Islands I rise to protest against this provision in the pending bill.

Preliminarily, the figures furnished by the Division of Statistics in the Bureau of Domestic and Foreign Commerce, Department of Commerce, exhibit the following:

Imports of tobacco and manufactures thereof from the Philippines.

Fiscal year.	Cigars, cheroots, cigar-ettes, and paper cigars.		Leaf tobacco.	
	Number.	Value.	Pounds.	Value.
1910.....	82,470,300	\$1,673,855	15,494	\$2,311
1911.....	44,219,470	920,321	31,475	7,720
1912.....	63,852,600	1,340,338	5,056	644
1913.....	123,014,110	2,328,387	98,097	14,495

It will be seen from the above table that there has been an astounding increase in the number of cigars entering the

United States from the Philippine Islands. Attention is particularly invited to the enormous increase shown during the fiscal year just closed, the importations then amounting to 123,014,110 cigars, which exceeded the most sanguine estimates, for it showed an increase over the previous year of no less than 59,161,510 cigars. The slump from the importations of 1910 shown in the returns for the year 1911 was due to the failure of the Philippine cigars that were first sent over here to please the taste of American smokers, but the defect seems to have been remedied, for there was a 50 per cent increase in 1912, and, as already stated, imports of 1913 were almost twice what they were in 1912. It may be expected, then, that these importations will continue to grow, for some of the great American corporations are now in the islands, and the vast scale on which they operate, coupled with the extraordinary cheapness of the labor they use, will result in an enormous production which will, of course, find its market in the United States. This production in addition to the production in continental United States will greatly exceed any amount which this country could possibly consume, and hence, if unrestricted free entry be given to Philippine cigars, the domestic industry must be to a great extent driven to the wall. We should not permit this. Whatever view may be taken of our duties and obligations in the Philippine Islands or of the attitude which we should assume toward the inhabitants of those islands there is no possible reason why, if we must choose between our own citizens, native born and naturalized, and accustomed to the American way of living, and the Chinese, Japanese, and Malays of the Philippines, we should give preference to the latter. We have in the cigar-manufacturing industry in this country an old-established, extensively distributed, and flourishing industry, one in which there has been a continued and noticeable improvement in the conditions under which the labor is performed, one in which there has been a gradual increase in wages paid, and one which is, as a rule, a very well organized industry. On the other hand, the Philippine Islands industry is as yet an incipient project to exploit the oriental labor of those islands by means of large capital that is controlled by a very few men.

There are figures available which show the rate of wages or payment, the hours of work, and the earnings of workmen in the cigar-making trade in the Philippines, and it is perhaps fortunate, considering the animadversions of the majority on any figures quoted by this side, that these figures are official figures taken from the annual report of the bureau of labor, department of commerce and police, Government of the Philippine Islands, and gathered and published as a part of said report.

Before giving these figures I should like to impress upon the Senators the enormous advantage that these capitalists in the Philippines will have over the cigar manufacturers in the United States owing to an abundant labor supply, an Asiatic rate of wages, and a low standard of living. Furthermore, that cigar making is practically all hand labor. There have been several attempts to introduce machines, and I am informed that there is now in use a device called a suction table, but it has increased production less than 5 per cent and is used only on the cheapest of cigars.

In the cigar trade piecework is the rule, and payment is made on the basis of 1,000 cigars, the rate per 1,000 depending upon the quality of the tobacco, workmanship, peculiar and fancy shapes, width and thickness of the product. This system affords a fair opportunity for a comparison of prices paid for the labor in the Philippine Islands with that paid in the United States, and it also eliminates the question as to the relative efficiency of such labor, because the payment for the labor is based upon the same quantity of production. I find from the First Annual Report of the Bureau of Labor in the Philippine Islands, page 56, Table V, that the price per 1,000 cigars ranges from ₱1.40, or 70 cents American money, to ₱2.50, or \$1.25 American money. I ignore two items in the table, one of which shows a workman who receives only 45 centavos, or 22½ cents, for making 1,000 cigars and the other of which shows a workman who receives ₱5, or \$2.50, for making 1,000 cigars. I do not know just what kind of cigars either of these workmen made—the report does not say—but they are so far away from the general average, one at the low extreme and one at the high extreme, that it seems more advisable to leave them out. This gives an average wage rate of ₱1.65, or 82½ cents in our money, for making 1,000 cigars.

In respect to the prices paid in the United States, the figures available come from an equally reliable source; that is to say, they have been furnished by the cigar makers' unions throughout the United States and have also been secured directly from the books of cigar manufacturers.

The wages paid in the United States for making cigars retailing for 5 cents range from \$7 to \$13 per 1,000 in union fac-

tories. The cigars retailing for a dime range from \$10 to \$17 per 1,000. Special brands in the high grades pay from \$50 to \$60 per 1,000. In the factories controlled by the American Tobacco Co. and the American Cigar Co. prices are said to be considerably lower than these, but at that they are four times the prices paid in the Philippines. The subsequent annual reports of the Philippine bureau of labor, which are available at this time, namely, those for the years 1911 and 1912, unfortunately, do not furnish any table of the same character as that found in the first annual report, and therefore no direct comparison is possible. However, the report for the fiscal year ending June 30, 1912, states that there were in the Philippines 53 cigar and cigarette factories, which paid out in wages that year \$2,183,049; that of the total number of persons employed in the industry there were 5,166 men, 5,143 women, 425 boys under 16, and 566 girls under 16, making a total of 11,306, which indicates an average per annum of \$193, which means that the average annual wage was \$96.50 American currency.

The Cigar Makers' International Union of America, recognizing the danger to its members' hopes of making a living entailed in the proposed admission free of duty of Philippine cigars and tobacco, has been especially active in its protests and remonstrances, and it has gathered together a number of tables showing the actual earnings of cigar makers in the United States, also of their living expenses, and also certain information relative to the cigar industry, all of which is well worthy of consideration in connection with the matter immediately under discussion. I shall not detain the Senators by reading them, but I should like to have them printed in the Record; as also certain resolutions adopted at the convention of the Cigar Makers' International Union of America, held in Baltimore in September and October, 1912; also resolutions adopted by the Chicago Federation of Labor on May 4, 1913; and also resolutions adopted by the Essex Trades Council, of Newark, N. J., May 21, 1913. I shall also ask to have printed a memorial addressed to Congress by the Cigar Makers' International Union of America under date of May 13, 1913; also a letter from Mr. A. Strasser, for over 14 years president of the Cigar Makers' International Union.

In conclusion, there are some few further considerations which should be urged upon the Senators of the majority, and I am sure that if they should think them over carefully and judge them strictly upon their merits the Senators would find that what they are doing in this bill is entirely opposed to their own party professions, for they are contributing to the building up of a gigantic trust and to the absolute destruction of small producers.

The Senators should not be misled by any mistaken feelings of chivalry or generosity toward the Filipinos. This legislation—and I speak advisedly and deliberately—is not in the interest of the Filipinos at all. They will reap little, if any, substantial benefit from it. The cigar industry in the Philippine Islands is in the course of being exploited on a gigantic scale by American and British capital and with the aid of Chinese coolie rather than Philippine labor. The benefits of unrestricted free trade will not go to the building up of the general prosperity of the Philippine Islands. It will go into the pockets of these capitalists. As I have said, the labor which is employed in the cigar factories there is for the most part Chinese and Japanese and not Filipino. Even if it were Filipino I doubt very much if it is good policy for us to encourage factory industries in the islands at the expense of the cultivation of the soil and the development of the natural resources of the islands. It is needless to say that these two branches of activity would furnish sufficient occupation for the inhabitants of the islands for some centuries to come, and it would certainly be better for the people of those islands to turn their attention to the cultivation of the soil and the development of their natural resources rather than be cooped up in factories, working long hours under insanitary conditions. Again I impress upon the Senators that the labor employed is largely Chinese and Japanese and that it is the very labor which we, even at the risk of provoking international complications, have excluded from entry into this country. How inconsistent it is to exclude this oriental labor from our shores and yet admit freely the products of that labor. Compare the coolies who make these cigars in the Philippines with the Americans who are engaged in the industry in this country. Here the majority of the workmen are American born. The industry is an old one and the conditions in it are such that it is not open like some lines of business to newly arrived immigrants. Do not by passing this section in its present form decree its destruction.

PRICES PAID FOR MAKING 1,000 CIGARS.

The wages paid for making 1,000 cigars in the United States, Porto Rico, Philippine Islands, Cuba, and other foreign countries are more or less graded according to quality, workmanship, peculiar and fancy shapes, length and thickness of the product. Cigar makers and packers, with a few rare exceptions, are paid by the thousand. This system affords a fair opportunity for comparison of prices paid for labor in the Philippine Islands with the United States. The following is quoted from the First Annual Report of the Bureau of Labor of the Philippine Islands, Table V, Cigar makers, page 56:

	Per 1,000.
Lowest price, 45 centavos per 1,000, equals, in United States currency	\$0.22½
Highest price, 5 pesos per 1,000, equals, in United States currency	2.50
Average price, 1.8 pesos per 1,000, equals in United States currency	.90

PREVAILING PRICES IN THE UNITED STATES.

The prices paid in the United States for making cigars retailing for 5 cents range from \$7 to \$13 per 1,000 in union factories; for cigars retailing for a dime the prices paid range from \$10 to \$17 per 1,000. Special brands in the high-priced grades pay from \$50 to \$60 per 1,000 for making. The prices paid in open shops average from 25 to 50 per cent less than paid in union shops operating with scales of prices based upon trade agreements.

In the factories controlled by the American Tobacco Co. and the American Cigar Co. the prices paid for nickel cigars are still lower, but when compared with the average prices paid in the Philippine Islands they are approximately 400 per cent higher.

AVERAGE WEEKLY WAGES EARNED IN THE UNITED STATES.

The following is a statement of earnings in a number of factories scattered over the whole country for the week ended May 24, 1913. If compared with the weekly wages earned in the Philippine Islands, the disastrous competition which is bound to ensue by opening the markets in the United States without any limitation whatsoever to the Asiatic product can be noticed at a glance:

<i>Colorado.</i>	
<i>DENVER.</i>	
(Factory of the Solis Cigar Co.)	
Average weekly wages of 86 cigar makers per capita	\$16.38
Average weekly wages of 7 packers	17.70
(Factory of the Cuban Cigar Co.)	
Average weekly wages of 44 cigar makers per capita	17.44
Average weekly wages of 3 cigar packers	25.68
Hours of labor, 48 per week.	
<i>Connecticut.</i>	
<i>HARTFORD.</i>	
(Factory of Charles Soby.)	
Average weekly wages of 83 cigar makers per capita	\$17.53
Average weekly wages of 6 cigar packers	24.85
Average weekly wages of 23 tobacco strippers	7.10
<i>NEW HAVEN.</i>	
(Factory of F. D. Graves.)	
Average weekly wages of 161 cigar makers per capita	18.85
Average weekly wages of 13 cigar packers	25.71
(Factory of A. Kafka & Co.)	
Average weekly wages of 89 cigar makers per capita	18.98
Average weekly wages of 8 cigar packers	23.84
<i>California.</i>	
<i>SAN FRANCISCO.</i>	
(Factory of Frankel, Gerds & Co.)	
Average weekly wages of 170 cigar makers per capita	\$19.85
Average weekly wages of 14 packers	23.15
(Factory of Red Seal Cigar Co.)	
Average weekly wages of 21 cigar makers per capita	20.00
Average weekly wages of 2 cigar packers	20.57
Hours of labor, 8 per day.	
<i>Illinois.</i>	
<i>CHICAGO.</i>	
(Factory of Wengler & Mandell—Clear Havana.)	
Average weekly wages of 152 cigar makers per capita	\$20.37
Average weekly wages of 10 packers	33.30
Average weekly wages of 33 stripper girls	9.28
(Factory of J. Fernbach & Co.)	
Average weekly wages of 72 cigar makers per capita	19.93
Average weekly wages of 5 cigar packers	29.52
Hours of labor, 47 per week.	
(Factory of Duus & Gellert.)	
Average weekly wages of 14 cigar makers per capita	20.41
Average weekly wages of 1 packer	28.90
Average weekly wages of 5 strippers	9.60
<i>Indiana.</i>	
<i>INDIANAPOLIS.</i>	
(Factory of Crump Bros.)	
Average weekly wages of 325 cigar makers per capita	\$19.50
Average weekly wages of 21 cigar packers	24.00

(Factory of A. E. Rauch.)	
Average weekly wages of 35 cigar makers per capita	17.00
Average weekly wages of 3 cigar packers	20.00
FORT WAYNE.	
(Factory of Coony Bayer Cigar Co.)	
Average weekly wages of 50 cigar makers per capita	16.83
Average weekly wages of 4 cigar packers	19.87
SOUTH BEND.	
(Factories of C. L. Goetz and Mike Hazinski.)	
Average weekly wages of 60 cigar makers per capita	16.00
Hours of labor, 48 per week.	
Kentucky.	
LOUISVILLE.	
(Factory of A. Bickel & Co.)	
Average weekly wages of 46 cigar makers per capita	\$9.09
Average weekly wages of 3 cigar packers	14.25
(Factory of J. T. Stier & Sons.)	
Average weekly wages of 28 cigar makers per capita	13.08
Average weekly wages of 4 cigar packers	9.03½
Hours of labor, 8 per day.	
Maine.	
BANGOR.	
(Factory of W. S. Allen.)	
Average weekly wages of 12 cigar makers per capita	\$26.72
Average weekly wages of 1 cigar packer	26.80
Hours of labor, 44 per week.	
Massachusetts.	
BOSTON.	
(Factory of Walitt & Bond (Inc.))	
Average weekly wages of 648 cigar makers per capita	\$22.16
Average weekly wages of 56 cigar packers	25.78
(Factory of H. Traiser & Co.)	
Average weekly wages of 486 cigar makers, per capita	19.94
Average weekly wages of 47 cigar packers	26.20
Average weekly wages of 192 tobacco strippers (females)	7.15
Missouri.	
ST. LOUIS.	
(Factory of F. R. Rice Mercantile Cigar Co.)	
Average weekly wages of 100 cigar makers per capita	\$16.05
Average weekly wages of 5 cigar packers	24.00
Hours of labor, 45 per week.	
New Hampshire.	
MANCHESTER.	
(Factory of R. G. Sullivan.)	
Average weekly wages of 479 cigar makers per capita	\$21.20
Average weekly wages of 39 cigar packers	23.18
Hours of labor, 48 per week.	
New Jersey.	
NEWARK.	
(Factory of Frank Mueller.)	
Average weekly wages of 29 cigar makers per capita	\$19.03
Average weekly wages of 2 cigar packers	26.00
(Factory of Stumm & Co.)	
Average weekly wages of 22 cigar makers per capita	16.15
Average weekly wages of 1 packer	24.50
(Factory of Harry Stone.)	
Average weekly wages of 20 cigar makers per capita	18.15
Average weekly wages of 1 packer	25.00
(Factory of F. L. Luz & Co.)	
Average weekly wages of 15 cigar makers per capita	17.22
Average weekly wages of 1 packer	24.00
Hours of labor, 44 per week.	
New York.	
TROY.	
(Factory of Quinn Bros.)	
Average weekly wages of 41 cigar makers per capita	\$14.20
Average weekly wages of 2 cigar packers	20.15
(Factory of Fitzpatrick & Draper.)	
Average weekly wages of 43 cigar makers per capita	17.80
Average weekly wages of 3 cigar packers	21.00
Hours of labor, 8 per day	
ONEIDA.	
(Factory of Powell & Goldstein.)	
Average weekly wages of 132 cigar makers per capita	14.95½
Average weekly wages of 10 cigar packers	18.85
(Factory of J. M. Bennett & Son.)	
Average weekly wages of 19 cigar makers per capita	14.62
Average weekly wages of 2 cigar packers	19.75
NEW YORK CITY.	
(Factory of B. Feifer & Sons.)	
Average weekly wages of 244 cigar makers per capita	11.94
Average weekly wages of 16 cigar packers	22.60
(Factory of Wm. Glacum & Sons.)	
Average weekly wages of 71 cigar makers per capita	12.62
Average weekly wages of 5 cigar packers	20.62
(Factory of T. J. Plunket.)	
Average weekly wages of 50 cigar makers per capita	15.32
Average weekly wages of 4 cigar packers	25.00
(Central Cigar Manufacturing Co.)	
Average weekly wages of 133 cigar makers per capita	17.60
Average weekly wages of 11 cigar packers	30.37

Ohio.

CINCINNATI.

(Factory of Peter Ibold.)

Average weekly wages of 103 cigar makers per capita	\$14.61
Average weekly wages of 10 cigar packers	17.25

(Factory of M. Ibold.)

Average weekly wages of 111 cigar makers, per capita	\$16.89
Average weekly wages of 4 cigar packers	28.75

(Factory of Herman Busch.)

Average weekly wages of 16 cigar makers, per capita	13.50½
---	--------

Hours of labor, 8 per day.

Average weekly wages of 4,546 cigar makers, employed in 43 cigar factories, for the week ended May 24, 1913, \$16.88½. Average weekly wages of 355 cigar packers, employed in 39 cigar factories, \$22.50½.

THE STANDARD OF LIVING.

The principal item in the cost of living for wage earners is the payment of rent for cottages, houses, and flats in tenements. The rents paid by cigar makers in the United States range from \$7 per month in villages to \$22 in the larger cities. The total cost of living, including rent, ranges from \$10 to \$18 weekly. This is approximately a fair estimate.

According to the first annual report of the bureau of labor of the Philippine Islands for the fiscal year ended June, 1910 (p. 57), the rents paid by cigar makers range from ₱12 to ₱120 per annum; the average per capita rent paid per annum was ₱56, equal to \$28 in United States currency. The total cost of living, including rent, ranged from ₱100 to ₱544; the average was ₱290 and 66 centavos; in United States currency \$149.83. The wide gulf which separates the standard of living of the cigar maker in the Philippine Islands from the worker in the United States has a direct bearing upon the cost of production. With such a vast difference in the labor cost and standard of living an industry based upon hand labor has not the slightest chance to survive. Absolute free trade in cigars with the Philippine Islands means the gradual destruction of the industry in the United States. This can not be successfully denied.

COMPARATIVE STATEMENT OF AVERAGE WEEKLY WAGES.

The difference in the average weekly wages earned by the cigar makers in the Philippine Islands as compared with the average wages earned by cigar makers in the United States furnishes sufficient proof against a law which permits the importation of cigars from the Philippine Islands free of duty without any limitation.

The first annual report of the bureau of labor of the Philippine Islands (p. 152) gives the average wages in the Provinces earned by cigar makers as 74 centavos, equal to 37 cents in United States currency. It is as follows:

Provinces.	Centavos.	Cents.
Occidental Negros	17	8½
Cebu	78	39
Cagayan	1.47	73½

The third annual report of the bureau of labor of the Philippine Islands (p. 15) states 53 cigar and cigarette factories paid in wages ₱2,183,049; average wages per annum, ₱193; equal to \$96.50 in United States currency.

The average number of hours of labor ranged from 10 to 12 per day. The number of people employed in the industry was as follows:

Males.....	5,166
Females.....	5,143
Boys under 16.....	425
Girls under 16.....	566
Total.....	11,300

IN THE INTEREST OF THE CIGAR TRUSTS.

The tariff bill providing for absolute free trade in cigars from the Philippine Islands will not benefit the consumer. The retail prices of cigars, with some exceptions, have been fixed for decades at 5 cents, 10 cents, and over. Some retailers in drugs, and so forth, sell nickel cigars from six to seven for a quarter. Ten-cent cigars retail sometimes three and four for a quarter. There are also cigars in the market which retail two for 5 cents and three for 10 cents, but these are the exceptions; the general price for cigars is 5 cents, 10 cents, and higher. To assert that free trade in cigars will benefit the consumer is an economic theory based upon imagination. This bill will benefit the powerful corporations known as the United Cigar Stores Corporation, the American Cigar Co., and the British-American Tobacco Co. It will enable them to locate large factories in Manila and other cities and exploit the cheap labor of the islands.

THE BUSINESS OF THE BRITISH-AMERICAN TOBACCO CO. IS WORLD-WIDE.

As now constituted the British-American Tobacco Co. (Ltd.) controls, through ownership of all or a majority of the capital stock, or through subsidiaries, the following companies engaged in the business of manufacturing or selling tobacco and its products:

American Tobacco Co. of Canada (Ltd.), Montreal, Canada.
 Nya Aktiebolag Cigarettfabriken Orient, Stockholm, Sweden.
 George A. Jasmatzki, Dresden, Germany.
 British Cigarette Co. (Ltd.), Shanghai, China.
 British-American Tobacco Co. (India) (Ltd.), Calcutta, India.
 Mustard & Co., Shanghai, China.
 United Tobacco Co. (Ltd.), London, England.
 United Tobacco Co. (North) (Ltd.), Transvaal, Africa.
 United Tobacco Co. (South) (Ltd.), Cape Town, South Africa.
 Maspero Freres (Ltd.), Cairo, Egypt.
 Jamaica Tobacco Co., Kingston, Jamaica.
 Peninsular Tobacco Co. (Ltd.), Karachi, India.
 W. S. Mathews & Sons Co., Louisville, Ky.
 T. C. Williams Co., Petersburg, Va.
 David Dunlop, Petersburg, Va.

GENERAL INFORMATION—WHOLESALE PRICES OF CIGARS IN THE UNITED STATES.

The prices paid by retailers for nickel cigars are as follows, per 1,000, \$22, \$25, \$28, \$30, \$35, and \$38. Ten-cent cigars range from \$45 to \$70 per 1,000. Large jobbers and wholesalers receive a discount from the manufacturer of from 7 to 10 per cent for cash; small retailers buying from a few hundred to a few thousand receive a discount of 2 per cent for cash.

A suction table has the appearance of a sewing machine; it is connected with pipes into which air is blown from a heating plant. The suction thus created holds the leaf-tobacco wrapper close to the table and saves the labor of spreading it. The cutter connected with the table cuts off the wrapper by a motion of the operator's hand, but owing to the round shape of the leaf the cutter is unable to cut the wrapper round the same as hand labor can do, thus destroying some of the finest part of the tobacco.

The so-called Borgfeld table was introduced for the purpose of saving labor in the making of the bunch. The operator making the bunch has to grab the filler from the table in the same manner as the cigar made by hand; the bunch has to be shaped by hand; the binder holding the filler is placed in the Borgfeld table, and with a motion of the foot the binder winds around the filler. The labor saved by both devices does not exceed 5 per cent.

I ask unanimous consent to have some communications and resolutions inserted as part of my remarks, together with a clipping from the United States Tobacco Journal of July 19, 1913.

The VICE PRESIDENT. The Chair hears no objection, and leave is granted.

The matter referred to is as follows:

Resolutions adopted unanimously at the convention of the Cigar Makers' International Union of America, held in the city of Baltimore, Md., in the months of September and October, 1912. The convention

was attended by 367 delegates from all parts of the country. The resolutions were introduced by Robert Ricker, delegate from San Francisco, Cal.:

Whereas they are now permitting the importation of 150,000,000 cigars annually free of duty into the United States of America from the Philippine Islands;

Whereas these cigars are coming in direct competition with the American workmen; and

Whereas the standard of living of the Philippine workman is below that of the American workman we find that it is impossible for the American workman to compete with the Philippine workman: Be it therefore

Resolved, That we, the Cigar Makers' International Union of America, protest against the importation of these cigars free of duty from the Philippine Islands; and be it further

Resolved, That the delegates to the American Federation of Labor be instructed to take up the subject matter in the American Federation of Labor convention and have the American Federation of Labor protest to the proper authorities, to have the law repealed which permits those cigars coming from the Philippine Islands free of duty.

Reported favorably by the committee on resolutions.

 C. O. BEALS.

Resolutions adopted by the Chicago Federation of Labor on May 4, 1913:

Whereas at a meeting of the joint unions of cigar makers and cigar packers a resolution protesting against a measure now pending in Congress, which measure pits the cigar makers and other organized workers against Asiatic, Mongolian, and oriental hand labor of the Philippine Islands, was unanimously adopted because of the following reasons:

One-half of the cigar factories in Manila, P. I., are owned by Chinese. The employees there work from 10 to 12 hours a day, while organized cigar makers work here 8 hours a day. The third annual report of the bureau of labor of the Philippine Islands shows that in 53 factories the annual wages averaged \$93.50, which is less than \$2 a week, or about 30 cents a day.

The cigar trade is practically a hand industry; practically no machinery is used in the production of cigars. Owing to the difference in the standard of living here and there, in the cost of living, in wages, and the hours of labor, the hand workers of this country can not successfully compete with the hand labor of the Mongolian, Asiatic, and oriental coolie hand workers of the Philippine Islands, and should not in justice be made to do so.

If the product of this oriental cheap labor comes into this country, the result will be ruinous to the industry here and would in a measure impair and partly nullify the Chinese-exclusion act.

Resolved by the Chicago Federation of Labor in regular meeting assembled, That we the delegates fully indorse and concur in the position and protest of the affiliated organized cigar makers and cigar packers' unions for the reasons stated, and instruct our officers to immediately forward a copy of this resolution to the secretary of the Joint Cigar Makers' Unions of Chicago.

Resolved, That nothing in the foregoing resolution commits the Chicago Federation of Labor, its officers or members, individually or collectively, to a protective tariff, a low tariff, a tariff for revenue only, or any kind of a tariff, and that the resolution and our action thereon is solely an indorsement of the protest of our affiliated organized workers being pitted against the Mongolian, Asiatic, oriental, and coolie hand labor of the Philippine Islands.

JOHN E. FITZPATRICK, *President*.
 ED. E. NOCKELS,
Secretary Chicago Federation of Labor.

ESSEX TRADES COUNCIL,
 Newark, N. J., May 21, 1913.

DEAR SIR: The following resolution was unanimously adopted by Cigar Makers' Union No. 138, of Newark, and the Essex Trades Council, composed of the following organizations; the resolution is self-explanatory, and we hope and pray that you will do all in your power to prevent this unjust competition that the present tariff bill proposes with Asiatic labor:

"Whereas at a meeting of the joint unions of cigar makers and cigar packers a resolution protesting against a measure now pending in Congress, which measure pits the cigar makers and other organized workers against Mongolian, Asiatic, and oriental hand labor of the Philippine Islands, was unanimously adopted because of the following reasons:

"One-half of the cigar factories in Manila, P. I., are owned by Chinese, whose employees work from 10 to 12 hours per day, while organized cigar makers here work 8 hours per day. The third annual report of the bureau of labor of the Philippine Islands shows that in 53 factories the annual wages averaged \$96.50, which is less than \$2 per week or about \$0.30 per day.

"The cigar trade is practically a hand industry; practically no machinery is used in the production of cigars. Owing to the difference in the standard of living here and there, in the cost of living, in the wages, and the hours of labor, the handworkers of this country can not successfully compete with the hand labor of the Mongolian, Asiatic, oriental, and coolie handworkers of the Philippine Islands, and should not be in justice asked to do so. If the product of this oriental cheap labor comes into this country, the result will be ruinous to the industry here, and would, in a measure, impair and partly nullify the Chinese-exclusion act:

"Resolved, by the Essex Trades Council in regular session assembled, That we, the delegates, fully indorse and concur in the position and protest of the affiliated organized cigar makers' and cigar packers' unions for the reasons stated, and instruct our officers to immediately forward a copy of this resolution to the secretary of joint cigar makers unions of Newark, N. J.

"Resolved, That nothing in the foregoing resolution commits the Essex Trades Council, its officers or members, individually or collectively, to a protective tariff, a low tariff, a tariff for revenue only, or any kind of a tariff, and that the resolution and our action thereon is solely an indorsement of the protest of our affiliated organized workers being pitted against the Mongolian, Asiatic, oriental, and coolie hand labor of the Philippine Islands."

The Essex Trades Council of Newark N. J., also indorsed the Kern bill, providing for compensation for Government civilian employees in case they get injured or disabled in the course of their employment through accident and occupational disease, and respectfully request you to aid its passage.

DANL. SPINDE, President.

Attest:
HENRY F. HILFERS, Secretary.

HEADQUARTERS CIGAR MAKERS'
INTERNATIONAL UNION OF AMERICA,
Chicago, Ill., May 13, 1913.

To the Congress of the United States—Senators and Members of the House of Representatives:

GENTLEMEN: At the September, 1912, convention of the Cigar Makers' International Union a resolution was adopted and under the referendum approved by popular vote, protesting against the importation of cigars duty free from the Philippine Islands and instructing the international president and executive board to protest to the proper Federal authorities and to the Congress of the United States against the importation of cigars from the Philippine Islands duty free.

In addition to the brief submitted to you by instruction by the international president, G. W. Perkins, under date of April 22, 1913, which brief we concur in and indorse and ask you to accept as our unanimous belief and judgment, we respectfully call attention to the fact that this proposition to raise the limit and permit cigars to come in without restraint from the Philippine Islands is more of an economic labor question than an economic political question, for the following reasons:

Our trade, the cigar trade, is a hand industry. Machinery is not successfully used in the manufacture of cigars. It is purely a hand trade, and because of the difference in standards of living in this country and in the Philippine Islands we can not successfully compete with the Mongolian, Asiatic, oriental hand labor of the Philippine Islands. In the Philippine Islands the wages are, according to the Third Annual Report of the Bureau of Labor of the Philippine Islands, about 30 cents a day.

Under the present law the Philippines are permitted to send here 150,000,000 cigars annually. It may be said that this limit has not been reached and never will be. If this is true, why raise the limit? We believe that if the limit is raised foreign capital will immediately establish factories there because of the extremely low wages paid, and in a few years either destroy the industry in this country or reduce the standard of wages to a level where no American can exist.

We again say this is more than a political protective tariff or tariff-for-revenue-only issue. It is subjecting our trade, a hand industry, to competition with the Mongolian, Asiatic, oriental hand labor of the Philippine Islands, the cheapest labor in the world, which proposition we earnestly and respectfully protest against.

The delegates to the convention which adopted the resolution instructing us to act in this matter did not consider the matter a political partisan issue, but rather one of competition with oriental labor. The delegates were so intensely in earnest and secure in the justice of our position that they instructed the officers to solicit the cooperation and assistance of all fellow trade-unionists, of other trades, and friends.

Yours, very truly,

G. W. PERKINS, International President, Chicago, Ill.
SAMUEL GOMPERS, First Vice President, Washington, D. C.
THOS. F. TRACY, Second Vice President, Boston, Mass.
W. H. FITZGERALD, Fourth Vice President, Portland, Oreg.
L. P. HOFFMANN, Fifth Vice President, Jacksonville, Ill.
JOHN REICHERT, Sixth Vice President, Milwaukee, Wis.
E. G. HALL, Seventh Vice President, Minneapolis, Minn.
GIBSON WEBER, International Treasurer, Philadelphia, Pa.

CHICAGO, ILL., August 30, 1913.

Hon. BOIES PENROSE,

United States Senator, Washington, D. C.

DEAR SIR: I regret my inability to go to Washington at present for the purpose of conferring with you personally on matters of legislation which the members comprising the Cigar Makers' International Union of America are vitally interested in. Mr. Daniel Harris, president of the New York State Federation of Labor, one of our old members, is authorized to represent our organization in Washington, and is fully qualified to explain our contentions against that part of the tariff bill which provides for absolute free trade in cigars from the Philippine Islands.

He notifies me that one of my statements showing comparative prices paid for making 1,000 cigars in the Philippine Islands and the prices prevailing in the United States might be disputed by some one who is anxious to pass laws which will have a tendency to curtail employment, to reduce wages, and to encourage disastrous competition with the product of the Asiatic and Mongolian labor of the Philippine Islands.

In comparing the prices paid for making 1,000 cigars in the Philippine Islands with the prices paid in the United States, I was compelled to use reports issued by the Bureau of Labor in the Philippine Islands. Part of these reports appear to be indefinite to one who is fully familiar with the technical points of the cigar trade.

In the report issued for 1910 I notice, on page 56, table 5, under the caption of "Piece or job prices," the prices range from 45 centavos to 5 pesos. Judging by the customs prevailing in the cigar trade in the Spanish-speaking countries, in the United States and foreign countries in general, it has been the prevailing custom to pay for making cigars, or packing cigars, by the thousand, and the quotations of prices to wholesalers are always based upon the thousand. The internal revenue tax paid for cigars is always based upon a similar system. While

the labor report does not definitely state that the prices paid are based upon a similar plan, evidence from other sources tends to convey the impression that such is the case. In this connection I desire to call your attention to a letter which was published in our official journal, which corroborates in part the deductions I have made from the statistics published in the labor report of Manila.

SAN FRANCISCO, CAL., May 17, 1913.

The Philippine cigars, which are made by Filipinos and Asiatics, if given free and unrestricted free trade with the United States, will cause a revolution in the cigar industry of the United States.

These cigars are being sold in all the cigar stores of California, and have already gotten a substantial foothold upon the saloon trade owing to their cheapness. They wholesale from \$10 per thousand and up. They retail at three for 5 cents and up. Millions of these cigars have already been sent to the Eastern States. If given free trade with the United States they will flood the Eastern States with these cigars the same as they are now flooding the Pacific Coast States, and which will throw thousands of our people out of work.

The new tariff schedule, which provides that 20 per cent of foreign tobacco can be used, such as Habana, and which will improve the cigars, causes a ready market and a greater sale for these cigars. Cheap labor, cheap tobacco, cheap cigars, free trade with the Philippine Islands—the result will be a swelling of the ranks of the unemployed in the United States.

We therefore hope that all the local unions will put their shoulder to the wheel and protest against the passage of this free trade in Philippine cigars proposition.

Respectfully and fraternally, yours,

CHAS. DRAEKE.

By ascertaining the wholesale price of cigars and the cost of production the approximate price paid to labor can be obtained without any statistical data or information.

The letter by our secretary from San Francisco contains the fact that Philippine cigars retailed in San Francisco are sold wholesale from \$10 up. Let me analyze, if you please, for the information of the United States Senators, the cost of production of 1,000 cigars sold at wholesale for \$10 per thousand in San Francisco. The cost of production includes the cost of raw material, internal-revenue tax, miscellaneous expenses, and wages paid for stripping, packing, and making. They are approximately as follows per thousand:

United States internal-revenue tax	\$3.00
Wrappers, fillers, and binders	2.50
Miscellaneous expenses	.50
Manufacturer's profit	.50
Jobber's profit in San Francisco	1.50
Stripping	.20
Packing	.25
Boxes and labels	1.00
Cigar making	.55
Total	10.00

This calculation is based upon general conditions prevailing in the Philippine Islands, which do not obtain in the United States in any particular whatsoever. The profits of the jobber, wholesaler, and distributor in the United States are invariably higher and sometimes twice as large as that obtained by the manufacturer. For distributing cigars retailing for 5 cents the jobber in the United States obtains a profit of from \$2 to \$5 per thousand. For cigars retailing for 10 cents the jobber's profit range from \$5 to \$10 per thousand.

Based upon these premises I have concluded that the jobber's profit in San Francisco would approximate \$1.50 per thousand. As a general rule the jobber will give preference to the distribution of cigars which offer him the largest profit. This is a matter of business and can not be disputed.

In the course of the debate on this question in the Senate the Senators favorable to this legislation are likely to contend that there is a vast amount of cheap immigrant and native labor employed in the cigar industry and that the tariff has no direct or indirect bearing on the prevailing wage rate in an industry which is the product of hand labor and in which machinery plays no part in the cost of production. In refutation of a fallacious argument of this nature I desire to state that we have from time to time succeeded in organizing the cheap labor heretofore mentioned and raised their wages considerably. The competition prevailing in our trade is between our own boundaries. Sooner or later we can reach them by organization, agitation, and education. Our attempts in the past have been crowned with success to a large extent. I can state without successful contradiction that the wages paid to the organized cigar makers in the United States are more than three times as high as those paid to the organized cigar makers in Germany, Holland, Belgium, and the Scandinavian countries. They are more than twice as high as those paid in Great Britain. These facts we can prove from the official trade papers on file in the office of the Cigar Makers' International Union from the various countries mentioned.

As I stated before, we can reach easily the cigar makers, whether native or foreign born, employed in the United States; but how are we going to reach the cigar makers employed in the Philippine Islands, a distance of thousands and thousands of miles, with a low standard of living, due to climatic conditions and other causes, and educate them up to a higher state of civilization? This looks like a remote possibility. We have not the facilities, opportunities, and means of the large corporate interests in the cigar industry, which encircle the globe, to follow them and endeavor to restrict them in their exploitations of the poor and helpless people.

I further contend that this legislation, knowingly or unknowingly, intentionally or unintentionally, is directly in the interests of the British American Tobacco Co., the American Tobacco Co., the American Cigar Co., and other large corporate interests, and diametrically opposed to the interests of the wage earners and the small manufacturers in the United States.

Karl Marx, the socialistic lama, in a pamphlet published in Brussels, Belgium, 62 years ago, favored universal free trade because it would intensify competition, reduce wages, increase misery, and hasten the coming social revolution. Thus we find men of extreme views on economic questions and actuated by different motives join hands on the same platform.

Yours, very respectfully,

A. STRASSER, Ex-President

(President from September 1, 1877, to January 1, 1892.)

[From the United States Tobacco Journal, July 19, 1913.]

WAS THERE AN INSIDIOUS PHILIPPINE LOBBY?

It seems to be more than a summer pastime what is going on in Washington in regard to the so-called lobby investigation. The Senate investigating committee having struck a fruitful trail, the House has also taken steps to do some lobby detective work of its own. What the result of all the expenditure of time and money on this kind of modern inquisition is going to be nobody can foretell. But so far the public has derived at least a great deal of entertainment from it.

That legislation had to be "accelerated" was and is no secret. And it had to be accelerated not only where private and special interests were at stake, but also in regard to general policies and the execution of principles even advocated by those seeking to be placed into power. Of course, it is in the mode, in the ways and means used for such acceleration, that distinction between the permissible and improper and corrupting influence has to be made.

What interests us most, however, in this lobby squeezing is whether the one or the other investigating committee is going to strike also the trail of a "lobby" responsible for the enactment of the absolute free trade in cigars and tobacco from the Philippine Islands. That there must have been such a lobby in action would appear to be evident from the following facts: The granting of absolute free trade in tobacco and its products was nowhere mentioned in the national Democratic platform; neither the presidential nor the congressional candidates of the Democratic Party had pledged themselves openly on the stump or anywhere before the public to such a policy, and the entire trade—tobacco growers, cigar manufacturers, and cigar workmen—were united as they have never been for any other purpose in opposition and intensely hostile to the concession of absolute free trade in tobacco and cigars to the Philippines.

A President and Congress representing American voters, professing the utmost loyalty and devotion to the welfare of the American people, turned about suddenly, smiting their own flesh and blood to aid alien interests. Surely neither the American tobacco farmers nor the American cigar manufacturers nor the American workmen in our tobacco industries have asked either President Wilson, or the Democratic Congress, or have expressed in any way or manner the wish and desire that the partial barrier kept up against the Philippines in the Payne-Aldrich Tariff Act should be removed, nor have they signified anywhere their tolerance of such a removal. Quite the contrary. The tobacco farmers are on record with indignant protests to Congress against such a removal. All the cigar makers' unions in the country have voiced their remonstrances against giving the Philippine tobacco products an absolutely free market in our country. And yet the House framed and passed its tariff bill and the Senate Finance Committee has reported this bill without paying the slightest attention and heed to the absolutely unanimous trade protests against the unrestricted admission of Philippine tobacco products into this country. Who, then, was the power that defeated the unanimous exertions of the American trade? Somebody must have been lobbying against the American interests, for it would be inconceivable that the American Congress should so contemptuously and arrogantly brush aside all the impassioned appeals and telling arguments of hundreds of thousands of their own constituents without having been "insidiously" compelled, as President Wilson would put it, by some outside force to inflict injury to domestic interests for the enrichment of aliens. If, then, there was "an insidious Philippine lobby" holding an invincible whip over Congress, the public is entitled to know who constituted that lobby and what means they employed to enforce their demands. The Senate investigating committee seems to take great pleasure in exposing the lobby exploits of the National Association of Manufacturers, an American body. But are such exploitations to be exempt from disclosure if they are supposed to have been practiced by a lobby representing a body of aliens? Will the Senate investigating committee please shed some light on this point?

Mr. WILLIAMS. Mr. President, when we went into executive session the last time we were considering paragraph 548, with the meat proviso. Since the Senator from Wisconsin [Mr. LA FOLLETTE] introduced his amendment this side have had occasion to study and consider it, and we are prepared this morning to offer a substitute for the committee proviso, beginning with the word "Provided," in line 15, paragraph 548, on page 142. I send it to the Secretary's desk.

Before it is read I want to say that it takes the provision of the Senator from Wisconsin and combines with that the amendment to the Senate committee amendment which was suggested by the Department of Agriculture, and with that some suggestions from the Senator from Montana [Mr. WALSH]. I should like to have it read and move its adoption as a substitute for the language on page 142, beginning with the word "Provided," in line 15, and including all the lines following on that page.

The VICE PRESIDENT. There being no objection, the vote whereby the committee amendment was amended is reconsidered.

Mr. WILLIAMS. The committee amendment was not agreed to. It was being debated when we went into executive session.

The VICE PRESIDENT. Certain amendments were agreed to. Mr. WILLIAMS. Yes; I think that some amendments to the amendment were agreed to.

The VICE PRESIDENT. They were agreed to. The amendment now submitted by the committee will be read.

Mr. CUMMINS. Mr. President—

The VICE PRESIDENT. Will the Senator from Iowa permit the substitute to be read before proceeding?

Mr. CUMMINS. I was about to state that the substitute I offered is the pending question, I understand, upon that paragraph. I have no objection whatever to the committee perfecting its amendment in any way that it desires.

The VICE PRESIDENT. The Chair will be compelled to insist on the ruling that until the committee has perfected its

text it has precedence, and then the amendment of the Senator from Iowa is in order.

Mr. WILLIAMS. This is offered as a substitute for the committee amendment as amended.

The VICE PRESIDENT. It will be read.

The SECRETARY. In lieu of the proviso offered by the committee on page 142, beginning at line 15, after the words "this section," insert the following proviso:

Provided, however, That none of the foregoing meats shall be imported into the United States from any foreign country unless the same are certified by the proper authorities of such foreign country, in a form to be prescribed by the Secretary of Agriculture, to have been derived from animals entirely free from disease and sound, healthful, wholesome, and in every other respect fit for human food, and to contain no poisonous or deleterious dyes, nor poisonous or deleterious chemicals, poisonous or deleterious preservatives, or other poisonous or deleterious ingredients; and

Provided further, That if the President, after due investigation, shall find that the system of meat inspection maintained by any foreign country is not the substantial equivalent of or is not as efficient as the system established and maintained by the laws of the United States, or that reliance can not be placed on certificates required under this section from the authorities of such foreign country for meat imported into the United States, he may proclaim that fact, and thereafter none of the foregoing meats shall be imported into the United States from such foreign countries; and

Provided further, That none of the foregoing meats imported into the United States from any foreign country shall be sold in the United States until they have been examined and inspected by inspectors appointed for that purpose by the Secretary of Agriculture, and have been found to be sound, wholesome, healthful, and in every other respect fit for human food, and to contain no poisonous or deleterious dyes, poisonous or deleterious chemicals, poisonous or deleterious preservatives, or other poisonous or deleterious ingredients, and such meats and meat products after entry into the domestic commerce of the United States shall have all the rights and privileges of meats and meat products inspected by the Bureau of Animal Industry of the Department of Agriculture as prescribed in the act of June 30, 1906.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee, submitted as a substitute proviso.

Mr. SUTHERLAND obtained the floor.

Mr. CUMMINS. Mr. President—

Mr. SUTHERLAND. I yield to the Senator from Iowa.

Mr. CUMMINS. I rose only to say that the amendment now presented by the committee accomplishes every purpose that I sought to accomplish in the amendment that I offered. It is substantially that amendment with the addition of the certificate which ought to have been in mine. Therefore I shall not offer the amendment which is now on the table.

The VICE PRESIDENT. The Senator from Iowa then withdraws his amendment.

Mr. CUMMINS. I withdraw the amendment, being entirely satisfied, so far as I am concerned, with the committee amendment.

The VICE PRESIDENT. The Senator from Iowa withdraws his amendment to the amendment. The question then is on the amendment proposed by the committee.

Mr. SUTHERLAND. Mr. President, I do not rise for the purpose of opposing the pending amendment, but for the purpose of making some general observations with reference to this proposed legislation, which I trust may turn out to be of a more or less relevant character.

On November 5, 1912, 42 per cent of the American electorate, owing to a foolish division among the remaining 58 per cent, commissioned the Democratic Party, which always stands ready to make a good situation bad or a bad situation worse, to introduce a few punctures into the car of American industry, leaving the extent of the vandalism to be limited only by the self-restraint of the vandals themselves.

We are about to witness the consummation of this amiable enterprise. The resulting damage can not at this moment be accurately estimated. All that we can predict with certainty is that when the Republican Party resumes its position at the wheel repairs will be necessary. Whether in the meantime we shall limp on one wheel or crawl painfully along on two or proceed at half speed on three we do not know. Into the field of precise detail prophecy must decline to enter. That must be left for the retrospective elucidation of history.

If it be true, however, as we have many times been told, that we may judge the future by the past, we are warranted at least in anticipating the result of the Democratic undertaking, now on the point of fulfillment, in a spirit of more or less subdued optimism. However much we may differ as to the exact character of the causes, this much is certain: That in this country prosperity has invariably accompanied protection, while business and industrial depression have just as invariably gone hand in hand with free trade. If these opposing policies and these differing conditions stand to one another in the relation of cause and effect, as I think they do, then the wisdom of protection has become established upon the basis of logical and moral certainty. If they are only coincidences,

the people who have reposed confidence in the Democratic Party have been the victims of an unkind fate, and the party itself stands convicted as a hoodoo of such chronic character and colossal proportions that its malign influence should be permanently exorcised.

During the half century preceding the election of 1912 the Democratic Party was intrusted with full power in the Government but once. Thirteen times prior to that date since 1860 the great jury of the American people deliberated upon the issues and 11 times returned an unqualified vote of confidence in the Republican Party. Twice out of the thirteen the people elected a Democratic President, and once they surrendered their Government in all its branches into the hands of this party of immeasurable misfortune and dismal incompetency. The four years of the second Cleveland administration were one long industrial nightmare. Business stagnation, commercial ruin, widespread suffering came in with the administration, accompanied it during its life, and vanished when it took its unlamented departure. The close affinity which is thus shown to have existed between disaster and Democratic control constitutes, to say the least, a most persuasive indication, if not a convincing demonstration, of their causal relationship. It is a rule of logic, as well as of common sense, that where a given condition usually follows a given circumstance the assumption that the circumstance has produced the condition rests in something more substantial than mere conjecture.

In this connection a comparison of the three most recent periods of our political history is illuminating and instructive: First, the Harrison administration, from 1889 to 1893; second, the Cleveland administration, from 1893 to 1897; and third, the period covering the administrations of McKinley, Roosevelt, and Taft, which has just ended.

During the first period mentioned the country as a whole and in every part was prosperous. Every form of industry was in successful, continuous, and profitable operation. Labor was generally employed at good wages. No capable man was idle save by his own choice. This situation was admirably summarized by President Harrison in his last annual message to Congress on December 6, 1892, in the course of which he said:

I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most-favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

He proceeds to show in detail the satisfactory growth, development, and productiveness of trade, manufacturing, and industry, upon which he thus concludes:

There never has been a time in our history when work was so abundant or when wages were as high, whether measured by the currency in which they are paid or by their power to supply the necessities and comforts of life.

Now, let us contrast this description of our broadly satisfactory conditions and national well-being, which at that time existed, with the picture of desperate apprehension and actual distress portrayed a few months later by Mr. Cleveland in his message to the special session of Congress, which convened on August 7, 1893, wherein he says:

With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

Mr. SMITH of Arizona. Mr. President—

The PRESIDING OFFICER (Mr. VARDAMAN in the chair). Does the Senator from Utah yield to the Senator from Arizona?

Mr. SUTHERLAND. I yield to the Senator.

Mr. SMITH of Arizona. For my information, and not to question the historical statement of the Senator, I should like to ask the Senator the difference between the dates when those two messages were delivered?

Mr. SUTHERLAND. The Harrison message was delivered to Congress early in December, 1892, and the Cleveland message was delivered in August, 1893. I gave the dates.

Mr. SMITH of Arizona. Does not the Senator recognize that between those two dates there was a universal panic, if you please, and a money stringency that occurred in the world, without regard to any legislation on the tariff at all?

Mr. SUTHERLAND. The conditions in the world generally were not very good, but they had been, as Mr. Harrison well

said in his message, in a very satisfactory condition in this country up to the time, at any rate, when he delivered his message to Congress.

Mr. SMITH of Arizona. Nobody doubts that.

Mr. SUTHERLAND. The deplorable condition of affairs which the President so dramatically sets forth he ascribes, in the main, to the purchasing clause of the Sherman Act of July 14, 1890, the repeal of which he strongly urges, having, indeed, called Congress in special session for this specific purpose.

These gloomy forebodings were fully justified by the events which followed, although the opinion of the President that the silver purchasing and coinage clause of the Sherman Act was the controlling cause of the distrust and fear, the business anxiety, loss, and failure which had come not by slow and stealthy approaches reaching back into former administrations, but which had, to use his own graphic expression, "*suddenly* sprung up on every side," was evidently not well founded, since, following the repeal of the law, conditions grew worse instead of better, until the whole people were reduced to a condition of hopeless and helpless misery. Up to the very closing hour of the Harrison administration, the conditions of industry and business were, considering the political change which had occurred, remarkably good, but a few weeks later, without previous warning, as a thunderbolt from a smiling sky, "*suddenly*," as we are told, financial distrust and fear sprang up on every side, moneyed institutions suspended, depositors were frightened, securities for loans were no longer accepted, values supposedly fixed became conjectural, and loss and failure invaded every branch of business. These, sir, are not my words, or the words of hysterical partisanship, but, I must again repeat, are the utterances of a Democratic President, addressed to a Democratic House and Senate, upborne by the consciousness of a great victory and sustained by an overwhelming vote of confidence on the part of the American people.

Mr. President, I shall not describe the conditions which obtained during the ensuing four years. This has been done so often, the memory of it all has been so deeply seared into the consciousness of our people, that extended reference is unnecessary. It is sufficient to say that a great army of idle men, willing and anxious to work, were seeking work in vain, themselves and their wives suffering for the bare necessities of life and the sight of their children going night after night in tears supperless to bed a common and distressing spectacle. We had been, as Mr. Cleveland himself said, "blessed with plentiful crops and abundant promise of remunerative production and manufacture." We were rich to the point of superabundance in all material resources, but nevertheless famine and desolation were abroad in every State. In Iowa and Nebraska, the farmers, unable to buy coal, burned their corn for fuel, while in the great coal fields of Pennsylvania and West Virginia a hundred thousand coal miners and those dependent upon them went hungry for food. The people everywhere lay idle in the valley of starvation, and everywhere there brooded the shadow of a vast discontent. And for this distressing condition of things the Democratic Party, trusted so generously but failing so miserably, found no remedy. It continued until the very last moment of Democratic control. As proof of this, let Mr. Cleveland's last annual message of December 7, 1896, bear witness. In the course of that message, after damning the operations of the Democratic tariff measure with faint and apparently artificial praise, he said:

There was nevertheless a deficit between our receipts and expenditures of a little more than \$25,000,000.

To which he naively adds:

This, however was not unexpected.

In spite of this alarming deficit, the President seems to take comfort in the thought that there was a surplus in the Treasury of the Government, a reflection which would have done credit to Mark Tapley himself, since it was the dwindling balance of a great loan of \$260,000,000 forced upon the Government in time of profound peace. President Cleveland, however, suspects that moderate improvement is on the way and says:

We can not reasonably hope that our recuperation from this business depression will be sudden, but it has already set in with a promise of acceleration and continuance.

It is worthy of remark that a month prior to the utterance of these somewhat guardedly hopeful words, the election of 1896 had taken place and the Republican Party had been restored to full power by an overwhelming vote. Truly recuperation had set in and assuredly "with a promise of acceleration and continuance," and in spite of Mr. Cleveland's prediction that we could not hope for a *sudden* return to the prosperous conditions which had *suddenly* deserted us four years before, they did return quite as suddenly as they had departed.

On March 4, 1897, Mr. McKinley, gentlest and best beloved of Presidents, took possession of the White House, and instantly, as though lifted by a hand of mighty power, we again stood upon the sunlit heights of prosperous times, and there we have stood ever since.

A few months ago the Democratic Party entered upon its four years of governmental control under the most favorable conditions imaginable. We were never before in all our history so prosperous. If the pending bill shall fail to justify the hopes of its proponents under these conditions, the Democratic tariff policy must stand definitely and forever discredited. Our Democratic friends, however, have promised to better these conditions, not merely to preserve them unimpaired, albeit this latter task is difficult enough. They have agreed to reduce the high cost of living, and it is by this bill that they expect to redeem the pledge, upon the theory that a protective tariff is the mother of high prices.

The Speaker of the House, addressing a Maine audience a few days ago, is reported to have said:

We believe that our tariff bill will reduce the cost of living, more fairly adjust the subjects of tariff taxation, and at the same time raise abundant revenue for the Government, economically and effectively administered.

Well, we shall see in due time. That the strictly tariff and usual revenue producing provisions of the bill will not raise abundant or sufficient revenue is confessed upon its face, for they are supplemented by an income tax estimated to raise \$100,000,000 annually.

Those of us who believe that the high cost of living finds its explanation in causes quite apart from the protective tariff will await developments with curiosity not unmingled, it must be confessed, with some degree of skepticism. If the cost of living be reduced, we shall be curious to know whether the cheapening of commodities by means of largely increased importations has resulted in excluding from the home market any considerable proportion of our own products; and if so, to what extent this has curtailed our domestic production and, in consequence, driven our people out of employment. Personally I do not believe that the cost of living will be appreciably reduced by the operations of this bill, unless it be by lowering the standard of living, and that at any time we can voluntarily do for ourselves without the aid of the Democratic Party.

This bill proposes to shut out of our market goods produced in foreign countries by convict labor. There can be no other reason for this except to protect the free, well-paid labor of this country against the unequal competition of convict labor in foreign lands. Goods produced by unregulated child labor are likewise to be excluded, either upon the theory that we should not be called upon to compete with such labor or in order to enforce upon those countries our opinions respecting the evils of employing immature children.

Mr. SIMMONS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from North Carolina?

Mr. SUTHERLAND. I do.

Mr. SIMMONS. I want to ask the Senator if the present law does not also provide for the exclusion of goods made by convict labor?

Mr. SUTHERLAND. Oh, yes. I am not complaining of that; I am in entire sympathy with it. I was calling attention to it for an entirely different purpose, which I will now proceed to state.

The same bill proposes to admit in competition with American labor the productions of the underpaid and often the grossly underpaid labor of Europe and Asia, without a thought of attempting to equalize the difference in wages by imposing adequate tariff duties. The difference between the cases where the bill excludes and the cases where the bill allows unfair competition is one of degree only. If it be right to protect our workmen by an embargo against convict-made goods why is it wrong to protect them by discriminating duties against pauper-made goods?

In the final analysis the tariff problem is a labor problem. If you pay high wages, you necessarily increase the cost of the things which highly paid labor produces, and in turn the price at which the things must be sold in order that the payment of high wages may continue. Protection in and of itself does not bring prosperity. It produces conditions under which prosperity can be achieved and maintained. In this day of rapid and cheap water transportation it makes little difference whether the American workman, receiving \$2 per day, be compelled to compete with an alien, receiving 35 cents per day, in Japan or in a neighboring factory. It is the steady demand for labor in this country which maintains wages and prevents the development of wide differences in the rate. Protection, by making production profitable, creates this demand. Well-paid labor is not called

upon to compete with poorly paid labor at home, because all labor, having been made independent of labor conditions in other lands by means of the protective tariff, is maintained at the same high level. The protective tariff stands at the gateway of the American market place and strips the foreign producer of the unfair advantage afforded by his more poorly paid labor and consequently his cheaper production before he is permitted to compete for customers with the domestic producer.

If protection did not do this the domestic producer, unless in exceptional circumstances, would be compelled to go out of business or place himself upon an equality with the foreign producer, which inevitably would mean that the workmen in that particular industry would be obliged to quit work or accept lower wages. In fixing our scale of wages and our scale of living, therefore, the protective tariff has the effect of excluding from consideration the labor conditions of foreign countries. It enables us to limit our inquiries to the conditions which obtain among our own people, and to adjust our standards with reference to such conditions alone. Free trade, by extending, would vastly complicate the problem and compel us to take into account and adjust ourselves to a great multitude and variety of fluctuating world-wide conditions, which are of an inferior order and some of them vastly inferior to our own, the result of which would be that American labor, instead of continuing its advance toward the summit of prosperity, would inevitably be compelled to descend, with no assurance as to how far below the summit it would finally rest.

That the pending bill is sectional in character and grossly unequal in its provisions as they affect different classes of our citizens, has been abundantly established during this debate. The Senator from Iowa [Mr. CUMMINS], in a speech of great power, has shown by unanswerable and unanswerable figures how the East and the South have been favored at the expense of the West. The Senator from Rhode Island [Mr. LIPPITT], in his masterly analysis of the cotton schedule, has shown how cunningly the language has been selected to discriminate in favor of the cotton manufacturer of the South; and my colleague [Mr. SMOOT], whose accurate knowledge of the whole subject is excelled by none, has pointed out again and again during the debate the unfairness and inequality which permeates the bill from its opening to its closing sentence.

And all these inconsistencies, inequalities, and incongruities—the duty which protects rice, the duty which excludes peanut oil for the benefit of cottonseed oil, the duty which taxes bananas for the sake of the Treasury—are all gathered together in one heterogeneous assemblage under the common label of “A tariff for revenue only.”

A tariff for revenue only! Alas, what hypocrisies are practiced in thy name! A most accommodating phrase, surely! Capable of infinite extension and unlimited contraction, to meet the elastic demands of expediency, it expands to afford generous entertainment to those fortunate industries which are the petted favorites of a capricious Democracy and closes to exclude all refuge to those which have been denied its affectionate interest. Southern rice and New Jersey catgut and Virginia peanuts, constituting a charming trinity of diversified loveliness, rest in safety and luxurious ease under the protecting agis of its flexible shelter, while western wool and Minnesota wheat and North Dakota tow, homely and commonplace, possessing neither the pale beauty of the first, the melodious possibilities of the second—whether living or dead—nor the succulent charm of the third, are coldly relegated to the exposed and inhospitable frontiers of the free list.

The line of cleavage between those who are sincerely for protection as a definite and defensible policy of general application, and those somewhat rare individuals who are *sincerely* against any form or degree of protection, as constituting a perversion of the powers of government and as being a robbery of the mass of the people for the benefit of the special interests is clear and well marked. In theory the orthodox Democrat regards it as a line of sharp separation, upon the one side of which lies the level field of equal rights to all and upon the other the artificial inequalities of special privilege. In practice, however, we are often called upon to mourn the sad inconsistency which is presented by a very large number of Democrats, who persist in treating it as a zone of uncertain and fluctuating extent, becoming wider or narrower in response to the elastic demands of local expediency. When any Democrat of this somewhat extensive class, therefore, proceeds to put his theory of free trade into practical operation his major and minor premises become hopelessly confused. In his major premise he asserts the unqualified wickedness of any degree of protection. Thus runs his theoretical generalization to which, by such sacred things as he is familiar with, he swears undeviating and undying adherence. In application, nevertheless,

he introduces into his minor premise a qualification which, quite unconsciously of course, he fails to disclose, an ingenious and fallacious method of deceiving the unwary and confiding, which the logicians call the undistributed middle, or muddle, I have forgotten which. Upon the things his constituents buy his tongue and his hand are in perfect accord—both are free traders. When it comes to the things his constituents produce his tongue is a free trader, but his hand is a protectionist. And so we find that what he says upon the stump and what he writes into the law frequently exhibit—to borrow a form of expression from the charming vocabulary of the distinguished Senator from Nevada—an unfortunate disinclination to coordinate. I do not mean to say that this type of Democrat is insincere. That would not be amiable, and the law of amiability is one which no gentleman can afford to trifle with. I only mean to suggest that he regards the golden rule as a more or less tentative proposition; that his conduct is not calculated to add any appreciable luster to the jewel of consistency. The occasional Prohibitionist who preaches the gospel of teetotalism for the salvation of the masses, but keeps a bottle for private consumption against the treacherous demands of a capricious appetite, would welcome this sort of a Democrat as a genial and sympathetic companion—an own brother, so to speak—to be unhesitatingly intrusted with a duplicate key to the private locker. The out-and-out free trader, who really thinks free trade, and conscientiously does what he thinks, is at least consistent in his folly. He takes the medicine which he prescribes for others. He practices the equality which he preaches, even though it be the equality of common ruin. But the Democrat who is for free trade on wool because his constituents buy wool, and for protection on rice because his constituents sell rice, stands for the comfortable sort of equality which the wolf proposed to the lamb, namely, that the latter should furnish all the meat and the former all the appetite.

The bill, substantively considered, is bad enough; but what shall be said of the methods adopted by the majority to bring about its enactment into law? The separation of the executive and legislative departments of the Government, so wisely provided by the Constitution, to the end that this should be a Government of law and not of men, has been set aside as though it were a meaningless platitude worthy of no man's respect. The majority party in Congress has ceased to be, if it ever has been, an organization of independent units and has become a mechanical assemblage of cogs and wheels, turning out legislation in response to the demand of the executive, heretofore supposed to be a coordinate and coequal, and not a superior, branch of the Government. Congress no longer legislates. It has sunk to the level of an automaton. It has ceased to be the servant of the people and has become the obedient servant of a servant of the people. The President does not tender advice. He issues orders to the caucus, and to the caucus each member surrenders his opinions, his judgment, and his political conscience, not in the interest of the Republic, not for the welfare of the people, but in order that the fetish of party solidarity may be maintained. The members of the majority on the floor of the Senate do not deliberate; they listen and obey. A few months ago the wheels of the Democratic machine were turning smoothly in the direction of a duty on wool and a continuing duty on sugar, but the hand of the master was placed on the reverse lever, and immediately every one of you, to a wheel, revolved in the opposite direction. Some of you mildly and some of you vehemently protested. Some of you did not relish the notion of crushing your constituents, who were following the vehicle in the trusting belief that you were going forward instead of coming back; but you went back, nevertheless, and in your ignominious flight to the rear, as you swept over and past these protesting victims of misplaced confidence, your voices were lifted in mournful unison to the mystic but familiar words of the old ballad:

I hear a voice you can not hear,
Which says I must not stay;
I see a hand you can not see,
Which beckons me away.

Have I exaggerated the condition of subordination which the Democratic Members of Congress have assumed in their relations to the Executive? Persuasive evidence that I have not done so is furnished by those Senators who came here the pronounced supporters of a duty on wool and a continuing duty on sugar, and who, after a valiant charge upon the caucus with bold and defiant words, gently subsided and are now found supporting the President's program. There have been apologies for the free listing of sugar, but who has defended it? It is freely conceded that such action will probably ruin the industry in some States and cripple it in others.

While every other food commodity has advanced in price—some having almost doubled—sugar has actually shown a mate-

rial decline in its money price. And this decline, measured by other commodities, has been phenomenal. On the whole, the retail price of sugar in the United States has averaged only a little more than two-thirds the average price in Europe, and in only four countries has it been cheaper, namely, in Belgium, Switzerland, Denmark, and the United Kingdom, and even in those countries the price has been lower by only the fraction of a cent per pound.

Sugar is an ideal commodity upon which to raise revenue by import duties. It has furnished in the aggregate more than \$50,000,000 per annum, but the burden thereby imposed upon each citizen is so slight as to be practically negligible. All this is admitted upon the floor, but the will of the Executive, ratified by a complaisant caucus majority, is supreme, and our friends shrug their shoulders and submit.

But this is not all. We have it upon the authority of the Senator from Nebraska [Mr. HITCHCOCK] that this caucus has forbidden its members to so much as offer an amendment upon the floor of the Senate. However strongly he may believe in its merits and however anxious many of his colleagues may be to support it, he is forbidden to propose it and they are forbidden to vote for it. I quote his own language, which arraigns his own party caucus more severely than any feeble words of mine could do.

He says:

It has been an unpleasant sight to me, as it has been to many Democrats during the last few days in this Chamber, when Senators on the Republican side of the Chamber have proposed amendments to the income-tax provision that appeal to the sense of justice and appeal to the judgment of Senators on this side, but who, because of caucus rule, were compelled to vote against such amendments. I do not think that is a worthy sight in the Senate of the United States. I do not believe it is right to bind individual Senators and compel them to vote against their conscience and their judgment upon such amendments when no party policy is involved.

And speaking a little later of his proposed amendment, he said:

I did not, however, ask the caucus to approve my amendment. I asked to be left free to offer it here in the Senate, and I asked that other Democratic Senators be left free to vote for it according to their consciences and their judgment. I was refused. The Senator from Arizona [Mr. ASHURST], however, offered my amendment, and after a heated controversy it came to a vote in that caucus. The votes have been published, so I am revealing none of the secrets of that caucus when I say that 18 Members of the Senate voted for my amendment and 23 appeared to vote against it. I say "appeared," because it is a fact, which I shall take the liberty of stating, that the nine Democratic members of the Committee on Finance voted as a unit, regardless of their convictions. So we have a wheel within a wheel, a machine within a machine. The inner machine controlled the caucus. The vote cast was not the correct expression even of the caucus.

Nothing that I or anyone could say would add force to the sweeping condemnation of Democratic caucus methods which the Senator from Nebraska, himself a Democrat of no lukewarm tendencies, has thus publicly made. He was courageous enough to offer an amendment, notwithstanding the decree of the caucus, but none of his associates, whom the caucus had refused to leave "free to vote for it according to their consciences and their judgment," gave him their support.

Sir, we have fallen upon a situation of great menace. Men have been called upon to give their time and money, to sacrifice even health and strength, for the good of the party; but it has never transpired hitherto that caucus action has gone to the extent of compelling them to "surrender their consciences and their judgment" to the will of a majority of their associates for the sake of party regularity.

Mr. President, I shall await, as, indeed, I am obliged to await, the verdict of those who sent all of us here, to see whether so unfair a measure, adopted by such indefensible methods, will receive the approval of the American people.

Mr. SMITH of Arizona. Mr. President, the Senate will bear witness that I have thus far refrained from any participation in this debate, and I shall not detain the Senate long now.

For 20 years I have been listening to debates on the tariff question—yes; longer than that—and without assailing the intelligence of any man or the strength of any argument made I may say that very little has been contributed to the literature of the subject. Our differences as parties is perfectly familiar to every man who has read the public press within the time I have mentioned, and this debate has done little more than emphasize that difference.

I can not refrain, however, from making answer, or, at least, an allusion to some statements made by the Senator from Utah [Mr. SUTHERLAND].

It strikes me that it comes with rather poor grace from an iron-bound, riveted, stand-pat, high-protection Republican to make a mighty outcry against the Democratic caucus, as he sees fit to call it.

What awful wrong did the Democratic Party do in the caucus of which the Senator complains? With a small majority in this

body, with a mere question of taxation involved, only settling the amount the people should pay for the support of government, hampered by no protective principle of government which you fall down and worship, but confining it to the mere question of laying taxes for the support of government and making the burden as light as possible, the Democratic Party got together, as a board of supervisors or a board of directors would do in any sensible corporation, and composed the differences between the Members on the rate the people should bear. Now, with a microscope, Senators on the other side hunt out every irregularity they can find, hunt out any one paragraph that perhaps might disagree with another, and make that the text of their assault upon this bill, which contains some 4,000 items or more. Some inconsistencies may be detected, but the principle of the bill is maintained throughout. The purpose to lessen tariff taxes is carried out.

More than that, the Senator's is the last voice raised against the conditions that Mr. Harrison left on this country at the time he quit the presidential chair, and all the miseries of which have been laid on the Wilson tariff bill, passed a year and a half after the panic was on. Everybody knows, except, apparently, the Senator from Utah, that the country was already in the throes of a panic at the time the Wilson bill was passed. Recognizing that, they attempt to account for the calamity by saying that the fear of tariff reduction, even before we attempted to touch the tariff, was enough to start and did bring on that fearful, world-wide disturbance.

So this thing—this fetish—that holds the worship of the Senators on the other side is so tender, your boasted protection has such a slight hold on the people—this right of taxing the great majority to help a very few—can not even survive a mere threat to change it; and the country must be disturbed in all its business, labor ruined, and the farmer robbed if we dare speak in criticism of the humbug. Inasmuch as the panic was on the country in full force long before the Wilson bill was passed, then the panic is accounted for by the fear that it would pass. I think we are built on a stronger foundation than that. Everybody knows that the Wilson bill had little or nothing to do with conditions at that time. There was a universal panic, and the same conditions existing in this country at that time existed over the world. But let that go.

But a word more and I shall cease. I want to compare the way the Senators on this side of the Chamber prepared this bill and settled the disputes as to their private differences with the way the last tariff bill—the Aldrich bill—was formed. When Senators are loudly declaiming against the caucus, with uplifted hands protesting against this infamy; through their thin coats we imagine we see the welts of the Aldrich party lash. Sir, at that time neither the Senator from Utah [Mr. SUTHERLAND] nor any other Republican Senator would have dared suggest a caucus. No differences were to be allowed discussion. The failure to have a fair discussion and a fair deal among yourselves created the insurgency of to-day. What happened to you? You promised to give the people relief. What did you give them? You gave them the Aldrich bill. Your President on the platform promised to give relief. What did he do? He signed the Aldrich bill raising the taxes, and what the result was is shown by the new faces in this Hall.

I tell you that your mistake was in not having a caucus or full conference of Republicans meet together for the purpose of settling such taxation as was to be laid on the people. That mode is largely preferable to the methods you adopted. No one on your side, out of the select few, had anything to do with framing the bill. If there ever was a tariff bill passed on earth when those having a hand in it were reduced to a minimum it is found in the Aldrich bill. You have seen the result of it, Senators.

Mr. President, I am not here to attempt to defend or denounce a Democratic conference. I am here, however, for the purpose of saying that it would have been idiocy in the face of differences on the mere question of the rate of taxation or relief of all taxes on the necessities of life, which ought to have long been free from any taxation, that we should have come into this Chamber with a majority of only a few votes and submit the bill to what everyone's private opinion might be, not on a question of conscience but on a question of a rate of taxation. That is all that was involved in this caucus of which we hear so much.

Now, having no other assault to make against the bill except that it was formed in caucus where we composed our differences in settling a rate, you pretend to claim that we have made some awful assault on the people. There was nothing sinister about it. No awful secret was made of it. We gave the proceedings every morning to the public. I will tell you one reason why we did not have an open caucus deliberation.

We were afraid that, having an audience, we might discover some men who also loved to talk to large crowds, and oratory instead of argument might long delay the conclusion of our duty to our party and our country and ourselves. If we had opened it to the public to hear gentlemen make speeches we would have been in conference all summer, and most of us would have been deliberating not so much as to what we ought to do, but deliberating on the best way of getting rid of that oratory if not of the orator.

Mr. GALLINGER. Mr. President—

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from New Hampshire?

Mr. SMITH of Arizona. I yield to the Senator.

Mr. GALLINGER. Will my amiable friend tell us on this side whether you are yet through deliberating in the Democratic caucus?

Mr. SMITH of Arizona. I will say to the Senator that we did not let him in there for the very reason I have expressed.

Mr. GALLINGER. That does not answer my question.

Mr. SMITH of Arizona. The Senator will get no further answer from me; as far as I am concerned, his question needs no more.

Mr. GALLINGER. I am afraid you are going to let some one in to-night who is a longer talker than I.

Mr. SMITH of Arizona. If the gentleman is perfectly willing to come he must promise not to do just what I have been criticizing. Some of our own men, spurred by the examples set on this floor, may be debating the question after others are tired of listening.

Mr. GALLINGER. So my friend does not deny that the Democratic caucus has not yet completed its work?

Mr. SMITH of Arizona. I do not deny that it has not yet completed its work, but the labor is about ended. We have taken time to deliberate and to talk with each other. You did not dare do that in the consideration of your Aldrich bill. You did not want and would not have a free conference of Republican Senators. The interests controlling the bill might thus be endangered. Your caucus was with the beneficiaries of the bill, not with each other. Ours was a conference carrying out our platform promises by reasonable concession to those disagreeing with us, and thus sensibly securing the results expected of us. And you complain at it. I do not wonder. You know your complaint is only a farce—a miserable pretense of virtue, used to fool the people to their own detriment in again supporting your cause.

This bill is prepared by the Democratic Members of the Senate, every one of them participating in the arguments and joining in the final result. Your present law was prepared by a very few members of your party, in and out of the Senate, then presented here with orders on your party members for support. No wonder that insurgency arose against the bill within your own party. These insurgents had not been consulted, or at least no argument made by them was heeded. Yet you are laying your principal opposition against our manner of forming the measure. It was not a matter of conscience with us—as I have before stated—because it was the question of a mere rate of taxation; and the Senator from Utah is now telling us of the great crime we have committed because we did not call in everybody to listen to our debates on the matter while we were settling the question of the rates of taxation that the people should bear. Does it not seem ridiculous? Yet I do not blame these Senators. The only thing on earth left for them to do now is to try to prejudice the farmer and the other people against the Democratic tariff bill drawn for their relief.

As to the farmer being injured by this bill I have heard enough and so has everyone else who has attended these sessions. I have seen the crocodile tears and have heard the wailing voices of some of you who never saw a farm in your life, except from a public road. You are talking about the troubles we are giving the farmer when every one of you knows that our every effort in this bill is to relieve him of the oppression your policy has so long and so cruelly imposed. We know, and you have known, that the rates of duty laid on farm products imported into this country were never of any general benefit to the farmer, because the great bulk of his products was exported and sold in competition with the world. Duties laid in his behalf are purely sentimental, and you have no other purpose than to delude them to their own injury by pretending that they were protected, and thus secure again their votes; but they seem to have gotten a little tired of it. The wonder is that they have stood it so long.

I happen to be one of those men who were raised in the country on a farm. I know something about its burdens. I have followed the horse in the corn row; I have gathered the crop; I was just old enough to work at the time of the libera-

tion of the slaves. I have spent years on the farm working at every possible job in that richest and most bountiful of all countries in the world in the abundance and variety of its crops. I have had my experience with that, and no man here or elsewhere has any greater sympathy than I feel this minute for them as I reflect on the awful labors which they endure and the small rewards they gather.

These very farmers who are now made the objects of your new-born solicitude have been the subjects of your most heartless exploitation. He sells now, has sold for years, and will sell as long as he produces more than we consume in this country in an absolutely free-trade market, competing with every tiller of the soil everywhere in the world, and is forced to buy everything he does not himself raise in the highest protected, most trust-ridden market on the face of the earth.

Now, Mr. President, in conclusion, it was no purpose of mine to enter into this debate. I have only said this little under temptation of the criticism constantly hurled across the aisle at us, charging sinister motives in the preparation of this bill. But having taken the floor, and being averse to detaining the Senate longer, I desire to print with my remarks some tables, some extracts from public documents, some statistical data and such explanatory comments as I may see fit to make.

The PRESIDING OFFICER. Is there objection?

Mr. GALLINGER. Mr. President, I observe the Senator proposes to comment on the document he places in the Record. The Senate has never agreed to that. I have no objection to the document being printed.

Mr. SMITH of Arizona. I would make no comment any less agreeable than I have made here, but I would not publish mere statistics and figures without explanation and I will refrain from doing so and submit to the reasonable and proper objection the Senator has made.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Mississippi [Mr. WILLIAMS], for the committee, as a substitute.

Mr. BRANDEGEE. Mr. President, I ask the Senator from Mississippi what effect, if any, would the omission of the words "meat products" from the amendment have? The committee's original amendment reads:

Provided, That meat and meat products brought to the United States shall be subject to the same inspection—

And so forth.

The amendment suggested by the Senator as a substitute omits the words "meat products."

Mr. WILLIAMS. The inclusion of those words might have one effect, if the Senator will permit me. The second or third proviso provides for a certain examination after it gets here. The meat products that come in canned or in containers might, if the language was repeated further down, subject them to being opened and uncanned for inspection. But if there is any trouble about the language, I think we can arrange that later on. Let it pass as it is now.

Mr. BRANDEGEE. I am willing to let it pass as it is, if it is correct.

Mr. WILLIAMS. I think any meat product is meat. That has been my opinion all the time.

Mr. BRANDEGEE. Certainly the paragraph in the part that is not proposed to be affected by the amendment provides for meats of all kinds, prepared or preserved. Does that include canned products?

Mr. WILLIAMS. Yes.

Mr. BRANDEGEE. Then the Senator's amendment might compel the opening of the cans?

Mr. WILLIAMS. I beg the Senator's pardon; the amendment would apply to such meats as could be subjected to inspection under the law of 1906. That law does not apply to the inspection of meat products which are canned. It provides for the inspection of meat that goes into the can in this country before it is canned. The previous part of the amendment provides that the Secretary of Agriculture shall be satisfied that they have a system substantially the equivalent of ours, in the language of the bill, and that would apply to their inspection and the meat before it was canned or preserved. I think it would dispense with the inspection of the meat here after it was imported already canned.

Mr. BRANDEGEE. If I carry the language of the amendment as suggested by the Senator in my mind, it provides for the inspection of all the foregoing, which means all the foregoing enumerated in this paragraph. I think it would provide for the inspection of canned meats by that language. Before I vote on the amendment I should like to have it read in full by the Secretary.

The PRESIDING OFFICER. The Secretary will read the amendment.

The SECRETARY. On page 142, line 15, in lieu of the proviso, insert the following:

Provided, however, That none of the foregoing meats shall be imported into the United States from any foreign country unless the same are certified by the proper authorities of such foreign country, in a form to be prescribed by the Secretary of Agriculture, to have been derived from animals entirely free from disease and sound, healthful, wholesome, and in every other respect fit for human food, and to contain no poisonous or deleterious dyes, nor poisonous or deleterious chemicals, poisonous or deleterious preservatives, or other poisonous or deleterious ingredients: *And provided further,* That if the President, after due investigation, shall find that the system of meat inspection maintained by any foreign country is not the substantial equivalent of or is not as efficient as the system established and maintained by the laws of the United States, or that reliance can not be placed on certificates required under this section from the authorities of such foreign country for meat imported into the United States, he may proclaim that fact, and thereafter none of the foregoing meats shall be imported into the United States from such foreign countries: *And provided further,* That none of the foregoing meats imported into the United States from any foreign country shall be sold in the United States until they have been examined and inspected by inspectors appointed for that purpose by the Secretary of Agriculture and have been found to be sound, wholesome, healthful, and in every other respect fit for human food, and to contain no poisonous or deleterious dyes, poisonous or deleterious chemicals, poisonous or deleterious preservatives, or other poisonous or deleterious ingredients; and such meats and meat products after entry into the domestic commerce of the United States shall have all the rights and privileges of meats and meat products inspected by the Bureau of Animal Industry of the Department of Agriculture, as prescribed in the act of June 30, 1906.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. McCUMBER. I have an amendment to the paragraph pending which I offered yesterday, but it was properly laid aside until the amendment of the committee could be perfected.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. Add at the end of the amendment just agreed to the following proviso:

Provided further, That any of the foregoing specified articles shall be subject to a duty of 25 per cent ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on such articles imported from the United States.

Mr. McCUMBER. Mr. President, it would be improper to ask for a vote upon this amendment without inserting in the Record some figures that will properly apply to and explain the amendment.

The principal countries from which imports may be expected under free trade are Canada, Australia, and Argentina. The duty imposed by these countries upon the importation of American meats are as follows:

Canada	-----cents per pound--	3
Australia	-----cents per pound--	4
Argentina	-----per cent ad valorem--	27

The probable value of imported meats will be close to about 10 cents per pound. If the meat imported from Canada would average 10 cents per pound, the duty would be equivalent to an ad valorem of 30 per cent. In other words, the Canadian ad valorem to-day is 30 per cent; in Australia there is an ad valorem duty of 40 per cent; in Argentina there is an ad valorem duty of 27 per cent. The American farmer, who is still an exporter of meat products, in order to get into any one of these countries would be compelled to pay the respective ad valorem duties of 30, 40, and 27 per cent.

If the New York farmer desires to sell a beef in Ontario, he must pay a duty of 30 per cent ad valorem. If the Ontario farmer desires to sell a beef in New York, he does not have to pay one penny. This demonstrates again the intense hostility everywhere expressed in this great bill against the American farmer and in favor of his competitor. No one will claim that it costs more to produce a beef in Canada than it does in the United States, or in Argentina, or in Australia. In fact, with our present duty, Australian meats are going into all our western ports; but suppose it costs exactly the same in the Provinces as in the States, why, then, this discrimination against the American farmer?

You say to the American farmer, "You can not ship your meat into Canada, into the Argentine, into Australia, unless you pay a duty ranging from 27 to 40 per cent," and you say to each one of the farmers of these countries, "You can ship your meat into the United States without the payment of a cent of duty."

Mr. President, carrying out the consistency of the same argument that I made yesterday, I again assert that it should be the purpose of a tariff-for-revenue-only bill to produce revenue for the support of the Government, and, following Democratic policies and theories, duties should be imposed upon all imports into the United States, unless there are special reasons why such duties should be taken off some imports and a greater amount added to other imports. Why should there be protection, or incidental protection, in some instances and no protection whatever in others?

If it could be shown to me that the cost of meats was too great in the United States, due to the cost of raising cattle, and that the farmers in the United States were receiving an exorbitant and undue price for their product, I think I would agree with the Democratic Senators in reducing the tariff, so that that product might be placed, possibly, upon a free-trade basis; but no one will claim that there are any exorbitant prices being paid to the producer of beef in this country, and I doubt very much if anyone will claim that the bill of itself will materially reduce the cost of that article to the ultimate consumer.

With this brief statement, Mr. President, I should like to have the yeas and nays upon the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withhold my vote.

Mr. CHILTON (when his name was called). I have a pair with the junior Senator from Maryland [Mr. JACKSON], and therefore withhold my vote.

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Nevada [Mr. NEWLANDS]. Observing that he is out of the Chamber, I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. REED (when his name was called). I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. OWEN] and vote "nay."

Mr. SAULSBURY (when his name was called). I have a general pair with the junior Senator from Rhode Island [Mr. COLT], and therefore withhold my vote. If at liberty to vote, I should vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON], which I transfer to the junior Senator from Oklahoma [Mr. GORE] and vote "nay."

The roll call was concluded.

Mr. BRYAN. I have a pair with the Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote.

Mr. LEWIS (after having voted in the negative). Inadvertently I voted. I discover that the junior Senator from North Dakota [Mr. GRONNA], with whom I am paired, is not here, and I therefore desire to withdraw my vote.

Mr. THORNTON. I desire to announce the necessary absence of the Senator from Alabama [Mr. BANKHEAD] and to state that he is paired with the junior Senator from West Virginia [Mr. GOFF].

Mr. GALLINGER. I desire to announce that the Senator from Delaware [Mr. DU PONT] is paired with the Senator from Texas [Mr. CULBERSON] and that the Senator from Michigan [Mr. TOWNSEND] is paired with the Senator from Florida [Mr. BRYAN].

Mr. JONES. I desire to announce that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily absent. He is paired with the Senator from Florida [Mr. BRYAN]. I make this announcement to stand for the remainder of the votes to-day.

The result was announced—yeas 32, nays 40, as follows:

YEAS—32.			
Bradley	Dillingham	McLean	Sherman
Brady	Gallinger	Nelson	Smoot
Brandeggee	Jones	Norris	Stephenson
Bristow	Kenyon	Page	Sterling
Catron	La Follette	Penrose	Sutherland
Clark, Wyo.	Lippitt	Perkins	Warren
Crawford	Lodge	Poin Dexter	Weeks
Cummins	McCumber	Root	Works
NAYS—40.			
Ashurst	Lane	Reed	Smith, S. C.
Bacon	Lea	Robinson	Stone
Clarke, Ark.	Martin, Va.	Shafroth	Swanson
Fletcher	Martine, N. J.	Sheppard	Thomas
Hitchcock	Myers	Shields	Thompson
Hollis	O'Gorman	Shively	Thornton
Hughes	Overman	Simmons	Tillman
James	Pittman	Smith, Ariz.	Vardaman
Johnson	Pomerene	Smith, Ga.	Walsh
Kern	Ransdell	Smith, Mo.	Williams
NOT VOTING—23.			
Bankhead	Chilton	Goff	Oliver
Borah	Clapp	Gore	Owen
Bryan	Colt	Gronna	Saulsbury
Burleigh	Culbertson	Jackson	Smith, Mich.
Burton	du Pont	Lewis	Townsend
Chamberlain	Fall	Newlands	

So Mr. McCUMBER's amendment was rejected.

Mr. JONES. I desire simply to offer an amendment by request, and ask that it may be printed and referred to the Committee on Finance. It is an amendment intended to be proposed to the pending bill.

The VICE PRESIDENT. Without objection, the proposed amendment will be printed and referred to the Committee on Finance.

Mr. THOMAS. I ask unanimous consent to reconsider the vote by which the amendment to paragraph 138 was agreed to, and to offer the amendment which I send to the desk as a substitute for the Senate committee amendment.

The VICE PRESIDENT. Without objection, the vote whereby the amendment to paragraph 138 was agreed to will be reconsidered. The Senator from Colorado offers a substitute for the committee amendment, which the Secretary will state.

The SECRETARY. In paragraph 138, page 40, line 20, after the word "Provided," it is proposed to insert:

That any prohibition of the importation of feathers in this section shall not be construed as applying to artificial files used for fishing.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. THOMAS. Now, I ask unanimous consent to reconsider paragraph 153 and to offer the amendment which I send to the desk as a substitute therefor.

The VICE PRESIDENT. In the absence of objection, paragraph 153 will be considered as open to amendment. The Senator from Colorado offers an amendment which the Secretary will state.

The SECRETARY. Paragraph 153, page 44, the committee proposes the following substitute for the paragraph:

153. Belt buckles, trousers buckles, waistcoat buckles, snap fasteners and clasps by whatever name known, any of the foregoing made wholly or in chief value of iron or steel; hooks and eyes, metallic; steel trousers buttons and metal buttons, all the foregoing and parts thereof, not otherwise specially provided for in this section, 15 per cent ad valorem.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. THOMAS. Mr. President, I now ask unanimous consent to revert to paragraph 318½ and to offer the amendment which I send to the desk, to come in at the end of the committee amendment heretofore agreed to.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 91, line 23, at the end of paragraph 318½ as agreed to, it is proposed to insert, after the word "fourteen," a comma and the words "until which date the rates of duty now provided by Schedule K of the existing law shall remain in full force and effect."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. THOMAS. Now, Mr. President, I ask leave to offer the amendment I send to the desk to the substitute for paragraph 326, which was adopted yesterday afternoon.

The VICE PRESIDENT. Without objection, the vote whereby the amendment to paragraph 326 was agreed to will be reconsidered. The amendment proposed by the Senator from Colorado to the amendment heretofore reported by the committee will be stated.

The SECRETARY. In line 9, page 2, of the substitute for paragraph 326 heretofore presented, after the word "ounces," it is proposed to insert "per square yard."

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. THOMAS. On behalf of the committee I offer as a new paragraph the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 151, after line 18, it is proposed to insert a new paragraph, as follows:

6151. Steel engraved forms for bonds, debentures, stock certificates, negotiable receipts, notes and other securities; and engraved steel plates, dyes, and rolls, suitable for use in engraving or printing bonds, stocks, certificates, or other securities.

The VICE PRESIDENT. The question is on agreeing to the amendment.

Mr. GALLINGER. Mr. President, that amendment places those articles on the free list?

Mr. THOMAS. That is the purpose; yes.

Mr. GALLINGER. It strikes me that that is a rather serious matter. Our engravers at the present time are not overemployed or overprosperous; and they have made very urgent appeals to Congress not only this year, but in former years, not to legislate to their disadvantage.

I do not know why we should promote the industry of steel engraving in other countries to the disadvantage of our engravers in our own country. Perhaps I do not understand the matter, but it strikes me in that way.

Mr. THOMAS. I think the same people have several times appealed for relief from the exactions of the New York Stock Exchange, which does not permit the listing of any stocks except those that are engraved by one great concern. It is quite probable that by placing these articles on the free list we may secure a little competition in some other quarters, if not in that one.

Mr. GALLINGER. The Senator does not think it will affect the operations of the stock exchange, does he?

Mr. THOMAS. No; I do not know that it will; but it will certainly tend to give the opportunity to use engravings of different sorts in competition with the American Bank Note Co., which has a monopoly of such things, so far as the stock exchange can give it that monopoly.

Mr. GALLINGER. Would not the stock exchange continue to give it that monopoly?

Mr. THOMAS. I presume it would, so far as concerns any effect which the amendment I have offered might have; but we propose, if we can, to secure its adoption, in the hope that it will tend generally in that direction, if not specifically.

Mr. GALLINGER. I will ask for the yeas and nays on the amendment. I think it is a pretty serious matter.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote.

Mr. CHAMBERLAIN (when his name was called). I again announce my pair with the junior Senator from Pennsylvania [Mr. OLIVER], and withhold my vote.

Mr. McCUMBER (when Mr. GRONNA's name was called). I desire to announce that my colleague [Mr. GRONNA] is necessarily absent from the Senate. He is paired with the junior Senator from Illinois [Mr. LEWIS].

Mr. McCUMBER (when his name was called). I transfer my pair as before stated and will vote. I vote "yea."

Mr. THOMAS (when his name was called). I again announce the transfer I made a few moments ago, and will vote. I vote "yea."

The roll call was concluded.

Mr. REED. I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from Virginia [Mr. MARTIN] and will vote. I vote "yea."

Mr. BANKHEAD. I am paired with the junior Senator from West Virginia [Mr. GOFF], and therefore withhold my vote. I will let this announcement stand for the balance of the day.

Mr. CHILTON. I transfer my pair with the junior Senator from Maryland [Mr. JACKSON] to the senior Senator from South Carolina [Mr. TILLMAN] and will vote. I vote "yea."

The result was announced—yeas 40, nays 32, as follows:

YEAS—40.

Ashurst	Lane	Reed	Smith, Md.
Bacon	Lea	Robinson	Smith, S. C.
Chilton	Martine, N. J.	Saulsbury	Stone
Clarke, Ark.	Myers	Shafroth	Swanson
Fletcher	O'Gorman	Sheppard	Thomas
Hollis	Overman	Shields	Thompson
Hughes	Owen	Shively	Thornton
James	Pittman	Simmons	Vardaman
Johnson	Pomerene	Smith, Ariz.	Walsh
Kern	Ransdell	Smith, Ga.	Williams

NAYS—32.

Bradley	Cummins	McLean	Sherman
Brady	Dillingham	Nelson	Smoot
Brandegee	Gallinger	Norris	Stephenson
Bristow	Jones	Page	Sterling
Cañon	Kenyon	Penrose	Sutherland
Clark, Wyo.	Lippitt	Perkins	Warren
Colt	Lodge	Poinexter	Weeks
Crawford	McCumber	Root	Works

NOT VOTING—23.

Bankhead	Clapp	Gronna	Newlands
Borah	Culberson	Hitchcock	Oliver
Bryan	du Pont	Jackson	Smith, Mich.
Burleigh	Fall	La Follette	Tillman
Burton	Goff	Lewis	Townsend
Chamberlain	Gore	Martin, Va.	

So the amendment of the committee was agreed to.

Mr. THOMAS. I ask unanimous consent to reconsider paragraph 652, and I offer an amendment to come in at the end of the paragraph.

The VICE PRESIDENT. It is not necessary to reconsider the paragraph. The amendment proposed by the committee will be stated.

The SECRETARY. On page 158, paragraph 652, line 22, after the word "thirteen," it is proposed to insert a comma and the words "until which time the rates of duty now provided by Schedule K of the existing law shall remain in full force and effect."

The amendment was agreed to.

Mr. THOMAS. I make the same request with reference to the paragraph immediately following—paragraph 653—and offer the same amendment.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. At the end of paragraph 653, page 150, line 4, it is proposed to insert a comma and the words "until which time the rates of duty now provided by Schedule K of the existing law shall remain in full force and effect."

The amendment was agreed to.

Mr. SMITH of Georgia. I wish to call attention to paragraph 258, which was passed over when the bill was read. I send to the Secretary's desk a substitute for that paragraph as a whole, which I offer on behalf of the committee.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 77, paragraph 258, the Senator from Georgia offers a complete substitute for the paragraph, so read as follows:

258. The terms "cotton cloth" or "cloth," wherever used in the paragraphs of this schedule, unless otherwise specially provided for, shall be held to include all woven fabrics of cotton in the piece, whether figured, fancy, or plain, and shall not include any article, finished or unfinished, made from cotton cloth. In the ascertainment of the condition of the cloth or yarn upon which the duties imposed upon cotton cloth are made to depend the entire fabric and all parts thereof shall be included. The average number of the yarn in cotton cloth herein provided for shall be obtained by taking the length of the thread or yarn to be equal to the distance covered by it in the cloth in the condition as imported; in counting the threads all ply yarns shall be separated into singles and the count taken of the total singles; the weight shall be taken after any excessive sizing is removed by boiling.

Mr. LIPPITT. Mr. President, I should like to ask the Senator if he does not think it would be wise, in addition to saying "removed by boiling," to put in the words "or by other suitable process"? It seems to me there might be some other process by which the sizing could be more readily removed than by simply boiling.

Mr. SMITH of Georgia. I conferred with the men in charge of the work in New York City, and they were of the opinion that boiling was the proper process.

Mr. SMOOT. It is one process, but the other wording would not hurt at all.

Mr. LIPPITT. The other wording would not hamper them, and it would give them more freedom.

Mr. SMITH of Georgia. I do not object to inserting the words "or other suitable process." I move that that be done.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. After the word "boiling," it is proposed to insert the words "or other suitable process."

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question now is on the amendment as amended.

Mr. LIPPITT. Mr. President, in connection with the amendment as amended, I wish to call the attention of the Senator from Georgia to the provision which he has made that all thread shall be considered in measurement as of the same length as the cloth itself.

I presume the Senator is aware that in a great number of cases, by merely giving an assumed measurement to the thread in that way, the committee is reducing the number of the yarn, and in effect is reducing the duty which is paid upon such cloth. In some cases the threads in the cloth are at least twice the length of the cloth itself. In that case, if the thread is No. 50, it will be taken for dutiable purposes as No. 25, and whereas in the case of No. 50 thread the duty is, I think, 25 per cent, the duty actually paid would be in the neighborhood of one-half that, or about 12½ per cent. Inasmuch as the duty depends entirely upon the number of the yarn and the cloth, it seems an unjust method of procedure.

Mr. SMITH of Georgia. Mr. President, this amendment first provides that the threads shall be unraveled, and the finest thread in any twisted thread shall be taken. That action was had to guarantee that the highest thread used should be estimated in the count, although before being woven its size was increased by twisting. We were aware of the fact that by measuring the thread as it is in the cloth the thread would not receive quite the length, and therefore not quite the number, that it otherwise would receive, but our investigation and the information I received did not lead to the conclusion that the extent of difference suggested by the Senator from Rhode Island would take place.

Mr. LIPPITT. Mr. President, when I made a few remarks on this subject a month ago I had here a sample of cloth, which I can not put my hand on at this moment because I did not

know this particular question would come up, which illustrated the fact that in that particular case the thread was twice the length of the cloth. The same thing happens in such classes of goods as seersuckers, which enjoyed great popularity a few years ago, and were made here in large quantities and imported in large quantities.

Mr. SMITH of Georgia. I did not hear the character of the goods.

Mr. LIPPITT. Seersucker. The same situation exists also in what is called Russian cord, where there is a covering thread, as it is called, that goes back and forth over the fabric and is frequently three times the length of the fabric itself. These are all novelty fabrics that are made principally on the fancy looms of New England, and the effect of allowing the custom-house to use this system of measurement is practically in those instances to nullify the entire principle of the bill.

It seems to me to be a most unjust provision, and I shall hope that the committee will decide to substitute for that language some language which will call for the thread to receive the actual measurement of the thread. I am not suggesting that anything should be done except what is done in every case where the thread is the length of the cloth. Where the thread is not the length of the cloth manifestly it should have the benefit of this full length so as to get its accurate number. It is very easy to make the change, and very easy to perform the operation of measuring the length of the thread.

The VICE PRESIDENT. The question is on agreeing to the amendment as amended.

The amendment as amended was agreed to.

Mr. SMITH of Georgia. I ask attention to paragraph 263, on page 79. We ask to substitute the word "woven" for the word "Jacquard," in line 18. The subject was up and discussed when the paragraph was formerly before the Senate. At that time we were not prepared to agree to use the word "woven," but now we agree to it. The paragraph was passed over, and we ask for its adoption with this amendment.

The VICE PRESIDENT. The amendment of the committee will be stated.

The SECRETARY. The committee report to strike out paragraph 263 and in lieu thereof to insert:

263. Tapestries, and other Jacquard figured upholstery goods weighing over 6 ounces per square yard, composed wholly or in chief value of cotton or other vegetable fiber, in the piece or otherwise, 35 per cent ad valorem.

In line 18, the first line of the paragraph, it is proposed to amend the amendment by striking out the word "Jacquard" and inserting "woven."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. SMITH of Georgia. There are two or three other paragraphs I wish to pass on. Paragraphs 264 and 265 were passed over at the request of the Senator from Pennsylvania.

Mr. PENROSE. I have an amendment to paragraph 265 which I should like to call up.

Mr. SMITH of Georgia. The Senator has no amendment to paragraph 264?

Mr. PENROSE. No; I did not offer any amendment to paragraph 264.

Mr. SMITH of Georgia. Then I ask that paragraph 264 be adopted.

The VICE PRESIDENT. There is no amendment to it, and it has been read, so it is adopted. The amendment proposed by the committee to paragraph 265 will be stated.

The SECRETARY. The committee propose to amend the paragraph on page 80, line 7, before the words "per dozen pairs," by striking out "70 cents" and inserting "\$1.20"; in line 8, after the words "per dozen pairs" and before the words "per centum," to strike out "40" and insert "30"; in line 9, before the words "per dozen pairs," to strike out "70 cents" and insert "\$1.20"; and in line 11, before the words "per centum" to strike out "35" and insert "45," so as to make the paragraph read:

265. Stockings, hose and half hose, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose and half hose, and clocked stockings, hose and half hose, all of the above composed of cotton or other vegetable fiber, finished or unfinished; if valued at not more than \$1.20 per dozen pairs, 30 per cent ad valorem; if valued at more than \$1.20 per dozen pairs, 50 per cent ad valorem. Gloves by whatever process made, composed wholly or in chief value of cotton, 45 per cent ad valorem.

The VICE PRESIDENT. The amendment proposed to the amendment by the Senator from Pennsylvania will be stated.

The SECRETARY. On page 80, line 7, after the word "unfinished," strike out the words "if valued at not more than \$1.20

per dozen pairs, 30 per cent ad valorem; if valued at more than \$1.20 per dozen pairs," so as to read "50 per cent ad valorem."

Mr. PENROSE. Mr. President, the effect of this amendment is to abolish the classification and make all of these articles bear a duty of 50 per cent ad valorem.

I do not wish to detain the Senate by any extended remarks on the subject. It is hardly worth while for me to call the attention of the Senate to the extent of this industry. It exists in some 20 or 30 States of the Union. It is a small industry in the sense that the men managing it are men of moderate means. There is no suggestion of a trust or combination in the hosiery business, and I do not know of anyone in the business who pretends to any great wealth.

It gives honest and decent employment to a large number of men, women, and children, and is a very desirable industry to have in any community.

The hosiery people were shocked and surprised when they found out the action of the Senate on this paragraph and discovered that at the last hour the Democratic caucus had advanced the dividing line on hosiery to \$1.20 per dozen, making the duty 30 per cent below that point and 50 per cent above.

In their opinion this will destroy the industry.

Already it has been noted that in Chemnitz, Germany, in the last few months the German manufacturer of hosiery has already provided for this change in the tariff by contracts which provide for an increased price for the German article if the bill becomes a law.

The only effect that this could possibly have, should it go through, would be to hand this important branch of the textile business over to the foreign manufacturers. It is doubtful if the hosiery business in this country, in the opinion of those engaged in it, will ever recover from this blow, and it is not likely that people will continue in an industry that has such a narrow margin to go on in competition with the foreign country and be continually menaced and placed in jeopardy by legislation or the possibility of legislation of this character.

I have the official statistics covering the imports of hosiery for the year ending June 30, 1913, which show that two-thirds of the business is represented by grades of hosiery having a foreign value of less than \$1.20 per dozen pairs, the rate of duty on which has been fixed by the Democratic caucus at 30 per cent ad valorem, as against the Payne rates of 70 cents, 85 cents, and 90 cents per dozen pairs and 15 per cent ad valorem. That I may be more clearly understood, the grades of hosiery affected by the proposed 30 per cent rate imported during the past year have carried average ad valorem rates of 92 per cent, 76 per cent, and 62 per cent, respectively; so the statement, frequently made, that the reduction on hosiery rates has been 50 per cent, is not substantiated by official figures. Very little business is done here or abroad in hosiery the foreign value of which is above \$1.20 per dozen pairs, consequently the rate of 50 per cent on such hose is of small value. Further examination of the import figures shows that when conditions are favorable German hosiery manufacturers have no difficulty in selling goods in this market, as in the quarter ending March 31, 1913, they sent us nearly 700,000 dozen pairs of hose, exceeding by 200,000 dozen pairs the number imported in any other quarter of the year.

In the last two quarters of the year ending June 30, 1913, the imports in the grade of hosiery covered by the Payne rate of 30 per cent ad valorem were 157,973 and 149,036 dozen pairs, as against 15,699 and 27,949 dozen pairs imported in the first two quarters, which should convince any fair-minded man that the Payne rates of duty are none too high to place the hosiery business on an even competitive basis with Germany.

The figures tell their own story, and without going into further details I will say it is my firm opinion, from conversation with a large number of people from many States in the Union, North and South, that the reduction in hosiery rates proposed in this bill will, if they go into effect, make it absolutely impossible for American hosiery manufacturers to compete with German manufacturers unless they pay the German rate of wages.

I think it is generally admitted, Mr. President, that for some reason or other the American hosiery manufacturer is unable to compete with the German. Why it is so I do not know unless it be the difference in the wages and the conditions of employment.

I have here some figures showing the imports of cotton hosiery for the fiscal year ending June 30, 1913, by quarters, and I will ask to have them inserted.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The table referred to is as follows:

Imports of cotton hosiery for the year ending June 30, 1913, by quarters.
ENDING SEPTEMBER 30, 1912.

Rate of duty.	Dozens.	Foreign value.	Unit foreign value.	Duty.	Unit landing value.	Ad valorem.
30 per cent.....	15,699.08	\$8,254.00	\$0.525	\$2,476.20	\$0.68	30.00

(Compiled by Hosiery Manufacturers' legislative committee.)

Mr. PENROSE. I have here a communication from the Hosiery Manufacturers' legislative committee, which, among other matters, states:

Should the Underwood tariff bill become the law, American manufacturers have been accused of an intention to close mills and reduce wages to prove the law a failure.

There is positive information regarding the intentions of hosiery manufacturers, and their unquestioned intention is that they will continue operations until forced to close mills or adjust wages to meet the foreign competition which must result from the destructive rates of duty applied to hosiery in the tariff bill now before the Senate.

Letters are being constantly received similar to the one quoted—and I shall quote it in a minute—all showing that hosiery manufacturers are encountering extreme difficulty in finding sufficient business to keep the mills open even before the tariff bill has passed the Senate.

I now quote a communication from a prominent gentleman in the business:

I am quite sure that if the present rates should be incorporated in the final bill the tariff will prove ruinous to a large portion of our industry. With the House rates we might be able to get along, although it would take a lot of scheming and squeezing on the part of the manufacturers, and will eventually mean lower wages for the operators; but it would at least be possible to get adjusted somehow to the new conditions under Underwood rates; but under the present rates of the Senate there would be nothing left to do but to shut down the mills, or at least part of the mills. We started to book a very fair business for next spring in June, and, although prices were very low, I had every hope of getting enough business in to keep the mill going, but this last cut in the Senate has upset everything again, and we have hardly booked

an order on the lines affected by this change. Our customers tell us frankly that they prefer to wait until the bill is finally passed, and that there will be very little business in the 25-cent grade for the American manufacturers if goods up to \$1.20 per dozen, foreign value, can be brought into this country under 30 per cent duty.

And also the following letter, addressed to me:

NEW YORK, August 25, 1913.

HON. BOIES PENROSE, Washington, D. C.

DEAR SIR: In reference to the proposal to reduce the cost of merchandise to the consumer by a reduction of the tariff, I beg to call your attention to the actual working out of the proposition as applied to hosiery, and take for example a pair of socks such as is sold to the consumer at 25 cents per pair. A relative percentage will apply to those that retail for any price, whether 10 cents or \$1. For the pair of hose you paid 25 cents, the maker received 13 cents; the difference, 12 cents, was the cost of distribution by the dealer, and in no way can the tariff affect this charge for getting the hose from maker to wearer. A pair of socks weighs approximately 1 ounce, or three-quarters of 1 cent's worth of raw cotton, which has been transformed by the labor of transportation, combing, spinning, and other necessary operations into yarn as delivered to the hosiery mill. There it passes through the various operations of knitting, topping, looping, seaming, turning, dyeing, mending, examining, pressing, pairing, stamping, not to mention superintendence, the foreman, engineer, bookkeeper, office clerks, shipper, draymen, etc., and all that form of labor which is as essential to the production as the man standing beside the machine. All this producing cost consisting of the laborer's profit and the manufacturer's wages—or, as it is usually referred to, the laborer's wages and the manufacturer's profit—must be paid out of the 13 cents. Nothing else can possibly be affected by a change in tariff. I have no information from any reading on the subject that the proposal to reduce the cost of living by a tariff reform is in any way going to affect the cost of distribution, which you see is practically 100 per cent of the cost of production of this article.

Manufacturing costs fluctuate from time to time, but a change of maker's selling price of 1 cent per pair would be considered in this article a wide fluctuation, yet in 15 years I have seen a rise or fall of 2 cents per pair in the maker's price without in the least affecting the consumer's paying price of 25 cents. Goods are sold at retail for integral parts of a dollar. For instance, men do not buy cigars for 4 cents or 9 cents or 14 cents; they pay 5 cents straight or three for a quarter or 10 cents straight or two for a quarter, according to their pocket, and hosiery is retailed in the same way.

The manufacture of hosiery in this country is on an intensely competitive basis. Combination is impossible, hosiery being made in hundreds of plants of an average of a few thousand dollars capital each. Intense internal or domestic competition is bad enough, but to subject the trade to foreign competition on the fallacious theory that the consumer at large will benefit will prove now, as it has in the past, a costly experiment to labor. The real beneficiary will be the foreigner and domestic distributor or middle man, who will pocket whatever difference in productive cost the domestic workers are forced by a lower tariff to make. Labor will be the sufferer first, last, and all the time. No change in the tariff can take out of the manufacturer enough of his profit to make an appreciable difference to the consumer, because it is not there to take out.

The progress made in the past three years under the present tariff has been phenomenal. The conserving of this great market to our domestic manufacturer has, by increasing the volume of business done in individual plants, permitted the increase of wages and a reduction of overhead expenses per unit, so that better values are being produced by manufacturers of hosiery, from the cheapest to the highest grades, than ever before in the history of the trade. Increased volume of output in a plant means lower cost per unit. Lower duties first let in foreign hose that shows more profit to the distributor or middle man; then the advent of quantities of cheaply made foreign hose restricts the market for the domestic article and, on the face of it, lessens production, thereby increasing the cost per unit. The impossibility of the manufacturer competing with cheap foreign labor under the condition of highly paid domestic labor forces that labor to such readjustment of wages as may be necessary to meet the new competition. There is still only one way to make an article cheap, and that is to pay cheap wages. There is still one way to bring about cheap wages, and that is to reduce the tariff and make it impossible for the laborer to get what is not there.

Yours, very truly,

C. H. BROWN,

Chairman Hosiery Manufacturers' Legislative Committee.

What is known as the Kensington or mill district of the city of Philadelphia is perhaps the center of this industry, and one of the largest centers in the world; but, as I have said, the industry is scattered all over the country, from the Southern States up through the Northern States and toward the Middle West.

I should like to have a vote on the amendment.

Mr. LODGE. Mr. President, in connection with the amendment of the committee, I merely wish to say that the conditions which the Senator from Pennsylvania has portrayed apply equally to the hosiery mills and makers of New England. There has always been a severe competition in the business. It is doubtful if they could live at all, even at the House rates. Certainly with this change in the bracket they will, in my judgment, be obliged to close down.

I am not going over the ground which has been covered by the Senator from Pennsylvania, but I wish to call attention to the next paragraph, to which I do not desire to offer an amendment, but which is connected with paragraph 265, as showing how recklessly the bill has been drafted.

Paragraph 266 covers all shirts, drawers, and so forth, knit goods, knit by hand or on machines, and includes them all in one bracket and places on them 30 per cent ad valorem. There is no distinction drawn between the light and fine and the heavy and coarse. There are made by some of our fac-

ories, for instance, shirts and drawers, with 70 cents' worth of cotton to a dozen garments and \$2.56 worth of labor. Those are the heavy kind generally worn, whereas the lightweight goods require \$1.82 worth of cotton and only \$1.43 in labor. Therefore the lightweight shirts and drawers which I have just described, at \$1.82 worth of cotton and \$1.43 worth of labor, cost only about half as much as the heavy kind where the labor is so much more expensive. Yet the same ad valorem duty is placed on both. The heavyweight goods, which are worn by the people who can not afford to pay for the more expensive kind, will bear a higher rate, and the light and finer goods, which are bought by people who can afford to spend more money, have a duty which will give them no protection at all, and probably force their abandonment.

I merely call attention to this as characteristic of the manner in which the bill is drawn, without reference to the cost of the article and as discriminating particularly against the fine goods, which runs throughout the bill.

I ask in connection with my remarks to print a letter from the treasurer of one of the companies, who is engaged in this industry.

The VICE PRESIDENT. Without objection, the letter will be printed in the RECORD.

The letter referred to is as follows:

LAWRENCE MANUFACTURING CO.,
Boston, April 9, 1913.

HON. HENRY CABOT LODGE,

Washington, D. C.

DEAR SIR: Referring to the new tariff schedule upon knit shirts and drawers the proposed rate of 30 per cent ad valorem will injure the industry almost irreparably, for the reason that with such a low rate the German, French, and Swiss manufacturers will obtain such a foothold in this country that only absolutely prohibitive rates at some future time will again give us the market.

The Payne bill gives us rates equal to between 50 and 60 per cent ad valorem, the same as the previous bill. The underwear manufacturers did not ask for any increase at the time that the Payne bill was formulated.

The manufacture of knit underwear originated in the United States, and the foreign manufacturers have been followers in machines and methods instead of leaders. With rates cut in two and in some cases reduced 60 per cent the situation will be reversed and we will be the followers, or perhaps out of business entirely except in the low-priced end where the cost is more cotton than labor. The proposed flat rate of a certain percentage is not a practical method of fixing duties. For instance, a shirt and drawer which we make has 70 cents worth of cotton to the dozen garments and \$2.56 worth of labor, trimmings, and selling expense. A heavyweight shirt and drawer which I have, costing in total practically the same as the above, has \$1.82 worth of cotton and only \$1.43 worth of labor. The lightweight goods are sold to the nice trade and are well finished in every way. The heavyweight goods go to the laboring man and are roughly put together. The rate of 30 per cent may possibly do for the very heavy and cheap goods, but it will not answer at all for lightweight goods, which have such a large cost of labor in them.

I have been to Washington twice within the last two months with other manufacturers trying to get fair treatment at the hands of the Ways and Means Committee, and our case has been well presented. We have endeavored to have the schedule divided into two classes, giving one rate for heavyweight goods and another for lightweight goods. We were listened to attentively, but evidently did not make any impression. The results of their work seems to warrant the statement that New England and Eastern State interests are being intentionally sacrificed.

In writing these facts to you it is hardly my hope that you can remedy conditions, but merely to inform you what we have done in making our case known to the members of the Ways and Means Committee, and the probable result of rates as proposed.

Very truly, yours,

C. P. BAKER, Treasurer.

Mr. PENROSE. I merely want to add to what I have already said, to complete the record as far as Pennsylvania is concerned, some interesting figures. The manufacture of hosiery was introduced into the United States at Germantown, now a part of the city of Philadelphia, about 1698, and that city has always been the center of this branch of the textile industry in America.

I ask to have the table which I have here printed as a part of my remarks showing the quantity and cost of material used and the quantity and value of products manufactured for 1900, 1904, and 1899.

The table is as follows:

Manufactures—Pennsylvania.

Material or product.	1909	1904	1899
Materials used, total cost.....	\$27,217,951	\$16,037,698	\$10,935,763
Cotton:			
Pounds.....	2,506,120	1,874,655	2,218,426
Cost.....	\$302,702	\$226,907	\$189,491
Wool (in condition purchased):			
Pounds.....	467,877	1,168,283	1,347,914
Cost.....	\$205,403	\$432,669	\$474,260
Equivalent in scoured condition, pounds.....	435,848	1,056,052	1,069,994
Shoddy and wool waste and noils:			
Pounds.....	960,929	777,995	593,985
Cost.....	\$303,217	\$232,754	\$163,309

Manufactures—Pennsylvania—Continued.

Material or product.	1909	1904	1899
Farms purchased:			
Cotton—			
Pounds.....	59,035,958	46,895,164	38,323,301
Cost.....	\$16,283,401	\$10,306,172	\$7,183,062
Woolen—			
Pounds.....	618,809	661,645	409,163
Cost.....	\$399,134	\$360,533	\$219,029
Worsted—			
Pounds.....	1,684,786	1,584,717	1,115,863
Cost.....	\$1,616,975	\$1,350,076	\$861,068
Merino—			
Pounds.....	389,296	178,619	350,011
Cost.....	\$202,453	\$104,827	\$92,478
Silk and spun silk—			
Pounds.....	250,467	73,006	30,397
Cost.....	\$978,071	\$204,872	\$103,169
Linen, jute, and other vegetable fiber—			
Pounds.....	15,975	6,827	500
Cost.....	\$17,507	\$6,250	\$100

All other products.....	\$2,995,663	\$2,445,727	\$2,433,757

¹ Included in "All other products."

During the decade the cost of materials increased \$16,282,188, or 148.9 per cent. Cotton yarns purchased increased in quantity from 38,323,301 pounds in 1899 to 59,035,958 pounds in 1909, a gain of 54 per cent. The quantity of wool purchased declined, while there was an increase in the quantity of raw cotton, of shoddy and wool waste and noils, and of the different kinds of yarn purchased.

The total value of products was \$21,929,426 in 1899 and \$49,657,506 in 1909, an increase of 126.4 per cent during the 10-year period. Nearly two-thirds of the total represents the value of hosiery, which increased 82.7 per cent in quantity and 133.9 per cent in value from 1899 to 1909. Almost all the hosiery produced was cotton. There was a gain of 48.9 per cent in the output of hosiery in which wool was the chief material and a large gain in silk hosiery. The production of shirts and drawers, gloves and mittens, hoods, scarfs, nubbies, and so forth, and cardigan jackets, sweaters, and so forth, more than doubled during the decade, while the production of combination suits showed comparatively little increase.

I have here, Mr. President, some figures giving the extent of this industry in the United States and the value of the product. I shall not state them all in detail, but will ask to have them printed in the RECORD. The value of the product of this industry, which, in the opinion of everybody engaged in it, is absolutely threatened with destruction by this legislation, is \$200,143,527. There are 1,374 establishments in the country; there are 136,130 persons employed; there are 5,721 salaried employees and 129,275 wage earners.

The table is as follows:

[From the Thirteenth Census of the United States, 1910.]

Pennsylvania—Statistics of manufactures for the State.

HOSIERY AND KNIT GOODS.

Number of establishments.....	464
Number of persons employed in industry.....	40,248
Wage earners.....	38,206
Males over 16 years.....	7,766
Females over 16 years.....	28,045
Males under 16 years.....	1,124
Females under 16 years.....	3,391

This is no small industry, Mr. President; and if there is any industry that is worthy of the care of the American Congress, it is an industry of this character.

Mr. SMITH of Georgia. I ask that the committee amendment be first acted upon.

Mr. PENROSE. My amendment is an amendment to the committee amendment.

Mr. SMITH of Georgia. But still I think the Senator's amendment would come in better after we have first perfected the text. Then the Senator can offer his amendment.

Mr. PENROSE. I move my amendment as a substitute for the committee amendment, and, therefore, it ought to be first in order, it would seem to me.

Mr. SMITH of Georgia. That is all right.

Mr. PENROSE. I ask for the yeas and nays on my amendment to the committee amendment.

The VICE PRESIDENT. The Chair does not agree with the Senator from Pennsylvania. There are three committee amendments comprehended within the amendment as proposed by the Senator from Pennsylvania. According to previous rulings of the Chair, the committee has a right to first perfect the text of the bill.

Mr. PENROSE. I do not think it is material; but after the Senate committee amendment is agreed to, then I suppose I can offer my amendment.

The VICE PRESIDENT. Undoubtedly.

Mr. PENROSE. But I am still of the opinion that I have a right to offer a substitute to the committee amendment, and to have it voted upon.

The VICE PRESIDENT. The question is on agreeing to the first committee amendment, which will be stated.

The SECRETARY. In paragraph 265, page 80, line 7, before the words "per dozen pairs," it is proposed to strike out "70 cents" and insert "\$1.20."

The amendment was agreed to.

The next amendment was, in the same paragraph, line 8, before the words "per cent," to strike out "40" and to insert "30."

The amendment was agreed to.

The next amendment was, in the same paragraph, line 9, before the words "per dozen pairs," to strike out "70 cents" and to insert "\$1.20."

The amendment was agreed to.

The SECRETARY. The amendment proposed by Mr. PENROSE is to strike out of the paragraph, beginning in line 7 with the semicolon, the words "if valued at not more than \$1.20 per dozen pairs, 30 per cent ad valorem; if valued at more than \$1.20 per dozen pairs," so as to read:

All of the above composed of cotton or other vegetable fiber, finished or unfinished, 50 per cent ad valorem.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Pennsylvania.

Mr. PENROSE. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. BRISTOW. Mr. President, I should like to inquire what the ad valorem rate is on the first duty fixed by the committee? It seems to be a specific duty—\$1.20. That is 30 per cent. What was the amendment which the committee proposed that was just adopted?

Mr. SMITH of Georgia. The committee extended the value from 70 cents to \$1.20 per dozen pairs and reduced the rate from 40 per cent ad valorem, as it came from the other House, to 30 per cent ad valorem, and extended the value of the hose to which this reduced rate applied.

Mr. BRISTOW. So that, as the bill now stands, there would be 30 per cent on hose valued at \$1.20 per dozen pairs and 50 per cent on hose valued above \$1.20?

Mr. SMITH of Georgia. Yes.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I am paired with the junior Senator from Michigan [Mr. TOWNSEND] and therefore withhold my vote.

Mr. CHILTON (when his name was called). I make the same announcement as to my pair and its transfer as I made upon the former vote and vote "nay."

Mr. McCUMBER (when his name was called). I transfer my pair as before stated and vote "yea."

Mr. THOMAS (when his name was called). I make the same transfer as before and vote "nay."

The roll call was concluded.

Mr. CHAMBERLAIN. I again announce my pair with the junior Senator from Pennsylvania [Mr. OLIVER] and withhold my vote. If permitted to vote, I should vote "nay."

Mr. CLARKE of Arkansas. I have a pair with the junior Senator from Utah [Mr. SUTHERLAND]. I transfer that pair to the Senator from Arizona [Mr. SMITH] and vote "nay."

Mr. CHILTON (after having voted in the negative). In view of the fact that the Senator to whom I have transferred my pair has voted, I withdraw my vote.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Oklahoma [Mr. OWEN] and vote "nay."

Mr. OVERMAN (after having voted in the negative). I wish to inquire if the senior Senator from California [Mr. PERKINS] has voted?

The VICE PRESIDENT. The Chair is informed that he has not.

Mr. OVERMAN. Having a general pair with that Senator, I withdraw my vote.

The result was announced—yeas 21, nays 47, as follows:

YEAS—21.

Bradley	Dillingham	Nelson	Stephenson
Brady	Gallinger	Page	Warren
Brandegee	Lippitt	Penrose	Weeks
Catron	Lodge	Root	
Clark, Wyo.	McCumber	Sherman	
Colt	McLean	Smoot	

NAYS—47.

Ashurst	Jones	Pomerene	Smith, S. C.
Bacon	Kenyon	Ransdell	Sterling
Borah	Kern	Reed	Stone
Bristow	Lane	Robinson	Swanson
Clarke, Ark.	Lea	Saulsbury	Thomas
Crawford	Martin, Va.	Shafroth	Thompson
Fletcher	Martine, N. J.	Sheppard	Thornton
Hitchcock	Myers	Shields	Tillman
Hollis	Norris	Shively	Vardaman
Hughes	O'Gorman	Simmons	Walsh
James	Pittman	Smith, Ga.	Williams
Johnson	Polindexter	Smith, Md.	

NOT VOTING—27.

Bankhead	Culberson	Jackson	Perkins
Bryan	Cummins	La Follette	Smith, Ariz.
Burleigh	du Pont	Lewis	Smith, Mich.
Burton	Fall	Newlands	Sutherland
Chamberlain	Goff	Oliver	Townsend
Chilton	Gore	Overman	Works
Clapp	Gronna	Owen	

So, Mr. PENROSE's amendment was rejected.

The VICE PRESIDENT. The Secretary will complete the reading of the paragraph.

The Secretary resumed the reading of paragraph 265.

The next amendment of the Committee on Finance to the paragraph was, on page 80, line 11, after the word "cotton," to strike out "35" and insert "45."

Mr. SMITH of Georgia. The committee desire that that amendment be disagreed to.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. SMITH of Georgia. Mr. President, the Senator from North Carolina [Mr. SIMMONS] desires to call attention to another matter at this point. As soon as he finishes, I wish to refer to another paragraph of the cotton schedule.

Mr. SIMMONS. On page 207, paragraph O, at the end of line 20, I move to strike out the comma and to insert the amendment which I send to the desk.

Mr. NORRIS. If I may make an inquiry of the Senator, he is proposing an amendment now further on in the bill than we have reached, is he not?

Mr. SIMMONS. I desire to do this irregularly, because it is an amendment that has just come to me from the department. It is a mere matter of administration, and there can hardly be any debate.

Mr. NORRIS. I am not going to object, but I wanted to suggest that we proceed in a regular way.

Mr. SIMMONS. We can return in a moment to the regular course. I merely desire to do this irregularly because it is the department's request, and I have to be out of the Chamber a good deal this afternoon.

The VICE PRESIDENT. In the absence of objection, the vote whereby the amendment inserting paragraph O on page 207 was agreed to will be reconsidered and the amendment reported by the committee will be considered as open to amendment. The amendment proposed by the Senator from North Carolina to the amendment heretofore reported by the committee will be stated.

The SECRETARY. In the amendment heretofore reported by the committee, paragraph O, page 207, line 20, after the word "imposed," it is proposed to insert:

And to pay such sums as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may deem necessary for information, detection, and bringing to trial and punishment persons guilty of violating the provisions of this section or conniving at the same, in cases where such expenses are not otherwise provided for by law.

The VICE PRESIDENT. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. SMITH of Georgia. Mr. President, there is one more paragraph of the cotton schedule to which I wish to revert. I refer to paragraph 268, on page 82. When this schedule was up before it was suggested that the only manufacturers of table damasks were in North Carolina. I have had the subject looked up, and find there are some 25 scattered throughout the country. I have a list of them, but I scarcely think it worth while to read them. I move, Mr. President, in line 4, after the word "section," that the comma be changed to a semicolon, and that immediately thereafter the amendment which I send to the desk be inserted.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 268, page 82, line 4, after the word "section" it is proposed to strike out the comma and to insert a semicolon and the words "cotton cloth composed wholly or in part of threads or plied yarns made of singles of different numbers."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. SMITH of Georgia. Then, at the close of the paragraph I move to add as an amendment the words which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. After the words "ad valorem," in line 4, it is proposed to strike out the period and to insert a semicolon and insert the words "plain gauze or leno-woven cotton nets or nettings containing not less than 80 nor more than 200 open spaces to the square inch, 10 per cent ad valorem."

The VICE PRESIDENT. The question is on agreeing to the amendment.

Mr. LIPPITT. May we have the amendment read again, please? I did not catch it.

The VICE PRESIDENT. The Secretary will again read the amendment.

The Secretary again read the amendment.

Mr. LIPPITT. Are the first two words "plain cloth"?

Mr. SMITH of Georgia. "Plain gauze."

Mr. LIPPITT. What is the meaning of the amendment? What sort of gauze is that?

Mr. SMITH of Georgia. A cheap class of mosquito netting. Our netting paragraph carries a high duty of 60 per cent, and was really intended to apply to a very high class of goods. The object of the amendment is to take these cheap mosquito nettings out of the 60 per cent duty class.

Mr. LIPPITT. I should like to ask the Senator from Georgia out of what numbers of yarns those mosquito nettings are made?

Mr. SMITH of Georgia. The duty would be about 15 per cent if levied on the yarn.

Mr. LIPPITT. Inasmuch as the leno weave is nearly double in expense and often two or three times in expense the ordinary plain weave, I fail to see why there should be a duty of 10 per cent put upon these products when in the ordinary process of weaving they would have a duty of 15 per cent.

I recognize the propriety of the Senator from Georgia in trying to eliminate those from the 60 per cent duty. A duty of 60 per cent would not be justified on such fabrics in comparison with the other duties that are in this schedule. Neither is a 10 per cent duty justifiable in comparison with the other duties. At least those fabrics ought to have the same duties that they

would be entitled to if they were the ordinary product of the Draper loom. They should at least have the duties that would go with their ordinary yarns.

Mr. SMOOT. Mr. President, I should like to ask the Senator from Georgia if the yarn from which mosquito netting is made does not carry a duty of about 15 to 17½ per cent?

Mr. SMITH of Georgia. I do not think so; not of this class.

Mr. SMOOT. It could not be lower than 15 per cent under the yarn schedule, and I do not believe the netting ought to carry a less duty than the yarn from which the netting is made.

Mr. SMITH of Georgia. I was under the impression that the nettings covered by this paragraph were made from a very cheap class of yarn, and were really very cheap goods.

Mr. SMOOT. No; they are not.

Mr. SMITH of Georgia. And I was really endeavoring to get a duty for them which would be about what they would have under the cloth schedule, and get them out from the incongruity of being dutiable at 60 per cent.

Mr. SMOOT. I think the Senator is perfectly right in taking them out of the 60 per cent paragraph or bracket; but I do believe that if they are put at 10 per cent the cloth itself will be dutiable at a lower rate than the yarn that goes into the cloth.

Mosquito netting must have a pretty strong thread. It can not be made of poor cotton. I do believe the rate on the cloth should be at least what the rate is upon the thread which goes into the cloth. As to the size of it, if the Senator will leave it at 15 per cent at the least or 17½ per cent at the most—

Mr. SMITH of Georgia. I think I shall ask to have this paragraph passed over until to-morrow morning.

Mr. LIPPITT. I should like to suggest to the Senator that if he made the duty 17½ per cent, it would not be at all out of the way as compared with the other duties in the bill. That would give this article the same duty as yarns of about No. 40. Mosquito netting is frequently made out of yarns as fine as 50.

Mr. SMITH of Georgia. But does this include the finest classes of mosquito netting? I was under the impression that that description would not cover the finest classes of mosquito netting.

Mr. LIPPITT. The very finest classes of mosquito netting are some of the most expensive goods made.

Mr. SMITH of Georgia. Yes.

Mr. LIPPITT. Whatever class of mosquito netting they are, a duty of 17½ per cent would not be at all out of proportion to the other duties in the bill. I say this in all frankness to the Senator.

Mr. SMITH of Georgia. I should be very glad myself to pass over the paragraph until to-morrow morning. It may be possible to have a conference and change it. I will therefore ask to have it passed over for the present, and call attention to it in conference. I am sure the purpose was not to discriminate against this particular class of cloth.

Mr. WILLIAMS. Mr. President, does it require unanimous consent to pass over the paragraph?

Mr. SMOOT. No.

The VICE PRESIDENT. The Chair is of the opinion that it does not require unanimous consent. The Chair understands that the Senator from Georgia withdraws the amendment for the present.

Mr. LIPPITT. Is that the last amendment the committee has?

Mr. SMITH of Georgia. That is all.

Mr. LIPPITT. Mr. President, I have two amendments which I wish to offer to the cotton schedule. I am aware that the juggernaut of the caucus, in silence and behind closed doors, has passed over this subject, but I think I am not using exaggerated language when I say that the discrimination which is involved in this cotton schedule and in the two paragraphs to which I propose particularly to call attention is the most monstrous thing that is proposed in the entire bill.

I discussed this subject at some length on a previous occasion. In no part of that discussion did I endeavor to get higher rates for these textile products. All I tried to do was to have the discriminations that exist in this bill between different products of the textile looms done away with.

In the amendments which I have in mind I am not going in the slightest degree to ask that the basic rate upon which the cotton tariff is formed shall be increased. In one instance I am going to protest, in the form of an amendment, against an extreme reduction which is proposed to be made in the bill as it has been elaborated in the Senate over the form in which it came from the House. In another amendment I am going to protest against the extreme discrimination which puts the

figured goods of New England upon a basis of protection tremendously inferior to the coarse products of the South.

It is unfortunate that in considering this product we have to consider sectional questions. Certainly no one regrets it more than I do. I am not in the slightest degree opposed to cotton manufacturing in the Southern States. I want to see it prosper. I do protest against a bill which leaves that industry in the South unimpaired and which will be the most staggering blow that the textile industries in the New England States, whether they are cotton or woolen or silk, have ever received.

In the course of a discussion which arose here a few days ago and which was not invited by me, I took occasion to show the great differences which existed between the Northern and the Southern States in the price of labor, in the hours of labor, and in the legal conditions of labor. I have no doubt that as time goes by those conditions will be equalized, but in the past and in the present the fact that in the Carolinas and in Georgia and in Alabama labor was employed in making cotton cloth for from 60 to 70 hours a week, at rates of wages that did not exceed two-thirds or three-fourths of those paid in New England at mills that ran for not exceeding 54 to 60 hours a week, and that in New England only children of from 14 to 16 years of age are allowed to be employed in the industry, whereas in the South, as yet, much younger children are employed, makes a competition which anyone in the slightest degree acquainted with manufacturing must recognize as most difficult to meet.

New England has met that competition in this industry. In no other industry in this country is there such an internal competition going on; or wherever it has gone on, nowhere else has it been met. But it has been met in this industry in New England, and it has been met by substituting for the coarser products of the cotton looms the high-grade decorated fabrics that require superior experience, greater skill, and greater intelligence. What will happen under this bill will be that those products, which have kept the mills of New England running and have filled up the gap that was made by all these coarse and common fabrics going to the Southern States, are going to be swept away from Massachusetts and Connecticut and Rhode Island and New Hampshire.

There is no danger of one class of the products of this industry being largely imported under this bill. There is an absolute certainty that they will be in the case of another class.

Mr. President, I know it is useless to discuss this question, and I am not going into any long discussion of it; but I simply wanted to state my premises to make clear the conditions, so that even those Senators who, perhaps, in some cases, are not voting entirely according to their consciences and their judgment, will see the situation as I see it.

The first amendment to which I invite the consideration of the Senate is in paragraph 257, on page 76. As that paragraph came into the Senate, on line 8, the word "highest" appeared in the clause "containing yarns the highest number of which does not exceed No. 9," and so forth. In a committee amendment, at the time the bill was first brought up for discussion, the word "highest" was changed to "average." It was changed to "average" for reasons that the committee have not yet seen fit to explain thoroughly.

I should like to ask the Senator from Georgia, in the first place, why he puts in the word "average," and in the second place, what will be the effect of having the word "average" there?

Mr. SMITH of Georgia. While I do not recognize the right of the Senator to catechise me in such a way, still I will answer him.

The word "highest" was abandoned by the committee, and the word "average" used, because in that way, for administration purposes, we were sure that a simpler and easier and better mode of ascertaining the character of the cloth would be furnished.

As to the effect of the change, I can not enter into detail without using quite a large number of figures. In some cases, it causes a reduction as to some goods from the classification under which they formerly fell to a lower classification. The goods that are affected most seriously are the goods that are covered in the amendment which I offered to the damask paragraph, where the variety in the yarns is by far the greatest. As to other goods in the paragraph, there was some reduction in some instances, and in quite a number none at all. It depended upon whether the classification of the goods changed them into a lower grade than that which they occupied measured by the highest number of yarns.

Mr. LIPPITT. I do not wish to catechise the Senator any further than he is ready to be catechised; but I should like to ask him, further, if the effect of that amendment is not

to leave unchanged the duty upon nearly every coarse-yarn fabric made in the South, and if it is not to reduce the duty upon a very large number of the fine-yarn fabrics made in New England?

Mr. SMITH of Georgia. The effect necessarily is, where it has any effect at all, to reach to a larger extent the class of goods made from yarns varying most in number. The more nearly the goods contain yarn of a single number the less effect the change will have upon them. The higher the number that is found in a cloth the more probable it is, of course, that lower-grade yarns will also be found in it. I wish to say very frankly that where it has any effect it has had effect upon classes of cloth in which very high-grade yarns are contained and where the average of the coarser yarns in the cloth pulled it down. Its greatest effect was upon those cloths which are known as novelty goods, and which are covered by the amendment we offered to the damask schedule.

Mr. LIPPITT. Does not the Senator think it would have been fair to have made some corresponding change in the classification?

Mr. SMITH of Georgia. I will state very frankly that I inspected it carefully, and called men to help me, and tried to work out one that I thought was perfectly fair, and I was not able to reach any change that did not seem to modify existing duties as much as the change already made modified it. I took some figures furnished me by the Senator, and those figures did not seem to be satisfactory.

I will make the additional statement that in those cases where the duty was reduced through the aid of experts and the report of the Tariff Board we made an investigation of the relative selling prices of the goods at the factories abroad, and we reached the conclusion that the relative selling prices on most of those goods were so nearly the prices abroad that there seemed to be certainly not more than a just competition produced by the rates that were levied.

Mr. LIPPITT. The Senator, I think I may fairly assume from his answer, agrees with me that the changes which are made by this change of method in assessing the duties affect to a very small extent the coarse yarn goods, and what effect is obtained is in the finer yarn goods that are made in New England. I will state what that duty really is. As the bill came from the House, if a piece of goods contained a No. 60 yarn and a No. 80, a rate of duty was applied upon that fabric which was thought suitable for No. 80 yarn. As the duty is assessed by the Senate committee, if a fabric is made out of those two numbers of yarns, instead of the duty being assessed for the No. 80 it is assessed for the average of the numbers between the two, somewhere in the neighborhood of 70. [After a pause.] I understand that the Senator from Indiana [Mr. KERN] would like to adjourn or to have an executive session.

Mr. SIMMONS. I should like to have a vote on this particular amendment, and then it is the desire that we shall have a short executive session. Then we will adjourn and after that we have a little caucus to-night.

Mr. LIPPITT. I sympathize with the Senator, but I will suggest that I think it would be better to adjourn or go into executive session now, because while I do not want to prolong the discussion any more than is necessary—

Mr. SIMMONS. If it is necessary, we will stay here until this amendment is finished. We want to finish the amendment before we adjourn; but I was in hopes that we would not have any prolonged discussion upon it. If the Senator wants to discuss it at length, we will be content to let him finish. I hoped that we might have a vote on the amendment without further discussion.

Mr. LIPPITT. Mr. President, I am sure I would rather stop now, but this is one of the most important subjects, so far as Rhode Island and New England are concerned, that is in the bill, and I want the record straight.

When I was interrupted what I was discussing was the effect of changing these duties. I pointed out that in cloth containing 60 and 80 yarn in one case the duty would be governed by No. 80 and in the other case it would be governed by an average of the two numbers and would reduce the duty materially.

Now, in order to see just what the effect of applying this new duty is, I took table 169 from the Tariff Board's cotton report, which contains a description of some 100 different samples that the board found commonly used in this country.

Mr. WILLIAMS. Mr. President—

The VICE PRESIDENT. Does the Senator from Rhode Island yield to the Senator from Mississippi?

Mr. LIPPITT. I do.

Mr. WILLIAMS. Just for my information I wish to ask the Senator a question. Perhaps I did not hear him correctly or

perhaps I do not remember correctly, but did not the Senator spend a considerable length of time here trying to persuade us that there should be an average number on these goods instead of the highest number?

Mr. LIPPITT. I did point out to the Senate and to the committee the fact that assessing the average duties by the highest number was a very expensive proposition, and was in some cases almost an impossibility; that that was unfair in many cases, and I strongly urged that they should adopt the average number. In connection with that I said to them if they did adopt the average number it would be necessary to make a corresponding change in the classification in order not to reduce the duty that had been proposed for cotton cloth.

Mr. WILLIAMS. I asked the Senator the question because I thought I was not mistaken. I want now merely to emphasize the fact that we sometimes comply with a request coming from the other side, as we did in this case.

Mr. LIPPITT. I understand the attitude of the Senator from Mississippi. I am told that he has been very anxious to have this duty changed in a way which would cause a reduction in the duties; that he wanted to adopt one-half of my suggestion, the one which I was enabled to present to the Senate, for the purpose of simplifying and improving the operation of their bill, but that he was not willing to adopt the accompanying suggestion by which the duties that were levied upon the fabrics of New England would remain substantially as in the present bill.

Mr. WILLIAMS. The Senator is correctly informed. I was willing to adopt his suggestion for the purpose of simplifying the administration of the law, and also for the purpose of reducing the duty upon goods which the Senator himself manufactures.

Mr. LIPPITT. The Senator from Mississippi perhaps forgets that something like one-half of all the people in my State are interested in this industry. He perhaps forgets that it is the most important industry in New England. He perhaps does not know that it is the duty of a man who represents a State to give such information and knowledge as he has in regard to an industry of such importance, in order that the industry may be carried on under the same conditions that other industries are carried on in this country. If he is so anxious to do an injury to me that he is willing to injure the large number of wage earners whose pay envelopes in Rhode Island are going to be emptied by this procedure, which, as he says, he does simply for the purpose of injuring their representatives, I can only say that I leave him to such happiness and pleasure as he may be able to get out of the situation.

Mr. WILLIAMS. If the Senator will pardon me for a moment and consent to an interruption—

Mr. LIPPITT. Certainly.

Mr. WILLIAMS. I have no desire to injure the Senator, but I have a common apprehension that every man who is a party in interest in legislation ought not to take part in that legislation; and if the Senator will pardon me—

Mr. LIPPITT. May I interrupt the Senator and ask him if he is not a cotton planter?

Mr. WILLIAMS. I am.

Mr. LIPPITT. The Senator is interested, I believe, in having cheap cotton bagging. He is interested in stopping the mills in New England so that he may have cheap cotton bagging. His voice was raised here hour after hour in favor of getting that cheap product for himself.

Mr. WILLIAMS. Mr. President, every man in the world is interested as a consumer.

Mr. LIPPITT. And every man in this country, Mr. President, is interested as a producer. Let me tell the Senator from Mississippi that he is bringing in a bill here for the purpose of getting a cheap dinner pail, but he forgets that the full dinner pail only comes from a full pay envelope, and it is the hitherto full pay envelopes of New England that are going to suffer from this transaction.

Mr. WILLIAMS. I want merely to read a part of Jefferson's Manual which relates to a direct personal interest, not to the general interest of consumers. I am interested in beef because I am a consumer of it:

Where the private interests of a Member are concerned in a bill or question he is to withdraw. And where such an interest has appeared his voice has been disallowed, even after a division. In a case so contrary, not only to the laws of decency, but to the fundamental principle of the social compact, which denies to any man to be a judge in his own cause, it is for the honor of the House that this rule of immemorial observance should be strictly adhered to.

The Speakers of the House of Representatives and the presiding officers of the Senate have ruled that the Member's vote could not be excluded in his interest, because he himself was

the judge of the fact as to whether he was personally and directly interested or not; that he must rely upon his own sense of honor and justice in determining that fact.

Mr. LIPPITT. Mr. President, I do not know that I am entirely sorry that the Senator from Mississippi brought up this subject. If the Senator from Mississippi believes that a man situated as I am, with ample means to live reasonably, can benefit himself by leaving his countingroom and occupying a seat in this body month after month and week after week devoting his time and attention to the great variety of subjects that continually come up here, that affect every part of this broad land from one end to another, he must be very ignorant of commercial transactions.

I know how many patriotic men there are in this body. I know that there are a great number of them who have sacrificed their personal interests to come here. I say to the Senator from Mississippi that large as that number is, there is no man who stands in this body who has made a greater personal sacrifice to come here—and when I say personal sacrifice I mean financial—than I have.

I had no desire to come to this body, but men in my State came to me day after day and week after week and month after month and urged me to come here, because they said ours is a small State and that those who had arrived at some prominence in her affairs should represent her.

Now, Mr. President, I do not claim for myself any greater public spirit than is shown by other Members of this body. I know how easy it is to claim public spirit and patriotism, and when I hear a man do it I want to look him straight in the eye and form my judgment of his motive. But I know also, Mr. President, that such a thing as public spirit and patriotism exist in this Republic when we are at peace as well as when we are at war. I know that when the call to arms came to this Republic, from high degree and from low there was a response made that was enough to thrill the heart of every lover of his country.

It does not come to all of us to serve on the field of battle, but it does sometimes come to some of us to make sacrifices that, while they are not of life, are nevertheless sacrifices; and I say to the Senator that if he thinks I came to this body from anything but the purest motives he is entirely mistaken.

Mr. WILLIAMS. I said nothing of that sort. I said the Senator was interested in the direct amendment which he now proposes to make. I laid down no rule of any description. I simply read a part of Jefferson's Manual.

Mr. LIPPITT. I am well aware that the Senator read a part of Jefferson's Manual, and if the rule which he read was applied to himself in yesterday's discussion, as he wants it applied here to me in to-day's discussion, then he committed yesterday an act that I should not think he would want to commit, because he committed the act believing that he ought not to have taken part in it. I committed the act believing that I am fairly representing, as I ought to do, the industries of my State.

Mr. WILLIAMS. I have no interest in bagging manufacture. If the Senator said that I was interested because I buy bagging, the Senator might say that every person on the surface of the earth is interested in the tariff bill because he is interested as a consumer.

Mr. LIPPITT. I think they are.

Mr. WILLIAMS. Every man who eats meat is interested in the tariff on meat; but that is not what the rule means, and everybody knows it. It means when the profits of a man's private business are to be increased by the success of the effort which he makes.

Mr. LIPPITT. The argument the Senator offered yesterday in the discussion with me was that the profits of raising cotton were going to be increased by buying cheap bagging. That was the argument. It was that the poor people in the South could have cheap bagging.

Mr. WILLIAMS. The profits of raising cotton were not going to be increased by cheap bagging. The loss of the planter in buying bagging as a consumer would have been decreased; but there would not have been a dollar added to the value of a pound of cotton in the world. There would have been merely an obstruction against a man's natural right to buy where he could buy cheapest the thing that he ought to have.

I was not interested in cotton bagging in any other way except as a consumer of it, just as I am interested in beef as a consumer of it, and in wheat and flour as a consumer of it. But everybody knows that the rule does not apply to that sort of a case, because if it did, no Member of the House and no Member of the Senate could vote upon any question.

Mr. LIPPITT. That is perfectly correct.

Mr. GALLINGER. Will the Senator from Rhode Island yield to me?

Mr. LIPPITT. With pleasure.

Mr. GALLINGER. I was called from the Senate temporarily and did not hear the passage read from Jefferson's Manual. There are a great many things in Jefferson's Manual we pay no attention to, and that have no relevancy to our discussions. Now, if it would please the Senator from Mississippi, I should like to have that reference called to my attention.

Mr. WILLIAMS. The Senator will find it in the two lines at the bottom of page 96 and the first 6 lines on the top of page 97, and then I will go and get Hinds' Parliamentary Precedents and find him a lot of rulings on the subject, if he wants it, all of which are to the effect that a Member himself must be the judge of the fact as to whether he has a private, personal, business interest in the matter.

Mr. GALLINGER. Mr. President, I have been for a long time familiar with that provision of Jefferson's Manual, and I quite agree with the Senator from Rhode Island that, if he is to be held to account and his voice and his vote criticized because he has some interest in manufacturing, the Senators who have an interest in bagging and who will derive a benefit for their cotton product are equally subject to censure.

I want to call the attention of the Chair and of the Senate to the fact that there is a specific rule in this body, not derived from Jefferson's Manual, which says:

2. No Senator in debate shall, directly or indirectly, by any form of words impute to another Senator or to other Senators any conduct or motive unworthy or unbecoming a Senator.

And I submit, Mr. President, that the accusation which has just been made against the Senator from Rhode Island, who is standing here defending as best he can, not the manufacturing interests of Rhode Island, but the manufacturing interests of New England, is entirely unwarranted, and that no Senator has a right to impute any unworthy motive to him, whether he bases his action on Jefferson's Manual or anything else.

Mr. WILLIAMS. I have not imputed bad motives to anybody. I have merely read a part of Jefferson's Manual.

Mr. GALLINGER. The Senator may be unconscious of it, but the Senator has imputed unworthy motives.

Mr. WILLIAMS. I merely asked the Senator whether he was not interested in these goods; I did not state that he was, except in that way.

Mr. GALLINGER. But the Senator from Rhode Island asked, in response to the Senator from Mississippi, whether the action that was taken here yesterday does not benefit him as a raiser of cotton, and the debate clearly showed that it did.

Mr. WILLIAMS. Oh, we went through that, and there is no use of going over that again.

Mr. GALLINGER. Oh, no!

Mr. WILLIAMS. If the Senator wants further information upon that point, just as I explained a moment ago, of course that rule does not apply to a man having a remote interest in legislation, as a consumer, because, if it did, then no Member of the House and no Member of the Senate could ever vote upon any clause of any bill that affected property.

Mr. GALLINGER. While the Senator is looking for that, I want to say that, if this debate is to degenerate into personalities and accusations against Senators—

Mr. WILLIAMS. There is no personality about it.

Mr. GALLINGER. The Senator will permit me to speak in my own time—that, if that is to be the case, there will be a good deal of discussion on this subject before we get through.

Mr. WILLIAMS. I do not desire any discussion.

Mr. GALLINGER. No; but I do.

Mr. WILLIAMS. But the Senator was calling attention to the iniquities of Senators on this side in trying to make money for the South out of this cotton-average business, and I asked him the question—

Mr. LIPPITT. If the Senator's remarks are addressed to me—

Mr. WILLIAMS. I asked the question whether he himself had not suggested it, and then he accused me of advocating the retention of the lower duty in order to injure him. To that I made reply that I had no idea of injuring him, and then suggested, since he had gone upon that footing, that perhaps he had better read that part of Jefferson's Manual. That is all I have done.

Mr. GALLINGER. What was the Senator's purpose in that? Mr. LIPPITT. Just a moment. I should like to ask the Senator from Mississippi if he did not say that he was opposed to the amendment I was about to offer because it would "injure me"?

Mr. WILLIAMS. I did not. I said—

Mr. LIPPITT. I so understood him.

Mr. WILLIAMS. I said I was in favor of adopting the average rule for two reasons—first, because it was simpler of administration, and secondly, because it would reduce the duties upon the goods which you manufacture—not to injure you, but to reduce the duty on the goods—and then you flew to the conclusion that that was the case.

Mr. LIPPITT. Does the Senator think that that would be a benefit to me?

Mr. WILLIAMS. No; I do not think it would be a benefit to you; but the goods do not all belong to you; you do not make them all; some other people make a part of them. I want to reduce the duty on the goods.

Mr. LIPPITT. If there is any other serious discussion, to be made upon this particular phase of the question, I am perfectly willing to go on with it; but I do not think—

Mr. SIMMONS. I want to inquire of the Senator from Rhode Island if he is willing that we shall take a vote now or does he want to go on?

Mr. LIPPITT. Mr. President, I will say to the Senator from North Carolina that the utterly unwarranted personal subject which has been introduced by the Senator from Mississippi has consumed in the neighborhood of three-quarters of an hour. I do not propose to be cut off on this subject under those conditions.

Mr. SIMMONS. I am not proposing that; I am simply asking the Senator the question if he cares to be heard further about this matter. If he does, I was going to suggest that we might lay the bill aside now and adjourn, and he can resume his argument in the morning, if that would be satisfactory.

Mr. LIPPITT. I think it would be better, Mr. President, because I have considerable to say.

Mr. SIMMONS. I ask that the bill be laid aside for to-day.

The VICE PRESIDENT. In the absence of objection, the bill will be laid aside, as requested.

HOOR OF MEETING TO-MORROW.

Mr. KERN. I ask unanimous consent that when the Senate adjourns to-day it adjourn to meet to-morrow morning at 10 o'clock.

Mr. GALLINGER. I hope that request will be granted.

The VICE PRESIDENT. Is there objection to the request of the Senator from Indiana? The Chair hears none, and the order is made.

EXECUTIVE SESSION.

Mr. BACON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 5 minutes spent in executive session the doors were reopened, and (at 6 o'clock and 20 minutes p. m.) the Senate adjourned until to-morrow, Saturday, September 6, 1913, at 10 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate September 5, 1913.

AMBASSADOR.

Joseph E. Willard, of Virginia, now envoy extraordinary and minister plenipotentiary to Spain, to be ambassador extraordinary and plenipotentiary of the United States of America to Spain, to fill an original vacancy.

MINISTER.

John Ewing, of Louisiana, to be envoy extraordinary and minister plenipotentiary of the United States of America to Honduras, vice Charles D. White, resigned.

RECEIVER OF PUBLIC MONIES.

Kirk E. Baxter, of Bellefourche, S. Dak., to be receiver of public moneys at Bellefourche, S. Dak., vice Samuel G. Mortimer, term expired June 30, 1913.

POSTMASTER.

MISSOURI.

Colin M. Selph to be postmaster at St. Louis, Mo., in place of Thomas J. Akins. Incumbent's commission expired May 13, 1913.

CONFIRMATIONS.

Executive nominations confirmed by the Senate September 5, 1913.

PROMOTIONS IN THE ARMY.

MEDICAL CORPS.

Maj. Alexander N. Stark to be lieutenant colonel.

Capt. Allie W. Williams to be major.

COAST ARTILLERY CORPS.

Lieut. Col. Isaac N. Lewis to be colonel.

Maj. John P. Hains to be lieutenant colonel.

Capt. Robert E. Wyllie to be major.

First Lieut. James B. Dillard to be captain.

First Lieut. James K. Crain to be captain.

INFANTRY ARM.

Lieut. Col. Daniel L. Howell to be colonel.

Lieut. Col. Walter K. Wright to be colonel.

Maj. Abraham P. Buffington to be lieutenant colonel.

Capt. Joseph C. Castner to be major.

First Lieut. Elverton E. Fuller to be captain.

Second Lieut. Alvin G. Gutensohn to be first lieutenant.

APPOINTMENTS, BY TRANSFER, IN THE ARMY.

INFANTRY ARM.

Second Lieut. David B. Falk, jr., to be second lieutenant.

CAVALRY.

Second Lieut. Carlyle H. Wash to be second lieutenant.

APPOINTMENTS IN THE ARMY.

MEDICAL RESERVE CORPS.

To be first lieutenants.

Alexander Watson Williams.

Walter Paul Davenport.

Ralph Michael Le Comte.

Louis Hopewell Bauer.

Lanphear Wesley Webb, jr.

Austin James Canning.

Harold Henry Fox.

Frederick Henry Dieterich.

William Guy Guthrie.

POSTMASTER.

MISSOURI.

Colin M. Selph, St. Louis.

HOUSE OF REPRESENTATIVES.

FRIDAY, September 5, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou eternal source of life and light and love, in whom we live and move and have our being, pour out Thy spirit in abundance upon us, that by its transforming power we may grow day by day unto the measure of the stature of the fullness of Christ, that peace and good will to all men may possess our hearts to the honor and glory of Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

REPORT FROM COMMITTEE ON RULES.

Mr. HARDWICK. Mr. Speaker, I desire to submit a privileged report from the Committee on Rules.

The SPEAKER. The gentleman from Georgia submits a privileged report from the Committee on Rules, which the Clerk will report.

The Clerk read as follows:

House resolution 244 (H. Rept. 67).

The Committee on Rules, having had under consideration sundry resolutions relating to the urgent deficiency appropriation bill, H. R. 7898, report the following substitute therefor:

"Resolved, That it shall be in order for the House in the Committee of the Whole to consider so much of H. R. 7898 as is embraced between the word 'the,' at the beginning of line 4, page 21, and the word 'repealed,' at the end of line 17, page 25.

"It shall also be in order for the House in the Committee of the Whole to consider, without amendment, even though the paragraph to which the said amendment is germane may have been passed, the following amendment to H. R. 7898:

"For compensation (not exceeding in the aggregate \$15,000 and a monthly compensation not exceeding \$300 each, to be fixed by the Secretary of the Treasury), and traveling expenses of agents to select and recommend sites which have been authorized by law for public buildings, for the fiscal year 1914, \$30,000."

Mr. HARDWICK. Mr. Speaker, I move the previous question on the resolution.

Mr. MANN. Will the gentleman permit the rule to be again read?

Mr. HARDWICK. Certainly.

The rule was again reported.

Mr. HARDWICK. Now, Mr. Speaker, on the adoption of the resolution I demand the previous question.

The SPEAKER. The gentleman from Georgia moves the previous question on the resolution.

The question was taken, and the previous question was ordered.

The SPEAKER. The gentleman from Georgia [Mr. HARDWICK] has 20 minutes and the gentleman from Kansas [Mr. CAMPBELL] has 20 minutes.

Mr. HARDWICK. The gentleman from Kansas is not here; the gentleman from Pennsylvania [Mr. KELLY] is the ranking minority member.

The SPEAKER. The gentleman from Pennsylvania [Mr. KELLY] has 20 minutes.

Mr. HARDWICK. Mr. Speaker, it is not necessary to go into a very extended explanation of what this rule is. I merely want to state to the House in a few words what it provides. The first paragraph of the rule simply makes in order the legislative provisions for the abolishment of the Commerce Court, and in accordance with the understanding generally on this side and as expressed in our caucus. The second proposition makes in order, and provides it shall be considered without amendment, a certain paragraph of the bill which was stricken from it yesterday on a point of order under the general rules to the effect we should have a certain number of inspectors provided to look into the sites already authorized for public buildings throughout the country.

Mr. BARTLETT. Site agents.

Mr. HARDWICK. Site agents, as my colleague suggests. So if this rule is adopted it will accomplish two things: First, that part of the bill dealing with the Commerce Court will be in order, and a point of order under the general rules of the House will not be good against it.

Mr. BARTLETT. May I ask my colleague a question?

Mr. HARDWICK. In just a moment. And, second, the provision that the committee put in the bill and which was stricken from the bill, for the building sites agents, will be in order and can be offered as an amendment, and a point of order under the general rules of the House will not lie against it.

Mr. BARTLETT. I understood from a reading of the rule that the Commerce Court provision would be in order and not subject to further amendment.

Mr. HARDWICK. Under the rule as we have reported it, the Commerce Court provision will be subject to any germane amendment.

The very reverse is true as to these building-site inspectors.

Mr. BARTLETT. That is what I want.

Mr. HARDWICK. We provided in one case there should be absolute freedom of amendment; in the other that there should not be; and since it has been put up to me in that way I will explain why we do one thing in one case and another in another case. It was the general understanding from the caucus action and from the committee, so far as the Commerce Court provision is concerned, that there should be the utmost liberality of discussion and amendment as to this legislative proposition in respect to the Commerce Court. So far as the building-sites proposition is concerned, the very reverse, as the Committee on Rules understood it, is true. The provision in the paragraph was the result of a virtual agreement between a number of gentlemen on the Committee on Appropriations and on the Committee on Public Buildings and Grounds, and it was agreed on in exactly the form that paragraph was put in the bill by the Committee on Appropriations. And not only the chairman of the Committee on Appropriations, the gentleman in charge of the bill, but also the gentleman from Florida [Mr. CLARK], chairman of the Committee on Public Buildings and Grounds, thought we ought to stand on just what there was in the bill as to this matter. For that reason we sent it to the House in that form.

Mr. GILLET. Will the gentleman yield for a question?

Mr. HARDWICK. Certainly, if the gentleman will not take too much of my time.

Mr. GILLET. I simply wanted to ask the gentleman if I understood him to say that this second proposition was also a matter of caucus suggestion?

Mr. HARDWICK. No; it was a subject matter of some caucus discussion and a somewhat general agreement on this side.

Mr. GILLET. But the reason you shut off amendment was not on account of any caucus action?

Mr. HARDWICK. No. If I said that, I expressed myself unhappily. We are not shutting off debate on anything.

Mr. MANN. I notice that the rule reads that so much of the bill that is between the word "the" in line 4, page 21, and the word "repealed" in line 17, page 25, shall be in order. Is it the intention to leave out the word "repealed"?

Mr. HARDWICK. That is inclusive.

Mr. MANN. But it does not so state.

Mr. HARDWICK. It has been construed that way. This is the exact form employed two or three times by Mr. Dalzell, of Pennsylvania, and no such technical point as that was ever made against it.

Mr. MANN. It may not be made now, but I want to know what the rule provides.

Mr. HARDWICK. It certainly meant inclusive.

Mr. MANN. I do not know. It does not say that it is inclusive. It shows a carelessness in drawing the rule that I am sure we should not be charged with.

Mr. HARDWICK. I think myself it is a careless practice for a Democrat to follow the precedents of Republicans, and I may have made that mistake, but if so it is utterly unimportant.

Mr. MANN. Of course, you might have followed the precedent of some Republican, but perhaps nobody over there thought about it.

Mr. HARDWICK. That is neither here nor there, but there is no trouble as to what it means.

Mr. MANN. What it means and what it says are two different things.

Mr. HARDWICK. All the language between those words shall be in order.

Mr. MANN. Between those words?

Mr. HARDWICK. Yes; inclusive.

Mr. MANN. But it does not say "inclusive."

Mr. HARDWICK. It does not say "inclusive," no; but that would be the ordinary construction, and the gentleman from Pennsylvania contended that it meant that.

Mr. MANN. I do not think the gentleman from Pennsylvania ever contended that or any lawyer ever contended that until the gentleman this morning, who is a good lawyer, contends it.

Mr. HARDWICK. If the gentleman will read the fourth volume of Hinds' Precedents, section 3260, and see the rule that Mr. Dalzell reported as to the point, he will be ashamed to make such a technical point.

Mr. MANN. He is not ashamed of it.

Mr. HARDWICK. The gentleman is reflecting on the gentleman from Pennsylvania, who is a much abler lawyer than myself, and does not reflect on me. I refer to the rule of 1906. I think the rule we report will accomplish the purpose anyhow. Of course if the gentleman does not think so, I am sorry. If necessary in the Committee of the Whole, these two words can be added by amendment.

I reserve the balance of my time, Mr. Speaker.

The SPEAKER. The gentleman has used 6 minutes. He has 14 minutes remaining.

Mr. KELLY of Pennsylvania rose.

The SPEAKER. The gentleman from Pennsylvania [Mr. KELLY] is recognized for 20 minutes.

Mr. KELLY of Pennsylvania. Mr. Speaker, I feel that the very able argument of my friend from Georgia [Mr. HARDWICK] still does not give any substantial excuse for having introduced a rule here which makes a matter in order which has already been stricken out of this bill and places it in such a posture that it can not be amended. The point that the item must be considered without amendment will, it seems to me, be enough to condemn this rule and secure rejection at the hands of the House.

Mr. Speaker, I want to read to the committee what the chairman of the Committee on Appropriations [Mr. FITZGERALD] said in his very able speech not long ago before this House when he was talking about the budget. I will take what he said as the text of the remarks I shall make on this rule now pending before the House. The gentleman's speech was delivered here on June 24, and in the opening of his splendid address the chairman of the Committee on Appropriations, discussing the appropriating policy of this Government, made use of the following language:

The rapid increase in the cost of the Federal Government is attracting universal attention. Many thoughtful men regard our profligate fiscal arrangements as the greatest menace to the permanency of the Union, and the proper solution of the many problems involved is complicated by the good-natured indifference of the people. While a Treasury surplus is maintained by a system of indirect taxation so ingeniously devised that individual burdens are not readily appreciated but are assiduously proclaimed as blessings, it will be difficult to awaken the mass of the people to the importance of the questions involved.

Taking that as the basis of my remarks, I make the statement that the rule which puts the paragraph back, and means increased expenditures, is unjustified in every respect. The item provides for additional expenditure of \$30,000, an increased expenditure of that amount, for the men who shall travel and select and recommend sites for public buildings are to be new officials.

It is not contended by the gentleman from Georgia [Mr. HARDWICK] or anyone else that this is in any way going to decrease expenditures.

Mr. HARDWICK. If the gentleman will excuse me, I thought the gentleman understood that we did contend that. I say that it is a measure of real economy.

Mr. KELLY of Pennsylvania. Not directly.

Mr. HARDWICK. Both directly and indirectly.

Mr. KELLY of Pennsylvania. Every man permanently employed at the present time in this work of selecting sites is retained. Every man who has been doing that work of selecting sites is kept on the Government pay roll, and this item includes an appropriation of \$30,000 additional.

The point is that it means an increased expenditure. It sets the precedent and involves an increased expenditure, which is an ever-increasing tendency, as I mentioned here yesterday or the day before, in the expenditures of the Government.

Taking the report of the Secretary of the Treasury for the fiscal year ended June 30, 1912, and the report for the fiscal year 1911, it appears that for the public buildings of this Nation the amount of \$16,287,525.82 was expended in the year 1911, whereas in the year following—in the year 1912—the amount jumped to \$18,034,385.07, with an increased expenditure on that one item alone in one year's time of \$1,746,859.25; that is to say, with the same administration, with the same kind of operation, with the same men on the pay roll, the expenditures increased one and three-quarter million dollars in one year's time. That brings us to the situation where the Secretary of the Treasury, in his estimates for the coming year, has the following to say:

The total estimates of appropriations for ordinary purposes for the fiscal year ending June 30, 1914, are \$732,556,023.03. These are exclusive of the estimates of expenditures for the Panama Canal, which may be paid from bond sales, and those for the postal service, which are repaid from the postal receipts. The estimates of receipts for the same period which will be available for the general fund, from which payments on such appropriations must be made, are \$710,000,000. The estimates of appropriations for ordinary purposes for 1914 are, therefore, \$22,556,023.03 in excess of the estimated revenue. The estimated expenditures for the Panama Canal are \$30,174,432.11, and if these expenditures should be paid from the general fund instead of from the sale of bonds, the total estimates of appropriations for 1914 are \$52,730,455.14 in excess of the estimated receipts.

That concise statement shows that after the great increase of 1912 over that of 1911, in the fiscal year coming—the year 1914—the deficit will be \$52,730,455.14, regardless of the immense sum expended.

I want to say, Mr. Speaker, that this tendency, which is growing and which is becoming more and more accentuated each year, is the danger that has been pointed out by the chairman of the Committee on Appropriations in his discussion of the budget proposition.

I feel that the expenditure at the present time of \$50 for every family in this country ought certainly to be sufficient; but it is not sufficient, and the Government keeps demanding more and more, with no seeming attempt at curtailment.

Mr. Speaker, I make the point that the Rules Committee has no right to make in order what has been stricken out of a bill after full consideration in this House. It is not right as a general practice. It may be justified under some conditions of urgency or immediacy of demand, or something of that kind, but when a point of order has been made against a paragraph in this appropriation bill and it has been stricken out, I claim it is unjustifiable for the Committee on Rules to manufacture a rule to make it in order without amendment. The House is the creator of the Rules Committee. The committee is only the creature of this House, and the House has established rules for its procedure. I do not feel that it is just for any committee of this House arbitrarily to make a paragraph like this in order unless there is an immediacy of demand or an urgency, which is not present in this case. I believe this particular rule, brought in this morning and reported by the gentleman from Georgia [Mr. HARDWICK], ought to be rejected by the House.

I reserve the balance of my time.

Mr. HARDWICK. Mr. Speaker, how much time have I remaining?

The SPEAKER. The gentleman from Georgia has 14 minutes and the gentleman from Pennsylvania [Mr. KELLY] has 13 minutes remaining.

Mr. HARDWICK. I yield four minutes to the gentleman from Florida [Mr. CLARK].

Mr. CLARK of Florida. Mr. Speaker, I think if we had an accurate calculator to whom we could submit the proposition it would be found, upon investigation, that more money has been spent in discussing this point of order than the proposed increase will amount to.

I believe it has always been customary to expend \$15,000 a year to pay the traveling expenses of the persons who have gone out to select these sites. In addition to that, you must count the salaries of the persons taken from the Treasury Department, whose ordinary work, of course, is not done or is done by some one else. When you add them all together you will find that we are probably increasing the expenditure by perhaps six or seven thousand dollars. And what do we accom-

plish? We save hundreds of thousands of dollars to the people of this country in the matter of the purchase of sites. There can be no possible question about this.

As I said yesterday, I repeat now: The persons who have been sent out heretofore to select sites have had no knowledge of the subject. They have been stenographers and clerks in the department, and others who simply desired to have a trip in the summer time to some northern resort and in the winter-time to some southern resort. They have gone into these communities with absolutely no knowledge of the values of real estate in those communities. They have been met by committees, they have been entertained, and have wound up by reporting to the department, usually in favor of the most extravagantly priced lot offered them in that community.

Mr. GILLET. Has not the Treasury Department often used the services of the supervising inspectors, if that is their title, the men who are inspecting the buildings, to select these sites?

Mr. CLARK of Florida. Very seldom.

Mr. GILLET. I think the gentleman is mistaken about that.

Mr. CLARK of Florida. My authority is Mr. Sherman Allen, Assistant Secretary of the Treasury, who says that the policy heretofore has been simply to appoint clerks and others in the department who wanted a vacation and give them an opportunity to take these trips for the benefit of their health, or for pleasure, or something else, to select these sites.

Mr. HUMPHREY of Washington. Will the gentleman allow me—

Mr. CLARK of Florida. Just a moment. I do not mean now to discuss any political phases of this question. Gentlemen on the other side have seemed anxious to throw some politics into this matter. I have studiously avoided that, because it is not a political question. It is a question of absolute economical administration, that is all; and, if I understand the policy of the Secretary of the Treasury, he will, for instance, out on the Pacific coast, group a number of States in which sites are to be selected, and he will select from that territory some gentleman acquainted with real estate values in that section of the country, some gentleman of ability, integrity, and character who is competent to judge of values, and let him go into these different communities and report to the Secretary which lot, in his judgment, under all the circumstances, is the best and cheapest lot, all things considered, for the Government to buy. Is not that much better than to send some clerk or stenographer?

Mr. HUMPHREY of Washington. Mr. Speaker—

The SPEAKER. The time of the gentleman has expired.

Mr. KELLY of Pennsylvania. I yield five minutes to the gentleman from Tennessee [Mr. AUSTIN].

Mr. AUSTIN. Mr. Speaker, I favor this proposition, and I think the Committee on Rules instead of being criticized ought to be commended. We have pursued in this House a policy that is unjust to our own membership. We raise points of order here against propositions which go out of these bills, and then those propositions are put in in the Senate, and when the bill goes to conference the House conferees agree to these items, and when the bill is finally passed every one of the items becomes a law. We rob ourselves of the credit we ought to have for this work. We inaugurate it in the beginning, we introduce the bills, we go before the committees, submit arguments, have the matters placed in the bill, and then some industrious and technical Member of Congress will raise a point of order and they all go out. We return home and our constituents feel that they owe us nothing, that these propositions became a law on account of the services rendered by the Senators of our State rather than by the Members.

Yesterday we took from this bill or refused to write into it 47 propositions that ought to have been advanced, that have been pending 5, 6, and 10 years, and I venture the prediction that every one of them will be written into the deficiency bill, and when it becomes a law every one of them will be in the act. We are reflecting upon our own efficiency and robbing ourselves of the work that we are entitled to in the interests of our constituents.

This rule involves 298 building sites, scattered over 46 States and one Territory. This property can be purchased cheaper this year than it can next. By employing outside men we do not rob the Supervising Architect's Office of a part of its force, which means a reduction in the number of plans for public buildings scattered over the country.

We hear a great deal about economy, economy, economy. I venture the assertion that this Government is more cheaply administered in proportion to population and wealth than any Government on the face of the earth. Take the city of New York, from which the economical chairman [Mr. FITZGERALD]

of this committee halls. Compare the expenses of the management of affairs of his city per capita with that of the United States and see how economical we are in the administration of national affairs. We spent last year on construction of public buildings not \$20,000,000, as asserted by the gentleman from New York [Mr. FITZGERALD] yesterday who interrupted me, but \$12,000,000 in 48 States of the Union. According to the controller's report—New York City—they spent \$15,500,000 in six months in New York City on public buildings alone.

The people of the United States are not criticizing Congress for the expenditure of public money. All that they care to know is whether the money was honestly expended and whether it was for a good and legitimate public purpose. The most popular man that we ever had in the White House, to my knowledge, was Theodore Roosevelt. And yet the cost of administration during his time in office was larger and greater than that compared with any of his predecessors. This country is growing by leaps and bounds. With its wonderful growth in population goes hand in hand the great growth of public business. If you will sit at the table of the Committee on Public Buildings and Grounds and hear testimony and petitions for the enlargements of public buildings all over the Union, you will have a true and correct conception of how immense the public business is and how rapidly it is increasing.

We are called upon constantly to enlarge public buildings because we do not anticipate the growth of the country and the increase in public business. I challenge the statement that the Democratic side ought to be criticized for the passage of the last public-building bill. It not only received a majority on that side, but it received practically every vote on this side. A fairer bill was never drawn. There was no politics in it, no sectionalism in it, no discrimination against any of the Members in this House, and it does it become anyone on the Republican side to criticize that legislation, when by a two-thirds vote here and a Republican Senate we made it a law. [Applause.]

Mr. KELLY of Pennsylvania. Mr. Speaker, I yield three minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Speaker, this rule makes in order a provision in the bill to abolish the Commerce Court. That seems to be the policy of the Democratic Party; and while I think it is a great mistake, I have discussed that matter heretofore and do not intend to discuss it on the rule. Yesterday the gentleman from Mississippi [Mr. HARRISON] offered an amendment to this bill for the purpose of enlarging the force in the Supervising Architect's Office so that the office might go ahead more rapidly with the plans for public buildings.

A point of order was made against that, and, of course, having been sustained, the amendment was not agreed to. Along comes another provision in the bill providing for an increase in the Supervising Architect's Office, and that went out on a point of order. If that provision in the bill had not gone out on a point of order, being subject to a point of order, it was subject to any germane amendment and it would have been possible to amend that provision of the bill so as to put in the very thing which the gentleman from Mississippi [Mr. HARRISON] proposed. But now comes the Committee on Rules this morning, very smooth and astute, with a provision making in order the item that went out on a point of order yesterday, which could have been amended, providing that there shall be no amendment to it; and the gentleman from Georgia [Mr. HARDWICK], in immediate charge, demands the previous question, without anyone knowing what it is, so that the rule can not now be amended; and there you have it. A majority of the House—and I do not speak now of the Democratic majority—but a majority of the Members of the House who have been working around here for days trying to find some method by which they could put into this bill a provision enlarging the force of the Supervising Architect's Office, having had the opportunity, propose now to cut off their own noses by the adoption of this rule, without amendment, and thus prevent themselves from offering an amendment which yesterday and the day before they said ought to and must go into the bill.

Gentlemen, you have been smoothly overcome by the distinguished gentleman from New York [Mr. FITZGERALD], who never misses a point.

Mr. HARDWICK. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. FITZGERALD].

Mr. FITZGERALD. Mr. Speaker, I am accustomed to carry a burden which has frequently been unloaded upon me when I am charged with being the entire Committee on Appropriations. I have listened to indignant protests from Members who charge that I will not do this, that I will not do that, when very frequently I am the only one of the 21 members of the Committee on Appropriations who has been in favor of the thing for which

I am denounced; but it remained for the gentleman from Illinois [Mr. MANN] to heap upon me a new burden—that is, to charge me with the responsibility for the action of the Committee on Rules. Fortunately that committee has not the evil repute that it had in Republican days or I fear that this new charge would be too much and I would be overwhelmed by it. [Laughter.] The gentleman is mistaken in attributing to me any peculiar skill or smoothness in this matter. I introduced a rule when I reported the bill from the Committee on Appropriations to make in order the provision proposing to abolish the Commerce Court. After the item in reference to the site agents was stricken from the bill yesterday some gentleman suggested—

Mr. HARDWICK. The gentleman from Florida [Mr. CLARK] introduced a resolution.

Mr. FITZGERALD. The gentleman from Florida [Mr. CLARK] suggested that if a rule were reported it should include a provision to make in order the item for the site agents stricken from the bill. Forsooth, the gentleman from Illinois now says that through my smoothness this matter has been incorporated in the rule and reported here in a manner to deprive Members of the opportunity to change it.

I do not believe that the provision was subject to the amendment to which the gentleman from Illinois refers. This amendment refers to agents to select sites. The other amendment, proposed by the gentleman from Mississippi [Mr. HARRISON], was for an entirely different purpose, and I doubt very much if it were germane; but to save a long and useless discussion, in which the gentleman from Illinois and myself probably would occupy valuable time of the House in attempting to split hairs, it was thought advisable to change the rule and thus deprive the two of us of at least one opportunity during this session to discuss parliamentary law. [Laughter.] And I am not certain but that the committee acted very wisely in that respect.

I am in favor of the provision for the appointment of these site agents. I am in favor of it because I believe it will result in a distinct saving to the Government. Instead of taking men from their work in the Supervising Architect's Office, for which they are peculiarly qualified, and in that manner deferring the completion of plans upon which they have been engaged, this will enable the selection for a few months of men peculiarly qualified to visit, inspect, and report upon the advisability of selecting one of many sites and upon the reasonableness of the price at which it is tendered.

The experience of those who have had to do with these public-building matters in the selection of sites is to the effect that if such practice be initiated it will result in a saving of hundreds of thousands of dollars. There will be expended within a year or two at least three million and a half of dollars in the purchase of sites, and it is the part of wisdom, it is good business policy, for the Government to have a report upon the sites to be selected by men who are competent and capable of reaching proper conclusions about it. It is in the interest of economy, in the interest of good administration, that I favor the original proposition, and I am in favor of restoring it to the bill.

Mr. Speaker, I wish to say that I welcome the gentleman from Pennsylvania [Mr. KELLY] to the ranks of the economists of this House. It is a pleasure to note that thus early he has taken a stand for economy, and I hope that we will have his effective assistance in some of the troublesome days ahead of us in the next session of Congress.

The SPEAKER. The time of the gentleman from New York has expired.

Mr. KELLY of Pennsylvania. Mr. Speaker, I think I have five minutes remaining, and I wish to yield those five minutes to the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. Mr. Speaker, the gentleman from New York [Mr. FITZGERALD] says that this rule was specially framed in order to deprive him and the gentleman from Illinois [Mr. MANN] of some privileges and rights. If that be true, this is a notable occasion, because this is the first time in my career in this House when a special rule deprived either of those gentlemen of anything.

Mr. FITZGERALD. The gentleman will notice that while I advocate it the gentleman from Illinois is restless under it.

Mr. MURDOCK. As a matter of fact, here we go again, Mr. Speaker, in the same old process of close corporation legislative action. The distinguished gentlemen who make up in part at least the Committee on Public Buildings and Grounds and the gentlemen who make up the Committee on Appropriations, and also those who are members of the Committee on Rules, have, as some gentleman said this afternoon, entered into an agreement the result of which is that this item for extra employees is to be covered into the bill against the ordinary rules of the

House. That is, the opinion of a few gentlemen on three committees is to supersede the wisdom of the House acting under its ordinary workday rules.

Mr. HARDWICK. Will the gentleman yield?

Mr. MURDOCK. If the gentleman will allow me to complete this statement then I will be glad to be interrupted. Having so decided, they bring into the House a special rule and ask for its adoption. In the ordinary course of business the House by a majority vote, usually when a quorum is not present, following leadership, adopts the rule. And what is the result? When the House does that, and it does it in the course of partisan politics, it breaks up the natural order of consideration of appropriation bills. There is all over the country a serious demand for economy. I think that individuals of this body believe that we should practice economy; but I say to gentlemen, that they will not practice economy successfully so long as they insist on this method of bringing in special rules to cover legislation on appropriation bills. When the rules of the House were originally formed they were framed with the idea of segregating the consideration of statutory legislation and the consideration of pure appropriations. The idea was correct. If you wish to reach economy in the consideration of bills you must keep out of your appropriation measures this new legislation. Why? We will all see the reason in the next session. All the great appropriation bills will come in—the legislative, executive, and judicial; the sundry civil; the Post Office and Post Roads; the naval bill—and in each case the major part of discussion on those bills will be upon new legislation in them to the neglect, I will say to the gentleman from Georgia, as he knows, of the straight-out appropriating items. Now, in the old days a practice grew up here of putting virtually all new legislation on appropriation bills. It was a bad habit. It was generally condemned, and righteously condemned, and the old party went out of power partly because of its evil practices in this House. Now the Democratic Party is in power. It has got a free field; its road is open before it; there is nothing to hinder it from taking the right course, and yet in the first appropriation bill that comes up in the new Congress what do we have? New legislation on the bill on the first day; a special rule covering that legislation up against points of order. There is a way to get this item into law. The item itself may be meritorious—I do not know—but there is a way to get this item into the law. It is to bring it in separately and pass it. This view is not partisan politics. There is no party point to be made about it. It is not good legislation. I do not think anyone will dispute that. I do not think this one item, appropriating \$30,000 for the pay of the special agents, will work any special economies. It is my observation that when you create extra officers you do not supersede anyone in the departments. We add just that many extra places to the expense of the Treasury, and I dare say that an examination of this expenditure a year hence will show that we have not saved any money to the Treasury; that we have simply added to our expenses \$30,000, and that the Treasury Department will use these extra men whom we provide, and they will also use the men who have previously been used for this work.

The SPEAKER. The time of the gentleman has expired.

Mr. HARDWICK. Mr. Speaker, I yield two minutes to the gentleman from Alabama [Mr. BURNETT].

Mr. BURNETT. Mr. Speaker, I was very sorry that the point of order was made against the proposition of the gentleman from Mississippi in regard to the 47 items. I thought that those items ought to go in; but so far as this rule is concerned, it ought to be adopted for this reason: This is an emergency proposition and is properly placed on an emergency deficiency bill.

Here is the status, gentlemen, of those of you who had authorizations for sites in the last bill. There have been propositions made in sealed proposals filed in the Treasury Department on a number of sites proposed, four or five times as many as there are sites to be acquired—a thousand or fifteen hundred I am informed by the chairman of the committee. They are being held up because the rule of the Treasury Department is that before they can even investigate the title to sites through the Department of Justice they must send some agent out for the purpose of making selection of the most available site.

Now, Mr. Chairman, after that is done it does not acquire your site; hence the necessity for this coming in at this time in order that by the time the next appropriation bill comes in when the next Congress meets the Department of Justice will have the opportunity of examining the titles, and then and not until then will you get appropriation for the purchase of your site. That is all that is involved in this proposition. It is to facilitate the investigation of the sites, because not a step can be taken by the Attorney General's Office, through his district attorneys, in regard to the investigation of title until these agents have first passed on the availability of the site. And many sites are being

held up. There are many growing towns, especially in the manufacturing sections of the country, where people have offered their sites and they have opportunity now of selling this property. I have had letters as former acting chairman of the committee from a number of people asking when this question will be settled, because they say that their site is in limbo and they do not want to be held up on the site, and therefore wish to facilitate these investigations and know what to depend upon. Hence it is an emergency proposition.

The SPEAKER. The time of the gentleman from Alabama has expired.

Mr. HARDWICK. Mr. Speaker, I have three minutes which I did not intend to use, but I do want to answer two observations made by my friend from Kansas [Mr. MURDOCK]. The gentleman seems to think that certain gentlemen on three committees of the House are adopting this rule. We can not do it for a minute, unless the majority of the Members of this House will vote for this proposition.

Mr. MURDOCK. The majority of those present?

Mr. HARDWICK. Any man here can demand a quorum. The gentleman from Kansas can do so.

Mr. MURDOCK. To the delay of public business, which no one wants to do.

Mr. HARDWICK. However, that is one of his constitutional rights. If he wants a quorum he can demand it, and this proposition can only be adopted by a majority of those present, which must be a quorum if any Member demands it. It is a majority rule, pure and simple, and by adopting it we are obviating one-man rule, where the technical objection of one man overcomes the will of the majority. [Applause.]

Now, not only that, but I want to say to the gentleman that I do not share with him in his view against legislating on appropriation bills. In my judgment, when the House of Representatives, in 1837, surrendered this general power it made the greatest mistake it ever made. The power of the commons over the purse has always been one of the greatest weapons in the hands of those who fought for liberty in every age and every country. And, in my judgment, the American House of Representatives would to-day occupy a higher position in our system of government if we had the power to insist upon our will and to say to the Senate and to the Executive that we will not appropriate money unless they let the will of the people be carried out in regard to other matters. The power over the purse is a great weapon, with which almost every fight for English liberty has been won, and for one I want to say in this presence that all this talk about legislating in connection with appropriation bills has no terror for me. [Applause.] If this House does not occupy to-day the powerful position that it ought as the immediate representatives of the people it is largely because we have tamely surrendered the right to demand legislation of the other coordinate branches of the Government before we will grant appropriations, and if the House is ever to regain its ancient position of supremacy it must reassert this right more and more.

The SPEAKER. The question is on agreeing to the resolution.

The question was taken; and the Speaker announced that the ayes seemed to have it.

Mr. MANN. Mr. Speaker, I ask for a division.

The House divided; and there were—ayes 89, noes 26.

So the resolution was agreed to.

PRAYERS OF THE CHAPLAIN.

Mr. BARNHART. Mr. Speaker, I desire to call up a privileged House concurrent resolution.

The SPEAKER. The gentleman from Indiana calls up a House concurrent resolution, which the Clerk will report.

The Clerk read as follows:

House concurrent resolution 8 (H. Rept. 66).

Resolved by the House of Representatives (the Senate concurring), That there be printed for the use of the House of Representatives, to be distributed through the folding room, 50,000 copies of House Document No. 1458, Sixty-second Congress, same being "Prayers offered at the opening of the sessions of the Sixty-second Congress of the United States."

Mr. JOHNSON of South Carolina. Mr. Speaker, what is the document to be printed?

Mr. BARNHART. It is a document containing the prayers of the Chaplain delivered during the Sixty-second Congress.

The SPEAKER. The question is on agreeing to the resolution.

Mr. THOMPSON of Oklahoma. Mr. Speaker, I just came in. I would like to have that resolution read again.

The SPEAKER. Without objection, the resolution will again be reported.

The resolution was again read.

Mr. HOWARD. Mr. Speaker, I would like to ask the gentleman from Indiana [Mr. BARNHART] a question. How many

copies of these prayers were formerly printed under a former resolution?

Mr. BARNHART. Two thousand copies, I believe; four or five copies to each Member. They are to the credit of Members at the folding room, and each Member can have one copy bound under the regular order—under the law.

Mr. HOWARD. Are these the prayers of the Chaplain of the House only?

Mr. BARNHART. Yes.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

STATUE OF ZACHARIAH CHANDLER.

Mr. BARNHART. Mr. Speaker, I want to submit Senate concurrent resolution No. 5, a privileged resolution, and move its adoption.

The SPEAKER. The gentleman from Indiana [Mr. BARNHART] submits a privileged resolution, which the Clerk will report.

The Clerk read as follows:

Senate concurrent resolution 5 (H. Rept. 68).

Resolved by the Senate (the House of Representatives concurring). That there be printed and bound, with illustrations, under the direction of the Joint Committee on Printing, the proceedings in Congress, together with the proceedings at the unveiling in Statuary Hall, upon the acceptance of the statue of Zachariah Chandler, presented by the State of Michigan, 16,500 copies, of which 5,000 shall be for the use of the Senate and 10,000 for the use of the House of Representatives, and the remaining 1,500 copies shall be for the use and distribution of the Senators and Representatives in Congress from the State of Michigan.

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. BARNHART. I will.

Mr. MANN. This is a House resolution?

Mr. BARNHART. It is a House concurrent resolution.

Mr. MANN. The proceedings have not yet taken place?

Mr. BARNHART. Oh, yes.

Mr. MANN. I beg the gentleman's pardon.

Mr. BARNHART. The gentleman from Illinois is mistaken.

Mr. MANN. I beg the gentleman's pardon; I am not mistaken. As I understand the resolution, it provides for the publication of the proceedings in Statuary Hall and in the House and in the Senate. Is not that the case?

Mr. BARNHART. Yes.

Mr. MANN. There was a date set for the proceedings in the Senate and a date set for the proceedings in the House. The proceedings took place in neither the Senate nor the House. I assume that there will be proceedings hereafter in the House. I understood at the time that the Michigan delegation was waiting for some reason or other. A special date was fixed, but the proceedings were not had on that date. If this resolution will cover the proceedings in the House and Senate when they are had, that will satisfy the demand; but if they go ahead with the publication of the proceedings before the proceedings are had, it would be a little awkward.

Mr. BARNHART. Well, their resolution came over from the Senate.

Mr. MANN. Well, probably the Senate acted a little hastily. Let us hear the resolution read again.

The SPEAKER. Without objection, the resolution will be reported again.

The resolution was again read.

Mr. MANN. Now, is the gentleman able to say, if this resolution passes, will the publication be held up until these proceedings can have occurred?

Mr. BARNHART. It certainly will.

Mr. FOSTER. Well, Mr. Speaker, if the gentleman will permit, is it not a rather unusual proceeding to get permission to print before the ceremonies are held? That is a good deal like providing for the publication of a funeral oration over a man before the man is dead.

Mr. BURNETT. This is for the usual expense for printing the proceedings in Congress?

Mr. BARNHART. Yes. It is the usual expense.

Mr. MANN. "The proceedings in Congress" mean the proceedings in the Senate and in the House. Usually that is included.

Mr. PAYNE. Mr. Speaker, I wish to call the attention of the gentleman from Illinois [Mr. MANN] to the fact that some proceedings have already taken place in the House looking to the acceptance of the statue. Under the language of the resolution they would simply print those proceedings in Statuary Hall, and not the future proceedings in Congress. There would not be any warrant or authority under this resolution to print any eulogies or anything of that kind delivered in the future.

Mr. MANN. We do not know whether the resolution for the acceptance of the statue has passed yet or not.

Mr. BARNHART. Yes; it has.

Mr. MANN. It is customary for the resolution to pass at the time the proceedings are had.

Mr. BARNHART. If there is any objection to this resolution, or if it be irregular, I have no disposition to urge its passage. It has simply come over from the Senate with the request that it be agreed to, and the Committee on Printing acted favorably upon it, and I have reported it.

Mr. MANN. I am calling the attention of the gentleman to the situation, so that, if the resolution passes, the Printing Office will not proceed with the printing of a part of the proceedings until all of the proceedings are had and the statue is accepted.

Mr. BARNHART. I think I can give the gentleman from Illinois full assurance that that will not be done.

Mr. J. M. C. SMITH. I should like to inquire whether this resolution was sent over by either one of the Senators from Michigan, both of whom are now absent? I understand there was a day set apart for the ceremonies in the House, but on that day it was inconvenient to have those proceedings, because something else was being considered in the House.

The SPEAKER. The House set a day on which to accept the statue, and on that day the gentleman from Massachusetts [Mr. GARDNER] raised the point of no quorum before the House ever got started.

Mr. MANN. Mr. Speaker, in justice to the gentleman from Massachusetts [Mr. GARDNER], who raised the point of no quorum, it is proper to say that it was not the expectation on that day to take up the special order. That understanding had been reached among the gentlemen on both sides of the House.

The SPEAKER. The Chair is not criticizing the gentleman from Massachusetts. The Chair will state to the gentleman from Michigan [Mr. J. M. C. SMITH] that this is a concurrent resolution which the gentleman from Indiana [Mr. BARNHART] has called up after it came over from the Senate in the usual course of business. It was brought over by one of the secretaries of the Senate, with a message announcing its passage and requesting the concurrence of the House of Representatives.

Mr. MANN. The resolution was passed by the Senate prematurely. I do not know that that makes any difference.

Mr. BARNHART. Possibly the Senate passed it with the understanding that the proceedings had been had in the House. The day had been set, and then the proceedings were deferred.

Mr. MANN. But the proceedings were not had in the Senate. They were deferred in the Senate in the same way.

The SPEAKER. The House will expect the gentleman from Indiana [Mr. BARNHART] to see to it that the proceedings are not published prematurely.

Mr. BARNHART. The gentleman from Indiana will see to that.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

URGENT DEFICIENCY APPROPRIATION BILL.

Mr. FITZGERALD. I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of H. R. 7898.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes, with Mr. Flood of Virginia in the chair.

The CHAIRMAN. The Clerk will proceed with the reading of the bill.

The Clerk read as follows:

LIFE-SAVING SERVICE.

To reimburse the appropriation for expenses of the Life-Saving Service for the fiscal year ending June 30, 1913, the amount expended therefrom in sending life-saving crews and boats, apparatus, and so forth, for the rescue and relief of the flood sufferers in the Middle West, \$5,000, or so much thereof as may be necessary.

Mr. MANN. Mr. Chairman, I move to strike out the last word. In the Washington papers this morning there appeared a telegram from Norfolk, Va., as follows:

NORFOLK, VA., September 4.

Life-savers of Hatteras, Ocracoke, and Durants Neck stations established a new record for bravery when they rescued 20 men, 2 women, and 2 children from the six-masted schooner *George W. Wells*, which went ashore yesterday 3 miles north of Hatteras Inlet during the terrific storm which swept the Virginia and North Carolina coast.

That is in accordance with the records of the Life-Saving Service, and it ought to be called to the attention of the House.

This was a terrific storm.

It has been stated that under the new management of the Weather Bureau that bureau is now to be conducted on a scientific basis. The new scientific management of the Weather

Bureau issued a circular in the ordinary form, dated 8 p. m. on September 3, as follows:

WEATHER CONDITIONS.
UNITED STATES DEPARTMENT OF AGRICULTURE,
WEATHER BUREAU,
Washington, Wednesday, September 3—8 p. m.

The southern storm has passed inland over North Carolina and is rapidly losing intensity. The winds have already diminished on the North Carolina and Virginia coasts.

In the morning paper after this circular was issued appears the following news:

WASHINGTON, N. C., September 4.

Sweeping southward from Chesapeake Bay between midnight and daybreak this morning, a furious storm, the like of which not the oldest inhabitants can remember, spread devastation throughout Beaufort County. The wind reached a velocity of 100 miles an hour. Estimates of the damage to property can not be made with accuracy, but it is believed the loss will reach \$4,000,000.

I suggest that the scientific management of the Weather Bureau ought to be careful about sending out word that the winds are diminishing and that the storm is dying out in the face of the worst storm, then approaching, which has reached North Carolina within the memory of the oldest inhabitant.

Mr. FITZGERALD. Mr. Chairman, it is apparent that the scientific man of the Weather Bureau had no information as to the outburst that occurred in the House yesterday or he would have anticipated it. [Laughter.]

Mr. BRYAN. Mr. Chairman, I notice the news of an awful wreck on the New Haven Railroad, and it is commented on and considered a violation of interstate regulations, one which warrants such investigation as may possibly result in criminal prosecution and all kinds of condemnation for the men who were responsible for the wreck and for the mismanagement of the railroad which brought on the wreck. It is very natural that a great deal of attention should be attracted to a thing of that kind.

On the 17th of August there was a wreck off the coast of Alaska. The steamship *State of California*, steaming northward in Gambier Bay, 60 miles south of Juneau, Alaska, with passengers and crew and a valuable cargo on board, going to spread the commerce of this country, endeavoring to carry on the trade that exists between Alaska and the States, ran upon an uncharted rock, and within a very few minutes was at the bottom of the ocean or inlet where the ship was then sailing. The reason for this wreck was not solely or in any part, so far as I know, due to any dereliction on the part of corporation directors; it was not some manager that was to blame; it was not some telegraph operator of some railroad or steamship line that failed to give the proper message, nor was it occasioned by the fact that some block signal did not work. The blame lies at the door of Congress, or, in other words, Uncle Sam himself is to blame.

Mr. MANN. For what?

Mr. BRYAN. Because, notwithstanding the petitions that have been presented, notwithstanding the pleas that have been filed with Congress for all these years for some kind of consideration for the Alaskan people, for some kind of charts and safeguards to navigation, notwithstanding these things Congress has turned a deaf ear to Alaska and has refused to provide these necessary aids to navigation which are absolutely essential to the safety of vessels engaged in those waters.

Mr. MANN. This was not the failure of an aid to navigation; it was an uncharted rock. What business had the vessel in uncharted waters?

Mr. BRYAN. If it had been on the coast of the Atlantic or on the Gulf of Mexico it would have been charted. That is exactly why I am calling attention of Congress to it at this time. These waters should be surveyed and the people of the Pacific States and Alaska should be considered.

Mr. STAFFORD. Will the gentleman yield?

Mr. BRYAN. Certainly.

Mr. STAFFORD. I understood that this boat to which the gentleman alludes was on a pleasure cruise, that it was sailing in unexplored waters beyond the traveled lines of navigation, and that the censure, if any, must fall not upon the lack of Congress to provide adequate aids to navigation, because we have provided adequate aids, but on the captain for cruising in waters not traveled at all by steamships to Alaskan ports.

Mr. BRYAN. Mr. Chairman, it is a grave comment upon the Congress and the amount of protection that Congress has given to Alaska to say that within Gambier Bay, within 60 miles of Juneau, off the Alaskan coast, there is a great area of water that has not been charted, and ships going to and fro have to go in a narrow definite channel in order to have that safety which the Government ought to grant and which the Government does grant by its service to other places. There were 23 people, according to the first reports, that went down to a watery grave immediately on account of the sinking of this ship.

This is not the only case. We have practically every year a wreck off the Alaskan coast and off the coast of the Straits of San Juan de Fuca. Why? Because over that vast area there are no, or at least very indefinite, life-saving stations, very few lighthouses, and only the slightest consideration given to Alaska and to its commerce.

The Congress of the United States has never taken Alaska seriously enough to suit the Alaskans themselves or those who have the interest of Alaska at heart. One of the duties of the Washington delegation is to see that the National Congress does not lapse into the view that Alaska is the home of blizzards and ice and snow and that all it needs is to have a fence built around it.

I have received the following from the Seattle Commercial Club, which I commend to the consideration of Congress:

The English-speaking world has again been called upon to shudder at the recital of a disastrous wreck in Alaskan waters. For years petition after petition has been presented to the proper authorities requesting aids to navigation, better facilities, and more thorough survey of the inland waters of this the most valuable outside territory of the United States, but with little effect. Each passing year witnesses some disastrous wreck on this coast, which in almost every case is due to the absence of aids to navigation or the fact that the waters have been improperly charted.

Whereas on the morning of August 17 the steamship *State of California* struck a reef in Gambier Bay, southwestern Alaska, and in three minutes went to the bottom, but with the awful death toll of 32 souls as a relic of the direful event; and

Whereas this steamship was traveling over a route not usually covered by steamships, owing to the fact that it was engaged in aiding the industrial development of a frontier section of Alaska, specifically the development of fishing and other industries on Prince of Wales and other important islands of the western coast, whose waters are almost wholly uncharted and where practically no aids to navigation exist; and

Whereas for years past wrecks of all kinds, amounting to millions of dollars, have occurred in the Alaskan Archipelago, resulting in a tremendous financial loss as well as a large number of human lives; Therefore be it

Resolved, That the attention of the Congress of the United States be drawn to this condition and that Senators, Members of Congress representing the State of Washington, and the Delegate in Congress from the Territory of Alaska be requested to bring this matter directly before the House of Representatives, and that they be urged to introduce a bill in those bodies calling for a full investigation; and be it further

Resolved, That the Senators and Representatives and Delegate mentioned above be requested to procure, or have procured, for such investigation full facts regarding the uncharted waters of Alaska from the United States Coast and Geodetic Survey and the Hydrographic Office of the United States Navy, as well as a report covering the need of further aids to navigation from the Bureau of Navigation and the United States Lighthouse Board; and be it further

Resolved, That the Commercial Club of the city of Seattle respectfully request immediate action on the part of the Representatives of the State of Washington in the matter of the above, owing to the urgency of the case and growing importance of Alaska and the steady increase in its shipping and commerce relations.

Mr. Chairman, I ask unanimous consent to extend my remarks in the Record.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

Mr. BRYAN. We have in Alaska a territory that exceeds the area of the States of Delaware, Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, South Carolina, New Hampshire, Virginia, New York, North Carolina, Rhode Island, Maryland, Maine, Vermont, Ohio, Indiana, Tennessee, Kentucky, and Michigan, whose combined area is 586,210 square miles. The area of Alaska is 586,400 square miles.

Or if we compare it with European countries we have the following square miles: Norway, 124,445; Sweden, 172,867; Finland, 144,255; England, 58,309; Scotland, 29,785; Ireland, 32,583; a total of 562,253 square miles, while Alaska has 586,400 square miles.

Or note the following comparative areas in square miles: Germany, 208,670; France, 204,092; Spain, 197,670; a total of 610,432 square miles, while Alaska has 586,400 square miles.

Here we have an area covering 20 States of the Union, which extend from the winter resorts of Florida to within a few miles of the St. Lawrence River and Quebec, where navigation is closed in winter, and from the shores of the Atlantic to the Mississippi River. If the map of Alaska is placed over that of the United States, with Ketchikan, in Alaska, on Jacksonville, in Florida, the western island of the Aleutian chain will be found at Santa Barbara, in California. From south to north it extends over 1,000 miles of latitude from the Mexican to the Canadian borders, and from the east to west over 2,500 miles of longitude.

A TEMPERATE CLIMATE.

There are those who think Alaska is so cold as to be uninviting. To be sure there are places in northern Alaska that become very cold, but the truth once learned, a temperate climate is found in the Pacific coastal area. Of course, the mountain peaks are covered with snow, and the vast banks of snow

and ice in the mountain gorges go to make up the glaciers which gradually move down the mountain side.

The following figures were compiled by the Alaska bureau of the Seattle Chamber of Commerce. These figures are taken from maps of the United States Weather Bureau, and, if even casually considered, the conception of a barren, unproductive land of ice and snow will vanish from any fair mind.

Table of Alaska temperatures.

¹ Government experimental stations.

On an investment of \$7,200,000, Alaska has given us in return, since 1867 (and by far the greater portion since 1899, or only 14 years), as shown in the reports of the United States Geological Survey, Director of the Mint, and other official documents:

Gold.....	\$213,018,719
Silver.....	1,824,364
Copper.....	13,377,194
Coal.....	355,489
Other minerals.....	993,119
Fish and furs.....	240,830,168
Total.....	470,399,053

And produced in 1912, as per preliminary estimates:

Gold, silver, and copper.....	\$21,580,000
Other minerals.....	360,000
Fish and furs.....	18,120,132
Miscellaneous.....	394,046
Total.....	40,354,178

The commerce of Alaska for 1912 was:

Imports.....	\$26,758,341
Exports.....	45,982,719
Total.....	72,741,060

Alaska has untold wealth and potential strength in its undeveloped water power, a means with which energy and heat will be generated in the years to come to drive the wheels of commerce to an extent never before dreamed of. The beauties of its scenery are unsurpassed. No one who has ever been to Alaska but longs to return. Its mountains, its glaciers, its sunsets are the charm of those who see them.

MINERAL RESOURCES.

When Uncle Sam purchased Alaska for \$7,200,000 one of the very best bargains was made. Its area is one-fifth that of the United States, or twelve times that of New York State. In 1912 it produced \$17,398,943 in gold; California, with a 37 to 1 population, \$19,928,500. In copper production Montana has had to accede to Alaska a place as its equal.

The mineral resources of Alaska are unknown. Its wealth has only been touched. Besides its gold and copper, it has silver, tin, iron, mercury, lead, and antimony. Alaska's fisheries for 1912 yielded \$17,391,578, its seals \$416,992.40, and its furs \$370,519.

Alaska will develop into a great agricultural and stock-raising country. The winter temperatures are not as severe as in Norway and Sweden, yet dairying is a principal industry in Norway and Sweden.

It is estimated that Alaska has 150,000,000,000 tons of coal. These vast coal deposits must be developed. Immigration into the country must be encouraged. These vast coal deposits which the Guggenheim syndicate was about to grab have luckily been saved for the people.

GENERAL DEVELOPMENT—ALASKA DEMANDS GENERAL DEVELOPMENT.

It is of great importance that it shall be opened to development, both for the best interests of that Territory and of the western country; but the mere necessity for its development is not nearly as important as the method of development to be used.

I believe that the people of the United States have decided once and for all that the resources of Alaska shall not be thrown open to private exploitation and monopolization. I do not believe that Alaska will ever be opened until it is opened in the right way; that is, until its development serves the whole people instead of a few private capitalists. In short, Alaska will be opened to development by governmental authority and responsibility rather than by individual authority and irresponsibility.

Holding this view, I have therefore introduced into this House a bill (H. R. 7085) to authorize the President of the United States to provide transportation and coal-mine development in the Territory of Alaska, and for other purposes.

Three methods of dealing with the great industries of our country are under discussion in the United States to-day. The first is the restoration of competition; second, Federal regulation; third, Federal ownership. The policy embodied in this bill includes a judicious combination of all three. It provides for Federal regulation of the coal-mining industry in the Territory of Alaska through competition by the Government. The conditions of the competition thus provided secure efficiency of operation and at the same time eliminate the evils of competition. Chief among these are adulteration of product, waste of resources, and exploitation of labor.

¹ This figure is probably nearly correct. Absolute accuracy is not possible without access to original documents, as many minor discrepancies appear in the published tabulations. Taking the statistics published in the report of the railroad commission, the fisheries estimate would be only \$240,518,606, or \$311,562 smaller. Some of these discrepancies may be due to the mixed use of fiscal and calendar years.

The purpose of the bill as expressed in section 14 is—
to provide transportation service and coal at the lowest price consistent with the maintenance of the welfare of all operatives at a high level, the stimulation of efficient service, and the maximum and at the same time most economical utilization of the fuel and other natural resources of Alaska.

This bill provides for the two immediate things which are essential to the development of Alaska—transportation and coal-mine development. After transportation is supplied other development of course will take place. Transportation is a primary essential for any development. Coal mining is the first industry logically to develop in that Territory, other industries being dependent in large measure upon it. Coal development also will furnish sufficient freight for the transportation system to justify the expense of building railroads.

The two necessary elements of transportation for Alaska are railroads from the coast ports to the interior, and steamships from the ocean termini to the Pacific ports of the United States.

It is customary for a Government in opening up a new territory to launch the transportation system. This was done in the case of our Pacific transcontinental railroads in the western United States. Our method then was to give away half of the country within a radius of 40 miles from the railroad. We have progressed beyond that stage, however, and so in launching a transportation system in Alaska we intend to have the Government own and operate its own system. We do not intend to be caught napping again.

As a matter of fact, the United States is, of course, one of the most tardy countries in the world in regard to the ownership of its own transportation systems. Most of the countries have government owned and operated railroads. We are one of the three nations of the earth which have not yet government-owned railroads, and it is about time we got started on this reform. Alaska offers a good place to begin.

As to the development of coal mines in Alaska, it goes without saying that we do not want to increase the hold of any private monopoly. But we must provide not only against what we do not want, but also for what we do want. This bill provides specifically for a system of development of these mines in a way to avoid the evils of private monopoly and also the evils of cut-throat competition. The evils of private industry, whether monopolized or competitive, are obvious. The chief of them are, as I have already stated, adulteration of product, unnecessary waste, and exploitation of labor.

The question is, How can industry be carried on and avoid these evils and at the same time retain the advantages which private industry offers?

The advantages are the saving of duplication obtained by private monopoly and the incentive to good management obtained by private competition. I consider that it is perfectly possible to retain these advantages and at the same time to eliminate the disadvantages. This can be done by having competition regulated by the Government, and I believe we ought to have the coal-mine industry in Alaska regulated in this way.

The bill provides, first, that no coal lands or deposits in Alaska whatsoever shall hereafter be sold in fee simple. It provides that one half of the coal lands and deposits shall be reserved for the use of the Government exclusively and the other half made available for lease to private lessees. The lessees are to mine coal in competition with one another and in competition with the Government. This is to be done under certain stipulated conditions. These conditions provide against adulteration of coal, against unnecessary waste of coal, and against all forms of injustice to labor. An eight-hour day is required, a minimum wage is fixed, and child labor is prohibited. An adequate system of housing and general living conditions is required. Compensation to injured employees and also industrial insurance is made compulsory. The safety of employees is also provided for. These provisions relate to the Government service and to all the lessees. The Government is a competitor and the private lessees as competitors are subject to the same conditions. They all have to obey the same rules of the game. This makes the conception of "fair" competition absolutely definite. All leases run for 50 years and are made subject to revocation through breach of any of the conditions named. Minor offenses are to be punished by suitable fines as penalties, so as not to work unnecessary hardship.

These regulations are of course statutory only. In order to be sure that they can be carried out, the bill provides that the Government shall itself take part as one of the competitors. The Government will not, of course, impose upon itself any conditions which can not be carried out by the lessees, because any regulations made for the guidance of the lessees would apply equally to the Government service. The lessees may charge as high a price as they like for their coal product, no

legal limit being set. The Government, acting as a competitor, regulates this matter in a practical way—not by standing off and shaking its finger in the manner of the Sherman law, but by actually taking part as a competitor and forcing the lessees to be efficient in order to meet the Government's competition. The law therefore has a physical rather than a fictional basis. The regulating laws thus far have been of the "thou shalt not" type. This bill differs fundamentally from this type. It is not theoretical regulation, but practical regulation.

The Government, through the mining service, acts simply as a competitor and not as a regulator. The Government, through the President or his agents, acts as a regulator and in no way as a competitor. That is, the President is charged with making all rules and regulations governing both the operations of the mining service and of all the lessees. His agents, acting as inspectors, see that all the provisions of the bill are carried out. These inspectors have no financial or other interest in the outcome or the results of the operations. On the other hand, the chief and all other operatives in the mining service have a very definite interest in the financial results of the mining operations.

The President or his agents acts as umpire in the game of competition. The mining service is one of the participants in the game. It is essential that these two functions be kept separate. One trouble in modern business to-day is that they are not kept separate. The participants in the game of competition in modern business make their own rules as they go along, and the man who is willing to make the most lax rules is the man who wins or forces his competitors to descend to the level of the rules that he has made. A competitor who is willing to adulterate his product in order to make more profits either forces his competitors to adopt the same methods or else go out of business. The competitor who is willing to employ child labor, to leave his machinery unsafeguarded, to work his employees as many hours as he can force them to work, to press down their wages to the lowest possible point, to adulterate his product, to resort to any and all means to drive his competitors out of business, either forces his competitors to descend to his methods or else get out of business. If by such methods he can sell at a lower price, he will get the market, and his rivals must either meet his methods or succumb. Thus the many small men are eaten up by a few big men and competition merges into private monopoly just as certainly as daylight merges into darkness. Thus there develop trusts of the character of Standard Oil and the American Tobacco Co., which have to go through a curious process called "being dissolved," with results well known. Under this bill the rules of the game will be laid down by Uncle Sam, and he will enforce them not only by being a competitor himself and setting the standard, but, if necessary, by revocation of the lease of any lessee who violates the rules.

One of the leading arguments against any form of governmental operation is that such operation does not provide for incentive and stimulation to good service. In other words, that the stimulus of self-interest being removed, Government officials can not do as efficient work as private operators. To avoid this possible danger this bill provides specifically for incentive. The plan is provided in section 10 of this bill.

The President or his agents is authorized to fix a minimum wage for each class of workers, which "shall not be less than the average wage paid that class of labor by other employers under conditions equivalent to those prevailing" in the Government service. The President also fixes the maximum prices to be charged for the various grades of coal, "not greater than will pay a reasonable profit on operations, to be determined by the President." The minimum wage applies also to the lessees, but the maximum price does not. Between these two limits thus set the mining service must do business. After all charges for operation, maintenance, depreciation, interest charges, and so forth, have been paid, the balance goes into a dividend fund corresponding to the profit made by a private business. This profit is then divided between the workers in the mining service and the consumers of coal. The share of the dividend fund assigned to the operatives in any fiscal year is to be distributed among them in such manner that each operative shall receive an amount proportional to the wages or salary previously receivable by him during the year, and the share assigned to the purchasers of coal in any fiscal year is to be distributed among them in proportion to the amounts paid by them during the year. The operatives in the Government service are defined as all persons who have been employed during any portion of the year, including the chief of the service.

By this device the interests of the producer and the consumer are made identical. The more efficiently the workers perform their duties the greater the dividend fund and the greater their

share; also the lower the price to the consumer. The consumer's share would be determined just as in any ordinary co-operative store, through a coupon system or otherwise. This whole plan applies to the transportation service as well as to the mining service. In the one case the purchasers purchase coal; in the other they purchase transportation; the plan operates in the same way in each case.

If the maximum prices have been fixed too low and there results a deficit instead of a dividend, the bill provides that "the difference shall be charged to a deficit account, 5 per cent of which, with interest of 5 per cent on the remainder thereof, shall be included in the total annual debit account of the appropriate service each year for 20 years thereafter." This means that any deficit can be distributed over a period of 20 years.

The plan of distributing dividends as worked out in this bill is known as "conditional compensation"; that is, the compensation of the workers is conditioned upon their lowering the price to the consumer.

The question as to who will be the consumers of coal to whom Uncle Sam will sell is determined to some extent by the bill itself. The bill gives preference in the sale of Government-mined coal first to the Government itself as a collective consumer. The transportation service, the United States Navy and other Government services, schools and other public institutions, including municipalities, have a preferential right to buy from the Government mining service. After providing for such public needs preference is then given to the ultimate consumer, next to bona fide cooperative associations dealing with ultimate consumers, and after that to the other classes of consumers. The object of this provision is to give the benefits of the Government operations to the consumer rather than to middlemen, who would naturally, if possible, pocket the benefit rather than pass it along to the consumer.

The bill provides that the mining service shall earn 5 per cent on the money invested. The capital is to be raised by a bond issue, carrying 3 per cent. The 2 per cent goes into a sinking fund to retire the bonds at maturity. The bill provides also for ample wages of superintendence and an ample margin of safety in conducting its operations. These are the only legitimate items which should be included under a "reasonable profit." There are other items sometimes included under the term "profit," such as "velvet" and "speculation." This bill makes no provision for such items.

The lessee competing with the mining service has ample opportunity to obtain all legitimate items comprised under the term "profit." He has no opportunity whatsoever for obtaining the illegitimate items. He has every opportunity for obtaining a profit which stands for service. He has no opportunity for obtaining a profit which stands for exploitation, either of laborer or consumer. He has plenty of opportunity to make a reasonable profit and no opportunity to make an unreasonable one. He has an assured market both in Alaska and on the Pacific coast; he has the use of a Government transportation system on equal terms with his Government competitor. What we want in Alaska is efficient mining men—managers, engineers, and persons who are content with the compensation which their service is worth to the community. Alaska needs no exploiters, no speculators, no land grabbers, no Guggenheim syndicate.

The cost of operation for the Government as provided for in this bill consists of certain items named—operation and maintenance, wages, salaries, and so forth, transportation, ground rent, interest charges of 5 per cent, and conditional compensation; anything over and above this is a rebate to the consumer. Thus the industry is conducted at cost—real cost, scientifically determined. No industry can be conducted indefinitely at less than cost, except by exploiting labor. To charge more than cost is to charge the consumer for something which he does not receive; that is, to charge tribute. Every cent charged over and above cost is one cent of tribute.

This bill provides a plan by which Alaska can be opened as it should be, so as to give every opportunity to producer, to consumer, and to manager, but no opportunity to the speculator, the promoter, and the exploiter. I believe that this bill is going to act as an acid test to show where the people stand—whether they want industry for service or industry for plunder.

Mr. MONDELL. Mr. Chairman, I move to strike out the last two words. I was unavoidably absent from the House the latter part of the session of yesterday when the public-building items were under discussion. In view of that fact I trust that the chairman of the committee will not object if I for a moment refer to the general proposition of public buildings.

Mr. FITZGERALD. I hope the gentleman will wait until we offer the amendment to restore the paragraph.

Mr. MONDELL. When will that be?

Mr. FITZGERALD. It will be later.

Mr. MONDELL. These thoughts are now upon my mind, and they might pass.

Mr. FITZGERALD. I hope the gentleman will keep them upon his mind. This will be germane at that point, and I hope the gentleman will reserve the discussion of it until then.

The CHAIRMAN. Without objection the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

INTERSTATE COMMERCE COMMISSION.

To enable the Interstate Commerce Commission to carry out the objects of the act entitled "An act to amend an act entitled 'An act to regulate commerce,' approved February 4, 1887, and all acts amendatory thereof, by providing for a valuation of the several classes of property of carriers subject thereto and securing information concerning their stocks, bonds, and other securities," approved March 1, 1913, of which sum not exceeding \$15,000 may be expended for rent of buildings in the District of Columbia, being for the fiscal year 1914, \$300,000, together with the unexpended balance of the appropriation of \$100,000 made for this purpose in the general deficiency appropriation act approved March 4, 1913, which is reappropriated and made available for the fiscal year 1914: *Provided*, That no person in the classified service of the United States on March 1, 1913, or employed therein since that date, other than in the Interstate Commerce Commission, shall be employed hereunder, by certificate or otherwise of the Civil Service Commission or by transfer from other branches of the public service, at a rate of compensation exceeding that received from the United States on or since March 1, 1913, nor shall the rate of compensation of any person appointed hereunder be increased within 12 months after such appointment: *Provided further*, That this appropriation shall be available for payment of persons duly appointed, qualified, and actually employed prior to July 1, 1913.

Mr. MANN. Mr. Chairman, I reserve the point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves the point of order on the paragraph.

Mr. MANN. First, Mr. Chairman, may I ask the gentleman whether the amount appropriated by the bill is sufficient for this fiscal year, according to the statement of the Interstate Commerce Commission? I believe the estimate is one million and a half.

Mr. FITZGERALD. The amount of the unexpended balance of \$100,000 will amount to a little over \$90,000, and the appropriation is about \$100,000 in excess of the amount that the commission estimates will carry them until about the 1st of February. It is said if we gave them about \$300,000 that by the next session of Congress their plans would be so much more definitely formulated and the information so much more accurate that they could very much better and more fully lay the matter before the Congress, and the committee gave them \$390,000, in the belief that it will be ample to carry them beyond the time when there would be another deficiency bill.

Mr. MANN. Of course, the estimate was one million and a half dollars. What I wish to inquire is whether the committee in reporting the bill has included as large an amount as the members of the commission say they now want?

Mr. FITZGERALD. Yes; with the understanding that in their opinion it would carry them beyond the 1st of February. There was no intention to withhold from the commission any needed money, but their plans had been delayed very much by the inability to have the examinations take place to obtain the required men. They believe that by the next session of Congress they could more accurately outline their plans and give the information that may be required.

Mr. MANN. May I ask the gentleman further in reference to the proviso, does that meet the approval of the members of the commission? Was that provision in reference to the transfer of persons from other branches of the service incorporated at the suggestion of the commission?

Mr. FITZGERALD. No; they were not consulted about it.

Mr. MANN. Could it not readily occur that some one in the Government service of aptitude and ability, transferred to another branch of the service where there was much greater responsibility, would demand a larger sum of money, especially in a service which in the end will be of a temporary character?

Mr. FITZGERALD. This situation was developed, that the Interstate Commerce Commission has fixed rates of compensation for the various places in excess of the compensation paid in other departments of the Government, and the attention of the committee was called to the fact that unless some such provision as this were inserted some of the offices in the Government would be depleted of the most valuable and competent men. The committee believed that if a man wished to leave one branch of the public service to go into this work, it would not be unfair to compel him to go in at the compensation he is now receiving and continue at that rate for at least a year.

Mr. MANN. Suppose some one in the Government service now is an expert accountant, it would hardly be expected he

would leave the place he is now in and go into the Interstate Commerce Commission to do this work, with greater responsibility, with a tenure of office less, at the same salary, and yet it might be to the interest of the Government in making this physical valuation, than which nothing is more important to have well made, to have that person in the Government service in that branch.

Mr. FITZGERALD. The trouble has been chiefly with men of technical ability. For instance, the Supervising Architect says that unless some such provision as this be adopted his office will be completely depleted.

Mr. MANN. I have very grave doubt about it, but I will yield to the committee, so far as my opinion is concerned, and I withdraw the point of order.

The CHAIRMAN. The gentleman from Illinois withdraws the point of order.

Mr. FITZGERALD. Mr. Chairman, I move to strike out the last word. The original estimates for the cost of the physical valuation of railroads of the country were about three and a half million dollars. I think the largest ever made was \$5,000,000. In the testimony taken before the committee it is apparent that the cost will be at least \$12,000,000.

Mr. MANN. The gentleman does not recollect the statement I made in the House that it would cost between \$15,000,000 and \$20,000,000 before you got through.

Mr. FITZGERALD. I was speaking of estimates, not of statements.

Mr. MANN. That was an estimate made at the time by an expert in railroad matters.

Mr. FITZGERALD. I mean made by officials in the executive department when the legislation was before the committee, and I quite agree with the gentleman from Illinois, from the information furnished to the committee, that it is more likely to cost \$20,000,000 than it is \$10,000,000, and I believe that this statement should be made to the House at this time. Commissioner Prouty said unless Congress was prepared to spend at least \$12,000,000 this work should not be commenced, and it is important that the House appreciate and realize the magnitude of the undertaking upon which it is now entering, so that hereafter when the cost will develop into these very large figures there will be no contention that information as to these facts was not furnished to the House.

Mr. MANN. Of course it is also perfectly certain that if the physical valuation is to be made, or valuation that is not confined to physical valuation, it is desirable to have it made as quickly as it can be done properly.

Mr. FITZGERALD. I believe that as soon as the commission gets its force organized that it is the part of wisdom to give them all the money they can utilize, so as to complete the work as quickly as possible. It is estimated, however, it will take about seven years to do it, but there was no difference of opinion and the committee gave them a little more than they thought they could possibly use, not with any intention at all to interfere with the work but simply to have Congress informed from time to time as estimates were submitted as to the progress of the work and the necessity for the various appropriations requested. There is a provision in this item which provides for employees, some of whom were appointed prior to the 1st of July and the appropriation ceased. After conference with the commission we suggested there is no question but that Congress will make provision for them in the interim and they should not be dismissed. One other thing. Mr. Chairman, may be of interest to the committee, and that is the President has issued an Executive order which permits the appointment of eight persons to be employed regardless of the provisions of the classified service, and only eight. There will be three of those employed as consulting engineers who will be paid at the rate of \$10,000 a year, and the engineers in charge of the five districts into which the whole country will be divided, each district containing about 50,000 miles of railroads. Those eight men the Interstate Commerce Commission will select at their discretion from the available talent in the country. All the other employees, they have been informed, must be taken through the civil service. Personally I believe there is at least another class that the commission should be permitted to select without regard to the civil service, and that is the expert real-estate appraisers who must be obtained in order to value the real estate of railroads, particularly in cities where the value of terminals will be of very great importance, but up to this time no provision has been made for that purpose.

Mr. MANN. Does the gentleman think that the President's order will prevent the employment temporarily of real estate experts in the different cities?

Mr. FITZGERALD. Well, I have had this experience. A gentleman residing in the county where I reside—not in my district, there are eight Members of Congress from the county—

who had been employed by men who have been engaged by the New Haven, the New York Central, and five of the great railroads of the country, in the valuation of their lines, and this man at various times has been engaged by these railroads as a real estate expert to appraise the value of the real estate of the railroads. He applied for an appointment under this authority and the commission has notified him that when that examination is held he will be apprised of it and be given an opportunity to compete in a competitive examination. That is all I wish to say, and I withdraw the pro forma amendment.

Mr. BARTLETT. Mr. Chairman—

Mr. FITZGERALD. Mr. Chairman, I withdraw the pro forma amendment.

Mr. BARTLETT. I move to strike out the last two words. I want to be heard on this proposition.

Mr. MURRAY of Oklahoma. Will you let my amendment be read?

The CHAIRMAN. The gentleman from Oklahoma [Mr. MURRAY] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 8, line 2, after the word "fourteen," strike out the figures "300,000" and insert in lieu thereof "1,500,000."

Mr. BARTLETT. I would just as soon address myself to that amendment. Go ahead.

Mr. MURRAY of Oklahoma. Mr. Chairman, I have here an estimate of the Interstate Commerce Commission showing there is required \$1,500,000, together with \$100,000 heretofore appropriated. In this connection this statement is made by the Interstate Commerce Commission:

To enable the Interstate Commerce Commission to carry out the objects of the act entitled "An act to amend an act entitled 'An act to regulate commerce,' approved February 4, 1887, and all acts amendatory thereof, by providing for a valuation of the several classes of property of carriers subject thereto and securing information concerning their stocks, bonds, and other securities," approved March 1, 1913, of which sum not exceeding \$15,000 may be expended for rent of buildings in the District of Columbia.

It is regarded extremely desirable that this work should be done as of a common date; that is, that the period covered should be as short as is consistent with economy and efficiency. The present expense of the organization which we are perfecting is in the nature of an overhead charge, the amount of work depending upon the field parties which will operate under the organization. The commission should therefore be in a position to develop this field work as speedily as can properly be done. While it is impossible to precisely forecast the future of this work, we are confident that at least the above sum should be placed at our disposal if it is to be prosecuted to the best advantage.

Mr. HINEBAUGH. Will the gentleman yield?

Mr. MURRAY of Oklahoma. No.

Mr. HINEBAUGH. For just a question?

Mr. MURRAY of Oklahoma. If I had more time, I would be glad to yield.

Mr. BARTLETT. The gentleman can get all the time he wants.

Mr. MURRAY of Oklahoma. If I can get more time, I shall be glad to answer the question.

Mr. HINEBAUGH. I just wanted to ask whether the gentleman is informed that the commission, before the subcommittee of the Committee on Appropriations, stated in substance that they were getting all or more than they could use at this time; and if that is so, why a larger amount is appropriated now?

Mr. MURRAY of Oklahoma. I do not understand that is true.

Mr. BARTLETT. It is true.

Mr. MURRAY of Oklahoma. I do not understand that anywhere they have made the statement that they do not need this money and need it now.

Mr. FITZGERALD. The gentleman is mistaken. We have given the commission all the money they say they can use now.

Mr. MURRAY of Oklahoma. When you do you will not make your appropriation until next summer. I want to say, Mr. Chairman, that the statement that this will cost \$12,000,000 need not deter Congress. We are already paying in watered bonds and stocks in one corporation more than that amount annually. If we string this work out for the next 30 years, it will give time to overcapitalize every corporation of this country. The greatest example is the Steel Corporation. The Steel Corporation first issued \$500,000,000 of preferred stock. There are but \$375,000,000 of that stock that represents actual valuation. And yet it was sold on the market. Subsequently there were \$500,000,000 of common stock; every dime of it watered. But by the manipulation of Morgan and his associates it was enabled to be sold. Who bought it? Two hundred and forty thousand investors throughout the world. Now, the man who palmed that fraud upon the people does not care what becomes of it. Forty thousand of those shares are owned by the employees of the Steel Corporation. The continuation of the issuance of fraudulent bonds and stocks can never be destroyed. When the innocent purchasers, the widows, and the people

of small means who want to make an investment have purchased that property it will be property that we can not take from them, and yet to the end of time we will have to pay dividends in the form of increased rates upon all the corporations of the country.

The American people demanded of Congress a provision whereby the physical valuation of the property of the railroads might be made or the law would not have been enacted. And you might just as well not enact a law if you are not going to make it possible to put the law into practical operation. More than 60 per cent now of all of the stocks of the railroads is water.

If we had started out in the beginning to provide—and have provided—that no bonds or stocks could be issued by any public-service corporation, except for money paid, labor done, or property actually received, the cost to the American people would have been a saving of more than \$60,000,000,000 that we to the end of time must pay interest upon in the form of dividends. The Supreme Court has declared that we can not regulate the railroads beyond allowing them reasonable interest and dividends.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. BARTLETT. Mr. Chairman—

Mr. MURRAY of Oklahoma. You said a while ago that you would let me have more time.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the gentleman from Oklahoma may have five minutes more. Is there objection? [After a pause.] The Chair hears none. The gentleman from Oklahoma is recognized for five minutes more.

Mr. MURRAY of Oklahoma. The quicker that we put this law now on the statute books into practical operation the better it is going to be for the American people. If we delay, it is going to mean that they will throw more water into their stocks and bonds, which will be sold and purchased by innocent citizens of the country. Are we going to stand by and be scared at \$12,000,000?

Mr. Chairman, I call attention to the fact that there is a difference between a fair rate and a uniform rate upon railroads or other transportation companies. A uniform rate is a rate that is the same to everybody. A fair or just rate is one that gives the corporations only a reasonable amount of income on its investment, and that, under the decision of the Supreme Court, we have got to give them. And yet they use every means in the world to hide their expenditures. They will take up a piece of railroad track and reconstruct it, simply in order to hide the expenditures. I have no doubt but that that is done right here in this city by some of the street car lines. And why? Because if they did not make that expenditure and use some juggle, it would be discovered that they are making more than a reasonable dividend. Therefore every means is pursued in order to hide the real dividends that arise from that great corporate interest, and the people have to pay.

I am in favor of giving this commission that \$1,500,000 and every other dollar they ask for to enable them to accomplish their task, to use the language of the commissioner, on "as of the same date," so that the people of this country will not be further oppressed by being required to pay interest and dividends upon watered bonds and stocks. If you wait a few years we will have still more. What is true with respect to the Steel Corporation, with the issuance of more than half of its stock as water, disposed of to the purchasers, will apply to every corporation in this country.

Now, we have a law passed by Congress. Let us make it practical. Let us not deceive the people with the idea that we have a law when the law is not self-executing. It is a great problem. It will require men, an army of men, to make the physical valuation of the railroad properties so that we can not only fix a uniform rate, but a fair and just rate, and that fair and just rate can not be made until the Interstate Commerce Commission can value the physical property of the railroads. When that is done we shall forever prohibit the issuance of fraudulent bonds and stocks, as has been done in the past.

Mr. BARTLETT and Mr. THOMPSON of Oklahoma rose.

The CHAIRMAN. The gentleman from Georgia [Mr. BARTLETT] will be recognized first.

Mr. BARTLETT. Mr. Chairman, the gentleman from Oklahoma [Mr. MURRAY] and no one else in this House or elsewhere is more in favor of the law that has been put upon the statute books to have a physical valuation made of the railroads engaged in interstate commerce than myself. I served on the

Committee on Interstate and Foreign Commerce of this House for a number of years, and I aided as well as I could both my Democratic colleagues upon that committee and others in passing the law which makes the physical valuation of railroads incumbent upon the Interstate Commerce Commission.

We could not get it upon the bill as it was reported from the committee, but an amendment was offered from the floor of the House, as I recall, by the gentleman from Illinois [Mr. MADDEN], and it went upon the bill. It did not pass in 1910, but this Congress, this Democratic Congress, passed the bill through the House providing for the physical valuation of railroads.

I do not know, Mr. Chairman, what our power is when we shall have ascertained the physical value of these railroads to prevent the watering of stocks and bonds or to squeeze the water out of the railroad stocks that have heretofore been issued. But I do know that when we shall have secured a fair valuation of the physical property of the railroads we shall then be in a position to have the Interstate Commerce Commission fix a reasonable rate for the transportation of passengers and freight over their lines.

I am not stunned at the idea that it is going to take many more millions of dollars than we anticipated, because I believe at the time this law was enacted that the suggestion that was made then by some members of the Interstate Commerce Commission to the effect that we could perform this work for three or five million dollars was not accurate, because I thought then that it would take more; and that fear, that anticipation of increased cost, has now been realized, if the statement made by the members of the Interstate Commerce Commission, the chairman, and others who appeared before the subcommittee are to be taken as correct.

Now, this committee stands ready and has always stood ready—the chairman and the members of the subcommittee and the members of the full Committee on Appropriations—to appropriate every dollar of money that is necessary to carry out the purposes of Congress in this regard.

After the bill passed the House at the last session, and before it passed the Senate, Senator LA FOLLETTE offered an amendment, providing an appropriation of \$500,000 for this purpose, which was adopted in the Senate. The Interstate Commerce Commission had made no suggestion of what the amount would be, and the conference committee reported an appropriation of \$100,000 to start this matter, and the House and Senate agreed to that. The \$100,000 was appropriated, and up to the 1st of July the commission had not been able to expend over \$9,000 or \$10,000 of that \$100,000. It is true that they submitted to the Committee on Appropriations a detailed statement of what they proposed to do, of the various divisions of the work, the various employees and officials, what their salaries should be, and what it would cost, amounting to \$1,500,000, according to my recollection.

But when we sent for the commissioners themselves, Judge Prouty and Judge Clements, the oldest members of the commission—one has been a member of it for 20 years or more—they said that in view of the fact that they had to reorganize the force and to obtain the employees from the eligible list of the Civil Service Commission they could not possibly use more than \$200,000 or \$300,000 up to the 1st of February. The committee stated to them that if they would come back to us with an estimate of the expense necessary to be incurred in this work which the people have demanded and which they are justly entitled to, the committee would perform its part in seeing that the Interstate Commerce Commission got every dollar of money that they could use and that was necessary for this purpose. If we now appropriate a million and a half dollars for this purpose, it will simply load down the bill and make a showing of expenditure which will not answer any purpose except to have the money paid back into the Treasury at the end of the next fiscal year, because it can not possibly be used.

I sympathize with my friend from Oklahoma [Mr. MURRAY] and will cooperate with him all along the line to furnish the Interstate Commerce Commission with every dollar that is necessary in order to carry out this work, but it is not necessary, in order to show the people our good faith, that we should appropriate more money than is necessary. Here is what Judge Clements states:

The law was passed about the 1st of March and required us to begin within 60 days; then an appropriation got into a bill here for some \$500,000 for the balance of the fiscal year. Now, as to whose judgment that was based on, and how that estimate was made I do not know. It was not ours.

Mr. BARTLETT. You furnished no estimate for it?

Mr. CLEMENTS. It was impossible to use any such sum as that.

The CHAIRMAN. That amount was put in the bill in the Senate, and we realized that it was impossible to use that much money, and we made it \$100,000.

Mr. CLEMENTS. I do not suppose we have used \$20,000.

The CHAIRMAN. You could not push a button and start this organization.

Mr. CLEMENTS. No. I consented to this provision for \$1,500,000 for the next fiscal year, but I believed then we could not use it, and I do not believe we can use it now. But I felt justified in it for this reason: That was done in May; we did not know of the delays that were going to take place in getting an eligible list and organizing these various divisions and working parties, although now Mr. Prouty, who has been delegated to look more directly after it than any other commissioner, in the division of our work, thinks those things can be organized and put into the field in October or November. But there will be other unanticipated hitches and delays about it. Manifestly, experience would suggest that those things will happen, and I do not believe we can use any such sum as that during the balance of this fiscal year. At the same time this estimate having been made in May, and having in mind that we might get a great deal of this organization started by the 1st of July and then build it up rapidly afterwards, I consented to the \$1,500,000 estimate. My consent was given, because I had in mind the possibility of getting this organization nearly up to its maximum about the first of the coming year or soon thereafter, and having a good working organization, handling its work rapidly, it would be unfortunate to have it collapse for the want of money for a month or six weeks. Knowing that it is a misdemeanor to create a deficiency, and ought to be—I do not find any fault with that, for we ought not to do it—I felt warranted in making an estimate that would give us sufficient money. If we had a pay roll and things were going, and there was no particular overhead expense, or anything of that sort, it would not be such a serious matter; but if we lay out districts, and start these parties in these districts, scattered all over the country, with men at San Francisco, Louisville, New York, Washington, or wherever these places are, and have the thing collapse all at once for want of money, it is a serious thing to contemplate.

The CHAIRMAN. That will not happen.

Mr. CLEMENTS. I know; but sometimes you do not know when you will get your bills through here; sometimes unforeseen difficulties arise here which cause delays. So I felt justified, in view of the temporary character of this machine or organization to be built up to do this work and get through with it, and the appalling results that would come if, when about the time it is built up and going, we should be compelled to stop for six weeks, in consenting to this estimate, feeling it was better to ask for more money than to ask for too little, but not upon the idea that we are going to ask for more in order to get about what we want; I do not believe in that practice, and have no respect for it. But now, since the delays that have occurred, and those that are likely to occur, I still do not believe that we could use any such sum during the balance of this fiscal year, although time will show whether we can or not. Neither do I believe that it will take any such sums as have been stated here to finish this work. I think, and I believe it is the opinion of the commission generally, that the best thing to do is to proceed rather cautiously and carefully and select men of character, standing, and ability to put at the head of this work to organize and carry it forward, so that when it is finished it will be agreed that it was done in good faith and fairly to all interests. Necessarily we have got to give them directions as to what we will call on the railroads for and in what form it shall be put.

All of this requires the definition and segregation of the things that we are to call upon them to do in the performance of their duties as prescribed by this bill, and to cooperate with us in this matter so as to get the same sort of information in regard to the same questions from each and all of them alike for our utilization, for the utilization of our engineers and the people who make these estimates. All of that takes time and thought, and it takes consultation with people who know more about it than we do. Congress knew we could not make this valuation with our own hands, eyes, and minds, and that we must be careful in the selection of the people that we are to have help us, especially in the beginning. And it has been our hope that we could have more regard for quality from the start than for quantity and speed, and that when we have gone far enough to make sure of the satisfactory quality of the work, we could multiply the units of the organization more rapidly and turn it off at the greatest possible speed so as to be through with it as soon as possible. And it remains yet to be seen whether it is going to take more than five or six million dollars. I think Prof. Adams, over in the Senate, estimated some \$6,000,000; I have been told that, but I have not read his testimony. At any rate, I think all of us have done the best we could in sizing up the magnitude of this mountain to begin with, and the closer you get to it and begin to deal with it, the better you can deal with actual facts.

Mr. BARTLETT. How much money do you think you can spend between now and the 1st of February?

Mr. CLEMENTS. We have not now more than 15 men, and about half of them were put in this division of valuation, which will be a permanent division in our work, for the reasons heretofore stated, and they are to take care of and file the correspondence. The volume of this work has been very heavy, and will be heavier. Aside from that we have just gotten these chief engineers, and have agreed upon some assistant engineers, but we will be delayed until there is an eligible roll which will come along this fall, in August, September, or October.

I will state by way of parentheses that these examinations have to be held for these places under the civil-service law, and they have not yet furnished to the commission the eligibles from whom to make these selections.

Judge Clements continued:

I do not believe it can be wisely, judiciously, and carefully done with such rapidity that we will have anything like the full-fledged organization that is ultimately intended here, by the 1st of February, and there is a good deal of a guess about how far short we will fall of it by that time. The commission made this estimate in May upon the idea that we might get this thing going and build it up more rapidly than has been possible, and we thought of the misfortune that would result if we found ourselves without money after we got it built up and got it going.

The CHAIRMAN. You have no doubt that a couple of hundred thousand dollars will carry you along until about the 1st of February?

Mr. CLEMENTS. I have not any doubt that a couple of hundred thousand dollars, or \$250,000 at least, will do that, and I have not any doubt that a good deal less than \$1,500,000 would take us until the

1st of July, that we could judiciously expend in that time. Now, I expect the second year and the third year we will turn out a great deal more work and that it will cost a great deal more.

The CHAIRMAN. You will organize and press the work as rapidly as possible?

Mr. CLEMENTS. Yes, sir.

Mr. BARTLETT. Is there any suggestion you could make by which we could authorize the commission to employ these experts other than through and by means of a civil-service examination? In other words, men who will do a class of work other than that you have mentioned?

Mr. CLEMENTS. Well, the President has given us an order for some of the employees.

Mr. BARTLETT. Could you not secure a better class of employees if you got them outside of the civil service?

Mr. CLEMENTS. We will require such qualifications as to record, experience, and things of that sort, that I think we will secure at once the most competent people. If there are any incompetent ones we would not give them any thought. We have a right to reject those who are incompetent, or whom we believe so, and call for others, and out of the number which will come to us in that way I think we will have as good an opportunity as I can think of.

Mr. BARTLETT. You have a chance for selection even from those certified by the commission.

Mr. CLEMENTS. Yes, sir. I do not see how we could help ourselves out on that score.

Mr. MURRAY of Oklahoma. Until when does he say?

Mr. BARTLETT. Until the 1st of next July, the beginning of the next fiscal year.

Mr. MURRAY of Oklahoma. When will the next appropriation bill be passed?

Mr. BARTLETT. The House will meet on the first Monday in December, and the sundry civil bill will pass before the 1st of July, and I will say to my friend from Oklahoma—and I think I am authorized to make this statement as a member of the committee, and to speak for the chairman and other members of the committee, certainly for the subcommittee or the members of it on this side of the House whom I in part represent—that if the Interstate Commerce Commission shall, on the 1st of February or at any time after that, say to us that it is necessary to have more money with which to carry on this work, so far as the committee are concerned, they will get it at our hands.

Mr. MURRAY of Oklahoma. Now, according to that statement of Mr. Clements, they are going to need that from February to July.

Mr. BARTLETT. No, sir. He says he has no doubt that a good deal less than a million and a half will take them up until July.

Mr. MURRAY of Oklahoma. He first states that, and then says a good deal less than a million and a half. Now, what is he going to operate on from February to July?

Mr. BARTLETT. He has this money which he will not expend, all of it; he has \$690,000 under this bill.

Mr. MURRAY of Oklahoma. That is for the purpose of organization.

Mr. BARTLETT. Oh, no; it is to carry on the work.

The CHAIRMAN. The time of the gentleman from Georgia has again expired.

Mr. BARTLETT. I ask an extension of five minutes.

The CHAIRMAN. The gentleman from Georgia asks that his time be again extended for five minutes. Is there objection?

There was no objection.

Mr. MURRAY of Oklahoma. Is it true that the usual appropriation bills come along just before the adjournment of Congress in June or July?

Mr. BARTLETT. No; an urgent deficiency passes sometimes the first of the session.

Mr. MURRAY of Oklahoma. If you are going to appropriate the money, what hinders making the appropriation now and having it available as soon as the commission is ready to expend it?

Mr. BARTLETT. Because the commission is not now in a position to estimate and tell us what they need. Both the commission and the secretary filed a statement in detail and said that in the main it was mere guesswork as to what it was to cost. We were not called upon to appropriate money of the people, no matter for how good a purpose, on mere guesswork, and we are not going to do it.

Now, I will read the rest of this:

Mr. BARTLETT. Is there any suggestion you could make by which we could authorize the commission to employ these experts other than through and by means of a civil-service examination? In other words, men who will do a class of work other than that you have mentioned?

Mr. CLEMENTS. Well, the President has given us an order for some of the employees.

The President had given an order by which the high-class men may be employed without regard to the civil service. But as to all others the engineers are to be under the civil-service examination, and the Civil Service has not been able to hold examinations. It would be just like we did when we appro-

printed \$100,000 for them for March and July and they were only able to spend a part of it.

Now, Mr. Chairman, I know the gentleman who made that statement before the committee. I have known him since I was a very young man. He had been a Member of this House for years. He has been on the Interstate Commerce Commission for twenty-odd years. For years he was its chairman. He is a careful, prudent, faithful official, and when he came before us that was not disputed. Inasmuch as it was in favor of making the valuation, inasmuch as the committee was willing to start all the work, inasmuch as it was willing to incur this vast expenditure of money for the benefit of what would be received, we think the House ought not to turn us down, because we are not willing to put in five times as much money as these gentlemen say they can spend during the next few months when Congress is to be in session. To appropriate a million and a half dollars which the commissioners say they do not need would be mere "buncombe" and let the people know that we were after the railroads and willing to spend money, not only all the money necessary, but appropriate five times as much as is necessary.

Mr. Clements said that they would need \$250,000, and we have appropriated nearly \$400,000, and that is ample. I make this statement to show that the committee needs no suggestion, that it is in sympathy with the work. So far as I am concerned I have been uniformly in and out of season in favor of it. I voted for the bill that made the physical valuation of railroads compulsory, and I am one of those who were in favor of it, who made the legislation possible, who voted for it and supported it on the floor of the House. I would be the last man to cripple the service of the Interstate Commerce Commission in an effort to destroy the act of Congress. This amount is all that is necessary, and I do not think the House ought to turn it down.

Mr. Sisson. Will the gentleman yield?

Mr. BARTLETT. Yes.

Mr. Sisson. In reference to the amount asked for, did not Judge Clements state that it was very doubtful if they could find use for the amount carried in the bill?

Mr. BARTLETT. He did. I read that to the House a few moments ago.

Mr. THOMPSON of Oklahoma. Mr. Chairman, if there is any question that is more important to the people of this country than another, it is the question of transportation. We have had an illustration of that in the State of Oklahoma. When we adopted the constitution in 1907, we adopted as a part of that constitution a provision for a 2-cent rate for passengers on the railroads in that State, in intrastate passenger service. In 1909 the railroads went into the Federal court and secured an injunction against the State corporation commission, prohibiting the enforcement of the 2-cent rate. Early in this year, and after the Supreme Court in the Minnesota case had rendered its decision, the railroads made an agreement with the State corporation commission by which they abandoned their injunction proceedings. From 1909 until 1913, or during the period of less than four years, on intrastate business in Oklahoma alone the railroads of that State, with a mileage of 6,400 miles, have collected on the difference between a 2-cent fare and a 3-cent fare, more than \$6,000,000.
